First. The Long Congressmen were notified on or about January 20 to remove their names from the Frazier-Lemke petition and to vote against the bill if it came up. They immediately removed their names on the very day they were told to do so, and later, when the bill came up, they voted against it. This part of the deal has been carried out.

Second. The Long machine is now for Roosevelt, and the President has Louisiana in his pocket.

Third. The administration has kept its word with respect to the indictments. Since the New York deal, no one has been criminally prosecuted for any of the indictments then pending, and at this date the Federal attorney has moved to dismiss the indictments on the ground that there is not sufficient evidence. One of the civil suits was tried, but a verdict rendered in favor of the defendant.

Fourth. The administration has adjusted its affairs in Louisiana favorably to Governor Leche, and the withheld patronage is being returned. Fight over relief has also been smoothed out.

The administration has been particularly strong in bringing in indictments charging "conspiracy", and the strong club it held over Louisiana was this list of conspiracy indictments. Through these, and these alone, Farley was able to club Louisiana into submission. Huey Long would have paid no attention to these indictments because he and everyone else knew that they were nothing but political indictments.

It is admitted now by the Government, for the Government now says it has not sufficient evidence upon which to secure a conviction. If they do not have sufficient evidence now, it is a sure thing they did not have it before or at any time. The Long followers were either bluffed or purposely deserted the Long fight, and Gov. Richard W. Leche is the man who is responsible for this sale.

It does not seem possible that the Department of Justice of the Federal Government in Louisiana could be put on the auction block by James Farley or anyone else, yet the fact is that precisely that has been done. At the date I first wrote the terms of the New York deal it is doubtful if anyone in Congress would have believed it, but today the record shows that every word of it was true.

Huey Long would turn over in his grave if he knew his faithless followers had delivered his well-working political machine to the arch enemy, James Farley. All of the reforms that Huey Long fought for have been forgotten, the people of Louisiana have been forgotten; they have been delivered

by the politicians of Louisiana to the politicians of the present administration. The question is, Will the people of Louisiana remain sold? Will they quit the fight they made with their dead leader? If they do, it is a devastating blow to the progressive cause of the Nation.

RECIPROCAL-TRADE AGREEMENTS

Mr. WOODRUFF. Mr. Speaker, at one time George N. Peek, the President's foreign-trade adviser, wrote an open letter to the President wherein he strongly condemned the policy of our State Department in negotiating foreign-trade agreements which leave us to hold the bag. According to Mr. Peek, we sustained a loss of approximately $1,000,000,000 last year on our foreign trade. Mr. Peek very properly takes the position that when we negotiate a trade agreement with Belgium, for instance, and permit under that agreement certain importations of commodities which compete with like commodities produced in this country, the benefits of such trade agreement should be limited to Belgium and not extended, as is the present policy of President Roosevelt and his Secretary of State, to all other countries producing similar commodities.

For instance, if in the trade agreement with Belgium we agree to reduce the tariff on any given agricultural or industrial product, automatically every other nation producing these same products is given the same reduction in the tariff rates, without, however, yielding anything to us for the privilege which accrued to them as a result of the Belgium agreement.

It can readily be seen that a very few trade agreements negotiated and ratified between this country and others will completely change the entire protective system in this country, because, through the medium of these few treaties, the nations of all the world will have the privilege of bringing practically every product they export into this country at a greatly reduced rate of duty.

Just what the administration can hope to accomplish by this policy, it is difficult to understand. Secretary Hull, whom I have known for a great many years, and who is a most estimable gentleman, but who on the other hand is probably the most outstanding free-trader who has been in public life in this generation, has always believed that the way to prosperity is through tearing down all tariff walls. He deliberately closes his eyes to the fact that we cannot follow his line of reasoning without bringing about a reduction of the American standard of living to the level of that in every country which would compete with us in our own market.

Certainly the American farmer does not want to be reduced to the economic standard of the Japanese coolie or the South American peon. Surely the American workingman does not wish to have his standard of living reduced to that of the workingman of all the other countries of the world, including those of the Orient. But this is the thing that will inevitably follow a continuation of the present policy of this administration in their endeavor to promote foreign trade.

Figures already available disclose that while we have increased our exports to some slight extent, our imports have at the same time increased several times faster than our exports. As I have heretofore stated, 6 to 1 is a price altogether too high to pay for the luxury of this foolish attempt to promote our foreign trade by surrendering our markets to the foreign producer.

Mr. Peek, of course, was 100 percent right.

AGRICULTURAL IMPORTS

Mr. WOODRUFF. Mr. Speaker, a farm conference at which delegates from eight Midwestern States were present in force was held recently at Sioux City, Iowa. Resolutions were adopted calling for the "immediate repeal of the reciprocal trade agreements", restriction of imports of "raw material products of farms, forests, and mines, and substitutes therefor."

This action was precipitated by reports from governmental departments showing imports of animals and edible animal products in 1935 amounted to $74,798,930, while imports of inedible animals and animal products amounted to $151,127,431; that we imported vegetable food products and beverages made therefrom valued at $506,440,885, and imports of inedible vegetable products, exclusive of fibers and woods, amounting to $282,121,473; and that imports of textile fibers and manufactures reached the total of $306,701,119, a total of $1,321,189,838.

These importations come directly in competition with the products of American farms and forests. They have a value of approximately 25 percent of the total cash income of the American farmers for 1934, less the benefit payments. Nearly every dollar's worth of these products can be produced on American farms, provided always the Congress and the President will protect the American farmer in his fundamental right to produce these commodities.

The following official figures on imports of farm products for the years of 1932 and 1935 demonstrate more forcibly than mere words what has been taking place since the present administration has been in power, and more particularly to what extent President Roosevelt, through his reciprocal trade agreement treaties, has surrendered the American market for farm products to the foreign farmer:

Product	Unit	1932 imports	1935 imports
Corn	Bushels	347,627	43,242,296
Oats	Bushels	58,786	10,106,903
Wheat	Bushels	10,026,320	27,438,870
Barley, malt	Pounds	52,532,636	320,622,537
Rye	Bushels	87	9,642,523
Tapioca (starch substitute)	Pounds	130,000,372	202,112,319
Hay	Tons	13,858	67,171
Soybeans	Pounds	36,568,700	107,463,044
Cottonseed (cake and meal)	Pounds	1,058,945	59,743,572
Butter	Pounds	1,052,598	22,674,642
Cattle	Number	95,407	364,623
Hogs	Pounds	28,875	3,414,317
Fresh pork	Pounds	1,657,500	3,922,609
Hams, bacon, etc	Pounds	3,015,489	5,297,335
Fresh beef	Pounds	796,594	8,584,114
Canned meats	Pounds	24,638,261	76,653,242
Total meat products	Pounds	45,706,926	115,059,124
Eggs in shell	Dozen	243,784	432,076
Dried yolks	Pounds	726,400	3,952,664
Frozen yolks	Pounds	422,060	1,199,772
Egg albumen	Pounds	1,275,790	1,876,445
Wool and mohair	Pounds	56,535,176	202,732,658
Dried milk	Pounds	596,448	2,743,349
Hides	Pounds	188,013,286	303,475,633
Inedible molasses	Gallons	155,888,307	235,161,684
Beet sugar	Pounds	1,139,134	1,681,598
Sunflower-seed oil	Pounds	16,456,724	37,051,732
Palm-kernel oil	Pounds	2,938,209	7,977,812
Peanut oil	Pounds	1,512,682	80,723,225

This table does not show the tremendous loss to the American farmers resulting from the annual importation of 4,500,000 tons of sugar, valued at $405,000,000, every pound of which could be raised on American farms if our farmers were permitted to do so. Nor does it disclose the reprehensible administration program under which the American production of sugar is curtailed.

The fact that we grow and refine only 30 percent of the sugar we consume is given no consideration whatever by the bureaucrats now regimenting the sugar industry. They go merrily on their crackpot way, taxing our people to pay the farmers to take out of production millions of acres of fine agricultural lands upon which we might well produce those foreign products now flooding the American market and ruining the price the American farmer receives for the products of his labor and investment.

It is announced that the President has completed negotiations with the Republic of France for another trade agreement. This treaty has already been signed, sealed, and delivered, and no American citizen is allowed to know until May 15 a single thing incorporated in the treaty, no matter how adversely he may be affected by its provisions. We may be sure, however, that this treaty will still further open our gates to the French, who give us something in return, and also to the 77 other nations who give us nothing in return. This "hoss trading" engaged in by Mr. Roosevelt and his Secretary of State is of a quality to make even the most unenlighted "hoss trader" seem a veritable mental giant in comparison.

AIRWAYS IN ALASKA

Mr. DIMOND. Mr. Speaker, recently I called the attention of the House to the pressing need for the construction of additional roads in the Territory of Alaska, and I then attempted to point out the great economic good which would be accomplished by the building of the roads proposed. At that time I took occasion to say that one other matter was of even more pressing and vital necessity for the development of the resources of the Territory, and that was the prompt establishment of a system of airfields and airways to cover Alaska. In making these remarks I gave airways priority by reason of the fact that airfields can be built and established and used long before a complete and comprehensive system of highways for Alaska can possibly come into existence. Airfields for Alaska are like the advance guard of the Army—like the modern advance guard of an army, which is its air force. The development of a new and raw country proceeds in some fashion like the march of an army in modern times. To both, aircraft is a vital necessity. For, without superiority in the air, no army can succeed. And after that, roads are equally necessary, for without roads the army cannot march.

It is my considered judgment that for the immediate future, with benefits even for the distant future, the prompt setting up of a system of airways in the Territory of Alaska is the one thing which would do most to stimulate the immediate economic development of the Territory.

During the past winter the subject has been given very careful attention by the several departments of the Government. A meeting was held of what is known as the Interdepartmental Committee, consisting of representatives of all the several departments of the Government, under the chairmanship of Dr. Ernest Gruening, Director of the Division of Territories and Island Possessions in the Department of the Interior. At this meeting, without a dissenting voice, it was agreed that a system of airfields and airways ought to be established in Alaska at the earliest possible date, and that conclusion was arrived at upon sound economic grounds, having in view also the inescapable fact that airfields and airways, useful and necessary for commercial purposes, will be equally useful for military purposes in the event of armed combat. However, in consideration of this matter, the economic features outweighed 10 to 1 the military considerations, and the system of airfields and airways which I am about to outline for Alaska is desired almost entirely for the development of the Territory.

While I do not say that all I am presenting here has the approval of the Department of the Interior or the Department of Commerce or any other department of the Government, I believe that most of what I have to present is entirely approved by all the administrative departments of the Government, and that differences of opinion from the views herein expressed will exist only as to relatively minor matters.

In treating of airfields in Alaska I shall roughly classify them in three categories, namely: First, terminal fields built in L shape with two runways, each runway being approximately 500 by 3,000 feet; second, intermediate fields having one runway approximately 500 by 3,000 feet; third, local fields having one runway approximately 300 by 2,500 feet. It is realized that these specifications cannot be met in every individual instance, but I think that generally the descriptions above given of the classes of fields will be found reasonably accurate.

At the present time no regular air-transport service exists between Alaska and our nearest neighbor in the States, the State of Washington. Most of the traffic for Alaska comes from the city of Seattle, Wash., and therefore that city is used in order to give the distance between the Territory of Alaska and the United States. In Alaska the nearest city to Seattle is Ketchikan, which is located 747 statute miles northwest of Seattle. In describing the airfields desired for Alaska, it may be well to begin at Ketchikan. At Ketchikan a terminal land field should be built as well as a water port for aircraft. This I deem a real necessity, for the reason that the city of Ketchikan is situated in almost the extreme southeastern tip of Alaska and is, as above stated, that city of Alaska which is nearest the United States. We all know that with modern aircraft a flight of 750 miles is not an extreme or a dangerous one, and one can well understand that, even if the landing field at Ketchikan is not used frequently, the existence of one is highly desirable.

Taking, then, Ketchikan as our base, we proceed northerly and northwesterly on one of the projected main air lines to Alaska, terminating at Nome on the Bering Sea. Along this line fields should be established or improved at Wrangell, Petersburg, Juneau, Taku, Berners Bay, Haines, and Skagway. From Skagway, unless the coast is followed, the planes must cross into the Dominion of Canada following the line through Carcross, White Horse, Kluane, Donjek River, and crossing again into Alaska at a place which may be arbitrarily named Boundary, a point near the Chisana River just west of the international boundary line between Alaska and Yukon Territory. Proceeding from Boundary, fields should be established, or existing fields improved, at Tetlin, Tanacross, near the mouth of the Johnson River, at Big Delta, Salcha, and Fairbanks. Fairbanks may be considered the center of the northern part of Alaska for aviation purposes. But proceeding along the same we ought to have fields at Tolovana, Chena, Hot Springs, Tofty, Tanana, Birches, Kokrines, Ruby, Galen, Koyukuk, Nulato, Portage, Koyuk, White Mountain, Golovin, Bluff, and finally at Nome on the Bering Sea.

The line, therefore, from Ketchikan to Nome may be considered as one of the main air thoroughfares of Alaska.

However, it is realized that if at any time it is impracticable to use the first section of this route into the interior of Alaska, an alternate route is desirable and, indeed, highly necessary. Therefore an alternate route may be considered for that part of the line north of Juneau proceeding westerly and northwesterly along the coast of Alaska with fields at Glacier Bay, Dry Bay, Yakutat, Cape Yakataga, Katalla, and finally terminating at Cordova or Valdez, which may be described as part of another air route.

Another line would comprise the route between Cordova and Valdez at the south, and Fairbanks at the north, with terminal fields at Cordova and Valdez and other intermediate or local fields at Thompson Pass, Tonsina, Copper Center, Gulkana, Paxson, Donnelly, and thence by way of Big Delta and Salcha to Fairbanks.

Let us go back now to the main line between Ketchikan and Nome and proceed as far as Tanacross. From Tanacross a route may be envisioned as proceeding southwesterly with fields at Slana, Chistochina, Gulkana—which is a point on the Cordova-Valdez-Fairbanks line—Nelchina, Chickaloon, Palmer, and thence to Anchorage on Cook Inlet.

Another route may be considered as connecting Seward and Fairbanks, and proceeding northerly from Seward with fields at Stetler, Anchorage, Willow Creek, Talkeetna, Cantwell, McKinley Park, Healy, Nenana, and Fairbanks.

A sixth route, proceeding from Anchorage to Goodnews Bay, an inlet of Kuskokwim Bay, with fields at Kenai, Kalgin Island, Iliamna, Seversons, Koggiung, Dillingham or Kanakanak, Togiak, and finally Mumtrak on Goodnews Bay.

Another line from Anchorage to McGrath, and thence to the lower Kuskokwim River, would be provided with fields at Susitna, Mountain Climber, Rainy Pass, Farewell Mountain, McGrath, Ophir, Dishna, and Flat. From Flat the line may be deemed as proceeding further southwesterly to Bethel and perhaps thence on to Goodnews Bay, or northwesterly to Nome—in the latter case with fields at Dementi, Unalakleet, Cape Denbigh, Koyukuk, and thence to Nome. As indicated above, the lines from both Fairbanks and Anchorage to the lower Kuskokwim join at McGrath.

Commencing at Fairbanks, fields should be established, or existing fields improved, first at Nenana (which is on the Seward-Fairbanks line), then other fields at Kantishna River, Lake Minchumina, North Fork of the Kuskokwim, Medfra, McGrath, following thence through Ophir and Dishna to Flat, thence southwesterly with fields at Georgetown, Napamute, Aniak, Kaltshak, Akiak, and Bethel.

From the foregoing it will be evident that a number of the air routes above described join and cross each other at various points. This is, of course, essential in any comprehensive air-transport system for Alaska.

Another line may be conceived of as extending from Cordova or Valdez northerly along the line to Fairbanks as far as Gulkana, thence along the line to Tanacross as far as that place, and projecting further on northerly to Chicken, Jack Wade, Steel Creek, and Eagle. Northerly from Fairbanks a route will cover Circle Hot Springs, Woodchopper, Circle, and Fort Yukon, and still another, Livengood and Rampart.

The same is the case with the second judicial division of Alaska in all of the region northerly from Norton Sound. It is planned that a number of fields shall be established there which will be served, perhaps not as part of any definite schedule flights but as needs arise.

The lower Yukon also should have service to include Kaltag, Holy Cross, Marshall, or Fortuna Ledge, Akulurak, and other places in that region. A field is also contemplated for the east end of Nelson Island.

Hereinafter set out is an alphabetical list showing the names of the individual fields, indicating those places where fields already exist and the size thereof, from which it can be readily discerned the really broad nature of the program and how well the construction of such fields and the installation of the air facilities contemplated will benefit air transportation in Alaska.

The carrying out of this project can be accomplished at no prohibitive cost, for it has been estimated that the total expense of the construction of the fields and the purchase and installation of air facilities for the entire program will probably not exceed $4,000,000.

The economic justification for such an expenditure is based upon the known actual wealth and greater potential wealth of the Territory, and the fact that other means of transportation generally are not available. Alaska has in all only about 2,400 miles of motor road in the entire Territory, including Mount McKinley National Park and the national forest areas. As a result, most of the Territory is entirely without roads and the only practical way to get over it is through the air. There is probably 100 times the justification for establishing a system of airfields in Alaska that there is for establishing a system in the 48 States. In the States in recent years good highways have been extended in every direction so that one may cross the continent from north to south or east to west, or in any other direction, and find everywhere good roads. That is not the case in Alaska, in large parts of which roads are entirely nonexistent and other parts are at best but poorly served. The Alaska flyers have accomplished marvels with the poor fields and the poor facilities at hand. They have done things which would not be attempted by ordinary flyers in the United States and, as a result, in many places even under present conditions we have seen a real beginning made, particularly in the development of mining through the use of airplanes. The construction of the fields outlined would inevitably stimulate to a very great degree all of the economic life of Alaska. This can be done at once without awaiting the construction of roads which will necessarily be much more delayed. Practically all of the airfields can be built and the air facilities installed within a year.

A list of fields with other relevant data follows:

Airfields in Alaska and locations of proposed airfields

NOTE.—Recommended class of field shown for each location indicates the following approximate dimensions:

Terminal field: Two runways forming an "L", each runway 500 by 3,000 feet.

Intermediate field: One runway 500 by 3,000 feet.

Local field: One runway 300 by 2,500 feet.

Airfields in Alaska and locations of proposed airfields—Continued

Location of field	Class of field proposed	Dimensions of existing field, if any
Akiak	Local	
Akulurak	do	
American River		250 by 780 feet.
Anchorage	Terminal	400 by 2,000 and 400 by 3,260 feet.
Aniak	Local	
Baldwin	do	100 by 1,100 feet.

ELKS LODGE OF SORROW

Mr. GEARHART. Mr. Speaker, pursuant to the unanimous consent of the membership of this honorable body, I am this day including in the CONGRESSIONAL RECORD an address which I delivered on Sunday, December 5, 1935, to the membership and friends of Hanford Lodge, No. 1259, of the Benevolent Protective Order of Elks, and at Modesto on December 7, 1935, to the members and friends of Modesto Lodge, No. 1282, of the Benevolent Protective Order of Elks:

Exalted Ruler, brothers, friends, this is the day set apart by the Benevolent and Protective Order of Elks to do formal and public honor to the memory of those of our brothers who have gone to "the undiscovered country, from whose bourn no traveler returns." It is a beautiful custom and one highly characteristic of the principles upon which this great brotherhood is founded. Once a year all over this broad land, in assemblages similar to this, gather the lodges of the order and the friends of its members, and by spoken word, ritualistic ceremony, music, and song, expression is given to the deep and abiding love which the Elks have for their dead; that love which is one of the evidences of immortality, since it lives beyond the tomb.

There is no family to which death has not come; that sorrow is common to humanity; and you, my friends, who have met here with this lodge of Elks to take part in this ceremonial function, will in this solemn hour sadly remember the graves upon which your tears have fallen.

But there is one consolation which is peculiarly ours in this year of blessed peace, the graves of our recent dead have their places in the sun; they each have their allotted space in hallowed ground; the wild flowers creeping along the bosom of the earth know where to find them. They are damp with the dews of night and wet with the rains from heaven, but no red flood of conflict deluges them; no shock of battle, no crash of arms, no thunder of war disturbs the sleep of those who lived and died and now rest in peace.

It is told of the poet Keats that, as he lay dying on a shore far distant from his native land, the last hours of his young life saddened by the savage attacks of those who had closed their eyes against the brilliance of his God-given genius, he composed his own epitaph, which consisted of the simple but pathetic words, "Here lies one whose name was writ in water." It was the last cry of a despairing soul, mourning amid the shadows of death, not for the cruel ending of the unequal warfare waged against him by poverty and disease, not that his night was falling while yet the sun was climbing the eastern sky, but that a cold and indifferent world had turned its back upon him; that he had been denied that sympathy and love which he craved so much.

And so it is with all who are worthy of the name of man; the strongest yearnings are for friendship and love.

There is no word in the English language sweeter than "friend." Not even love, for love withers when friendship dies. Friendship thinks no evil for in friendship there is no evil. Friendship thinks no wrong for friendship can do no wrong. Friendship is trusting, friendship is confiding, and friendship is faithful unto death. It is of such friendship that the Son of God spoke when He said, "No love hath a man greater than this—that a man lay down his life for a friend."

For the purpose of exemplifying this great principal of friendship numerous orders have been established throughout the globe. There is no rivalry amongst them, for each recognizes the great work in the cause of humanity that is being done by all of the others. The mind reverts to one of these great fraternities which has for its inspiration the story of the friendship which existed between the sweet singer of Israel and the son of Saul; and to another which has for its exemplars those two noble souls who dwelt in sea-girt Sicily so many centuries ago and whose sublime and trusting friendship softened the proud heart of the tyrant Dionysius; and yet to another, the oldest, the proudest of them all, whose origin lies beyond the horizon of history, whose early adherents worshiped their God in the temple of Solomon, and whose warriors of a later age wrested the holy sepulcher from the hands of the infidel and wet with their heart's blood the cross of Christ at the gates of Jerusalem.

A peculiar distinction of the Benevolent and Protective Order of Elks is that it is an American order founded by Americans. Born on American soil, grown to its proudest strength amid American influences, it typifies what we may term the spirit of American friendship, and its members are taught that in order to understand the lessons of friendship one's heart must be filled with charity.

The charity practiced and exemplified by the members of this young but mighty order is not that charity which is content with the giving of alms, but that which finds its greatest happiness in the doing of good; which walks in the ways of benevolence, and lightens the gloom of the unfortunate by an encouraging word and a pleasant smile; which scatters flowers along the pathway of life and does not sow thistles by the wayside; which visits the sick and comforts the afflicted; which closes the eyes of the dead and cares for the widow and orphan; that charity which thinkest no wrong, which finds no contamination in the touch of evil, but rejoices to grasp the hand of the fallen and to place the feet of the erring on the rock of virtue. That charity which is modest and kind, long suffering and patient; that charity which is as tender as a loved-one's hand on a fevered brow; as grateful as a cup of cold water to the parched lips of one lost in the desert.

Those beautiful virtues of friendship and charity, shining as they do upon all those who have eyes with which to see, whether they be fortunate or unfortunate, high or low, rich or poor, are the stars which lighten the pathway of this order as it pursues its steady course onward in the beneficent work which it is doing for mankind. It is the practice of these virtues that makes life worth the living; it is the observance of the lessons taught, in their practical exemplification, that through God's love teaches us how to die.

"Is life worth living? Yes;
So long as there is right to wrong,
Tyranny to find, or the wail
Of the weak against the strong;
As long as there is gloom to chase,
Or streaming tears to dry,
One kindred woe or sorrow,
That brightens as we draw nigh.
Long as a tale of anguish dwells
In the heart and lids grow wet,
And at the sound of Christmas bells
We pardon and forget;
So long as faith with freedom reigns
And loyal hope survives
And gracious charity remains
To leaven lowly lives;
While there is one untrodden track
For intellect or will,
And men are free to think and act,
Life is worth living still."

If all mankind would understand and could appreciate the good to come from the universal practice of the virtues of friendship and charity, how different the world would be. No longer would the war cloud lower; no longer would the sons of men be called to battle; no longer would widows mourn and orphans wail for those who had fallen beneath the red fires of death on the field of carnage in order that some mad monarch might win greater renown; in order that some covetous nation might extend its power.

Peace will come to the world in time. The great navies of the nations will be sunk beneath the blue waters of the ocean; armies will no longer be mobilized; and devastating cannon will no longer thunder. The fields of earth will, in that happy day, no longer be plowed by shell and harrowed by bullets and all mankind will enjoy the fruits of Nature's harvest while dwelling together in peace and unity.

But that day will never come until this principle of friendship mingled with charity shall be known and practiced throughout the globe, and that day cannot come until, in the fullness of time, it pleases Almighty God that it shall come.

When man has learned the lessons taught by the gentle Nazarene and is able, through the strength of experience and the guidance of his Maker, to obey, unquestioningly, the Commandments given to Moses on Sinai's awful mount, then the sun of peace will rise and shine forever in the firmament of God's heaven.

The members of this order are taught to believe in the divine goodness of Him who holdeth the earth in the hollow of His hand. But the Elks teach no dogmas and preach no creeds. It leaves to each of its members the worship of his God as his conscience may dictate. But no man can become an Elk who does not believe in the existence of a Supreme Being who rules the universe and whose wisdom is supernal and eternal.

The precepts of the order do not constitute a religion, but their every tenet breathes of immortality. As true friendships can never die, neither can the soul which exemplifies it perish. In this precept the Elk's faith is complete.

Man, proud man, boasts of his wisdom and exults in the vastness of his knowledge. He is the heir of all the ages, and the wisdom and experience of the past are to him an open book. He plows the seas and swims the air; he speaks and the distant nations hear his voice; he nods, and mountains tremble and fall into the seas; he measures the sun in his scales; he times the flight of comets, and, yet, with all his boasted knowledge and undoubted wisdom, he cannot tell what makes the tiny blade of grass to grow, nor what causes one rose to be white and another to be red. The mysteries of life and death must ever remain to him unknown. He cannot tell what puts the breath of life into the lips of a new-born babe; he cannot know what takes that breath away.

But faith, greater than knowledge, teaches, and its lessons we believe, that all this did not come by chance; that the Creator of the universe did not intend that the soul which He had placed upon this earth to love and to suffer, should perish upon this mundane sphere. So the Elk, with confidence unshaken, dreams dreams of happiness which shall have their fulfillment beyond the sealed door of the silent sepulcher.

Those whom we have loved have gone from us; we have followed them to the earthly shore of the dark river, but though we have strained our eyes, we have not seen their crossing.

Although we have listened with ears intent we have not heard the sound of the oars which have carried them over its deep and hidden bosom.

But this we know, although they have gone from us, they still live.

Somewhere for them the waters are flowing; not earthly waters, bitter with time, but the crystal waters of the river of life, on whose banks do stand the trees of paradise.

Somewhere for them arises the voice of song; not the melodies of this world, to which our mortal ears are attuned, but the glorious chanting of angels and archangels, pouring forth praise and thanksgiving before the throne of the living God.

Somewhere for them a sun is shining, a sun without a cloud, a sun which never sets, but shines on in glory and unutterable splendor—the never-ending sun of God's unending love.

ACCOMPLISHMENTS ON BEHALF OF THE NEGROES OF ST. LOUIS DURING THE SEVENTY-FOURTH CONGRESS

Mr. HENNINGS. Mr. Speaker, I wish to call to the attention of the House, at this time when we are preparing to adjourn the Seventy-fourth Congress, the value of the New Deal to more than 100,000 Negroes of St. Louis, Mo., residing within my congressional district. The district embraces the downtown, or metropolitan, part of St. Louis. It is entirely an urban population, and the Negro residential and business section comprising part of it is one of the most compact in America.

We know without my repetition here, that when the claws of the depression spread over our Nation, the tentacles were unsparing in whom they clutched. Industrialist as well as farmer, Negro, and white were caught in the depression, so thoroughly that by the winter of 1932 and 1933, our banks were in a crisis, our credit was exhausted or in jeopardy, our business was at low ebb. It was a zero hour. The Negroes of St. Louis, as well as of the Nation, were in distress. Money was scarce. Jobs were unavailable. Those who had security dared not part with it; those who didn't were near starvation. Privation and want, like a grim spectre, stalked the land.

The pages of history that our children and grandchildren will read, will glisten with the accomplishments of our President, Franklin Roosevelt, who overnight started the wheels of industry turning anew, who in a short period of time restored faith in our Nation, industry to our people, dollars to our pockets. It was a bold stroke—and it had to be bold to avert disaster.

How did the Negroes of St. Louis respond? For more than 60 years they had been following the promises of others, promises that were never fulfilled, and usually not checked in the boom days of our country's expansion. But when the Nation had grown up, and these hollow promises had to be fulfilled for care and sustenance, they looked to someone who might do more than promise. In 1932, and again in 1934, they turned to Roosevelt and to Democracy. In 1932 they did it as a hope. In 1934 it was approbation.

For these colored people, what has the present administration done? So voluminous would be the report of accomplishments of the entire administration on their behalf that I could not ask your time to listen, even though the figures would be enlightening and most encouraging. But I will give you the accomplishments which I personally have been able to achieve, working hand in hand with our President, with the departments, and Congress.

As I started the present term of Congress a fundamental tenet of my legislative program was and is to favor legislation designed to benefit the conditions of the great masses of American people and to oppose measures that would curtail the God-given rights of all.

The Hennings antilynching bill was one of the first measures which I introduced, and I appeared on behalf of this measure before the Judiciary Committee to urge its passage. When it became apparent that no individual antilynching bill would become law without the support of everyone interested in this humane legislation, I gladly forsook my personal desire with respect to my own bill. I assisted in circulating and was one of the first to sign the petition calling for a Democratic caucus on antilynching legislation. The caucus decided to throw its combined strength behind the Gavagan bill, almost identical to my own. I was among the first to sign a petition to discharge the bill from committee, to bring it on the floor of the House.

At the present time more than half of the House of Representatives has signed the petition, and the antilynching bill is scheduled to come up for a vote if adjournment can be postponed. It is almost certain to pass if it does reach a vote.

This is by far the most successful antilynching legislative effort in our history.

My legislative record also shows that I supported, among other measures, the farm-tenant bill, designed to aid the Negro sharecroppers of the Mississippi Valley.

It was also my good fortune to be a member of the special committee which sought and arranged for the continuation of the C. C. C. program in its present scope, taking our underprivileged American boys to healthy outdoor environment, to give each of them a man's job and an opportunity for vigor, strength, and manliness.

In connection with this it is well to mention the success which crowned my efforts to arrange a special C. C. C. camp for Negroes. Missouri was allotted three, but too many underprivileged colored boys were still left in the city streets of St. Louis. With the aid of Mr. Robert Fechner, C. C. C. director, and the approbation and cooperation of three Federal departments, I obtained a fourth Negro C. C. C. camp for Missouri to take care of a good many of these boys. I am also carrying on a vigilant, almost ceaseless campaign to see that competent Negro directors are the officials of these camps.

Since the first days of the depression, an undertaking of increasing importance to a Congressman has been that of trying to find employment for his constituents. Special Federal agencies were attempting to relieve distress in all of our States. While I had no power to designate individuals to employment in these agencies, I did demand that the Negroes of St. Louis be given every consideration. The Works Progress Administration cooperated to such an extent that in the spring of this year 13,766 St. Louis Negroes had been taken from the relief rolls and were given employment. I also sought the cooperation of the Missouri State Employment Service and other State-managed agencies for the jobless. The Census, National Youth Administration, Resettlement, and other new projects which were reducing unemployment were all prevailed upon by me, in my demands for adequate Negro representation.

With respect to appointments to our Military and Naval Academies, I made my vacancies available to every boy within the congressional district. Competitive tests were conducted, and I personally interviewed the candidates. As a result, 4 Negro boys from the district, among the 50 or more candidates, were designated as alternates to the academies. It is the first time in history that such recognition has been given to the colored youth of St. Louis.

Through my first year and a half in Congress I have consistently demanded adequate, proportionate Negro representation in all fields of Government and party activities, and it is gratifying to see that both my Government and the Democratic Party have responded, for the Nation and for my district. The cooperation extends even to the selection of delegates to the Democratic National Committee, where my demands for adequate Negro representation were acted upon favorably by the district committee.

In such instances as these, the new, true spirit of the Democratic Party and the New Deal show clearly that it has the welfare of the American Negro at heart. The New Deal is ever vigorous and watchful for the commonweal and the interest and welfare of all of our people without regard to race, creed, or color.

H. R. 12835. TO PROVIDE ADEQUATE LOW-COST HOUSING

Mr. SCOTT. Mr. Speaker, it has been estimated—in the absence of Federal statistics—by housing authorities that approximately 15,000,000 low-rental dwellings are needed to house American families adequately.

This need affects one-half of the Nation's population now forced to live in houses unfit for habitation—in slum areas, in overcrowded dwellings, in dilapidated and unsafe firetraps, in houses with no sanitary conveniences whatever.

This half of the Nation—with an income less than $1,000 per year per average family of four—cannot obtain adequate housing, as operated and controlled by private enterprise, at rents within their means.

An additional 25 percent of the Nation's population can afford only part of the rents charged by private enterprise.

Thus adequate housing is beyond the reach of three-fourths of the American families who are forced to pay high rents for housing unfit for habitation at the sacrifice of necessary food, clothing, and medical care.

Private enterprise has proved its inability to provide adequate housing for these families. The high cost of private building, including speculative land values and high-construction profits, interest and amortization rates, taxes and depreciation charges, does not permit rental charges that three-fourths of the American Nation can afford to pay.

The inability of 75 percent of the American Nation to obtain adequate housing constitutes a condition of social peril. Slums and bad housing are a social and economic liability. No one escapes the high cost of their maintenance. Studies in Cleveland, Boston, New York, Philadelphia, Chicago, Detroit, and many other cities have proven conclusively that slum areas add to the taxpayers' contribution to the cost of government. These increased costs result from juvenile delinquency and crime which breed in slum communities. The increased costs of hospitalization, fire and police protection of these areas are a charge on every citizen of the community. Modern society cannot long tolerate a condition which condones blighted lives and which actually permits a subsidy for the maintenance of these communities.

Millions of dollars out of Federal funds—by the payment of relief checks which go for rent—have gone into the pockets of landlords for the preservation of communities which are a blight and a charge on society as a whole. The Federal Government must initiate and assume the responsibility for a planned Nation-wide program of modern housing construction. These dwellings must be publicly financed, and low rentals must be guaranteed the income groups for which the houses are intended.

H. R. 12835 aims to correct the deplorable housing conditions under which great sections of the American people are living today. It was designed to meet the needs for adequate housing for the low-income groups.

In addition to the social advance of providing decent, healthful homes and communities for millions of American families, widespread and continuous employment would result from this program of construction.

The benefits of employment would not merely be confined to the actual construction but would be felt throughout the construction and related industries. The employment of labor and skill in the development of new industrial methods and materials would put into constructive use the potential productivity of our industrial system in terms of modern housing and communities for the entire Nation.

The introduction of H. R. 12835 was prompted by the failure of the housing division of P. W. A. and other New Deal agencies, which, after 3 years, has produced a negligible quantity of housing, and by the inadequacies of such proposed legislation as the Wagner-Ellenbogen housing bill. The Wagner-Ellenbogen bill, which was recently introduced into Congress by Senator WAGNER and Representative ELLENBOGEN, is inadequate because:

First. The total sum of $900,000,000, which is made available over a 4-year period for housing under the bill, is grossly insufficient in the face of the needs. In the process of being reported out of committee even this meager appropriation has been whittled down.

Second. Although low rents are referred to in general terms, no statement is made of a maximum rental. There is no assurance, therefore, that low rents will actually be realized. Indeed, the provision in this bill that outright grants by the Federal Government shall not be more than 45 percent of the cost of the housing makes inevitable a rental charge which will be too high for the vast majority of American families.

Third. Too much discretionary power is placed in the hands of the authority created under the bill. Such latitude may not only cause the bill to be deemed an unconstitutional delegation of legislative power, but it also carries the danger that the authority will construct very little housing, or possibly none at all, if it so chooses.

H. R. 12835 represents the only realistic and adequate solution of the housing problem of the low-income groups. The following are the basic concepts and provisions of this bill:

1. Private enterprise in establishing rental charges of necessity includes the items of (a) the repayment of the land and construction cost together with interest or profit thereon, (b) the cost of maintenance, and (c) taxes. Experience has demonstrated that the rental charge for new, adequate housing, which is based on all of these items, is beyond the means of the majority of American families. Three-quarters of the families in the United States have annual incomes of less than $1,500, and can safely pay for rent not more than about $5 per room per month. Because of this the Scott bill is founded on the concept that low-rental housing can be achieved only where there is an outright grant of the total land and construction cost and where the rental charge is based only upon the cost of maintenance and the payment of local taxes. Under present conditions such a charge would not exceed $5 per room per month in large cities like New York, Chicago, and Philadelphia, and would be less elsewhere.

2. The creation of a housing fund out of the United States Treasury. Outright grants to public housing agencies of 85 percent of the land and construction cost will be made out of this fund for the purpose of providing modern housing for families of low income at a rental charge not exceeding $5 per room per month.

3. The creation of a housing authority to disburse the housing fund. Federal grants will be made only to public housing agencies who agree to certain conditions under which the housing will be constructed and operated. These conditions are:

(a) That the public housing agency contribute the balance of 15 percent of the land and construction cost in the form of a local outright grant.

(b) That the rental charge shall not be more than $5 per room per month and less where possible.

(c) That no family shall be eligible for this housing whose income exceeds $1,000 plus $250 for each dependent in excess of two. This means that the maximum annual income for the average family of four would be $1,500.

(d) That priority of application shall determine the right of occupancy.

(e) That union wages be paid to all employees in any way connected with the construction and operation of the housing.

(f) That tenants shall have adequate tenure rights and that there shall be no discrimination by reason of religion, political opinion, etc.

(g) That construction standards of the research and planning division created under the act be followed.

4. The establishing of a schedule of annual construction under which the Housing Authority will be required to make outright grants to qualified local agencies for the construction of a total of 10,000,000 dwelling units within a period of 10 years.

In view of the action of the United States Supreme Court in declaring much New Deal legislation unconstitutional, it is important to examine H. R. 12835 in this respect. In the first place, the efforts of the Federal Government to condemn land and construct public housing projects has been deemed an unconstitutional invasion of State and municipal rights. Under this bill the United States Housing Authority does not construct, own, or operate the housing. This is done exclusively by the local public housing agencies. Secondly, the powers of the Housing Authority have been circumscribed as rigidly as possible for the purpose of assuring the realization of the objectives of the bill. Consequently, it cannot be said that unwarranted powers have been delegated to the Authority. The right of Congress to appropriate money out of the Treasury is unquestioned, so that the bill stands on solid constitutional grounds.

It must be noted that in attempting to make the bill constitutional no compromise has been made with the basic concepts of an adequate low-rental housing program. On the contrary, in every respect the constitutional provisions are also desirable instruments for achieving the objectives of the bill.

The Wagner bill, as amended, passed the Senate on Tuesday of this week. I do not know whether it will be called up in the House during this session or not. If it is, I shall propose H. R. 12835 as a substitute. I hope the Members will do me the courtesy to give some study to the bill and the substitute which I shall offer, and in this connection study these remarks.

Since the Senate has passed the bill and since it will undoubtedly be offered again next year, if not passed during this session, I hope Members will give the legislation considerable study before the opening of the Seventy-fifth Congress.

RECOGNITION OF THE AMERICAN NEGRO YOUTH

Mr. HENNINGS. Mr. Speaker, democracy, in the larger application of the term, carries with it, as an integral and essential component, equal opportunity for all citizens of a Republic "dedicated to the proposition that all men are created free and equal."

While the latter proposition may be subject to certain refinements of interpretation, I believe that opportunity for all citizens for self-improvement and betterment is not a rigid and inflexible state, but a goal which can only be attained by a relentless and continual assault upon the strongholds of privilege and predatory power.

I rise in the House today to call upon my colleagues to consider the problems of the youths of America, and in this instance, to the attainments of our Negro youths in being designated as candidates for commissions in the armed forces of the United States, by virtue of their having been designated as principals or alternates to the Military and Naval Academies.

Our distinguished colleague, ARTHUR W. MITCHELL, of Illinois, has seen the admission of James Lee Johnson, Jr., a Negro boy, to the Naval Academy at Annapolis, a boy whose achievements and record thus far presage a successful career in that great institution, and later in the service of our country. He is the first of his race to be admitted to the Academy since 1879.

I am proud to say, that from the numerous applicants of the Eleventh Missouri Congressional District, on their merits I have designated four Negro boys, James Allen, Raymond Holly, William White, and Jasper Williams, as alternates, two to Annapolis and two to West Point. These boys, through competitive examinations and through personal fitness, demonstrated their character and worth. They are not only a credit to the Negro race, but are the finest type of American youth.

As a Democratic Member of Congress, I am happy to have been able to, in substantial form, demonstrate my faith and confidence in these boys, and to have been able to have accorded them this favor and distinction, an honor in which every American boy would take justifiable pride.

Those of us who live among our Negro citizens, who esteem them as our friends and respect them for their magnificent progress and courage as a race, and for their contribution to our people, know that the Democratic Party and the New Deal have opened the door of opportunity to our Negro citizens as never before, as an abundance of fact and instances clearly demonstrate. We know that our Negro citizens in all walks of life are beholding new vistas of more complete, more abundant, and more constructive lives for their families, themselves, and their race.

Let our party, and we as individuals, ever be mindful of our sacred duty to consider the welfare of all the people as our paramount law, and thus continue to build a greater and more glorious America.

ELWOOD MEAD, B. S., M. S., C. E., D. E., LL. D.

Mr. TAYLOR of Colorado. Mr. Speaker, I want to pay a humble tribute to a very dear friend, Dr. Elwood Mead, the late Commissioner of the Bureau of Reclamation.

I knew him well for 50 years. From 1886 when he was professor of irrigation engineering at the Colorado Agricultural College and assistant State engineer of our State, and from the day of his appointment to the office of Commissioner on April 19, 1924, until the day before his death on January 26, 1936, I was in almost constant communication with him over reclamation matters throughout the West.

Many others have ably chronicled his eventful and great public services.

The milestones of progress in this public servant's long and useful career have been duly recorded and spread upon the minutes of learned scientific bodies. Editorials of a deserved laudatory nature have appeared in the press of the country. Memorial services have been held throughout the land. Expressions of regret at his passing have been voiced by the President and public officials everywhere.

Of his career as a benefactor to the Nation in the field of engineering, irrigated agriculture, and land settlement all are familiar, particularly those inhabitants of our great West, who knew of his genius through personal associations.

Recognized as an eminent authority in his particular sphere of activity, his fame was world-wide. His opinions and advice were sought by foreign governments. His researches in distant Palestine made him as well known in Europe as he was in Australia.

So it seems fitting now, several months after his passing from our midst, to peer behind the scenes somewhat and inquire into the cause of the sublime impetus with which this man, like so many other true Americans, was endowed, for no man was more nobly endowed with the spirit of patriotic service than was Elwood Mead. For over half a century he labored in the cause of the struggling farmer on arid lands.

ELWOOD MEAD A TRUE PIONEER

This inquiry, this delving as it were, into the inner spirit of the man leads us back perhaps to the beginnings of the Nation. It carries us back to the pioneer days, when our forbears left behind them decaying Europe, and with enterprise, high expectations, and a sublime faith in God landed upon these

shores. No weaklings, either men or women, had any part in that journey to this then unknown land.

The seeds of the pioneer spirit were planted in the minds of the early settlers. And in this great spirit is seen the root of that urge, that impetus with which our leaders are most happily possessed.

Above all else, Elwood Mead had inherited this true pioneer spirit, both in thought and in deed.

Naturally, our thoughts take us back to that early pioneer family in Indiana who passed on to its son a rich heritage of hope and a strong will to explore new fields of thought. Born on a farm a few years before the outbreak of the Civil War, the boy Elwood experienced the usual rugged hardships of frontier youth. He saw Indians; he saw soldiers; and he witnessed the trying days following reconstruction of the Nation. He saw the Conestoga wagons and prairie schooners from Pennsylvania, filled with settlers on their journey to the great West.

His early ambition was that of a soldier. Service to his country prompted him to take the examination for entrance to West Point, but through unfortunate circumstances, poor health, and parental objection, he was deterred from that hope. Nothing daunted this pioneer youth. He began preparing himself for possibly a greater service. While not so enticing a career as that of an Army officer, his was to be a service to agriculture, a lifework devoted to the thousands of men, women, and children whom he had seen treking across his native State to the wilderness of the West. Our country was then largely agricultural, and this far-seeing youth looked forward to the day when he might help solve the problems that would surely arise from this great migration to newer settlements.

LAYING THE FOUNDATION

With an intensive mind, and realizing that but few scientific principles had been applied to man's oldest occupation, he saw that vast agricultural problems would some day become of national and governmental importance. He began to lay the foundations of a broad technical knowledge that would enable him to solve them and be of service to his country and fellowman. Working as a rodman with a surveying crew he gained practical experience and at the same time earned sufficient to pay his tuition at Purdue University, where he graduated with the degree of bachelor of science. Later, at Iowa State College, he acquired his degree of civil engineer.

As an engineer his vision pictured the mighty rivers harnessed by power plants, furnishing light and power to homes and towns yet unbuilt.

As an agriculturist he saw great supplies of life-giving water stored up in artificial lakes behind these dams, to be used in irrigating the arid soils. He realized that the fast-growing and overcrowded communities of the East would soon need room for expansion. He knew that our virgin soil was fast becoming depleted. He saw the urgent necessity for a scientific scheme to bring arid lands under cultivation. Truly, the youth Elwood Mead was a pioneer in constructive thought as well as a pioneer in the mighty reclamation projects which he later consummated. He felt that the development of the vast area west of the Mississippi was to become the most remarkable in the history of the world. It has. He was an exemplar of "Westward, the course of empire makes its way."

A few earlier minds had grasped the significance of a study of agriculture. George Washington had expressed the hope that a clearing house for the dissemination of agricultural information be set up. But it was not until Benjamin Harrison's administration, in 1889, that the Department of Agriculture was established. Thus we see Elwood Mead a pioneer in the field of sound agricultural principles many years before the Federal Government became cognizant of this crying need in the internal affairs of the people.

Dr. Mead progressed not only as a builder of enduring works but, being rural-minded, as a conservator of man's inherent right to the bounty and beauties of Nature. The philosophy of his very soul filled him with the desire to improve the conditions of those who lived by the sweat of their brows. Throughout his life he strove for that end.

Edwin Markham's words describing "the man with the hoe" were perhaps ever with him:

> Bowed by the weight of centuries, he leans
> Upon his hoe and gazes upon the ground,
> The emptiness of ages in his face
> And on his back the burdens of the world.

He wanted no Old World conditions in this country.

THEORY PUT TO PRACTICE

His imaginative foresight, coupled with his ability as an engineer, was a most useful guide. While not neglecting the lessons his trained scientific mind had taught him, he was amply endowed with the most precious of faculties, the faculty of a wise, sympathetic, yet disciplined imagination, without which few men can be said to have fulfilled the purpose for which the Great Architect placed them upon this earth.

Referring to Dr. Mead's career in Federal Government, it was not idle chance that placed him there. The history of this Nation from earliest times has demonstrated that responsibility placed on our men and women in public life has brought with it always a just consideration of all classes. These thoughts Dr. Mead particularly carried with him during all his administrative positions. His comprehensive broad-mindedness toward social and economic conditions stood him in good stead during a long and honorable career.

Better, thought this man, to deserve office and not achieve it, than achieve office and not deserve it. He sought no public office, though he served many States as an engineer and planner. He held offices under both of our political administrations. His fundamental partisanship was devotion to the people's interests. His allegiance was to duty, which he considered the sublimest word in the English language. His consciousness of duty well performed gave him as much satisfaction as the honorary degrees bestowed upon him by colleges, and the acclaim accorded him by a discerning nation.

It is refreshing to note that the great executive branches of our Government have been singularly fortunate in attracting such men of science and technical ability as Dr. Mead, and it redounds to the credit of our Presidents that they have had that devoted national spirit to seek out such men of ability, irrespective of what, if any, political views such men may have had.

From his first endeavor in public affairs, as engineer for the Territory of Wyoming, Dr. Mead began to put into operation his advanced theories and scientific plans. He felt that the prosperity of this country would not long endure if its foundations were not laid in the material benefits which come from the soil and application of scientific methods to preserve these benefits. He proceeded to acquaint legislators with this fact, and the need of conservation, preservation of the public domain, irrigation and flood prevention. He was one of the first to bring to the attention of the country that these questions were not a political or partisan matter. His fame as a progressive young official and the reforms he instituted in Wyoming did much to bring that sparsely settled Territory into statehood. A new law initiated by him and incorporated in the constitution of the new State upset the old theory of water rights that had been passed down through the ages, from Rome to England and to this country. The principle of the older law, in effect, was that the owner of the land through which a stream passed had full control of all the water flowing through it. Serious hardships, contention, and innumerable legal battles had developed through this antiquated precept. Dr. Mead's new concept, that all the peoples were to share in Nature's beneficence, was universally endorsed and was soon incorporated in law by many other Western States.

From Wyoming, after 10 years of auspicious service, he was appointed Chief of Irrigation and Drainage Investigations in the Agricultural Department. His reports while serving in that capacity, his papers, addresses, and contributions to scientific and agricultural journals of the world,

gained for him new prestige. His fame spread to that other colonized country, Australia. He felt that duty called when he accepted a demand from that Government to come and straighten out its own inland water problems.

Our men of science, our engineers, our inventors, and even our statesmen are all essentially pioneers. With known facts behind them, and an analytical and logical mind to guide them into future fields, each pursues his own particular path. But it is a straight path toward the establishment of enduring good works, and no one pursued a straighter path than Elwood Mead.

EARLY PLANNING OF OUR NATIONAL RESOURCES

With foresight to see that our Nation's resources would be soon wasted unless systematic plans and strong efforts were brought to bear, Dr. Mead labored unceasingly to awaken the people to the danger. He aroused the Nation to proper utilization of these resources, and to prevent spoilation of them by selfish interests. Involving a great moral and humanitarian aspect and staunchly advocated by him and other public-spirited associates, the question of conservation and preservation of nature's gifts has been opposed by one pretext or another, until recent years. Until a few years ago the question was closely allied to political and economical discussion.

Such universal popular approval as has been given to conservation and reclamation projects is largely the natural result of the sublimity of this man's devotion to the cause for which he fought. An evidence of the hold these ideas have on the country is the establishment of the National Resources Board and the widespread desire to rename the Department of the Interior to that of the Department of Conservation and Public Works.

There is something for everyone in the life of Elwood Mead. We, of today, who are living can gain inspiration from this unselfish man's life. Our children of tomorrow, in whatever walk of life they may follow, will be materially benefited by the labors of this conservator and patriot.

At this point one might pause and ponder the mystericus ways of divine Providence that gave this pioneer to the American people. He was born near the village of Patriot.

Elwood Mead was a man steeped in a profound knowledge of his chosen line of endeavor. During more than 50 years of labor his researches took him into the study of land colonization, government aid to homesteaders, farms for soldiers, rural child labor, planned rural development, drought problems, reservoirs, irrigation structures, water-right controversies, various Australian studies, land settlement in California, economic development of waterways, plans for creating rural communities, conservation of the public domain, building dams, electrical development, soil erosion, control of silt, and all other allied investigations.

His literary efforts were many. His contributions to scientific journals and magazines covered the same wide scope as did his official investigations. They appeared frequently in the following: Outlook, International Quarterly, Independent, Agriculture Year Book, Engineering News-Record, New Republic, Annals of American Academy, Australian Bulletin, Reclamation Record, Metropolitan, Sunset, American Economic Review, World's Work, Review of Reviews, Ladies Home Journal, Country Gentleman, American Child, Agricultural Record, Scientific American, Southwest Builder and Contractor, Forum, Current History, the Reclamation Era, New York Times, and others.

MONUMENTS TO ELWOOD MEAD

When future generations of our great West, when the millions of dwellers in happy homes and firesides that are now coming into being around our 40 great reclamation projects, when the teeming thousands, tillers of the soil, blessed by nature's full bounty; when these peoples shall lift their eyes aloft, they shall see monuments to high spiritual endeavor, mighty monuments that were first conceived in the mind of this master builder, Elwood Mead.

And when these future agricultural peoples shall have cast their eyes toward that greatest of all his endeavors—the Boulder Canyon Dam—holding in check the gigantic flow of that mighty "Nile of America", the Colorado River, and its thousands of tributaries; when they shall view that great expanse of water, producing power and light for their farms, as well as for many great cities and industries, and supplying them with life-giving water; when they shall view this mightiest of all artificial lakes, this lake that has been so aptly designated "Lake Mead", who can say what thoughts will pass through their minds?

And who can say, as they silently bare their heads in reverence and gratitude before this, his monument, that they will not silently shed a tear?

It is thus we, and all succeeding beneficiaries of those pioneers in thought and deed, are handed the torch of spiritual enlightenment and patriotism. It is for us to keep the flame ever bright and to revere them in an humble spirit, and to preserve the example of their teachings and follow as best we can, their footsteps.

National recognition will be given Dr. Mead when, on June 25, on the occasion of the annual meeting of the American Society of Agricultural Engineers at Estes Park, Colo., he will be posthumously awarded the highest honor the society can give, by conferring the Cyrus Hall McCormick gold medal for "the greatest achievement and contribution to agriculture."

A few years ago, recognizing Dr. Mead's leadership in irrigated agriculture, the society made him a life honorary member. The conference of this high honor during his lifetime, combined with the posthumous award of the medal, makes Dr. Mead one of the outstanding members of the society and one they will always be proud to refer to as being one of them.

It is fitting we thus honor Elwood Mead. The annals of humanity and agriculture will bear large his name, as benefactor, humanitarian, and conservator.

THE SYMBOLISM OF THE FLAG

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks, I include the following address I delivered at Harrisonburg, Va., June 14, 1936, to the Harrisonburg Club, B. P. O. E.

Mr. Chairman, ladies, and gentlemen, I esteem it a high privilege and honor to be permitted to participate with the Elks' Club of Harrisonburg in the dedication, to the high purposes of peace and good citizenship, of an American flag, the gift of local Veterans of Foreign Wars.

From time immemorial nations have employed standards, colors, and flags to indicate their individuality, but these national emblems, usually born of conflict, have in times past represented more the accomplishments of war than those of peace.

Our own flag, for instance, was born of the Revolutionary War. When Great Britain ceased to treat the Colonies as a mother should a child, the "three crosses of England" became repugnant to them. The British flag no longer represented their welfare. Some of the northern Colonies adopted the pine-tree flag, with the inscription "An appeal to God"; some in the South the serpent flag, representing a coiled rattlesnake, ready to strike, with the inscription "Don't tread on me."

Although we declared our independence in July 1776, our present flag was not adopted until June 14, 1777. On that date the American Congress resolved, "That the flag of the 13 United States be 13 stripes, alternate red and white; that the Union be 13 stars, white in a blue field, representing a new constellation."

Alfred B. Street, in a speech on the Battle of Saratoga, said: "The stars of the new flag represent a constellation of states rising in the West. The idea was taken from the constellation Lyra, which, in the hands of Orpheus, signified harmony. The blue of the field was taken from the edges of the Covenanter's banner in Scotland, significant also of the league and covenant of the United Colonies against oppression, incidentally involving the virtues of vigilance, perseverence, and justice. The stars were deposed in a circle, symbolizing the perpetuity of the Union, the ring, like the circling serpent of the Egyptians, signifying eternity. The 13 stripes, with the stars, showed the number of the Colonies and denoted the subordination of the States to the Union as well as equality among themselves. The whole was a blending of the various flags, previous to the Union flag, namely, the red flags of the Army and the white ones of the floating batteries. The red color, which in Roman days was the signal of defiance, denotes daring and the red blood that was spilled in the defense of freedom and liberty; the white, purity and peace; and the blue, loyalty. What eloquence do the stars breathe when their full significance is known? A new constellation, union, perpetuity; a covenant against oppression; justice, equality, subordination, courage, and purity."

Members of the Benevolent and Protective Order of Elks, this is the flag, born of conflict, that my comrades of the World War

have presented to you. Decked with only thirteen stars, representing the Thirteen Original Colonies, it had first waved over Washington's raw levies at Valley Forge. As the cluster grew it was flown by John Paul Jones and disputed on equal terms with the Cross of St. George, its ancient lordship of the seas.

Andrew Jackson, whose home in Tennessee I visited last Sunday, kept it flying over New Orleans, and Stonewall Jackson, under Scott, carried it to the heights of Montezuma in the Mexican War. And the boys who donated it to you carried it, now bearing its full complement of 48 stars, symbolizing great and free States stretching from ocean to ocean, for the first time upon a European battlefield, where it received as its baptism of fire a salute from the arsenals of hell. Time, the great alchemist, had blotted out the tragic reconstruction era and we could all join in saying:

"Here's to the blue of the wind-swept North;
When they meet on the fields of France
May the spirit of Grant be with them all
As the sons of the North advance.

"Here's to the gray of the sun-kissed South;
When they meet on the fields of France
May the spirit of Lee be with them all
As the sons of the South advance.

"Here's to the blue and the gray as one;
When they meet on the fields of France
May the spirit of God be with them all
As the sons of the flag advance."

You, sons of the noble order of Elks, in Harrisonburg, in Virginia, in a thousand cities and hamlets throughout the United States, are sons of the flag—a flag in your hands dedicated not to war, but to the high calling of peace on earth, good will to all men. Your order came into being in 1868—in the midst of the tragic era. Your order was born in a spirit of brotherly love, and through the teaching and practice of charity, justice, and fidelity you have given form and substance to the highest and noblest symbolism of the flag. In your hands it symbolizes a capitalistic system of society operating under a constitutional form of Government, "of the people, for the people, and by the people." It symbolizes churches, hospitals, schools, and the sanctity of the home. It means that the strong must protect the weak and in every sense be a good neighbor. For the past 4 years our Nation has been striving to evolve a higher code of business ethics, in the full meaning of the Elks' tenets, benevolent and protective. You realize that the whole of justice is not expressed in the law. "Such sentiments", said Woodrow Wilson, "sweep across our heartstrings like airs from the presence of God, where justice and mercy are reconciled and the judge and the brother are one."

And the veterans who donated to you this flag have marched under its banner in the trying period of a war against depression with the same courage and loyalty with which they carried it upon the fields of France. In every major economic upheaval, enemies of constitutional government seek to capitalize the spirit of unrest. They foment strikes and disorders in the industrial world; they hold out to the aged and infirm the hope of Government bounties that can never be realized; they subsidize the criminal activities of the underworld to make it appear that organized society is disintegrating; in subtle ways they suggest that our Constitution is an instrument of bondage, designed by a capitalistic class for the economic slavery of the masses.

To those of us who have served in the Congress during the trying time of the past 4 years, nothing has given us more satisfaction nor a greater feeling of security than the realization of the fact that the boys who served under the flag in foreign lands in times of war are still true and loyal to their flag and country in times of peace, and ready to combat all subversive doctrines that seek to undermine and destroy our Constitution, and with it the greatest degree of personal liberty that the people of any Nation have ever enjoyed. They subscribe to the sentiments of Daniel Webster who, on the one hundredth anniversary of the birth of George Washington, said:

"Other misfortunes may be borne, or their effects overcome. If disastrous wars should sweep our commerce from the ocean, another generation may renew it; if it exhaust our Treasury, future industry may replenish it; if it desolate and lay waste our fields, still, under a new cultivation, they will grow green again and ripen to future harvests. It were but a trifle even if the walls of yonder Capitol were to crumble, if its lofty pillars should fall, and its gorgeous decorations be all covered by the dust of the valley. All these may be rebuilt. But who shall reconstruct the fabric of demolished government, who shall rear again the well-proportioned columns of constitutional liberty, who shall frame together the skillful architecture which unites national sovereignty with State rights, individual security, and public prosperity? No; if these columns fall, they will be raised not again. Like the Coloseum and the Parthenon, they will be destined to a mournful, and a melancholy immortality. Bitterer tears, however, will flow over them than were ever shed over the monuments of Roman or Grecian art; for they will be the monuments of a more glorious edifice than Greece or Rome ever saw, the edifice of constitutional American liberty."

Therefore, on this one hundred and fifty-ninth anniversary of the birth of our national flag, the veterans who present it and the Elks who receive it can appropriately clasp hands in a common cause and a mutual understanding. For both the flag is the symbol of our liberty under the Constitution—the guardian of our homes. The one group swore allegiance to it when it entered military service; the other when it accepted membership in a great fraternal order.

As the silken folds of Old Glory unfold to the breeze as it rises to the top of yonder flagpole, I can say to you, in the words of Henry Ward Beecher: "Accept it, then, in all its fullness of meaning. It is not a painted rag. It is a whole national history. It is the Constitution. It is the Government. It is the free people that stand in the Government on the Constitution. Forget not what it means; and for the sake of its ideas, be true to your country's flag."

"May the spirit of God be with them all
As the sons of the flag advance."

THE ST. LAWRENCE SEAWAY

Mr. CULKIN. Mr. Speaker, the outstanding national power and navigation project of America is the St. Lawrence seaway. It is conservatively estimated that as a result of the development of the St. Lawrence River more than 2,500,000 horsepower of electrical energy will be generated, one-half of which will be available for use in the State of New York and New England. This vast horsepower so created will come into the north country, which includes all the counties of my congressional district, and will be available for manufacturing purposes. Uncalculable benefits from this great volume of energy will be passed on to every city, village, and hamlet in northern New York. Under the improved methods of transmission New England will likewise share in the benefits of this power development.

ADDITIONAL SEACOAST

Nor is that all. This seaway will open up 3,576 miles of new seacoast interconnecting with the Atlantic and Gulf coasts. It brings the Atlantic Ocean 1,000 miles inland. It will lessen the economic handicaps of adverse transportation costs to the vast area in the interior of the American Continent. This area embraces more than 22 States. Within these States are more than 40,000,000 people who gain their livelihood from agricultural production and manufacturing. It cannot be denied that the people of this inland section have had their progress retarded both from manufacturing and agricultural standpoints by handicaps in transportation.

LOW-COST TRANSPORTATION

The building of the Panama Canal left them marooned in the interior of the continent. It placed on them unfair handicaps in the matters of transportation. During the greater part of the last few years railroad rates for transportation per 100 miles on corn, wheat, and other staple products have gradually increased. The people in these inland areas of the United States are entitled to relief from the present exorbitant and destructive freight rates. The potential annual tonnage of this waterway is 30,174,625 tons.

I am of course vitally interested in this seaway by reason of the fact that my district participates in the benefits resulting therefrom. I am interested in it as well for the reason that it is a truly national project which will advance the cause of America. This seaway should have been completed long since. The delay in its construction has been due to the failure of the United States Senate to ratify the treaty providing for its construction in the international sector. I have had a part in the preliminaries leading up to the commencement of this seaway. I had a hand in obtaining the depth of 27 feet in the St. Lawrence River from Lake Ontario to Ogdensburg. I had a part in the ratification of the agreement whereby New York State pays $89,000,000 of the initial cost in consideration of the power. I have served for 8 years on the Rivers and Harbors Committee of the House and know the national picture. I know that America will never fully come into its own until this seaway is completed. Not long since, I helped organize a nonpartisan steering committee in the House for the purpose of promoting the ratification of the treaty. Some 50 Members of the House, representing the Great Lakes and the prairie States, are now members of this steering committee and are active in the promotion of the seaway. My colleagues did me the honor to elect me chairman of this group.

TREATY WILL BE RATIFIED

On may 28 our group was addressed by Senator KEY PITTMAN, chairman of the Foreign Relations Committee of

the Senate, which has the treaty in charge. He assured us that the way for ratification is clear and that the senatorial differences would be ironed out by some minor change in the treaty. We were likewise addressed by Senator ROBERT M. LA FOLLETTE, of Wisconsin, who made a stirring address in which he outlined the economic benefits of the seaway and its value to present and future generations. It is the purpose of our steering committee to promote the cause of this seaway by every honorable means. It is our purpose, however, to carry the war to those sections who, unmindful of our rights to this development, are being influenced by the selfishness of locality. We have back of this project the National Grange, American Farm Bureau Federation, Great Lakes-St. Lawrence Tidewater Association, Power Authority of the State of New York, Northern Federation of Chambers of Commerce, Minnesota Arrowhead Association, Champlain Valley Council, Ohio Lake Ports Association, West Michigan Legislative Commission, and Great Lakes Harbors Association.

This project has been approved by Presidents Harding, Coolidge, Hoover, and the present incumbent of the White House, President Franklin D. Roosevelt. It has been repeatedly approved by the United States Engineers, who, to my mind, are the greatest economists on water transportation in the world today.

ATTITUDE OF ADMINISTRATION

President Roosevelt in his message to the St. Lawrence seaway meeting at Detroit on March 11 this year stated:

I wish the conference at Detroit to be assured not only of continued unremitting effort to complete the seaway and power development but also of my strong conviction that recent events have helped to clear the way for action, upon the broadest lines of public benefit.

The use of electric energy is gaining so rapidly today that no sane person would dare to assert that after the 7 years required for construction of works, St. Lawrence power would provide a surplus above actual needs.

As a matter of fact careful studies have shown that there will be a serious shortage of electric energy in the Northeast before the project can be completed.

The Great Lakes-St. Lawrence Treaty of 1932 has not been ratified in either country. Something further than mere resubmission of a treaty is called for under these conditions.

We are seeking, therefore, a new approach to the problems involved in the many projects for improvements in the Great Lakes-St. Lawrence Basin.

Considering all the elements involved, I am more than ever convinced that means can be found to go forward with the development on terms that will serve public requirements.

The Great Lakes-St. Lawrence project is in keeping with the spirit of the times and with the policy of cooperation now firmly established on this continent.

For the United States and Canada to demonstrate the full value of such a policy on a frontier that spans a continent would contribute immeasurably to security and progress in the Western Hemisphere.

REPUBLICAN CANDIDATES FOR SEAWAY

No one questions President Roosevelt's complete loyalty to the cause of the seaway but it is encouraging to know that the Republican candidate for President, Governor Landon, of Kansas, and his running mate, Colonel Knox, of Illinois, are vigorously for it. I have been assured by an authoritative source that during the campaign Governor Landon and National Chairman Hamilton will espouse the cause of the seaway in no uncertain terms, so that in the event of the election of a Republican President we may likewise be assured that the project will be pushed to completion.

So the record may be clear, I include the statement made by Governor Landon in a petition to the United States Senate on March 12, 1934. Governor Landon said:

I demand the setting aside of special privilege and sectionalism in the consideration of this great national and international undertaking. In voicing that demand I speak for the homes, for the industries, for the agriculture, for the united common need of a great body of the American electorate, impelled by one great desire—that the doors of transportation opportunity shall be opened to the widest possible extent by bringing the sea base into the heart of the North American Continent.

These words are clear and unequivocal, and I know from my own contacts with the situation that they are spoken with sincerity. It is interesting to note the views of the Republican Vice-Presidential nominee on this question. In a telegram to the Senate February 12, 1934, Colonel Knox said:

The seaway is a continental betterment, designed to link the productive heart of the continent to the seven seas. By making the entire continent a more efficient, productive, and transport mechanism the seaway is bound to benefit practically every useful industry now contributing to the incomes or goods and services available to the American and Canadian peoples. All the world shared the benefits of Suez and Panama * * *. The St. Lawrence seaway, designed to link the West to blue waters, is of the order of world-helping works.

With every forward-looking influence in America back of the seaway proposition, the ratification should be accomplished early in the next session. Already we are assured support from States that were hostile before, and it is my honest judgment that if the treaty could be submitted this session there would be sufficient votes in the Senate for ratification. However, the States and localities that are interested in this seaway must keep the project before the people of the country through the medium of discussion and a continuing presentment of the seaway's merits as a navigation and power project.

NATIONAL BENEFITS

The building of this seaway with its resulting development of 1,125,000 horsepower of electrical energy will be available for distribution in New York State and in New England as well. It will bring relief from excessive and oppressive charges for domestic lighting on the farm and in the homes. Never in the history of the Republic has a project been offered that was so fruitful of benefits to the whole country. This waterway will require 7 years for completion, during which time the normal growth of traffic in the Nation will far more than compensate for any diversion from the American railroads or American port facilities. It is thoroughly national in scope. It rises above the whims and littleness of locality.

The resulting benefits of the St. Lawrence waterway with its power development will confer very material blessings upon the people of the West and Middle West. It will be a great aid to the future development of America. It will permanently confirm the title of the people of the Northeast to this great national resource. It would be the crime of the ages to stop this development. The construction of this seaway with its resulting power will mean great things for the farmer and manufacturer of the Middle West. The leadership of both parties is for it. Its consummation will be in the interests of a real nationalism. [Applause.]

LITTLE AMERICANS

Mr. McGRATH. Mr. Speaker, I was deeply impressed by the leading editorial published in the New York Times under date of June 14, 1936, entitled "Little Americans."

The editorial comments upon the platform adopted by the Republican convention at Cleveland. It is so rational and convincing that I believe the American people ought to have a further opportunity of reading it. Therefore I request that the editorial be printed in the CONGESSIONAL RECORD.

The editorial follows:

[From the New York Times, June 14, 1936]

LITTLE AMERICANS

"Little Englanders" used to be a term of reproach applied to those who had small concern for the British colonies and who did not realize the vast importance of British commercial and political interests across the channel and beyond the seas. Their narrow views and limited vision appear to have been transferred to those who wrote the Republican platform at Cleveland. Many feared or predicted in advance that it would be a "reactionary" document. In a humanitarian sense it was not. With the New Deal, it looked forward to social betterment. It also called for Federal regulation of utilities doing an interstate business, and for severe measures against private monopoly of every kind. But in an economic sense the platform was reactionary in the extreme. If carried out according to its promises, it would condemn the United States to a shrunk and stagnant existence, to a lessened instead of expanding production, and to a lower standard of living.

Such results would surely follow if the policies urged in the platform were to be followed. They are, in effect, policies of nonintercourse, whether commercial, financial, or political. The already high tariff is to be made higher. The American market is to be reserved exclusively for Americans. Every pound of beef or butter or cheese that comes from abroad into this country is to be thought

of as a wicked invader of our sacred preserve, and is hereafter to be excluded by every device of law and discrimination. The act under which Secretary Hull has negotiated reciprocal trade treaties is to be repealed forthwith, although for many years reciprocity in trade has been a good Republican doctrine enshrined and lauded in many platforms of the party. In theory, if not in practice, this would put the Nation in the attitude of saying coldly to every other: "Do not try to send any of your goods to this country, for we shall buy nothing of you that we can possibly produce ourselves."

To pile one absurdity upon another, the Republican platform pledges itself to collect the debts owed our Treasury by foreign nations. It blames the Democratic administration for having made no serious effort to do this. But what could a Republican administration do? It would have set up a system by which our debtors were forbidden to pay us anything, even on account, in the only way possible. There has recently been some faint evidence in France and England of the desire to open negotiations with the United States regarding the debt settlement. This was generally traced to the better feeling and to the prospect of more normal commercial relations, created by the intelligent and persistent efforts of Secretary Hull to start international trade flowing again, if only at first on a small scale. But now the Republicans would wipe all this out; at the same time that they would brand our debtors as shameless delinquents unless they did the impossible thing of paying up at once. This is high protection and inflated nationalism with a touch of midsummer madness upon them.

The Republican platform does not appreciate the distinction between being self-governed and self-contained. Of course, we make our own laws and allow no other nation to dictate a policy to us. But this does not mean that we can stand alone on the earth as if no others existed and as if we could maintain ourselves in comfort and happiness though completely isolated. We cannot forget what the industrial revolution has meant for the world. We cannot overlook the immense expansion of our capacities for production and for manufacturing, far beyond the consuming power of our own people. Unless we can enter into trading agreements with foreign nations and find an outlet for our varied surpluses in markets abroad we shall inevitably find ourselves shut into a cramped country, fit perhaps for the residence of little Americans, but wholly unlike the United States with a great and growing world trade which we were rapidly becoming a few years ago.

It is in keeping with this proposed policy of commercial and industrial aloofness that the Republican platform turns its back on international cooperation. Not content with banning the League of Nations, it declared against our adherence to the World Court, although this has been recommended by three Republican Presidents and once voted, with reservations, by a Republican Senate. The whole plan and picture of the platform builders is, in the matters referred to, not merely provincial but parochial. It is out of touch with realities. It ignores the past and shuts its eyes to the future. In a word, it is an example of the way in which great empires may be weakened and brought low by little minds.

ANNIVERSARY OF THE SINKING OF U. S. S. "PRESIDENT LINCOLN", MAY 31, 1918

Mr. DORSEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address which I delivered before the President Lincoln Club at New York on May 30, 1936:

I have the privilege of being able to address you as fellow members because 1 year ago you honored me with the distinction of being your first and only honorary member. In the truest sense of the word yours is a fraternal organization. The reason secret societies hold initiation ceremonies is that they seek to weld a stronger bond about their members through a common experience—riding the goat or some such thing. The psychology is plain—a mutual experience brings men together. But a lodge initiation is a synthetic common experience. You men who survived the sinking of the *President Lincoln* had the real thing. And no wonder you meet annually for your tie was a common experience on the broad Atlantic that was harrowing.

When the *President Lincoln* was torpedoed by the German submarine *U–90* on that fateful May 31, 1918—the experiences which were your common lot served to weld you together in a bond of friendship and comradeship that has no parallel in any organization coming out of the World War and identified with naval service. The discipline, behavior, spirit, and action of the men who went through that trying ordeal were not based solely upon individual initiative and recognition of responsibility—when your ship was sunk. Rather, it was the result of the careful preparation and foresight and planning of your commanding officer—Captain Foote.

Knowing Captain Foote as I do, I can well appreciate the meaning of the citation which was given him when he was awarded the Navy's Distinguished Service Medal. These words of commendation read: "The conduct and bearing of Commander Foote under the trying conditions of the disaster, and his handling of the situation were in accord with the best traditions of the naval service."

I can well appreciate the love and respect that you have for the man who commanded you while serving on the *President Lincoln*. It is similar to the opinion held by all with whom he served. His remarkable record in the Navy—which stands out as one of the most brilliant in that service—qualifies him for better than that which he has received at the hands of the Navy Department. He has suffered injuries on four different occasions—in line of duty—these culminating in the sinking of the *President Lincoln* have been the bar which has prevented him from advancing to the grade of rear admiral. The honor that was due him was recognized by the Congress of the United States during the present session and both House and Senate passed unanimously the bill I had the privilege of introducing for his promotion. But unfortunately, the Navy Department—under the guise of protecting its sacred precedents—made sure it would not become a law by recommending a Presidential veto.

He is with you here tonight both as honored guest and comrade. Yours is a reunion that will further cement the ties of friendship and likewise pay trbute to your comrades who have passed to the great beyond. So it is particularly fitting that this gathering should take place on Memorial Day. One of the most beautiful lines from Lincoln's Gettysburg Address is the one which says "That from these honored dead we shall take increased devotion." There are lessons in life and there can be greater teachings in death. Men die in bed and leave honored memories but when men who are not mercenary soldiers die on the battlefield for a democracy such as ours it is usually because of some cherished principle. The honoring of your comrades today may well bring to mind the ideals that were theirs and which should be ours. If democracy is as dear to us as it was to them let us face the fact that there was never a time in our history when it was more threatened. Since the war we have witnessed the type of autocracy which aims at world conquest and which pursues underground methods of attaining its ends. It violates every governmental precept we hold dear for it advocates bullets rather than ballots to win its way. It urges revolution instead of evolution to bring about change. It has succeeded only too well. Eternal vigilance will be the price we must pay for our continued liberties.

The kind of government they would foist upon us is at the opposite pole from our type of democracy—for which men have died. Yet we must realize that we are living in an ever-changing world. While our concept of democracy and its principles must be maintained—to perpetuate it we must be prepared to meet changing economic conditions—by evolutionary and not revolutionary methods. Legislative enactments and the interpretation of our basic law must be made in the light of such changed conditions if our democracy is to survive.

America is a peace-loving nation and at no time was war in greater disfavor than now. That is a good sign if we bring reason and balance to the idea. We have learned past lessons in a forceful way. There are crosses—row on row—which bear mute testimony to the price we paid in human sacrifice. We had our generosity returned in debt repudiation. We have been dubbed "Uncle Shylock" by nations that should be everlastingly thankful to us. So let us put it plainly that the only kind of a war in which we will ever engage is one of defense—where we repel the invader from our shores. We want none of the conditions that lead to war. We demand that our munition makers work at an ordinary profit and that industry be conscripted the same as manpower. If the old destructive fire is rekindled in Europe—we will tell our nationals that they embark on the ships of belligerents at their own risk. We want no part of a Europe at war.

If we could speak to the valiant dead today—we would give an account of our stewardship and a report on world conditions. We would say: "This world was not made safe for democracy—and the war which took your life was not a war to end war. We are working toward a plan of taking the profits out of war so that bankers and munition manufacturers cannot adroitly draw us into conflict. We are through with expeditionary forces and will never again wage any but a defensive war. We will not resort to the old practice of training our boys at the last minute as we did with you. Our problem has changed since you were walking decks or doing squads right with us.

No; the world was not made safe for democracy, Buddy. In fact, our democracy must be jealously guarded, for there are forces afield which would destroy it. These are distressed times—such as you never knew. But America is pulling out from the depths and our form of democracy is proving flexible enough to stand the strain. The old story is repeating itself in Europe, but we are wiser than we were in 1917.

We honor you today—and on all days—and you did not pass this way in vain. Your example is worth a lot. You may have thought you were dying to make the world safe for democracy, but we know we are fighting to preserve it right now. Yet there are those among us today, Buddy, who are still thinking in terms of yesteryear. They speak in platitudes of constitutional guaranties and individual liberty—high-sounding phrases. They would face the problem of 1936 with the solution of 1900. By their blindness to the obvious and apparent things—by their unalterable opposition to progressive change—they are breeding radicalism among a people who are seeking economic freedom. But at this minute, they are a minority among us and even they will be compelled to see the light. For the torch which you have thrown to us shall brighten the path to security and happiness.

In a short while—as time is counted—you will be joined by the old outfit and we'll have a full company formation with regular bugle calls. Then another generation will be paying the floral tributes and firing the volleys over the graves—as was so proudly done by us today. And meanwhile the democratic ideals of America—so jealously guarded, so nobly upheld by you when you gave your life—will live on under the protection of those who follow us.

NEW DEAL POLICIES HAVE DESTROYED EXPORT MARKETS FOR COTTON

Mr. HOPE. Mr. Speaker, Mr. Chester C. Davis, former Administrator of the Agricultural Adjustment Act, in a speech at Memphis, Tenn., on June 17 emphasized the importance of foreign markets for American agriculture. With that idea most Americans will agree. Mr. Davis is particularly interested in foreign outlets for cotton, but seems to be quite critical of some of the methods which have been suggested for securing these outlets. In view of the fact that our loss of foreign markets for cotton is due almost entirely to the policies which have been followed by the administration of which Mr. Davis has been an important part, it would seem that he is in a poor position to criticize the proposals of others.

Mr. Davis' speech is more important from the standpoint of what he left out than from what he said. As might be expected, he said nothing critical of administration policies and conspicuously failed to point out the extent to which these policies have resulted in the loss of cotton markets abroad. He failed to tell the farmers of the South that growers in other lands increased their production of cotton by amounts greater than our restrictions. He omitted mention of the shifts of spinners abroad to foreign growths and the drastic decline of cotton exports from this country during the operations of the compulsory restriction program.

It is well worth while to examine the situation in some detail. America produced 13,001,000 bales of cotton the year preceding the introduction of the disastrous compulsory program (1932–33). The year just closing, the last of the restricted years (1935–36), produced 10,635,000 bales. This reduction of 2,366,000 bales was accomplished, in large part, by the forced reduction of some 14,500,000 acres planted to cotton. While this country was accomplishing this feat, what was happening to cotton growing abroad? Cotton production in other countries increased from 10,937,000 to 15,365,000 bales during the past 4 years. During this period production in the United States dropped from 54 to 41 percent of the world's total. World supplies were reduced during the same 4 years by only 1,268,000 bales.

In 1932–33 exports of American cotton amounted to 8,419,000 bales. Last year (1934–35) it had dropped to 4,799,000 bales. It seems clear that the most effective phase of the cotton-control program was to encourage cotton growing in foreign countries, and to turn over our cotton markets abroad to competitors in other lands.

Mr. Davis also failed to say anything concerning another New Deal policy which has prevented normal cotton exports. I refer to the matter of making cotton loans direct to growers on a basis higher than world prices. This not only resulted in the accumulation of some 4,500,000 bales of cotton by the Government, but, because it established a price level above world prices, foreign buyers were driven to other countries for their supplies. For the same reason our exports of cotton goods were curtailed. In addition, at current prices, the Government has about $45,000,000 more in this cotton than it can get out of it and is faced with the problem of disposing of its stocks without injuriously affecting the normal market.

There may be some question as to the best method for regaining our foreign markets for agriculture. Surely, however, in view of the record, there can be no doubt as to what brought about the present deplorable situation and no amount of discussion or explanation can place the blame elsewhere than directly on the doorstep of the New Deal.

WORK RELIEF AND PUBLIC WORKS ACTIVITIES IN WESTERN NEW YORK

Mr. BEITER. Mr. Speaker, I believe the governmental activities carried on to alleviate undue suffering and morale-breaking inactivity during the depression is one of the major accomplishments of this administration. This work has assumed stupendous proportions. It has accomplished its purpose of easing the burden of many people who have been unemployed through no fault of their own, people who have been caught in the whirlpool of a major economic catastrophe. It has eliminated the enlargement of un-American parties and demonstrations which certainly would have resulted in strife, bloodshed, and chaotic civil disturbances. I believe that a review of the governmental activities in my district, treating specifically those activities undertaken by the Government to cope with these conditions will be of interest to many in Buffalo and Erie County, N. Y.

In my remarks before the House of Representatives on Monday, June 8, 1936, I pointed out that governmental activities resulted in a 50-percent improvement in business in western New York. This discussed in detail harbor improvements at Buffalo and along the Niagara River from Buffalo to Niagara Falls; the stimulating effect of governmental contracts in the Buffalo aircraft industries; the extension work of the United States Department of Agriculture; Federal aid for vocational education; Reconstruction Finance Corporation aid to banks, trust, loan, and mortgage companies; Civilian Conservation Corps activities, and many other governmental departments and agencies directly affecting industry, individuals, and local governments in the Forty-first District of New York. A detailed discussion of relief agencies, however, was left for treatment in a later remark. Mr. Speaker, the following is a discussion of that important subject.

UNEMPLOYMENT SITUATION

In 1933 personal and industrial relief on a national scale was practically an unexplored field. The country was economically ill to say the least. A stimulant to industry had to be found and direct and indirect work relief granted. A survey of the economic forces of the country immediately made clear that direct construction work and the stimulation of construction industry was an ideal means for proper relief distribution.

The average annual expenditure for construction during the years 1926 to 1933 was $8,894,875,000.

In 1928, $12,000,000,000 was expended for construction. This reduced to approximately $11,000,000,000 in 1929 and then collapsed to a little over $3,000,000,000 in 1933. This abnormal fluctuation, with its accompanying disturbances in other industries, was a major factor contributing to unemployment. Further, since the ramifications of the construction industry are so numerous and important and because of the direct and indirect employment furnished, contract construction and work relief was determined upon as the proper means of employment stimulation. The business and social activities of our country are mutually interdependent, and all had to be stimulated in proper proportion to create a balanced economic life and recovery. In addition to the direct employment furnished to those on relief rolls a further employment and stimulation to industry would be offered through the materials used in construction. These have a widespread occurrence in nature and must go through many stages of processing and transportation, before they can actually be used in construction works.

Furthermore, in 1925 to 1933, according to figures published, approximately 122,000,000 people were normally supported by 47,000,000 gainful workers, 13,000,000 of whom were directly employed in the construction field and related producer-goods industries. Since unemployment decreases consumption and increases dependency, when 7,000,000 lost employment through the collapse of the construction industry, it has been conservatively estimated that it caused a further unemployment of another 4,000,000 people.

N. I. R. A. ACT, 1933, PASSED

As a result of these and other studies the National Industrial Recovery Act was passed in June 1933, which made possible increased contract construction work and work relief. This was to become of primary importance to the Nation and to the people of the Forty-first Congressional District. It was the first major step to relieve the chaotic condition

which existed. In my district there were thousands of unemployed persons floundering frantically and hopelessly for employment and for some respectable means of keeping their families together. Upon being elected as Representative of the Forty-first District I immediately resolved to carefully study the causes of unemployment, the effects of relief legislation, to see that the unemployed benefited by this legislation, and to do all in my power to see that as many permanent works as possible resulted from the governmental expenditures. A complete story of the far-flung achievements throughout the United States would fill countless volumes; even the accomplishments in western New York would fill many books. Consequently it is important to but briefly summarize the activities.

The following table lists the work projects of the Civil Works Administration and Emergency Relief Bureau from November 20, 1933, to October 30, 1935. This shows the amount expended for direct labor, materials, and equipment for the construction of desirable public works of a beneficial nature. It lists the expenditures by municipalities in Erie County, N. Y., and clearly indicates how each town has benefited from the program.

Projects from Nov. 20, 1933, to Sept. 30, 1935

Town	C. W. A.	E. R. B.	Materials	Equipment	Total expended	Local contribution
Lancaster [1]	$60,808.04	$93,192.79	$3,433.67	$4,838.32	$162,272.82	$5,495.27

Grand total (omitting amounts for Buffalo, Forty-first District, which is included in Buffalo total)	5,385,272.62	14,631,732.49	1,995,725.78	669,167.88	22,681,898.77	

[1] Towns located within Forty-first Congressional District.

NOTE.—C. W. A. projects are financed 100 percent by the Federal Government; E. R. B. projects, including materials and equipment, are financed 75 percent by the State and 25 percent by the county. County and State projects, such as parks, etc., are not included in above town figures.

At the same time that the C. W. A. and E. R. B. were in operation the Federal Emergency Administration of Public Works had been created and was aiding local governments to finance and construct the heavier type of public works. These projects included highway construction, schools, sewerage systems, water works, distribution systems, wells, sewage treatment plants, office buildings, irrigation works, and other similar worth-while projects. The following table lists P. W. A. allotments to municipalities within Erie County:

Federal Emergency Administration of Public Works allotments made from National Industrial Recovery Act—grants equal 30 percent of total cost

Location	Type of project	Allotment approved	Type of allotment	Total cost
Erie County [1]	Highway	$1,259,800	Loan and grant	$1,259,800
Buffalo	High school, Kensington	334,500	Grant	1,115,000
Do. [1]	Storm sewer	1,148,370	Loan and grant	1,148,370
Do. [1]	School no. 37	782,000	do	782,000
Holland	Water works	79,000	do	79,000
Hamburg	Wells	56,000	do	56,000
Tonawanda	Storm sewer	77,000	do	77,000
Hamburg	Disposal plant	57,000	do	57,000
Eden	Water works	73,000	do	73,000
Lackawanna	School addition	110,400	do	110,400
Buffalo [1]	Police station	404,000	do	404,000
Total		4,381,070		5,161,570

[1] Projects located in or partially in the Forty-first Congressional District.

Total cost of projects under N. I. R. A. equals $5,161,570.

Total cost of projects under N. I. R. A. in or partially in Forty-first Congressional District equals $3,594,170.

Total cost of project allotments equals $4,381,070.

The Emergency Relief Act of 1935 appropriated further funds for work relief and public works. Of this amount P. W. A. received $389,381,748 for further grants to maintain its stimulating effect on industry and direct and indirect employment. The following table lists the projects in Erie County carried on under this extended P. W. A. program:

Federal Emergency Administration of Public Works allotments made from Emergency Relief Act—grants equal 45 percent of total cost

Location	Type of project	Allotment approved	Type of allotment	Total cost
Gowanda	Municipal building	$26,100	Grant	$58,000
North Collins	School	83,300	do	185,000
Amherst [1]	do	263,536	Loan and grant	263,536
Tonawanda	do	181,818	do	181,818
Buffalo [1]	Sewers	15,000,000	do	15,000,000
Erie County [1]	Office building	175,000	do	175,000
Sloan [1]	Flood abatement	92,727	do	92,727
Ebenezer	School	19,485	Grant	43,300
Angola	School addition	81,000	do	180,000

Alden [1]	School addition	52,650	do	117,000
Grand Island	School	90,000	Loan and grant	90,000
Buffalo	Housing	4,500,000	Grant	4,500,000
	Total	20,884,999		21,496,077

[1] Projects located in or partially in the Forty-first Congressional District.

Total cost of projects under E. R. A. equals $21,496,077.

Total cost of projects under E. R. A. in or partially in Forty-first Congressional District equals $15,797,921.

Total cost of project allotments equals $20,884,999.

GRADE-CROSSING PROJECTS

In addition to the above heavy-type projects, approximately $1,675,000 was received for the construction of grade crossings

in Erie County from the E. R. A. of 1935. These are listed in the following table:

Railroad	Location	Amount
Lehigh Valley R. R.[1]	Route No. 1, 3.6 miles north of Buffalo.	$235,000
Erie	Route No. 523, 3 miles north of North Collins.	100,000
Do.[1]	Cemetery Rd., 1 mile east of Lancaster.	100,000
New York, Chicago & St. Louis	Cemetery Rd., ½ mile south of Angola.	120,000
Pennsylvania	do	120,000
City of Buffalo	Tifft St. and other grade crossings to be selected by the city.	1,000,000
Total		1,675,000

[1] Projects located in or partially in the Forty-first Congressional District.

WORKS PROGRESS ADMINISTRATION

At the termination of the E. R. B., the work relief load was assumed by the Federal Works Progress Administration which operated by funds appropriated from the 1935 Emergency Relief Administration. This organization has been, in addition to caring for practically all of the white-collar projects, constructing the lighter type of public works, such as the lighter sewer, water, paving sidewalk, grading, and park development projects.

The following table lists the Federal Works Progress Administration grants by towns and cities in Erie County and the sponsors' contribution for those projects.

Summary of approved Works Progress Administration projects, Erie County, N. Y., July 1935 to June 1936

	Federal funds	Sponsor's contribution
Akron [1]	$16,854.85	$7,069.98
Alden [1]	326,629.21	58,698.28

Total	13,514,836.91	2,219,621.06

[1] Projects constructed within Forty-first District and general city of Buffalo projects definitely affecting Forty-first District.

A recapitulation of the above Civil Works Administration, Public Works Administration, Emergency Relief Bureau, and Works Progress Administration projects in Erie County, N. Y., show that the tremendous sum of $75,126,555 was spent in various phases of work relief.

Recapitulation of various work-relief agencies in Erie County, N. Y.

C. W. A	$5,385,272
E. R. B	17,296,626
P. W. A	26,657,647
W. P. A	25,692,802
N. Y. A	94,208
Total	75,126,555

After making the necessary deductions for material and equipment, this expenditure represents approximately 800,000 man-months of employment at an average income of $75.

Practically all of the wages were spent or reinvested in the consumer-goods field, producing and distributing goods consumed by those on work relief. It was then reinvested by the recipients of the first cash turn-over in buying, transporting, and manufacturing articles which were originally purchased, and thus the cycle continued until the ultimate amount of business transactions equalled approximately two and one-third times the original transaction, or approximately $175,000,000 of total business value. Of course, the ultimate amount was not entirely expended within the confines of Erie County since many raw materials came from other parts of the country. However, many products from within Erie County were likewise purchased through relief expenditures from other parts of the country, and in turn benefited indirectly from those expenditures. In addition to the business transactions, the indirect labor may be similarly estimated in the consumer-goods field, in manufacturing the finished article, and in preparing, shipping, growing, and mining the raw materials.

The National Youth Administration, an organization established within the Works Progress Administration, was initiated primarily for youths in relief families. It endeavors to find employment in private industry for jobless youths between the ages of 16 and 25, to provide employment for such youths at work-relief projects suited to their abilities, to provide vocational guidance for youths without specific skill, and to provide part-time employment to needy college students. This organization has been efficiently operating in Erie County and has approved $94,207.78 of projects. In this connection the sponsors of the National Youth Administration projects have contributed $11,826.25.

I pointed out on June 8 in my remarks before the House of Representatives that there was a 50-percent improvement in business in western New York. There can be no question but that the work-relief expenditures within Erie County and the Forty-first Congressional District had a great deal to do in stimulating this recovery. I am sure that anyone will readily agree, upon carefully considering the ramifications of work-relief expenditures, considering the tremendous effect of the indirect expenditures through the consumer-goods industries, of the salaries and wages received from work relief. In addition to the relief of thousands of workers and their families, in addition to the stimulating effect given

to the producer-goods industries in furnishing the building materials necessary, in addition to the increase in consumer-goods business transactions and indirect employment in the consumer-goods industries, many worth-while public improvements have been constructed to add health and wealth, not only to the community in which the project was built but to the entire Nation.

It must be remembered that when the colossal undertaking of providing relief to millions of people, and industry employing many millions more was begun, there was no existing agency to handle the problem or had any comprehensive plans for public works been formulated. No studies had been made during the previous periods when they had economic stress. Consequently it became necessary to speedily formulate agencies and to select and distribute projects through the country so they would produce the most from this effect. It was a tremendous undertaking, and those in charge of administering these agencies should be congratulated on the results of their efforts. The above outline of the work performed in Erie County demonstrates the splendid accomplishment in relieving social needs in a dignified way and in aiding industry to show a 50-percent increase in business. The result is worth while—the work has been productive.

WATERWAY DEVELOPMENT IN SOUTHWESTERN WASHINGTON AND THE FEDERAL HARBORS AND FLOOD-CONTROL PROGRAM

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD I insert an address delivered by me before the Fourteenth Annual Convention of the Northwest Rivers and Harbors Congress at Raymond, Wash., October 5, 1935, as transcribed by the official reporters of the convention.

The address is as follows:

Mr. President and gentlemen, this is indeed a very happy occasion for me, and one regret is that I was not here this morning. I tried to get here as soon as I could; I had a number of very pressing engagements this morning, receiving a call from a delegation of citizens from an adjoining county, and I wanted to go with you out on that trip that you took out in the woods, but I just got in on the end of it to meet you and greet you as you returned back into Raymond. I have very pleasant recollections of our meeting in Seattle last year, and you may recall that in my remarks at that time I predicted that we would pass in Congress an omnibus rivers and harbors bill in this last session of Congress. I am very happy to be able to report, as you are fully aware, that such a measure was passed, and it is the first omnibus rivers and harbors bill passed by Congress in 5 years, and personally I think the best rivers and harbors bill ever passed, because it contains more items and includes more projects for the State of Washington and southwest Washington—and I believe this also applies to Oregon—than any other rivers and harbors bill ever passed by Congress, so I think it is a pretty good bill, and I think you will agree with me. There are nine projects in that bill for southwest Washington, consisting of improvements in existing projects, modifications of projects, and some entirely new projects, and in addition to that contains four items for surveys and preliminary examinations for brand new projects which are contemplated. The subject which I intended to speak upon was waterway development, and I am very sorry I was not here this morning when our Chief of Army Engineers, Gen. E. M. Markham, was here, as I would like to have welcomed him to our district and our part of the country. It has been my privilege to become quite well acquainted with him and cooperate with him in the National Capital in the last 3 years, during which time I have served on the Rivers and Harbors Committee.

We have always been fortunate in having in his position engineers and Army officers of the highest caliber, and General Markham is certainly a worthy successor to the able men who have preceded him in that high position, and it has fallen to his lot to be in that position during a period when there is more rivers and harbor work being prosecuted and more funds allocated, and naturally has a greater responsibility to discharge than during any previous period of our history. I think, unless I am mistaken, that including the funds which will be allocated under the W. P. A. that the aggregate amount for rivers and harbor work which will be disbursed, including what has already been disbursed in the past 2 years, will amount to considerably in excess of over half a billion dollars, closer probably to $600,000,000, when all these projects are carried out in the next fiscal year, and this is by far the greatest amount that has ever been expended in the same period of time.

The jurisdiction of the War Department as a result of legislation by Congress over rivers and harbors in our country goes back over 100 years to the year 1824, when the first legislation was passed by Congress. The United States Army Engineers as an organization were organized by the Continental Congress in 1776, and they were permanently established by act of Congress in 1789, so it is one of the very oldest branches of our Government, and of all of the projects which have been carried out under the supervision of the United States Army Engineers there has never been a breath of scandal in connection with a single project.

The Panama Canal was built under the supervision of the United States Army Engineers. They built the Washington Monument, the Lincoln Memorial, the Memorial Bridge across the Potomac River, and the great hydroelectric projects that we now have in our country call for the greatest engineers of all the ages, so that we men who are interested in river and harbor development feel a very keen and very personal interest in that branch of our Government, and while there has never been any real danger of any encroachment upon the jurisdiction of the United States Army Engineers, it has been whispered, and sometimes it has become even more than that in recent years, that surreptitious attempts have undoubtedly been made to divest the United States Army Engineers of some of their jurisdiction over the improvement of waterways in this country, and transfer that to private engineers. I want to say to you the Rivers and Harbors House Committee and to a lesser degree the Senate Commerce Committee have resisted to the utmost every attempt of that character that has been made, and if we had our way entirely, as we hope to have in the future, we would not have these funds allocated by any other agency of the Federal Government, as is now being done by the W. P. A., and previously by the P. W. A., because in the past, as you know, the expenditures have been authorized by Congress, based upon reports and recommendations of the United States Army Engineers, and then Congress has appropriated the money. This is the procedure we have followed during all the years of the past, and which has proved so efficient and so economical and so desirable from every standpoint, and I hope that conditions in our country will continue to improve as they are improving daily, with business conditions getting better and the improvement in agriculture and in industry, that it will be possible to revert back to the procedure and the method which we have pursued all these years, so that the matter will be left entirely in the hands of the United States Army Engineers and the Congress, where the Constitution of the United States placed it originally, because in article 8 of the Constitution, section 3, Congress is given jurisdiction over the waterways of our country, to regulate interstate commerce, commerce between the States as well as commerce between the nations, foreign commerce, and it is my feeling in the matter as it is that of a majority of the Members of Congress, and I believe the American people, that authority should not be delegated to any other agency or creature of law we have in this country, because the record which has been made by the United States Army Engineers and Congress, dealing with river and harbor projects over the century, abundantly prove the wisdom of the method pursued all these years.

I believe that an organization such as the Northwest Rivers and Harbors—and we are taking it up in the National Rivers and Harbors Congress—should make it our duty to enlighten the people, and particularly our good friends in the rural regions, in the agricultural districts, bearing in mind one-third of the population of our country are found upon farms or dependent directly or indirectly upon those who live upon the farms of this country, the importance of river and harbor improvements, because there is apparent here and there, cropping out not infrequently, a lack of understanding and appreciation on the part of that large element of the population of the economic necessity and the advantages which accrue to the entire community from river and harbor development. I think you gentlemen have discerned this, for it is undoubtedly a condition which exists throughout the country, and we should conduct a campaign of education so that our friends will understand that low-cost water transportation, which results from river and harbor development, is a benefit to the entire community; it is a benefit not only to the manufacturer, not only to the businessman, but it is a benefit to the farmer; that he is one of the principal beneficiaries, and also that every article that is used in our homes, everything that enters into the daily life of the American citizen, is affected and the cost of it is affected by low-cost water transportation, and there is hardly anything that we use every day for which we would not be required to pay a higher price if it were not for the lower cost of water transportation which has resulted from the development of our rivers and harbors and the commerce that is borne by the waterways of the United States. I think we can go a step further and point out to the community that as a general proposition, with very few exceptions, river and harbor development is not inimical and is not in conflict at all with railroad transportation; and we could cite cases by the hundreds of community after community in every section of the United States where railroad shipments have increased as a result of the development of ports in this country, which have acted really in the final analysis as a feeder for the railroad and development of business, new business, new commerce, and new trade, some of which has been carried over the water but which has resulted in such development and extension of business that the railroads have benefited.

I think that the immediate future of waterway development in the country is very bright. I think that the President of the United States today is one of the best friends of waterway development that we ever have had in the White House. It has been my privilege to go to the White House a number of times and discuss these matters with him, as a member of the House Rivers and Harbors Committee, and on one occasion individually in regard to projects in my own congressional district and discussed with him the Grays Harbor jetty, the biggest jetty project in the course of construction in the United States west of the Mississippi River, a

project which will cost $4,565,000, and which General Markham has gone down to inspect this afternoon. President Roosevelt, you might say, is waterway-minded; he is friendly to our projects. We have had a real fight down in Washington, D. C., for the last 2 or 3 years, and we never in the world would have gotten this large allocation of funds for river and harbor work had it not been for the fight we put up, because we had to overcome a great deal of prejudice with certain people occupying high positions with the Federal Government, who contended that river and harbor work does not employ a sufficient percentage of labor, that the percentage is less in the case of river and harbor work than in the case of other types of public construction and public work, and therefore they have opposed liberal allocation of funds to river and harbor projects. In the President's Cabinet, Mme. Frances Perkins, Secretary of Labor, in the beginning was very bitterly opposed to all river and harbor work as a part of the public-works program, and contended that there was very little labor employed, and we had to talk to her and a lot of other officials in Washington to correct the false impressions they had. I wish I had with me a memoranda we had prepared in the United States Army Engineers Office, which establishes conclusively that directly and indirectly, there is a higher percentage of the money expended that goes to labor in the case of river and harbor work than even in the case of road construction or any other public work.

We had statistics, surveys, and analyses of costs made, and we were able to conclusively prove our point. That is now past history but I just want to mention it so that you will realize that in river and harbor development, to paraphrase what Wendell Phillips said: "Eternal vigilance is not only the price of liberty but is the price of river and harbor work", that is, you have to be vigilant because there are some people in our country who do not understand the situation and subject as well as we do and there are others who for one reason or another are prejudiced.

In our own particular part of the country we are getting more recognition now than we have received in the past. Of course the eyes of the country are fixed upon this section on account of the two mammoth projects being carried out by the Federal Government, the Grand Coulee project and the Bonneville project in our own State of Washington, and as a result we are receiving more recognition and more consideration. The location of these two projects out here led last year to the establishment of a new engineering division office in this part of the country. We had nine division engineers in the United States for many years, now we have 10, as a new office was created at Portland and Col. T. M. Robbins was transferred from San Francisco and placed at Portland, so we have a division engineer right here in our own midst, which certainly is to our advantage and interest. We have 42 district engineers in the United States, we have only one Chief of the United States Army Engineers. This is the wonderful organization I referred to in my opening remarks, and I think we ought to—as an organization—be alert so that their jurisdiction is never encroached upon. We have as fine a body of civil engineers in this country as there is anywhere in the world, in private practice, but as a lawyer I am frank to admit that the present organization, the one which we have had all these years is as nigh ideal as it could be, because it is in essence a judicial tribunal.

The treatment these projects receive from their very inception until the completion of the projects is quasi judicial all the way through. The community initiates the project; it is talked up in the community; some important industry or the citizens themselves see the possibilities, the advantages, that would accrue; they agitate the project; then their Representative in Congress is called upon and introduces a resolution. It requires a resolution of a Member of Congress to initiate any river or harbor project and its adoption by the Committee on Rivers and Harbors. Then it is referred to the district engineer; he holds his hearings; the public is invited; all those who want to be heard are heard. It is in the nature of a judicial hearing. The district engineer, after considering the testimony at that hearing, makes recommendations and sends it to the division engineer who reviews it; it goes back to Washington to the United States Army Engineers, and there you have seven men from various parts of the United States, who have no local interest whatever; they are not affected by any local interest; they are far removed geographically and in every way from the project under consideration; and they consider it back there just like the United States Supreme Court considers an appeal to that high tribunal. They are absolutely divorced from politics; they are nonpolitical and nonpartisan; and these men are the honor students of West Point, the very pick, the very cream of all the Army officers of the United States, and after having graduated as honor students from that institution they take postgraduate work at the College of Engineers, a course in the application of the knowledge which they have received in West Point, and they are the best trained and qualified men to deal with these problems that could possibly be selected, and they could not be selected by any other method; and that is why we are receiving and have received in the past the wonderful results which we have from our river and harbor projects.

Flood control is becoming a matter of greater importance than it has been in the past on account of the floods we have been having all over the United States and for many years the policy of the Government in regard to flood-control work has been restricted to the Mississippi River and the Sacramento River in California. It is only in the last few years we have had these disastrous floods in every part of the United States that we had to call on the Federal Government, because the cities and counties and municipalities on account of the economic emergency existing in our country did not have the funds and the taxpayers have not been able to pay taxes; we have had delinquent taxes in every district in the United States, and the people had to go to the United States Government as the only agency powerful enough and ready and rich enough and could raise the revenue to give to the local communities. Some communities have fared better than others perhaps, due to the fact they have prepared their projects and then kept down, under the present program, the man-year labor cost. It was the intention of the President and Congress to take this last $4,000,000,000 and if it could be done, give employment to three and one-half million men on the relief rolls and terminate relief in this country and provide gainful employment to take its place at a reduced wage. That was done; that is why the man-year labor cost had to be kept low on these projects; these flood-control projects I am talking about now, because the labor cost is much higher on river and harbor projects, and we placed the limitation at $1,140 on some projects and some less than that in order to make the money reach as far as possible, so we could transfer if possible all of those on relief to employment. That is why some of these flood projects have been rejected, labor estimates were too high. Also in some instances they asked the Government to go in and dike private property. I have talked to the Army Engineers in Washington and they stated that if they had to dike to protect all the private property in the United States it would cost $20,000,000,000. It simply cannot be done everywhere in the United States. It is being done in some places but in nearly every community the local communities are required to make a contribution.

On the way home from Washington, after adjournment, I stopped in Chattanooga, Tenn. They have a flood-control project there, and that is in Speaker Byrns' own State, so certainly they should not be treated much worse than the rest of the country, and the local communities there are contributing 55 percent and the Federal Government 45 percent. I was in Texas, not far from Vice President Garner's old home, Uvalde, and in Texas they have a project along the Brazos River, a flood-control project, and the local communities there are paying one-half the cost. When I mentioned to a number of Congressmen from States where they have been having floods longer than we have, the fact that our engineers in our part of the country—I am speaking now particularly of the districts along the Columbia River, the communities along the Columbia, that Colonel Robbins' office and the office of Major Fox, in Portland, the district and division engineers, had rendered favorable recommendations in regard to flood-control projects along the Columbia and Cowlitz Rivers, diking projects in Oregon and Washington, and asked the communities to pay one-half the cost, I had some of those Congressmen say to me, "Smith, how do you folks do that out there, we have only been able to get the Government to pay 25 percent of the cost of our projects." With the aid we get coming from the State arising out of the State program, it would mean if we took advantage of the generosity of the Federal Government and accepted the 50-percent grant from the Federal Government, we might get 25 percent from the State set-up and the taxpayers only pay 25 percent out of their own pocket, and that is the least they pay in any part of the United States. We have had more work and are having today more work of that type carried on in this part of the country than we ever had before. In the past we were sort of an orphan out in this part of the United States.

The greatest activity has been in the last 3 or 4 years, and therefore I think we have reason to not exactly be jubilant, but at least we can rejoice on account of the progress that has been made; and, speaking for the administration and as one of the administration at Washington, let us remember that this money is being expended right here in the United States; some people talk as though this money appropriated and spent in this country has been spent in China or somewhere in South America or Australia; why, the money has been spent in the United States, and it must be here some place, some of the citizens of the United States must have it, it is all in the pockets of the American people, and it is all in the banking institutions of this country, every dollar that has been spent, and for every dollar spent for relief, according to the Government records, $10 have been spent to benefit business and industry and agriculture and the laborers and farmers and the businessmen of our country. The obligations of the National Government are being disposed of at the lowest rate of interest in history, which is evidence of how the security is held in the estimation of investors who buy the securities, because the better the security the lower usually the rate of interest is, and the more speculative, the higher the rate of interest required by the investor, and every Government obligation is selling today at a premium; United States bonds selling all the way from 101 to 117, so that the credit of this Government has never been better than it is today. Let us remember that, those of us who are in favor of the Government spending money and improving harbors, waterways, and flood control, and developing these projects and putting armies of men to work. We are spending it with our own people and in our own country and how vastly different is it from the experience we had a few years ago when over $17,000,000,000 of money of the American people was taken out of this country and invested in worthless foreign bonds which sank down to nothing, not worth the paper they were engraved upon. South American bonds went down to one-tenth of what the people paid for them, and it is conservatively estimated that $17,000,000,000 was filched from the American

people through the bond-selling campaign, and those securities were dumped into every community in the United States by the big banks of New York City.

What were those bonds for? Some of them were for waterways in South America, building highways and public improvements in foreign countries, and did not give employment to a single laboring man in the United States or any of the money spent with storekeepers or professional men, and did not benefit any of our people at all, only a few big bond brokerage houses and banks, particularly in New York City, and the rest of the money was taken out of this country. With the policy we are pursuing, spending the money at home, we are benefiting our own people—and I ask you as hard-headed businessmen to bear that in mind, because the average man in the street is looking to you for information and I think we should be very careful to give him the right kind of information. This country is not headed for bankruptcy, and there is no need to shed a lot of crocodile tears over the money that has been spent to prevent it from going bankrupt, because the money is right here in our own country. You cannot go into a community without seeing where they have been benefited by public works, and river and harbor projects. Over a million dollars is being spent in the Third Congressional right now—in Vancouver, at the Willipa Narrows, and the Grays Harbor jetty. That is going on in every district in the United States, building schools, making grants to school districts, building roads everywhere in the country, building dock terminals, building playgrounds. We are making improvements which are of permanent value to the people, and let us not forget this fact, that all of the money that has been loaned out by the Reconstrucion Finance Corporation in the last 3 years, over 50 percent has already been paid back to the Government—which is some evidence of the recovery in business and of the wise and sane policy of the Government in making the loans.

So, gentlemen, I take a very hopeful view of the situation in general, and in regard to river and harbor projects in particular, and in regard to all other projects in the country. I think we have every reason to be optimistic, particularly we who live out in this part of the country. Let me tell you something I heard in Washington in regard to this part of the country. I heard one of the greatest pulp and paper experts declare, who has spent a lifetime in that business, that we have a sufficient supply of pulpwood and raw material in this part of the United States, in Washington and Oregon, to supply all the pulp and paper mills in the United States for the next 50 years, and he said inevitably they would move their plants out here from the East in order to save manufacturing and transportation costs. Why, we haven't even scratched the surface in this part of the country. Coming home I traveled through 22 States, through the East, the South, the Middle West, and out through the far West, and the most salubrious, the most healthful and invigorating climate in the United States is right here in the Northwest. I read a stanza the other day that appealed to me very much, and I will close by repeating it to you. I think it expresses a very fine thought and is based upon fact:

"I do not hold with the pessimist that all things are ill,
Nor with the optimist that all things are well.
All things are not ill, and all things are not well;
But all things shall be well as surely as God and the Republic live."

I thank you.

IOWA AGRICULTURE AND IOWA AGRICULTURAL FAIRS

Mr. GILCHRIST. Mr. Speaker, under leave to extend my own remarks, I submit the following address by me at the Iowa State Agricultural Convention in Des Moines, Iowa, on December 11, 1935, being introduced by President John P. Mullen in the following words:

The next topic on the program is by a man whom most of you have known for a good many years, and with whom I have been acquainted for 50 years. As you know, he was in the Legislature of the State of Iowa—both the house and the senate; he is a great friend of the State fair and of the county and district fairs of Iowa. This gentleman and Mr. Edson, of Storm Lake, were coauthors of the law which permitted us to store our corn for the purpose of borrowing money from the Government. He is also the author of the law known as the Gilchrist amendment to the constitution of the State of Iowa, which prohibited any county having more than one senator. He was instrumental in having passed legislation that is very beneficial to the dairymen of the State. He is now in Congress, and, so far as I know, his record in the National Congress is a continuation of the good work that he performed for the State of Iowa when he was in the legislature.

It is a great pleasure to me to introduce to you FRED C. GILCHRIST, Congressman from the Eighth Congressional District of Iowa.

Mr. GILCHRIST. Mr. President, delegates, and friends, I am grateful for the opportunity to address this meeting of delegates at the Iowa agricultural convention. I am glad to be here under the auspices of the Iowa State Fair Board and of you men and women who have made these expositions the foremost in the land. I appreciate the management of the State fair and of the county and district fairs which has made this success possible. I have no great or extensive knowledge of how the other States manage their fairs, but I do know a little about it, and I am convinced that the set-up by which our Iowa State, county, and district fairs are managed is the best that there is in the land, and that is why you have this excellent control of our great Iowa exposition. Such management is neither sectional nor political, nor selfish, and it is eminently successful.

Fairs and expositions, as McKinley said at Buffalo shortly before he was assassinated, are the timekeepers of progress. I wish you would again read that great oration, for you would derive renewed inspiration and help from it. It is a most excellent thing that we should dress up once in a while and get away from our own local environment and predelictions and put on our best clothes and go out on parade and see what is doing in the world among our neighbors and our frends outside. When we get on our full regalia we become conscious of ourselves, we have confidence in ourselves, we gain renewed vigor and power and become properly proud in self esteem and in knowing that we have the best men and the finest looking and most helpful women on the continent. So then we dress up our agricultural production and our livestock as well as our people and send them to the State fair each year to participate in a new celebration that marks another milestone in the course of agricultural progress.

Recently I travelled over the highways down in Virginia where there is a milestone for every mile and where markers are placed designating points of interest that you pass by on your journey. They tell you of historical events that took place in times gone by. So we should annually take account of ourselves and place markers along the highways of our agricultural progress.

In Iowa as the first thing in geological succession we should place a marker to teach us that our State was prepared by God Almighty ages and ages ago so that she now has the best soil for the production of bountiful crops on the face of the globe. There is less waste land here and a greater percentage of fertile fields and a greater proportion of tillable lands here than anywhere else in the wide wide world. Iowa was prepared geologically. She was given the greatest gift that can come from the hand of a bountiful creator. But there is no gift and there is no grant which does not carry with it a corresponding duty and a corresponding responsibility. What are you agricultural people going to do about it? Will you longer permit erosion and wasteful mining of the soil? Are you going to husband this soil? Will you make a covenant with the Lord from whom you got your inheritance that you will preserve it for your children and your children's children so that future generations may have the same blessings and benefactions that have been given to you? It is an invaluable inheritance. Many peoples and many civilizations after rising to power and prosperity have gone down in dismal and abject failure because they allowed the soil to be wasted and impoverished. There is this day no more important duty than that of preserving for future time the productiveness of our land. Abject poverty and squalor and want have come to every civilization which has failed in its responsibility to preserve the fruitfulness of the land which God had given to it. Iowa realizes her high position among the States and she must now take such steps as will guarantee the proper handling of her resources, including the soil and the forests and the water areas.

After preparing it, then in the fullness of time God disclosed and discovered it to mankind. Civilization passed another milestone when that intrepid voyager spread his sails to west-bound winds and after mutiny and soul-racking hardships landed on new shores, and the hopes of the world turned to the American Continent where only could mankind solve the problems of social justice and preserve in enduring political institutions and in religious and social life the rights of men.

Then after centuries another marker was passed when farmers turned their eyes to the western plains and a procession of hardy pioneers came treking from the East into this great fruitful domain and filled it with an industrious and God-fearing population. And wherever the covered wagon came to a rest there sprang up the sod shanty and the church and the schoolhouse and the political organization that preserves us from the bandit and despoiler, from the greed of princes and despots and gives to every man that which his industry and his foresight earns unto him.

With what purpose did these forefathers of ours come here? They were of steadfast faith, diligent in industry, and believing in justice, and fearing only God. What is justice? Why, justice is simply a thing which the righteous pray for and the wicked fear. These forefathers did not come here with the expectation that they would be on the receiving end of a philanthropy which would preserve them in idleness from economic want; they did not expect to be carried to the skies on flowery beds of ease; they wanted only a chance to work and to earn and to live in and on the great plains of a fertile valley. They wanted a place to work rather than a dole. Such is the philosophy that these men and women have handed down as a heritage to you and to me, and that philosophy should be carved in enduring and perpetual bronze as we progress along our historical and economic highways.

In that early day it was an old agriculture, it was a different agriculture. The pioneer had a self-sufficient and self-contained agriculture which is represented by spinning wheels and the grist mill, the cradle and the flail. I have seen the spinning wheel in my grandmother's home. I have seen her running tallow candles. I have seen my grandfather mold leaden bullets and ram them down the barrel of his old muzzle-loading rifle of

Revolutionary War days that used to hang over the kitchen door. Agriculture then was a self-sufficient and self-contained business.

There was a family life in connection with that old agriculture which was a happy thing. What has become of that old family life? I fear that much of it has been lost. I fear that in our cities and towns there remains little of that intimate companionship and of that splendid dependence which each member of the family had in the other and of that old love and endearing respect which marked that old mode of life upon our farms. I call this to your attention as another thing which we should mark down and bring back to our farm life. Some of that mode of living was shown by the girls here this morning who gave us the 4-H demonstration. Where has gone that beautiful family life of the old pioneer days? I wish we could get some of the inspiration that such a remembrance might bring into the hurly-burly of the present industrial agriculture.

The children of that time—oh, they tell us that today children are worse than they used to be; they give us statistics about crime, but is it true that children today are worse than they used to be? Is it true? If it is, then it is a most damnable indictment not of the children—not of the boys and the girls, but of present-day parents themselves. If that thing is true, then the very greatest work that you have in the State fair and in your county fairs is the work that was demonstrated here this morning—the work of the 4-H clubs, the calf club, the baby-beef club, and club activities having to do with home improvement, which you folks are engaged in promoting in your counties and in the State at large. There is nothing that equals that in my estimation. There is no activity of the fairs that equals that, and you ought to carry it forward with enthusiasm and pride.

Has the effort to find a place for youth succeeded? Were you not thrilled with pride last night when Mr. Yoder was introduced? Imagine, here was a farm youth who developed a baby beef which won the grand championship at the International Stock Show against all comers. But when you and I were boys the public didn't take much interest in us. If we entertained ourselves by playing a little baseball, for instance, we had to provide our own ball and whittle out a bat from a 2-by-4 scantling.

But there was an institution that flourished in my boyhood days that had some constructive value with the rising generation down in eastern Iowa. I don't know whether it has gone entirely out of vogue or not; perhaps it ought to be out of vogue. Perhaps we ought to pay more attention to the things that have been spoken of here this morning in order to interest our boys and girls; but if there is more crime in this country now than there used to be, it is perhaps because that old institution has not met the favor lately that it formerly had—namely, the old woodshed. [Laughter.] I remember the influence of the old woodshed! It was a place where retributive justice was oftentimes laid with heavy hand upon that part of a boy's anatomy which an All-Wise Providence has in such cases made and provided. [Laughter.] It was an institution corrective in nature, but it was not an institution which halfway equals the present one of interesting our young boys and our young girls in the objectives of the 4-H clubs and other varieties of clubs and farm work. If there is one thing in your work and in the work that we have here at the State fair that will make for a better civilization, it will be this activity of the clubs.

The future welfare of this world depends upon the health, happiness, and education of our youth. To start with, health is the most important of all because without it no man can serve as he ought to serve. He cannot do good work in a factory which is out of repair. He himself will be leaving that factory some day but so long as he is in it, he must keep it in order. Our youth must be taught the laws of health and of hygiene. It must not be allowed to contract habits which will destroy either body or soul.

I was told that down in Kansas City some years ago there was a columnist working upon the Kansas City Star. He was a talented and brilliant young man but he had the unfortunate habit of drinking too much. The manager of the paper had forgiven him seventy times seven (according to the Biblical prescription), but finally called him into the office and said: "Young man, this has gone far enough. If you get drunk once more, you will be fired." Unfortunately the day came that the tempter again seduced the young chap and he was indeed fired from the newspaper. He went back to his desk and wrote a last paragraph for his last column. It read something like this:

"If you want to employ a lawyer, you can do so easily by climbing a flight of stairs and visiting a law office.

"If you want a preacher to perform some function of baptism or marriage or burial, you can go down the street to the manse or the parsonage and it will be easy to procure that service.

"If you want to have a doctor perform some service, ring a phone and he will come to your home and minister to you.

"But every man must be his own damn fool."

Now, I submit this as a piece of philosophy that is worthwhile. Health is a thing that ought to be taught to every boy and girl, and it was a wonderful demonstration of health-training that was given to us here this morning. There is no short cut to health. It is the result of a good birth and of good living and of good training and of a wholesome and happy mode of life. You cannot swallow a pill and give yourself health. A school teacher friend of mine told me that he once had a very smart youngster in high school who was a credit to his school and to his family; and who, by the way, has since become a successful business man. Across the street from the home of this lad's mother lived another family whose daughter was also a student in the high school, but she was having great difficulty in keeping up with her class and making proper grades. One morning the mothers of these two youngsters were talking together, and the girl's mother made some complaint to the effect that her daughter wasn't getting along very well in her studies, to which the boy's mother replied: "Feed her Grapenuts, Minnie; feed her Grapenuts. We fed Johnny Grapenuts and he skipped a grade." [Laughter.] But that is not the way to get health—you cannot buy it. You must grow up with it and bring it into the lives and beings of our boys and girls as they grow up. No greater responsibility is given to you in life than of making strong, vigorous men and women of the children in the State of Iowa.

The hand is another thing that the 4-H clubs talk about—and when we think of the hand we think of labor. Agriculture is interested in labor. Labor and agriculture are concomitant. When one has prosperity the other has prosperity; when agriculture is in the dumps, labor is in the dumps. Yes, we really are our brother's keeper. If you can give jobs to the unemployed in this country, we farmers would profit from that employment without a doubt. If we could give jobs to 10,000,000 men who are now out of work, and if we should assume that they and the members of their families would eat two eggs per day, do you know what volume of eggs that would make? Why, it would make 6,666,666⅔ dozen eggs that would go upon the breakfast table tomorrow. Say, wouldn't that inspire the hens, and would not the old rooster give us a lusty crow tomorrow morning? There is nothing that is more important than to teach our boys and girls that industry—to labor with the hands and with fruitful intentions—is one of the saving graces; because, after all, labor is the thing that satisfies.

The head is another thing that is emphasized by these boys and girls' clubs—teaching the way to intellectual development. There are a great many people in this world who believe that truth can be isolated like a chemist will isolate some particular elementary substance; that you can define truth by a law, and lawmaking bodies have tried to do so. I have had some experience in lawmaking bodies. The chairman so kindly referred to that. It is well to remember that the fellows who go to your legislature and to your Congress are not more intelligent than thousands and thousands of constituents who stay at home and who are about and around us all of the time. These legislators do not hold any patent rights—they do not have any better way than others of discerning what truth really is. Certainly it cannot be defined by law. For that reason they should not try to pass a law that is designed to remedy some evil when they are ignorant of what the truth really is. The way to test truth is to put it to trial and let it go out before the world. Only by trial can it be proven whether it is in fact truth or whether it is fallacy. God has given to every man and to every woman the opportunity to discover truth. It has now become a matter of whether you want truth or whether you want untruth; whether you prefer to languish in repose or whether you are willing to be diligent.

The 4-H clubs also talk about the heart, and teach the boys and girls their duty both to God and to men. Can anything be more wonderful or important than this? And of all the arts the greatest is the art of living together in unison and happiness with our neighbors. Be tolerant; be friendly; be polite.

Therefore, when I see this great parade of children belonging to the 4-H clubs, teaching health, hand, head, and heart, I know that it is the most glorious sight that can be looked upon. It far exceeds the vision of the million dollar (or is it two million now) stock parade. There is no parade in the heavens above or in the earth below that can possibly equal in grandeur and importance and beauty this parade at your State and county fairs of the boys and girls interested in 4-H work. We have progressed happily from hula hula girls to the 4-H girls.

And so I say, the old agriculture has passed away when farms were self-contained. We have come now to a new agriculture in which the farmers are in the vortex and whirlpool of commerce and trade. We have reached another mile post. Agriculture lies at the foundation of our national life. Bread is a thing that actually has to do with world politics. It is the subject of grave concern in every capital of the world. Bread wins wars. Armies do not travel on their legs. Armies travel on their bellies. You boys who were in France know that to be true. The time has gone by when agriculture can take its position as a self-contained industry, and it follows that there must be some sort of a control or regulation in agriculture just as there has been in every other field of business or of endeavor or of enterprise. We no longer go along the old trail. Agriculture is entitled to as much consideration as other industries receive. If they are given artificial and legislative helps, then it should have equality in that regard.

Down in Washington sometime ago a committee was making an investigation of certain industries, and one of the witnesses before the committee stated that it was very important that those at the top should have prosperity. We all agree with that, because none of us get anywhere by trying to push down the folks who are in control of great enterprises. This witness went on to say that we couldn't afford to curtail the activities of certain great monopolistic trusts that were in control, because the lowly people depended upon them. Thereupon the chairman of the committee turned to him and said, "In other words, you believe in spreading a great feast for Dives, the rich man, so that Lazarus will have more of a chance to pick up the crumbs which perchance may fall from the table"; and this great master of industry and of combination who was sent to testify before and enlighten the committee replied, "Yes, Mr. Chairman, you have given a very beautiful illustration of what I mean—crumbs for Lazarus." That is an actual happening.

Now, since agriculture is not the old and self-contained agriculture; now, since agriculture is a new agriculture; and since it really is in the vortex of trade and of commerce just exactly as other industries are, it seems to me to follow that there must be some sort of assurance given to it that it will not be compelled to depend merely upon the crumbs that fall from the table of other industries and of other activities. It must have a table of its own, whereon must be spread a prosperity for every one of its workers.

I am not offering political devices or urging political arguments here. Both of the great parties recently have espoused various kinds of control measures for agriculture, and I think we are making a mistake if we do not recognize that simple truth. A Republican Congress fathered the equalization fee and the debenture plan as a method of securing premiums for agriculture. A Republican Congress passed the Agricultural Marketing Act under which a Republican administration spent $500,000,000 in an endeavor to give some measure of control and direction to agriculture. It is now a Democratic administration that has given us the A. A. A. So that I am not talking partisanship when calling attention to these things; I think there is a milestone now passed after which there is to be some kind of regulation because the farmer alone cannot regulate effectively for himself.

We have at the present time the A. A. A. It would be out of place here today for me to say a partisan word either for it or against it; but I am declaring my faith that hereafter there must be some kind of support for agriculture which will make safe and secure the industry of 6,000,000 people who labor upon the farms. I think that agriculture ought to be thoroughly divorced from the ebb and flow of the political tides that divide us. But it surely ought to have its place in the legislation of the country, just as manufacturing and banking and merchandising and other enterprises and other activities have, and that is why some of us down in Congress on both sides of the aisle have insisted upon a prosperous agriculture just as much as a prosperous industry. That is another milestone that we have passed.

We must attain equality for agriculture. The farmer must be put on a fair level with industry; but let us always remember that industry, too, must be supported. Do not get it into your minds that it is a one-sided proposition, because it is not. The standards which we set up for our agricultural people must be those which will give culture and beauty and form to their lives—not food and shelter only. The dog has food and shelter. We have here the auto now; we have the telephone; we have the radio. Why, the greatest monarchs of olden times—Cleopatra, for example—never had any equipage that was as useful or as comfortable as an old tin lizzie. I have heard farmers being criticized down east because they all ride on rubber. If there is any person on earth who is entitled to ride on rubber it is the farmer, because he has an isolated position in the world—he is out on the farm. It is not necessary for me when I am in a city to have an automobile, because I can go about in taxicabs or on street cars. It is necessary for me when I am out here on a little farm, that I happen to own, to have an automobile there.

Iowa is not yet a finished product; we have yet to put electricity into our farm homes, and that is a milestone that we will pass very soon. There are only 14 percent of the agricultural people who have electricity in their homes in the country at large. We must also have plumbing and water facilities. Only 12 percent of our rural homes have plumbing. The tin basin and the old washtub and visions of soap and Saturday night are interesting remembrances, but not especially inspiring. We must bring beauty and happiness and social security and uplifting mission to the farmer. I am an individualist; I believe in it, but it is an individualism that teaches that social activities are the activities that make us most happy and our neighbors most happy, and nothing else will. Secure beauty on the farms. Abraham Lincoln said on one occasion: "When I am gone I shall want the world to know that whenever possible I always plucked the thistle and in its stead planted a flower." Diogenes, the cynic, taught Alexander the Great, who was the greatest autocrat of ancient times. One day Diogenes said to Alexander, "Get out of my sunlight", and Alexander said, "Were I not Alexander I would want to be Diogenes." Let the sunlight in. Remember the alabaster box of ointment and that Solomon in all his glory was not arrayed as the lily. Let us have beauty and social mission on the farm.

Expositions and fairs are the timekeepers of progress. Be true to this mission. There was an ancient Greek philosopher who said, "know thyself"; and then there came a Hebrew philosopher, born in the town of Bethlehem of Judea, who taught the world a new philosophy. It was "Give thyself." And in your great activities, in your county capitals, in your State capital, as directors of these great expositions, as timekeepers of our progress, you must give yourselves to a better and happier Iowa.

MIGRATORY BIRD CONSERVATION

Mr. BOLTON. Mr. Speaker, in accordance with general permission for Members to extend their own remarks in the RECORD, I insert a radio talk which I delivered under the auspices of the Culture Club of Cleveland, Ohio, over station WJAY on June 16, 1936:

Fellow citizens, I presume that nearly everybody is interested in birds. I know that I myself have long thought them of great importance not only because of their interesting ways, their colors, and their songs, but also because of their usefulness to farmers and their recreational values. As a member of the Federal Migratory Bird Conservation Commission, as well as a member of the Special Wildlife Committee of the House of Representatives, duty also directs my attention to the problems of bird conservation, and thus in many ways I appreciate highly the invitation of the Culture Club to talk with all of you a few moments on migratory bird conservation.

Among my fellow countrymen who are listening to this broadcast today, and among our Canadian neighbors whose radios may be receiving these words, there are thousands who delight in the presence of birds that none of us can claim as anything more than regular guests. These are the migratory birds—more than 500 species and subspecies that travel from the Provinces to the States each fall and return again each spring from the States to the Provinces. Many of these species are valuable enemies of insects that destroy man's crops. Many of them are songsters providing music for which there is no standard that can measure their true value. Many have such pleasing colors and such grace of flight that the mere sight of them makes our living easier. And many of them are the favorite game of millions of sportsmen. All of these migratory species are with us in their present abundance largely because of a treaty proclaimed nearly 20 years ago, a treaty of such fundamental value to North American bird conservation that its importance cannot be called too often to the attention of the peoples who sustain it from year to year. This is the Migratory Bird Treaty between the United States and Great Britain.

Let me illustrate the importance of that document by telling you about a significant recent development in Europe. You may know that in some of the southern European countries it has been the practice among some classes to consider all birds from the point of view of the potpie on the table. As a result, large numbers of the song and insect-eating birds have been taken for food. This, of course, means a very considerable decrease in the bird populations. Well, many of them are migratory species that spend the warmer months of the year in the northern countries of Europe. In these regions the birds are valued highly, not only for their songs and their pleasing presence but also because they protect the farmers' crops by destroying insects.

So these countries are anxious to have the birds protected by law, not only in their own fields but also in the southern countries where they spend their winters. And as a result there has been some agitation in Europe for an international treaty for the protection of these useful birds.

That European situation is very interesting in this country because we already have such a treaty—the migratory-bird treaty.

The importance of this treaty is not, however, entirely in its provision of the sort of international bird protection demanded by the European peoples I have been talking about. I should say that the most important effect of our migratory-bird treaty is its grant of power to our Federal Government making possible the protection of species that are not permanent residents of any one State but transients—here today, gone tomorrow.

The history of the efforts that led up to the negotiation of the treaty can perhaps be summarized in a couple of sentences. Long and futile efforts of the various States convinced State game commissioners, sportsmen, conservationists, and others that the uniform and adequate protection of migratory birds and equalization of hunting opportunities depended upon the exercise of supervisory jurisdiction by the Federal Government. Conservationists made different attempts to provide for this jurisdiction, but none of these was entirely successful until the final one resulted in the migratory bird treaty.

This brief summary, however, may not give an adequate understanding of the development of wildlife-conservation sentiment in this country. When the white man came to this continent he found wildlife so abundant that he exhausted his vocabulary in trying to tell the story to his friends back home. There was no thought of conservation. There was no understanding of the fact that wildlife is a living resource that must perpetuate itself. Not as a husbandman harvesting the increase of nature's living creatures, but as a miner taking from an inexhaustible supply, man exploited the wildlife of the continent until species after species dwindled.

The reluctance of our ancestors to enact the needed conservation legislation is well illustrated in a declaration by a committee of our own senate here in Ohio in 1857. They said (and I quote): "The passenger pigeon needs no protection * * * the snipe, too, like the pigeon, will take care of itself, and its yearly numbers cannot be materially lessened by the gun. The wild goose does not perhaps need general protection, though if any linger here until near breeding time they should be spared." That ends the quotation.

The abundance of game in the early days and the rapidity with which certain species moved from place to place seemed to assure abundance for all time, but the great flocks of the wild pigeons, described by Wilson, in the Ohio Valley and the rafts of the ducks reported by Audubon and by Frank Forrester on the broad waters of the Atlantic coast region, are things of the past.

With the building of the railroads in the Middle West and the later introduction of cold storage, to say nothing of the increased efficiency of the modern shotgun, the already enormous killing of game for market increased to such an extent as to threaten certain species with extermination. The chief causes, then, of the decrease of game birds, in addition to market hunting, were spring shooting and the drainage of breeding and feeding grounds. Each of these dangers was met by Congress by the enactment of a special law. Spring shooting was outlawed by the Federal migratory bird law of 1913, the sale of game was prohibited under the Migratory Bird Treaty Act of 1918, and the preservation of the breeding grounds of birds was provided for by the Migratory Bird Conservation Act of 1929 and the more recent Migratory Bird Hunting Stamp Act.

At the time of the passage of the Federal migratory bird law in 1913 there had been for at least 20 years a marked decrease in waterfowl in many sections of the country, and although about 40 States had enacted laws for the protection of these birds, only a fourth of them prohibited early spring shooting. Opposition to spring shooting had made little progress, because the States were reluctant to forego privileges that they knew were being enjoyed by their neighbors.

Under the State laws there had been a noticeable tendency to permit maximum privileges, for the greatest privileges permitted by the laws of one State were naturally the privileges desired by the gunners in other States. Such laws were incapable of coping with the commercialization of migratory game birds. Ducks and geese found ready sale in the markets, and this encouraged violations of the law by unscrupulous commercial interests and by their political agents.

The States had no adequate facilities for getting scientific facts about the migratory game birds. Moreover, some of their laws were passed more to facilitate traffic in game than for the protection of the wildlife itself.

The Federal migratory bird laws and their regulations provided at once a harmony of protective measures, based on zones, times of flight, and relative abundance.

They furnished in a central organization the means for accumulating information relative to the migratory game-bird situation.

They prohibited the commercialization and the spring shooting of migratory game birds, and prohibited also such destructive methods of taking, hitherto permitted under the laws of many States, as night shooting, trapping, and snaring.

By providing equal privileges in all parts of the country, the Federal laws eliminated the dangerous effect of jealousy among gunners in different sections and developed the principle of a mutual interest in a common possession.

Moreover, the establishment of the principle of leadership in conservation of a national resource by the Federal Government was a strong incentive to increased cooperation among the several States in game-bird protection. The evident common sense, fairness, and effectiveness of the principal of Federal control in this field gradually reduced all lingering opposition.

The Federal agency that carries on the work of enforcing the migratory-bird treaty is the Bureau of Biological Survey. Fortunately this Bureau is not merely a law-enforcement agency. It is also a bureau of research, basing its recommendations for laws and regulations on the results of scientific investigations. Long before the Migratory Bird Treaty was negotiated the Biological Survey had gathered a vast amount of data on the usefulness of birds.

I may discuss briefly with you one or two of the interesting aspects of the Bureau's research work. For instance, formal extensive reports by the Biological Survey have described the food habits of more than 250 species, and brief accounts of more than 100 additional species have appeared in annual reports, yearbooks, and farmers' bulletins.

The scientists of the Biological Survey study the food habits of birds in two ways: They observe the birds in the field and they study the contents of bird stomachs in the laboratory. Both of these means of gathering information are essential. More fascinating, perhaps, is the study of stomach contents.

Believe it or not, but the Biological Survey has men who can take out of a bird stomach the left hind leg of an insect, or a piece of a wing, and tell what insect has been sustaining that bird's life. And these scientists know their plants and plant seeds also. They have extensive reference collections to compare such items with. Incidentally, they also have their own ways of knowing. For instance, one of the early workers once chewed the coating off some seeds as the first step in identifying them. They were poison-ivy seeds, and the man had a mouthful of poison for some days thereafter.

Some bird stomachs have contained as many as 65 different kinds of food. The scientists are able to take this conglomoration, sort it out, and identify each item. Then they group the items and calculate the percentage that each item represents in the total bulk. These percentages are recorded. Such records increase with the years until it becomes possible to make very definite statements about the habits of many species. The Survey has examined stomachs of some 600 different species of birds during its 50 years of reasearch. As I have just said, fairly complete laboratory studies have been made of perhaps 250 species. This has meant the examination of tens of thousands of individual stomachs. These studies of food habits make it possible for the Biological Survey to tell with authority about the usefulness of birds.

Bird banding is another interesting part of the Biological Survey's research work. Government workers and cooperators have trapped birds and decorated the captives with small aluminum leg bands. When the numbered band is in place the bird is released uninjured—but from that moment, though it doesn't know it, the bird is working for Uncle Sam and furnishing accurate information to the authorities who want to know where that duck rears its family, where it spends the winter months, by what routes it travels, and whether it uses these same routes year after year.

The method of banding is simple. The aluminum bands are stamped with the address of the Biological Survey and numbered. When a bird is banded the information is recorded in the Bureau's files. When the duck is killed, or perhaps when it is trapped again by some other bird bander, the band or the record is forwarded to the Survey and the information patiently carded. Thousands of ducks, not to mention other birds, are banded each year, and thousands of bands are returned each year, each one adding to our knowledge of the resource.

The files of the Biological Survey are, in fact, packed with believe-it-or-not stories about the flights of birds, and they are all true—matters of record. There is, for instance, the story of blue-winged teal no. 4576. This bird was banded one fall in Ontario, near Lake Scugog. That was on September 24. Less than 3 months later, on December 9, it was killed in the British West Indies, at Port of Spain, Trinidad.

Among all the species protected under the migratory-bird treaty, one group stands out vividly in our thoughts for conservation—the waterfowl. These birds are especially prized by those who seek them as objects of sport, those who value the resources as the means of an income from the sale of hunting equipment, and by those who take a pure delight in seeing these birds. Our wildfowl are also in a more precarious status today than any other species of our migratory birds. It will thus seem appropriate, I am sure, if I conclude today with a brief discussion of waterfowl conservation.

Two salient facts indicate forcibly the importance of the migratory-bird treaty in waterfowl conservation. First, it is estimated that about 80 percent of the wildfowl of North America come from the nesting regions of Canada. Second, it is likewise estimated that about 75 percent of the birds that are taken for sport are shot in the United States. The cooperation of Canada is essential in protecting the birds during the nesting season. Protection during most of the critical winter period, which includes the hunting season, is the duty of this country. Waterfowl conservation is thus truly an international responsibility.

The effectiveness of the migratory-bird treaty in the United States is most fittingly shown in the waterfowl program that is now being carried on by the Bureau of Biological Survey. This program has included an heroic effort to recover for the birds some of the immense areas that had been unwisely devoted to agriculture or other enterprises of man. For this purpose the sum of $8,500,000 was allotted the Bureau from emergency funds, and last June Congress made an appropriation of an additional $6,000,000, to remain available until expended. The sportsmen of the United States have also added sums by buying duck stamps.

Establishing refuges is, however, only part of the United States work in carrying out the terms of the migratory-bird treaty. The aspect of conservation that is perhaps of the greatest immediate importance in its application to waterfowl is the preservation of an adequate breeding stock. Wild-fowl conservation by reducing the annual kill by hunters has, therefore, been stressed as part of the restoration program. The most rigid regulations in the history of American wild fowling were adopted last year, and these restrictions were enforced with the aid of a "flying squadron" system, whereby a relatively small number of officers are used effectively by concentrations and fast movements.

And so we in the United States are doing our best to protect the migratory birds while they are in this country, to provide them with resting, feeding, and wintering areas, and to preserve an adequate breeding stock for future years. All of this work and all of the Dominion activities across the border to the north as well are based on the migratory-bird treaty, the bulwark of migratory-bird conservation on this continent.

WASHINGTON STATE AND THE NEW DEAL

Mr. WALLGREN. Mr. Speaker, during discussion of the relief appropriation bill I should like to read to the House excerpts from two newspaper editorials. The thought contained in these editorials is, I think, indicative of the great mass of public thought in my district of the State of Washington.

The following is from the Arlington Times:

All thoughtful people realize that the Federal Government cannot go on indefinitely spending such huge sums of money in providing employment, and hope the necessity may soon cease; but in the meantime we had just as well view the matter honestly and admit that without governmental effort along this line not only the unemployed but also the average businessman would be far worse off than he is today.

And the Grange News, the official organ of the Washington State Grange, is even more emphatic:

And now, right in the middle of the stream, they (big business) are all crying, "Stop the spending."

What on earth, besides spending, will keep a nation prosperous? Wasn't it the lack of spending that plunged us into the depression?

Stop the spending? Why, that is what we did in 1930, and look where it got us.

And yet today special privilege is saying that all we have to do is to go back to 1929. Well, what if we did go back? What would we have? The Brookings Institution tells us—that institution studied the question and now it testifies that 21 percent of the families in the Nation were living in 1929 on less than $1,000 a year, 42 percent below $1,500, and 71 percent below $2,500. And remember that $2,500 is regarded as the deadline below which a family cannot live decently.

And now we are nearing the end of another momentous session of Congress, another session during which a New Deal administration and a New Deal Congress have striven valiantly to enact legislation which would bring to an end a system under which so many citizens are forced to live in actual want even during most prosperous times.

During my 4 years as a Member of Congress I have seen and have worked in the inauguration of a program which raised the spirit of this Nation from the depths of despair to an even plane of confidence. During these 4 years, under the inspired leadership of President Roosevelt, the Congress has laid the foundation for recovery and real prosperity. There is no doubt but that this foundation has been well laid and well planned, although building plans have been interrupted by the majority members of the Supreme Court. However, we know and have confidence in the ability of the American people. There can be little doubt that when individual initiative is really given freedom as entrenched privilege is dislodged, the future holds much in store for the average citizen of the United States.

The world knows and recognizes the remarkable accomplishments made toward this end under President Roosevelt. Millions of unemployed have been saved from hunger and hardships. Our social and economic system has been preserved so that orderly advance can be assured in the future. The homes, the farms, and the savings of millions of people have not only been protected from foreclosure and loss but the ownership by individuals has been made more secure for the future.

Real advance toward economic security has been made. It seems fitting that the reasons for the advance be reviewed. The problems of each congressional district are the Nation's, and the well-being of the Nation depends upon the prosperity of each district.

Today the farmer, the laboring man, and the businessman readily admit that the paramount need is for general purchasing power. Purchasing power allows the free flow of goods, which in turn gives employment and provides a market for farm products.

When private employment does not furnish this purchasing power there can be but one source from which a substitute can be obtained. That source is the Federal Government. When there is a wide-spread private unemployment this agency must substitute.

The question today revolves about the speed with which private employment is taking up its slack. The American Federation of Labor gives one answer to this question. Its March 16 Survey of Business states:

> It is an inevitable, but none the less tragic, fact that industry, as it recovers, is failing to solve the problem of unemployment because it has turned its back on a basic New Deal principle (the maintenance of a balance between production and purchasing power).

In order to indicate to what extent the Federal Government is meeting this lag I should like to insert here a tabulation of the meaning of the various governmental agencies to the second district of the State of Washington. These statistics show the substantial and concrete meaning of the New Deal to my district.

Table showing Federal funds allocated and expended in Washington State and the Second Congressional District under the New Deal administration

County	Home Owners' Loan Corporation	Federal Housing Administration	Bonus certificate holders	Public works, non-Federal projects	Farm Credit Administration, all funds	Estimated cost, Works Progress Administration projects to Apr. 15, 1936	Federal Emergency Relief Administration, all funds	Civil Works Administration	Total
Snohomish	$1,615,635	$388,806	$1,719,012	$526,731	$816,525	$1,501,699	$3,387,521	$674,321	$10,630,250
Skagit	441,521	245,242	766,025	427,475	837,125	404,636	610,035	338,269	4,070,328
Whatcom	1,444,199	323,205	1,288,872	752,762	1,310,910	666,713	1,488,300	644,541	7,919,502
Clallam	307,189	214,607	445,747	149,140	263,550	259,408	437,749	177,790	2,255,180
Jefferson	21,471	151,777	181,926	68,290	68,155	26,480	146,253	206,443	870,725
Island	24,687	27,394	117,033	7,800	107,905	107,434	170,140	130,483	692,876

Total, State	39,009,472	11,836,540	34,079,306	11,918,208	19,123,145	18,499,962	47,977,844	13,593,000	96,037,455

And in addition to the funds as shown in the foregoing table, the Second Congressional District has already gained through the completed and contemplated construction of two Federal post-office buildings in Mount Vernon and in Anacortes at a cost of $75,000 and $80,000, respectively. In addition to these I have been working for the construction of a third post-office building in the district. The foregoing table does not include many other items, a part of each of which was expended directly in the district. For instance, the very successful Civilian Conservation Corps program has resulted in the expenditure of $28,848,631 in the State of Washington. Federal highway funds allocated to the State, through this fiscal year, total $17,293,438. The social-security program, although just getting under way, has paid the State $1,216,208 for payment of old-age pensions and for assistance to the blind and for helping indigent children and mothers. Reconstruction Finance Corporation loans, made in the State to assist various industries, total $41,524,797.

FLOOD CONTROL STARTED

Four years ago flood-control needs of the Second Congressional District had not been mentioned in the House of Representatives. Today more than $5,000,000 has been allocated by the Federal Government for work on many rivers and streams in Snohomish, Skagit, Whatcom, Clallam, King, and Jefferson Counties.

For years the streams in that district have been stealing valuable land resources and destroying crops. During my first year in Congress I pushed through several survey bills. I continued the fight in the Seventy-fourth Congress. In 1934, I was one of a small group of Senators and Representatives who presented the Nation's flood-control needs to President Roosevelt. As I reported to the House later, "We urged upon him the necessity of a national plan that the loss of natural resources be stopped or curtailed."

With the inauguration of the Works Progress Administration a definite flood-control program start was made. Mr. Hopkins, W. P. A. Administrator, was at first doubtful as to the efficiency of a flood-control program in Washington State as a means for giving relief employment. But after several conferences he ordered the Washington State administrator to prepare a list of flood-control projects. I then won the cooperation of the War Department in pushing those projects so needed.

In addition to W. P. A. funds, the continuous preparatory work made it possible for the district to have included in the omnibus flood bill projects on four rivers—Nooksack, Snohomish, Skagit, and Stillaguamish. The Senate reduced this appropriation to $3,511,100 for the Skagit and Stillaguamish Rivers.

Flood-control fund allocations to the various sections were: Whatcom, $257,656; Skagit, $3,508,200; Snohomish, $1,223,000; Clallam, $67,950; and Jefferson, $79,600.

SHINGLE INDUSTRY AIDED

During the consideration of the reciprocal-trade agreement with Canada many people in the lumber district feared that our lumber market would be thrown wide open to Canadian imports. Because of this feeling I made a special

trip at my own expense in order to confer again with officials in Washington.

Immediately upon my arrival here I conferred at length with the State Department and with the White House. I fought for the imposition of a quota system which would be fair to all interests. Largely as a result of these presentations, I firmly believe, a quota of 250,000,000 board-feet limited the amount of lumber which could be exported to this country under reduced tariff.

At the same time my efforts were directed toward obtaining an agreement with Canada which would allow a limitation of the red-cedar shingles which would be admitted into our markets from Canada. This quota agreement was included in the agreement signed by Canada. This was the first step taken by any administration toward the protection of our valuable Pacific Northwest shingle industry.

MILLIONS OF HOMES SAVED

"Own your own home" has long been a slogan particularly applicable to the United States. However, the slogan was rapidly losing its meaning when in 1933 home foreclosures reached a frightening record of 1,000 a day. Many other home owners, although not fearing immediate foreclosure, had to face deterioration of their homes because no funds were available for repair work so badly needed. Foreclosures and depreciation were taking a tremendous toll of this great national asset.

Prior to the New Deal no effective action was taken to assist the American citizen who wanted to save his home. No action at all was taken to assist him in keeping his home from falling into ruins.

In just 3 years of the New Deal 1,016,142 home-saving loans had been made throughout the Nation. Through this Home Owners' Loan Corporation activity those receiving the loans were able to save more than $60,000,000 annually because of the lowered interest and renewal charges on loans that totaled $3,081,893,559.

The Federal Housing Administration was organized to carry on where the H. O. L. C. left off. Under this program, according to June 10 statistics, 1,065,109 modernization and repair notes totaling $386,284,272 had been insured. In addition 77,383 home mortgages totaling $311,387,403 had been accepted for insurance.

FARM INCOME RISES

As a result of the many factors which combine to assist the farmer the record shows the remarkable upward trend of the income chart.

In 1920 the gross income of the American farmers was $13,600,000,000. In 1932 it had dropped to $5,300,000,000. In 1935 it had moved back up to $8,110,000,000. The cash income of farmers in 1932 was $4,300,000,000. In 1935 it increased to approximately $7,000,000,000.

Both the dairy and poultry industries have prospered more because of the wise direction of this New Deal administration. For my part I have consistently sought to cooperate with the Washington State Grange, its locals and pomonas in reaching decisions in regard to farm problems. In legislation affecting the dairy industry I have sought to gain the views of the various dairymen's associations. The effective work done on the adoption of the coconut-oil tax as an aid to the butter industry is illustrative of the effectiveness of this cooperation.

DISTRIBUTION OF FARM SURPLUSES

Organized to aid in the distribution of farm-produce surpluses, the Federal Surplus Commodities Corporation purchased the following farm products, in whole or in part, in the State of Washington: Apples, 5,397,238 pounds; peas, 642,405 pounds; wheat, 2,591,274 bushels, during 1935. From October 1933 through December 1935 the products bought included 9,372,604 pounds of fresh apples, 75,073,806 pounds of butter, 36,891,959 pounds of cabbage, 62,367,680 pounds of milk products, and 768,000 pounds of canned salmon.

In addition to these purchases the F. E. R. A. allocated funds to individual States for the purchase of eggs. In Washington $23,587 was thus allocated and in the whole country $1,769,616 was so used. This purchased 136,680 dozen eggs in Washington State and 9,397,598 dozen eggs were taken from the national market, thus taking these surplus eggs off the market and supplying them to needy families.

EIGHT BANKS FAIL IN THREE LONG YEARS

During the past three Republican administrations 11,144 banks failed in the United States. The Hoover administration alone saw 6,054 banks close their doors.

The history of national banking failures shows the remarkable record of the Roosevelt New Deal banking program. Under Hoover 1,035 national banks failed and 207 banks failed to open after the banking holiday. Under Coolidge 533 national banks failed, under Harding there were 78 such failures, and under Wilson, 98.

Now, let us contrast this with the banking record of the Roosevelt administration. Since President Roosevelt took over the helm, only eight national banks have failed, and this administration has put into effect the insurance of bank deposits, which guarantees all deposits up to the amount of $5,000. This one act alone stands out as a protective measure to the vast majority of depositors.

COAST GUARD ACTIVITIES

The Coast Guard facilities in the Puget Sound area have been improved with the establishment and betterment of the Coast Guard air base on Ediz Hook near Port Angeles. Barracks are now being constructed at a cost of $115,000. This work as well as additional work is expected to be finished in September. Coast Guard maintenance in the Washington State area cost $904,944 in 1935.

I was successful in having the Coast Guard boat returned to its station in the San Juan Islands from where it had been moved as an economy measure some years ago.

SAND POINT A PRIMARY AIR FIELD

After long neglect, the Sand Point Naval Airfield north of Seattle is being improved. Logically located it has nevertheless required considerable time to gain full consideration for the field. The Chief of Naval Aeronautics just recently announced that this field is now considered a primary air base in the naval scheme. An allotment of $291,000 has been gained to improve the buildings, grounds, and general facilities.

MERCHANT MARINE AND FISHERIES COMMITTEE

As a high-ranking member of the Merchant Marine and Fisheries Committee, a great deal of legislation directly affecting the welfare of fishermen and fishing companies has come directly to my attention. Until this year I was the only Democratic member of this committee living on the Pacific coast. As a result most of the legislation dealing with our problems was referred to me.

CONCLUSION

This is but a brief picture of what the Democratic administration has meant to the Second Congressional District and to the Nation as a whole. A comparison between the chaos and hopelessness of 1932 and the reasonable hope and justifiable confidence in the future today indicates the true differences between the Old Deal and the New Deal.

"UNCLE JOE"

Mr. PETTENGILL. Mr. Speaker—

"A prince once gazed on a warrior dead;
'Taller he seems in death', he said."

Death strikes a balance, closes the book, the accounts cast up. Debits and credits reach their final appraisal. The result is then seen not in minute detail but in long perspective.

That is why a good and great man seems taller in death. We measure him not against the fleeting incidents of the flying days but against the final equation that is called life.

I leave to those who served with him for one or two or three decades of time to appraise Speaker BYRNS as a great man. I shall speak of him now only as a good man.

He was, indeed, a man of many talents and of them he was a faithful steward. But his life illustrates more than any man I ever knew the profound truth of the saying, "A man succeeds less by his talents than by his character."

When in the fullness of geologic time a mountain peak stands forth against the horizon, what has happened? Everything else has been washed, or worn, or blown away by the attrition of the ages and the once-hidden granite stands revealed.

The granite of the mountain is the character of the man. It is like the Great Stone Face of Hawthorne's beautiful story. If at the end when "evil tongues and the sneers of selfish men" have done their worst, a man's character remains, perhaps assailed but unassailable, we can then say with complete confidence, "to all the world this was a man."

Certainly there is no attrition comparable to public life to reveal the ultimate essence of human personality. If after 40 years in politics a man leaves the arena with the applause of the multitude who have watched him and now love him, he has passed the final test, the last examination, the ultimate scrutiny which man can give to man.

The only remaining judgment that can be rendered is that by God himself, and of that we need have no fear.

As I try to sum up all of those qualities of heart and head which we knew as Speaker BYRNS, I think the key to the secret is the fact that we younger men called him "Uncle Joe."

The affection which grows up between two men and holds them together is one of the purest relationships of human life. It is different from the love of man and woman. It demands far less. It is free from the tarnish of jealousy. It is different from the love of parent and child. It is less possessive. It is free from dependence on the one hand or domination on the other.

When one man calls another, unrelated by blood, by the name of "Uncle", you can be certain that an unspoken affection exists which comprehends everything because it demands nothing.

That deep love of country which how many millions, living and dead, have felt for this America of ours in the 16 decades of time since her story began has never found, in all the genius of our people, a more fitting and lasting expression than "Uncle Sam." There is something greatly significant in this word "uncle." Across the seas the soldiers of France could find only one word in their rich vocabulary to describe their feeling toward the hero of the Marne, "Papa" Joffre. These are homely words. We may, if we think about them, smile a bit as we use them. But they portray, and none others have been found to portray, that intangible, inexplicable relationship which grows up between men and needs a word to describe what cannot be explained.

JOSEPH W. BYRNS met that final and ultimate test. We knew him as "Uncle Joe." By that name let him be remembered. He needs no more.

AMERICAN PRODUCERS HIT BY BABASSU OIL

Mr. STEFAN. Mr. Speaker, I wish to call attention of Members to the continued inroads being made against the American producers of domestic fats and oils by the importation of foreign products. With our tax on Philippine coconut oil, we who represent the farming sections of our country believe we have saved over $250,000,000 to the American producers of fats and oils. Now, we are informed that through the reciprocal trade agreement with Brazil, millions of pounds of this edible oil are being brought into our country and not subjected to the internal-revenue taxation into the United States. Members should be apprised of this dangerous importation of this foreign oil.

It appears to me that either the reciprocal-trade-agreement negotiators were woefully ignorant of the facts and the potentialities or else this amounts to a deliberate effort to replace coconut oil in the United States by this Brazilian oil product. I am in the position of inquiring if this is an attempt to evade the benefits derived from the tax on Philippine coconut oil by the American farmers?

For information of Members of this House, I give some memoranda on babassu oil furnished to me by the National Dairy Union:

A new vegetable oil is appearing in increasing quantities in the United States markets. This is babassu oil, which comes chiefly from Brazil. This oil first came to general attention by the reports of its use as an ingredient in oleomargarine during the year 1935. The Census Bureau reports that 1,838,000 pounds of babassu oil was used in oleomargarine in that year.

Interest increased when it was found that in the recently negotiated reciprocal trade agreement with Brazil babassu oil was "bound" on the free list; not only that, but that the State Department on behalf of the United States Government agreed that it should not be subject to internal taxation into the United States. The legality of this latter part of the agreement is questioned, but the State Department maintains it.

About the same time as the announcement of the Brazilian agreement there was a noticeable increase in the imports, which have now reached a total of about 7,000,000 pounds a month.

Babassu oil is an edible oil when produced under proper conditions and is also a soap oil. Chemically it is closely related to coconut oil, containing an appreciable percentage of lauric acid, which is one of the valuable constituents of coconut oil. In the use to which it has been put it is a direct substitute for coconut oil and palm oil for both edible and inedible purposes.

Domestic producers of fats and oils, who have become alarmed by the increasing imports of this Brazilian oil and the peculiar provisions of the Brazilian reciprocity agreement, have found two amazing facts as they have begun to study this new threat against domestic industries.

One of these facts relates to the enormous potential supply.

The other fact relates to the threat found in this part of the Brazilian agreement against the long-standing coconut-oil trade with the Philippine Islands.

As Philippine coconut oil is now subject to a 3-cent tax, untaxed babassu oil can be bought by users in this country at 3 cents a pound less than coconut oil, and every pound of babassu oil used is, potentially at least, a substitute for and will replace a pound of coconut oil.

It is difficult to explain how the sponsors for the Brazilian agreement within the State Department can reconcile the damage likely to be caused by this agreement to the Philippine oil trade with their violent protestations in favor of the Philippine coconut-oil producers during the past 2 years. With reference to the potential supply the United States Department of Commerce has issued a special report (no. 36) dated October 25, 1935, on "Brazil's Babassu Nut Industry." From this report it appears that the possible supply of babassu oil is almost unlimited. It has not appeared heretofore in the markets in large quantity because of the difficulty in cracking the very hard shell of the babassu nut. This difficulty seems to have been overcome. The oil is produced from the nut of babassu palm trees, of which there are 800,000,000 in one state in Brazil (Maranhao) and 400,000,000 in another state, with large numbers in four other states. These trees average 275 pounds of the nuts per year, the kernel of the nut averaging 33 pounds to the tree and these kernels producing 60 percent of oil, or about 19 pounds of oil per tree. Of course, transportation and other difficulties must be overcome before any large part of this tremendous available supply can be released for commercial use. The oil as stated above is very similar to palm oil, contains lauric acid and replaces palm oil and coconut oil in their usual and ordinary commercial uses. When used in oleomargarine it not only replaces coconut oil but also replaces cottonseed oil, soybean oil, and other important domestic products.

The imports of babassu oil have become alarming since the 1st of January 1936. Imports for the first 4 months of this year are as follows:

	Pounds
January and February	18,502,076
March	5,083,506
April	5,596,601

If this level of imports is kept up it is evident that from sixty to seventy million pounds will come in this year. With the Brazilian trade agreement as a bar to any remedial action by the Government it seems evident that American oils and fats producers are in for another discouraging period in spite of the efforts which Congress has undertaken to protect this important branch of American agriculture.

AN ANSWER TO HON. FRED J. SISSON

Mrs. JENCKES of Indiana. Mr. Speaker, I rise to a point of personal privilege to defend my good name and the good name of a member of my official staff against the untruthful statements made on the floor of this House by the Representative from the Thirty-third District of New York, Mr. FRED J. SISSON.

In the May 4, 1936, edition of the CONGRESSIONAL RECORD appear the following statements made by Mr. SISSON in discussing his bills, H. R. 10391 and H. R. 11375, referring to the repeal of a proviso relative to teaching or advocating communism in the public schools of the District of Columbia; also to make more effective the law against advocating communism in the District of Columbia.

Mr. SISSON made this statement to the Members of this House of Representatives—these are his very words as reported in the CONGRESSIONAL RECORD, in which he refers to a member of my staff who, at my direction, request, and, in

my presence, placed certain information before a subcommittee of the House of Representatives:

This Russian, Serkowich, a man of doubtful reputation, a man warned by the Better Business Bureau of this city to desist from various stock promotions. This Serkowich, the clerk of the gentlewoman from Indiana, one of the star witnesses of the gentleman from Texas in his star-chamber inquisition into the schools of the District of Columbia.

This is a statement made by the Democratic Representative of the Thirty-third District of New York [Mr. SISSON], while I was absent from this House by permission of our former Speaker, Mr. Joseph Byrns, in order that I might take care of my campaign as a Democratic candidate for renomination in the primary election in the State of Indiana, which was held on May 5.

It is needless to say that the deliberate untruths uttered from the floor of this House, and Mr. SISSON's deliberate attempt at character assasination was used by those forces opposed to our Democratic administration in an attempt to defeat me for renomination. Mr. SISSON's untruthful statements were circulated among the school teachers of my congressional district in an effort to discredit me in the estimation of these fine men and women who have known me all my life, and who know that I would not, directly or indirectly, do anything to their disadvantage. Quite the contrary, they know I have a record of service and defense of the underpaid and overworked school teachers.

I know that the Members of this House who have served with me during the sessions of the Seventy-third and Seventy-fourth Congresses and who are interested in the truth will be pleased to learn that Mr. SISSON's deliberate untruths caused the people of my district to quickly investigate Mr. SISSON's charges, and when they found them to be untruths, the people went to the polls and I was renominated by an enormous majority. I carried every one of the 10 counties which comprise my district. I was assured by the Republican and Democratic school teachers in my district that they had faith and confidence in me and that they deplored the cowardly attack made against me, several days before the Indiana primary election, where I was a candidate for renomination. I was renominated because the people of my district knew of the service I have rendered to them and the support I have given the leadership of this House and our administration. If Mr. SISSON, a Democrat, expected to cause my defeat at the primary election by attacking me while I was absent from Washington, he has failed.

Mr. SISSON has used the influence and prestige of this House of Representatives for the purpose of character assassination and for the purpose of circulating a libel under the protection of the House of Representatives.

When I came back to Washington and read Mr. SISSON's statements in the RECORD, I sent a letter and copies of the RECORD to the officials of the Better Business Bureau of Washington and asked them whether they had ever "warned Mr. Serkowich to desist from various stock promotions." I asked the Better Business Bureau of Washington if they had ever directly or indirectly written to anyone or stated to anyone that Mr. Serkowich was a "man of doubtful character."

The Better Business Bureau, over the signatures of the officials of that organization, have advised me as follows in a letter from Mr. Louis Rothschild, director until a few weeks ago of the Better Business Bureau, in reply to my inquiry:

Answering your specific questions:

1. I have no record of any communication from or to Mr. SISSON during my time as director of the Better Business Bureau of Washington, D. C.

2. The Better Business Bureau of Washington, D. C., during my directorship never put out a statement that they "would not give Mr. Serkowich a clean bill of health." The Better Business Bureau does not deal in terminology of that sort.

3. The Better Business Bureau of Washington, D. C., has no facts upon which to conclude that Mr. Serkowich is a man of questionable character.

4. The Better Business Bureau of Washington, D. C., did not "warn Mr. Serkowich to desist from various stock promotions."

These statements were made by Mr. Louis Rothschild, who was director of the Better Business Bureau of Washington, D. C., for many years and just resigned to enter the practice of law in the District of Columbia.

After receiving the statement from Mr. Rothschild, I then made a written request for the same information from the Better Business Bureau of Washington under the present management, and I received a confirmation of the statements made by Mr. Rothschild, which definitely disproves Mr. SISSON's statements made to this House of Representatives, in which he uses the name of the Better Business Bureau of Washington, D. C., without their authority, permission, or knowledge.

Mr. SISSON described Mr. Serkowich as a Russian. Mr. Serkowich was born in the United States and has always been an American citizen. For the information of the Members of this House of Representatives, before I asked Mr. Serkowich to become a member of my official staff, I caused a most careful search and investigation of his character, efficiency, and record of service.

He enjoys the highest character. He has never during his lifetime been arrested for any cause. He has never during his lifetime been indicted. He has never during his lifetime had a judgment rendered against him. He has a long and unusually fine record of service in several States. He is a World War veteran. He served as a commissioned officer, was promoted to a high rank, in line of duty, for service rendered. He was honorably discharged after 3 years and 11 months' service with a most favorable commendation from his commanding officer. He has been awarded a decoration for service by a foreign nation.

He has rendered distinguished service to many industrial, civic, patriotic, commercial, and political organizations. He has an excellent record of service to an important organization of prominent business and professional men here in Washington, D. C. On two different occasions the board of directors of this organization, by official resolutions, commended and praised the loyal and efficient services rendered to Washington by Mr. Serkowich. Mr. Serkowich has rendered a most valuable service as a member of my official staff. He has served during the Seventy-third and Seventy-fourth sessions of Congress and he has displayed the highest type of character. He has rendered most efficient service in connection with my administration.

He has in the past rendered service to other Members of the Congress and to our Democratic Party.

A man's good name is his most valuable possession. It is a matter of grave concern when a good name is traduced by a Member of Congress under the protection of the rules of the Congress. I have placed before you the evidence to disprove Mr. SISSON's untruthful and cowardly charge against the good name of a member of my staff. I would not have in my employ a person of doubtful character. I do not need to defend myself against the attack Mr. SISSON made against me.

Now, I wish to get on record concerning Mr. SISSON's bills which will permit the teaching of communism in the public schools of the District of Columbia.

I am not opposed to his bills. As a member of the Subcommittee on Education I requested that Mr. SISSON's bills be held up until an investigation could be made of the charges I made against the entire Board of Education of the District of Columbia.

I made a written charge that the Board of Education of the District of Columbia was not administering in an efficient and proper manner the funds appropriated by the Congress for the purposes of the Board of Education in the District of Columbia. I made the definite charge that the Board of Education of the District of Columbia has not answered this charge I made satisfactorily to other Members of Congress and myself. I charged the Board of Education with refusing to permit a commissioned officer of the Metropolitan Police department of the District of Columbia to sit in as an observer in the "character education classes" which were authorized by the Board of Education of the District of Columbia under the direction of a professor who was associated with the University of Moscow and who was employed by

the Board of Education of the District of Columbia at the salary of $50 per day. Permission was refused the Metropolitan Police department, and as a Member of Congress I made a request and I was also refused. After the public had been aroused, permission was granted.

I also charged the Board of Education of the District of Columbia with permitting the use and distribution to children of books and references containing vile and filthy literature, and also literature which directly and indirectly taught and advocated communism. The Board of Education of the District of Columbia first refused to withdraw these books and later withdrew them. The Board of Education has never satisfactorily answered why they permitted these books and references to be used and why they ordered them withdrawn.

Instead the Board of Education of the District of Columbia, its friends and lobbyists, have joined with the friends and lobbyists who are promoting and protecting the cause of Communism throughout the United States, and have thrown up a smoke screen with reference to the "red rider." I specifically stated at a congressional hearing that I would vote for the repeal of the "red rider" when and if the charges I made against the Board of Education of the District of Columbia had been satisfactorily explained and corrected. This has not been done to date.

I wish to definitely state that I am not in opposition to the Russian Soviet Government. They have the right to any sort of government they wish to have in Russia. I also accord the right to any group of American citizens to be members of the Communistic Party, as long as they do it in an open and aboveboard manner, in accordance with the law, and within their rights as American citizens. I do not now and shall never agree with the Marxian theory of government, but I accord any American citizen or group of American citizens the right to differ with me and I will defend their right to disagree with me. However, I have been, and will continue to be, most active in an effort to bring to light any undercover or secret, subversive efforts which have been used and are being used to promote communism or any other un-American theory in order to change or overthrow our form of government.

I am not a "red" baiter. I am sure that the attempts which are being made to change our American form of Government to a communistic form of government will fail. The American people will never accept a communistic form of government. While I will defend the right of American citizens who are Communists to try to change our form of government, in an orderly manner, as permitted by law, and I will defend their right to do so, and while I do not agree with them, I, as a Member of Congress and as a private citizen, will not permit the efforts which are being made to indoctrinate communism among our citizens to be accomplished secretly without the full knowledge of our citizens. I wish to make the statement that I do not believe any American school teacher in the employ of any city, State, or the National Government would advocate communism and the overthrow of our Government.

The "red rider" never would have been necessary if the activities of the Board of Education of the District of Columbia had not been questioned by the citizens and by the Members of Congress. The Board of Education of the District of Columbia cannot hide behind their plea that the academic freedom is threatened and that teachers have been maligned. The school teachers are generally underpaid and overworked. In the accomplishment of the great responsibility which rests upon them the actions of the Board of Education of the District of Columbia, in refusing to conserve the money appropriated by Congress for educational purposes in our National Capital, adds further burdens to the rank and file of the school teachers of the District of Columbia. The actions of the friends of the Communists and the lobbyists of the Board of Education of the District of Columbia in spreading the untruthful utterances of Mr. SISSON further proves the necessity of a searching investigation into the actions of the Board of Education of the District of Columbia. I have placed this information before the House of Representatives for your information.

I thank you.

RANDOLPH PERKINS

Mr. BEITER. Mr. Speaker, as a fellow member of the Committee on Elections No. 3, it was my privilege to know and respect the late Hon. RANDOLPH PERKINS, of New Jersey, whose untimely death brought great sorrow to the hearts of his associates.

He had nearly completed his eighth term as a Member of the House and his genius for friendship won for him a lasting place in the affection and memory of his colleagues.

Though our political affiliations differed, I always had a keen appreciation of his judgment for he was liberal and fair in his decisions. As a capable lawyer, he weighed all evidence thoroughly and freely contributed his knowledge and experience toward the accomplishment of acts of the greatest benefit to the majority of his constituents and the country at large.

I feel that his achievements in the Congress of the United States will long be remembered by those he served and those with whom he was so closely associated in the House of Representatives. He has written his name upon the roster of those who died in service and his influence cannot help but inspire those of us who remain to carry out by study and devotion to duty the obligations that befall us.

SUGAR BEETS

Mr. KNIFFIN. Mr. Speaker and Members of the House, for more than a year I have had under consideration the introduction of a bill to provide a permanent Federal sugar program, to take the place of the Jones-Costigan Act when it expires December 31, 1937. The decision of the Supreme Court on January 6 cast considerable doubt upon the validity of the quota system, because the declared purpose of the Jones-Costigan Act was the same as the declared purpose of the Agricultural Adjustment Act, which was decided to be unconstitutional.

Therefore, early this session I introduced two bills—H. R. 12294 and H. R. 12295—to provide benefit payments for the growers of sugar beets and sugar cane, and to continue the quotas for insular areas that import or transport sugar into the United States for consumption therein. My bills provided no restriction or limitation on the production of sugar beets or sugar cane in the continental United States, because it is my opinion that the Supreme Court decision in the Hoosac Mills case very definitely invalidates any such provision. I am also of the opinion that any attempt to control or limit the marketing of sugar produced within the continental United States is subject to the same objection because eventually such provisions must restrict or limit the production of sugar.

I have contacted a large number of growers and processors in what is known as the eastern beet area, composed of the States of Ohio, Indiana, Michigan, and Wisconsin, and I have been gratified with the unanimity with which they have approved of the provisions of my bills. I have communications and resolutions passed by organizations in that area endorsing the provisions of these bills.

During this week Senate Joint Resolution 278 was approved by the House of Representatives, the provisions of which are intended to extend all sugar quotas to December 31, 1937, for the purpose of regulating foreign and interstate commerce. It is recognized that this joint resolution is merely a stoppage until a full opportunity is given at the next session of Congress to consider a permanent sugar program such as is provided in my bills. I feel that it should be made perfectly clear that we do not acquiesce or agree to the continental quotas extended by the joint resolution, although we did not disagree with the extension of the offshore quotas on a legal basis.

It is noted with encouragement and renewed hope the statements made on the floor by the Honorable MARVIN JONES, of Texas, chairman of the Committee on Agriculture of the House of Representatives. I have complete confidence and

faith in the leadership of the chairman, who, although he has no sugar produced in his district or State, has demonstrated a sympathetic understanding and helpful consideration of the wishes, desires, and merits of the domestic sugar industry. Under his disinterested and intelligent leadership I hope that in the next session of Congress a program can be worked out that will be satisfactory and helpful to the sugar beet and sugar cane growers of the United States, recognizing their preferential right to the United States market as domestic producers of agricultural commodities and at the same time dealing with fairness and equity with the insular areas who supply sugar to the United States.

PUERTO RICAN CHILDREN IN NEW YORK SCHOOLS

Mr. MARCANTONIO. Mr. Speaker, a most slanderous attack has recently been made on Puerto Rican children living in New York City. It has been made under the guise of a psychological report. It proves that there is such a thing as racketeering even in the field of psychology. This report is evidence of it. I have had this report investigated, and I hereby submit the findings, which constitute an exposé of another fraud attempted at the expense of a racial minority in our country.

AN ANALYSIS OF AND CONTENTS UPON A REPORT OF THE SPECIAL COMMITTEE ON IMMIGRATION AND NATURALIZATION OF THE CHAMBER OF COMMERCE OF THE STATE OF NEW YORK, DATED DECEMBER 31, 1935, SUBMITTING A STUDY ON REACTIONS OF PUERTO RICAN CHILDREN IN NEW YORK CITY TO PSYCHOLOGICAL TESTS

The motive of the chamber of commerce for undertaking the investigation was "in connection with an agitation now on foot to include Puerto Rico as a State in the Federal Union."[1]

The investigators appear to be persons of training sufficient to inspire confidence in their published findings. Dr. Clairette P. Armstrong is the psychologist attached to the Children's Court of the City of New York. Dr. Edith M. Achilles is connected with the Psychological Corporation in New York City. Mr. Sacks' connections are not known to your commentators.

The conclusions drawn from the investigation by the psychologists may bear rewording in the light of the analysis which follows. Comment is therefore delayed.

ASCRIBED REASONS FOR THE RESEARCH

(1) Since reputed "difficulty of adjustment of Puerto Ricans in New York City has become a serious problem * * * therefore a consideration of the intelligence of Puerto Rican school children, as compared with that of public-school children here, may be illuminative."

(2) Because of the overpopulation and the high Puerto Rican birth rate as compared to the United States in general, "Puerto Rico could well be an inexhaustible source of population supply for a complacent mainland."

THE PUERTO RICAN GROUP INVESTIGATED

In November and December 1935 the investigators examined "240 Puerto Rican children at Public School No. 57 at One Hundred and Fifteenth Street near Lexington Avenue, New York City, where enrollment includes a large and representative sampling of Puerto Ricans."

These children were taken from grades 4, 5, and 6. Included were children up to age 16 and one child taken from a non-English-speaking class.

"Nearly a third of the group were born in New York City of Puerto Rican parents, and well over a third had been here 6 years or more. The others, Puerto Rican born, had been here under 5 years. * * *"

"Over half said they were on relief, home or work."

About one-third of the Puerto Rican children came from broken homes, living with the mother alone, or with the father alone, or with stepparents or other relatives.

"Fifty-eight were recognizably Negro, 91 were white, and 91 with indications of Negro antecedents."

THE CONTROL GROUP[2]

Three hundred and twenty-eight children from Public School No. 6 at Eighty-fifth Street and Madison Avenue and from Public School No. 166 at West Eighty-ninth Street in New York City and 124 rural children in public schools in Katonah, Bedford Hills, and Bedford Village in northern Westchester County, N. Y., a total of 452 children.

Describing these children in 1932, Dr. Armstrong wrote:

"In the New York group there were no children of unskilled laborers.

"It is generally conceded that children in inferior occupational classes have lower test scores than children in higher occupational classes. This is true of ability to react to objective as well as verbal situations."

"Since the schools were all in the better residential districts, there were fewer children of foreign parentage than are found in public schools in other localities. This is another factor leading to higher I. Q."

"The higher I. Q.'s may be attributed to some selection as to occupational level and nationality."

"First generation American-born children have been found inferior on nonlanguage as well as verbal tests by many investigators, among others, Young[3] and Kirkpatrick.[4]"

Dr. Armstrong carefully eliminated any children who were under 8 or over 15 years of age from the control group, and included a grade range from fourth to eighth.

ANALYSIS OF THE COMPARABILITY OF THE PUERTO RICAN GROUP AND THE CONTROL GROUP

In table I the outstanding differences between the two groups are contrasted. Lack of sufficient data available in the published material hampers additional analysis. If this much is available, a surmise as to the rest may be indicated.

TABLE I.—*Factors differentiating the control group from the Puerto Rican group*

	The control group	The Puerto Rican group
Number of pupils	452	240.
Number tested	417	129.
Locality in which the children live.	The best housing and school facilities that New York City and Westchester County have to offer.	An area which has become one of the worst of overcrowded slums in New York City and in which the teacher personnel is constantly shifting.
Age and grade range	Grade range from fourth to eighth with underage and overage children eliminated from the study so that a selected group of 9 to 14 years of age are included.	Grade range from second half of the fourth to the sixth grade only. All ages included and 1 child from a non-English speaking class included.
Language background	Children of native-born parents, from the highest occupational levels, with English as the native language.	Children of impoverished Puerto Ricans of the lower occupational levels with Spanish as the native tongue and the language of the home and street. English is the language used at school.

COMMENT

The control group is admittedly a selected group as evidenced by (a) the elimination of under-age and over-age children, and (b) the economic and social level from which the population was drawn.

Therefore, the statements made by the investigators under results (p. 5)[5] that "Puerto Rican children in New York were very inferior to unselected public-school children in ability to react to concrete situations", and on page 7,[5] "their (the Puerto Rican group's) inferiority to the control group is marked and they are far below the average child of the States in 'native ability' ", have no basis in fact because the control group was neither unselected nor typical of the average American child but they are a highly selected group.

The use of the expressions "unselected" and "the average child in the States" is unfair because facts do not justify their use. It is difficult to understand how psychologists of the training that these have had would use their terms so loosely.

On page 4 of the "study" states in reference to the Puerto Rican children in P. S. 57 Manhattan, of New York City, "the enrollment includes a large and representative sampling of Puerto Ricans."

On page 6 it refers to "this random sampling of Puerto Rican children in New York."

The population of the Puerto Rican groups studied was taken from two and one-half grades in one school. The conclusions were drawn from the results of 129 of the total of 240 studied. The children all reside in the immediate locality of the school, a locality which is one of the worst slum areas of New York City.

When the investigators use the words "sampling", "random", and "representatives", they imply that all Puerto Ricans are like these children. When they say a large sampling they refer to the 129 pupils they tested. When they say 'random" they mean unselected and the investigators carefully selected the lowest economic and social levels of the Puerto Ricans in New York to compare them with the finest that New York State has to offer. Is a comparison of this type valid or fair?

This is another procedure which is difficult to understand since the study is on a scientific basis and the terms have scientific significance.

---

[1] Matter in quotation marks is taken verbatim from the "report" referred to in the title.

[2] This group was examined in 1928 and described in a study published by Dr. C. P. Armstrong in Psychological Clinic, vol. 21, pp. 39–48, 1932.

[3] Young, K., Mental Differences of Certain Immigrant Groups. University of Oregon. Pub. 1922, vol. 15, pp. 417–434.

[4] Kirkpatrick, C., Intelligence and Immigration. Mental measurement. Monograph I, 1926, N.

[5] The report of the special committee cited above.

ANALYSIS OF TEST PROCEDURE

The "study" attempts to judge the verbal ability of all Puerto Rican children on the basis of an Otis Self-Administering group test "administered to 96 Puerto Ricans in the sixth grade and 33 in the upper fifth" (p. 4).

The test was administered to the Puerto Rican group, with a "20-minute time limit" (p. 7).

The control group had had 30 minutes. The control group had a grade range from fourth to eighth and the Puerto Rican group merely from upper fifth through sixth. (For some unexplained reason 35 students of the control group were omitted from this part of one study; the report summarizes the results of only 417 of the control group. Why were 35 control-group students omitted?)

In order to try to make a theoretical comparison between these two groups, the investigators then applied statistical techniques to the scores of the Puerto Rican group.

COMMENT

The results from this set-up were a foregone conclusion to any trained psychologist.

The time and effort expended to compute the statistics for transmitting 20-minute scores to 30-minute values in order to defend the saving of 10 minutes in the administration of a group test is difficult of comprehension. In the light of other unorthodox procedures in this "study" this action may also be interpreted as prejudicing the results against the Puerto Ricans despite expressions to the contrary.

ANALYSIS OF THE TABLES IN THE STUDY

The tables given in the study have been included without interpretation as to the significance of the differences between the two groups.

COMMENT

A statistician can read those figures and infer the implied interpretation that the two groups are different and that the differences are statistically significant because they appear to be well outside the realm of ordinary chance. But in the light of the manner in which the study was conducted, the differences great to begin with, the coefficients of reliability of the differences had to be great. Then, why was it necessary to compute the statistical functions given in the tables? If they were needed to support the conclusions drawn, why are they not referred to and explained? Is it possible that comparison of five or six grades or the one with fourth, fifth, sixth, seventh, and eighth grades on the other hand could not be adequately defended from these tables?

GENERAL COMMENTS

In view of the improper comparisons, the unorthodox procedures, and the many questions raised in the comments above, the conclusions which the investigators draw are reduced to statements having little or no relationship to the data submitted.

THE THOMAS JEFFERSON MEMORIAL

Mr. WEARIN. Mr. Speaker, I have introduced a resolution in the House providing that the design for the Thomas Jefferson Memorial in Washington, D. C., be selected as a result of an architectural competition. The matter has been called to the attention of the chairman of the Commission established for that purpose, and I am taking this opportunity of placing the subject before the Congress and the country. Such a plan would be characteristic of the Great Commoner whom we desire to glorify. It would carry out the spirit of the political party he founded, giving to young men all over the United States an opportunity to rise in their profession. If the Federal Government does not cooperate with such a method of selecting designs for public buildings and memorials it will be a party to discouraging one of the oldest and noblest of the arts established so many thousands of years ago.

Some of the finest works of art in the field of architecture and some of the noblest of buildings abroad and in the United States are a direct result of competitions, and we should, of course, take that into consideration as well as the democratic characteristics of such a program. When selecting the proposed Jefferson Memorial let us recall that one of the most outstanding of these competitions harks back to the fifteenth century and the Renaissance of art in Florence, when in the first year of that period Cosmo de Medici, an early founder of a family that has probably contributed more to the artistic temperament of the world than any other single family in history, inaugurated the custom by proposing such a contest for the selection of the bronze doors of the Baptistry, which was a great inspiration for that period or any other. Col. George F. Young in his book entitled, "The Medici", says:

It is impossible to describe the rivalry and enthusiasm called forth by this competition. It was a time when the stirrings of art were felt throughout the entire population of Florence, and the excitement over the matter was intense. When the models were sent in, three of them were considered superior to all others, those of Ghiberti, Brunelleschi, and Jacopo della Quercia, the two former being Florentines and the third a native of Siena. They were all quite young men, Jacopo della Quercia being 27, Ghiberti 23, and Brunelleschi 22. After further consultation the panel by Ghiberti was judged the best and the construction of the bronze doors was given to him.

It is interesting for us to note that the results of the young artist's work, representing scenes in the life of Christ, occupying his time and effort in part for the next 22 years, is said by authorities today to have never been surpassed.

To bring these observations with reference to the results of architectural competitions on down to examples in American history, I would call your attention to the fact that our own United States Capitol, which, in my judgment, is the most beautiful public building in the world, designed by William Thornton when he was 33 years of age, was the result of such a competition; James Hoban submitted the winning design for the White House when he was 30; Don Barber designed the Connecticut Library and the Supreme Court Building at the age of 35; Bertram Goodhue, St. Thomas' Church in West Point, N. Y., when he was 34; Thomas Hastings, the New York Public Library at 38; Guy Lowell, the New York County Courthouse at 43; Robert Mills, the Monumental Church in Richmond, Va., at 30; York and Sawyer, the Commerce Department Building in Washington at 39; Edgerton Swartwout, the Missouri State Capitol at 42; Paul Cret, the Pan American Building at 31. I am also reminded that the Lincoln Memorial is the result of such an architectural competition won by Henry Bacon.

These are only a few of the examples I have in mind or that are obtainable. You will find that a large percentage of the memorials in the United States, public buildings, hospitals, and courts, are a result of such competitions, and certainly they are among the highest and best types of work in the Nation. To my mind, the Federal Government should set the example of promoting the general practice.

The above list bears out my contention that such competitions give the younger men in the profession an opportunity to rise and thereby keeps the art alive, which is not generally true when architects are selected in an arbitrary manner, as the older men generally receive the preference under such circumstances.

The Royal British Architects, which has been in existence for 101 years, for the last 25 years has taken a definite position that the architectural competition is the best means of obtaining a design and an architect for a public building. They have put the prestige of their organization directly behind such a policy and endeavor, wherever possible, to persuade the public to use the competition method.

Some of the objections advanced in protests over adopting such a policy for the selection of a Jefferson memorial is the matter of the expense to the profession, but, of course, that is not an item to the younger, more energetic architects who seek to rise in their profession. Experience in the past would indicate that architects do not hesitate to enter such contests. In all probability they realize that against the actual expense in wages and material must be counted the gain in experience and technical knowledge which is to be obtained from every competition. All those who seriously enter one discover that the preliminary research work and the production of a design add to professional knowledge and experience, regardless of results.

It may be stated that promoters do not anticipate working with an inexperienced young architect should one be successful, but experience has indicated that it is almost unknown for a man to win an important competition and be incapable of carrying out the work. If that were not true the erection of many of our principal public buildings would have been unsuccessful. Furthermore, it must be remembered that many of the leading members of the architectural profession began successful careers by winning an open competition while young and unknown.

Offsetting any objections and in addition to the advantages already stated, there is this item of the utmost importance. You and the other Members of Congress will be spending

the people's money for the construction of the proposed memorial to Thomas Jefferson, which is entirely fitting and proper. We should, however, exercise the same due diligence in obtaining as much for that money as possible as if we were carrying on our private business. An architectural competition will enable the Commission to obtain at practically no extra cost solutions to many problems from some of the best men in the profession throughout the United States and to retain the services of the successful one at the same fee that would be paid to any other member of the profession. The people will, as a result thereof, receive the advantages of concentrated study of this particular problem and be offered a wide assortment of designs from the hands of the Nation's best. Furthermore, there can be no charge that the design was selected as a result of wire pulling or political influence, as they should be offered to the Commission unsigned and the selection determined as a result thereof upon the basis of merit and beauty alone.

I feel confident that this suggestion will meet with the approval of American citizens throughout the land who believe in the principles of democracy and the erection of a fitting memorial to the founder of the Democratic Party.

THE UNITED STATES HOUSING ACT OF 1936 HAS THE WELL-NIGH UNANIMOUS ENDORSEMENT OF THE PEOPLE

Mr. ELLENBOGEN. Mr. Speaker, I have compiled a very partial list of endorsements of the Wagner-Ellenbogen housing bill. This list does not include the endorsements which have gone to individual Members of Congress but only those that have come to my personal attention. These endorsements come from every part of the country. They show that the Wagner-Ellenbogen housing bill has the well-nigh unanimous endorsement of the people of the United States.

NATIONAL ORGANIZATIONS WHICH HAVE ENDORSED THE WAGNER-ELLENBOGEN HOUSING BILL—URGING ITS ENACTMENT AT THE PRESENT SESSION OF CONGRESS

Christian Science Monitor.
Unitarian Ministerial Union.
National Council of Catholic Charities.
American Association of Social Workers, housing committee.
American Federation of Labor, executive council, building trades department, housing committee.
United States Conference of Mayors, F. H. LaGuardia, New York.
National Federation of Settlements.
Federal Council of Churches of Christ in America.
National Women's Trade Union League.
National Public Housing Conference.
National Urban League.
National Association for the Advancement of Colored People.
Labor Housing Conference.
American Home Economics Association.
United Mine Workers of America.
National Council, Young Men's Christian Association.
National Recreation Association.
American Federation of Hosiery Workers.
Special Conference of American Rabbis, Social Justice Commission.
International Brotherhood of Electrical Workers.
Glass Bottle Blowers Association.
International Fur Workers Union.
Brotherhood of Railway Clerks.
National Association of Letter Carriers.
Piano, Organ, and Musical Instrument Workers Union.
Sheet Metal Workers International Union.
International Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers.
International Association of Marble, Stone and Slat Polishers, Rubbers, and Sawyers, Tile and Marble Setters, Helpers, and Terrazzo Helpers.
United Rubber Workers of America.
International Federation of Technical Engineers, Architects, and Draftsmen's Union.
Federation of Flat Glass Workers.
United Leather Workers International Union.
International Broom and Whisk Makers Union.
United Wall Paper Crafts of North America.
Cigar Makers' International Union.
National Federation of Rural Letter Carriers.
Operative Plasterers and Cement Finishers International Association.
Amalgamated Clothing Workers of America.
United Association of Plumbers and Steamfitters.
International Association of Machinists.
American Federation of Musicians.
International Ladies' Garment Workers Union.
Bricklayers, Masons and Plasters' International Union.
United Hatters, Cap, and Millinery Workers.
Scripps-Howard Newspapers; Stern Newspapers; New York Times; Baltimore Sun.
Brotherhood of Maintenance of Ways Employees.

Among the organizations which never endorse specific legislation, but which have, nevertheless, officially endorsed the general principles behind the bill are:

American Institute of Architects.
The National Conference of Catholic Women.
The National Board of the Young Women's Christian Association.

INDIVIDUALS WHO TESTIFIED ON BEHALF OF THE WAGNER HOUSING BILL OR ENDORSED IT

Hon. Harold L. Ickes, Secretary of the Interior.
Hon. Frances Perkins, Secretary of Labor.
Hon. John H. Fahey, chairman, Federal Home Loan Bank.
Horatio Hackett, Assistant Administrator, Public Works Administration.
Miss Helen Alfred, secretary, National Public Housing Conference.
Harry C. Bates, chairman, American Federation of Labor housing committee; president of the Bricklayers, Masons, and Plasterers International Union.
Miss Catherine Bauer, executive secretary, Labor Housing Conference.
Ernest J. Bohn, member of the Cleveland City Council.
John Carroll, vice president of the Massachusetts State Federation of Labor.
A. R. Clas, director, Housing Division, P. W. A.
Michael J. Colleran, president of the Operative Plasterers and Cement Finishers International Association; member of the A. F. of L. housing committee.
James G. Couffer, representing Blythe & Co., New York City.
John C. DeHoll, chairman, Housing Authority, Birmingham, Ala.
Hon. William Green, president, American Federation of Labor.
Louis J. Horowitz, former president of Thompson-Starrett Co.
Rabbi Edward S. Israel, Social Justice Commission of Special Conference of American Rabbis.
Howard Johnson, social-service representative of the New Jersey State Housing Board.
D. E. McAvoy, chairman, Home Mortgage Advisory Board, Long Island, N. Y.
Stewart McDonald, Administrator, F. H. A.
Hon. Neville Miller, mayor, Louisville, Ky.
Dr. John O'Grady, secretary, National Council of Catholic Charities.
Langdon W. Post, chairman of the New York City Housing Authority, Tenement House Commissioner for New York City.
Ira S. Robbins, counsel, New York State Board of Housing.
Rt. Rev. John A. Ryan, National Catholic Welfare Conference.
Mrs. Mary Simkovitch, president, National Public Housing Conference.
Alfred K. Stern, chairman, Illinois State Housing Board.
J. David Stern, publisher, Philadelphia Record, New York Evening Post.
A. Joseph Stewart, Louisville, member of mayors' committee.
Anson Phelps Stokes, chairman, Washington Committee on Housing.
Nathan Straus, president of the Hillside Housing Corporation, New York.
Dr. Worth Tippy, executive secretary, Federal Council of Churches of Christ in America.
Hon. Davis Wilson, mayor of Philadelphia.
Col. L. Kemper Williams, chairman of the New Orleans Committee on Housing.
Walter White, secretary of the National Association for the Advancement of Colored People.
Mrs. Edith Elmer Wood, former member of the New Jersey State Housing Board.
Evans Clark, National Public Housing Conference.
John L. Lewis, president, United Mine Workers of America.

ALABAMA ORGANIZATIONS WHICH HAVE ENDORSED THE WAGNER-ELLENBOGEN HOUSING BILL

Housing Authority, Birmingham.
Alabama State Federation of Labor.
Building Trades Council, Montgomery.
Muscle Shoals Building Trades Council, Florence.
Birmingham Building Trades Council.

THE RECOVERY PROGRAM IN THE THIRD CONGRESSIONAL DISTRICT OF CALIFORNIA

Mr. BUCK. Mr. Speaker, not even those who would like to see the control of the National Government shift into their own hands can long deny facts. The facts are that the program of relief and recovery instituted by the Roosevelt administration is succeeding even beyond expectations. The daily papers, particularly the financial sections, bear column after column of news showing better business conditions, increases in wages and dividends, and vastly more activity along all lines.

Contrary to the idea that some people would like to instill in the minds of all, business improvement does not happen by itself. Depressions as severe as that which we were in on March 5, 1933, are not cured without a proper remedy. It is easy for any of us when times begin to grow better to forget how badly off we were. When the tooth is pulled and the toothache is over our mind does not dwell on the pain and suffering that we endured. I do not desire to revive any memories of that sad period of our country's history, but I do desire to point out to my constituents and to the public generally the very definite effect that the program of this and the last Congress and the Roosevelt administration has had upon their individual welfare.

The only hope of the opposition is that the citizens of the country will not realize what has been done for them by the last and the present Congresses and the administration.

Today the Third California Congressional District is in a relatively prosperous condition. There is every indication that its prosperity will continue; that, as a result of new activities, its population will increase, its business houses, its wage earners and its farmers, will continue to prosper. To this prosperity the Federal Government has contributed in no little measure through its construction program both through the Public Works Administration and the Works Progress Administration. Both have been intended to relieve the unemployed and the distressed by giving them work, and both have succeeded to a marked degree. At the same time, the work that has been done has been useful work. It has not been wasteful work. The following list of Federal projects in the Third California District, all of which have been financed with emergency-employment funds, quite aside from and in addition to the regular appropriations, show the tremendous sums that have been spent in the Third District:

San Joaquin River: River lights	$14,798
Sacramento River:	
Convert lights	9,000
Levees	500,000
Rectify channel	1,000,000
San Joacquin River: Deepen channel	1,158,000
Mare Island Navy Yard:	
Vessels	5,200,000
Causeway to Vallejo	980,000
Extend dike no. 12	236,721
Magazines	310,000
Ordnance	137,503
Shop equipment	583,009
Power plant	135,000
Miscellaneous repairs and improvements	667,168
Benicia Arsenal: Manufacture and preserve ammunition	18,395
Woodland: Post office	69,900

Sacramento County:	
School (Indian Bureau)	$12,350
Roads (Indian Bureau)	18,000
Lodi: Post office	72,607
Total	11,117,799

The above list comprises expenditures on Federal projects which require no repayment from any source. In addition thereto, the Public Works Administration has made, on application of county, school, and other municipal districts, grants and loans as follows for public projects:

GRANTS ONLY

Sacramento:	
Highway bridge	$12,212
Hospital	13,700
Fire department	3,437
City-hall improvements	20,300
High school	186,363
Elk Grove: School addition	3,394
Galt: Water mains	13,515
Walnut Grove: School	14,545
Stockton Port:	
Harbor improvement	23,550
Wharves	204,300
Clarksburg: High-school addition	8,182
Woodland: City hall	7,354
Vallejo: Waterworks improvement	16,753
Total	527,605

LOANS AND GRANTS

Stockton Port, cotton compress (30-percent grant)	255,323
Stockton Port, addition to cotton compress (30-percent grant)	45,043
Suisun, waterworks (grant, $2,375)	23,375
Grant Union High School, North Sacramento (additional funds in process of allocation; total grant not yet determinable)	179,100
Total	502,841

LOANS

American River flood-control district	$194,000
Sacramento County, school improvement	16,500
Del Paso Heights, school improvement	15,500
Stockton Port, 6 warehouses	194,000
Total	336,000
Grand total for non-Federal projects	1,366,446

In addition to these items a loan of $600,000 was authorized for a municipal power plant at Lodi. The completion of this loan and consequently the start of work has been held up by litigation started by power interests. A number of other allotments have also been made which for one reason or other have not been accepted by the district involved and have been turned back to the general funds of the Public Works Administration. It is interesting to note that in at least one of these cases, a Sacramento school application, it was found possible on account of more prosperous business conditions, to sell the bonds which had been voted, in the open market at a lower cost to the citizens than to dispose of them through P. W. A. All of these are worth-while projects, all of need and value to the particular community involved, and all will be of a permanent and not a temporary benefit.

In assisting in obtaining these grants and loans, I have been continuously active, and in many cases, as the officers of the districts concerned can readily testify, the persistent work of my office has not only expedited consideration of applications but secured additional funds where needed to complete projects.

With the advent of the Works Progress Administration in the summer of 1935, the Emergency Relief money appropriated during the first session of the Seventy-fourth Congress was handled in a slightly different manner. The aim of the Works Progress Administration was to put at actual work on constructive and useful projects sponsored by some municipal body, as many men and women as possible who were in need of relief and who could actually perform the work required. The cost per man-hour, however, was made lower than under P. W. A. in order to spread the available funds as widely as possible.

Hence, many heavy construction projects, where a large proportion of the total cost was in material, could not qualify under W. P. A. Nevertheless, there were many worthy enterprises to be undertaken, and through them the problem of work relief has been well taken care of. It must be further realized that under this program, now to be continued for 1 more year, work, not a dole, is to be provided. Actual "unemployables" are properly the care of local authorities and their care does not have a rightful place in a work-relief program.

Under W. P. A., 72 projects in the 5 counties comprising the Third Congressional District, involving a peak employment of 5,219 men with a Federal contribution of $227,880, had been completed as of May 15, 1936. On the same date W. P. A. was operating 195 projects in this same territory, which will have a peak employment of 7,898 men, and to which Federal contributions will amount to $1,846,596. As of the same date there remained to be started in the Third District 94 projects which had been approved, with a peak employment estimated at 3,177 men, and to which the Federal Government would contribute $549,200.

It is not my intention to list these projects individually, but they include such items as road work; repairs, painting, and extensions to schools; water-main and fire-hydrant installations; work on reservoirs; the reconstruction of drainage and canal ditches; work in mosquito-control districts; rodent eradication, and clerical assistance rendered to various county and State bureaus. All of this work has been work of importance, work that has been needed, and work that has kept people alive.

I append hereto a table which I have prepared showing by counties the distribution of Federal and sponsors' funds on completed, operating, and prospective W. P. A. projects in the Third Congressional District as of May 15, 1936. As of today, of course, some of those that were then operating are no doubt completed, and some which were then not started are now in operation.

W. P. A. projects as of May 15, 1936

COMPLETED

Counties	Number	Peak employment	Funds supplied		Total
			Federal	Sponsors	
San Joaquin	29	1,223	$162,137	$40,213	$202,350
Sacramento	28	3,698	42,630	85,772	128,402
Yolo	10	232	12,838	8,721	21,559
Napa	5	66	10,275	17,025	27,300
Total	72	5,219	227,880	151,731	379,611

OPERATING

San Joaquin	72	2,925	1,046,345	247,929	1,294,274
Sacramento	97	4,425	641,353	178,239	819,592
Yolo	12	360	84,233	27,975	112,208
Solano	7	119	47,427	9,279	56,706
Napa	7	69	27,598	11,916	39,514
Total	195	7,898	1,846,956	475,338	2,322,294

TO BE STARTED

San Joaquin	43	1,711	316,914	124,988	441,902
Sacramento	36	1,044	166,347	38,445	204,792
Yolo	10	276	51,879	15,622	67,501
Solano	5	146	14,060	11,960	26,020
Total	94	3,177	549,200	191,015	740,215

These figures show conclusively the extent to which the Third District has benefited by the Federal construction program. I do not desire to take the time to list the many regular appropriations which I have been instrumental in securing, such as those for the maintenance of the Sacramento River, San Joaquin and Suisun Channels, Benicia Arsenal, the College of Agriculture at Davis, and Mare Island Navy Yard. I think I may well note, however, at this point that in addition to the two post offices at Woodland and Lodi, money for which was obtained from emergency funds, two others will shortly be under construction, the money for which comes from regular appropriations. These two post

offices will be constructed at Tracy, to cost $82,000, and at Vacaville, to cost $65,000.

Nor do I desire to list as benefiting solely the Third District the money which was first obtained from the relief funds, and, secondly, from the deficiency bill just passed for Central Valley water project. Sacramento, however, has been chosen as the head office of the Bureau of Reclamation in connection with work on this project, and as a result of that choice a considerable amount of employment, particularly along clerical and engineering lines, will be given to residents of that city. Much other employment, increasing as work progresses, will be available in the field. Congress has just appropriated an additional $6,900,000 for work on this project during the fiscal year 1937, which starts July 1, 1936. This, with unexpended balances from the President's allotment of September 1935, will provide about $15,000,000 for the coming fiscal year. This will permit an orderly development of all parts of this great work at all times.

It is true we will have to come back annually to Congress for funds to carry on, but the fact that this appropriation of new money has now been made, and particularly the language in which it was made, indicates clearly the intent of Congress to recognize this as an approved undertaking. The fight against this project was especially bitter and I am well satisfied, as I am sure citizens at home must be, with what we have accomplished.

The regular Navy appropriation bill also contains an item that should not be overlooked. Since my entry into Congress, I have been working vigorously for an increased workload at Mare Island Navy Yard. This, of course, requires increased facilities. The figures given first above show where I was able to obtain many of the necessary improvements. But a new drydock was needed and that could not come within the limits of either P. W. A. or W. P. A.

In 1935, however, I secured a regular authorization for $3,500,000 for a new graving dock. This year, at my personal insistence, $150,000 was actually appropriated to start work in clearing the site, preparing test pits, cofferdam, and other preliminary work. This assures a start and the remainder of the required funds will be forthcoming in due course.

I spoke in some detail a few days ago on the subject of the Pacific Air Depot which is to be located a few miles north of Sacramento. The bill containing the appropriation for this work, amounting to $7,000,000, was completed yesterday, and has gone to the President. No doubt exists as to his signing this and work on this project will be under way before August 1, 1936. I doubt if even yet the residents of our district realize what a tremendous base this is to be and what numbers of people are to be employed and what a vast amount of business will be brought to Sacramento and the surrounding territory. This is one of the new activities that I referred to which insures continuance of prosperity. The expansion of Mare Island is another.

The deepening of the San Joaquin Channel has brought increased business and prosperity to Stockton. The Board of Army Engineers has just approved the straightening and deepening of Suisun Channel (H. Doc. 97, 74th Cong.), which will result in that work being undertaken as soon as the next rivers and harbors bill is passed.

Not all of our new activities are of Federal origin, though administration policies have helped in the establishment of some. For example, the two new sugar refineries, one at Clarksburg and one at Woodland, which afford assurance of continued employment at those points. They afford also an assurance to the farmer that his sugar beets will find a ready and profitable market. The present administration is responsible for the establishment of the quota system in connection with sugar, and this Congress has just extended that system for another year.

Time does not permit me to analyze now the recovery work done in our district by the Farm Credit Administration, Home Owners' Loan Corporation, and Federal Housing Administration, nor to comment on the wonderful work done to aid banking recovery. The evidences of these benefits are so strong, so apparent, and so voluminous that to mention these is to recall some specific instance of aid to everyone's mind.

The work of the Reconstruction Finance Corporation is not so well known, so I shall devote just a brief moment to it. Through March 31, 1936, this organization had advanced in the Third Congressional District the vast sum of $16,315,202.17. Of this amount, $755,000 represented subscriptions to preferred stock of banks and trust companies, and the remainder was divided as follows:

Authorizations to industrial or commercial business, under sec. 5-D	$10,000.00
Loans to borrowers engaged in the mining, milling, or smelting of ores	190,000.00
Financing of agricultural commodities and livestock	500,000.00
Loans to or for the benefit of drainage, levee, and irrigation districts	$1,763,304.99
Loans to banks and trust companies (including receivers and conservators)	13,096,897.18
Total (including stock subscription)	16,315,202.17

Each county in the district has participated to some extent in these operations. Perhaps the use of the credit of Uncle Sam in these ways has been even as valuable as the more direct relief program.

Those who will carefully review these figures that I have submitted must realize, as perhaps they never have realized, the extent to which the Third District has benefited under the present administration. A continuation of these benefits and a continuation of the protection of the interests of industry, labor, and the farm alike, can only be assured by the continuation at the head of the Nation and in Congress of those who have been responsible for what has been done in the last 4 years. Those who have pursued a definite policy of aid to all in need of it, of encouragement to the disheartened, of relief to the poor, and of judicious expenditures in works of permanent benefit, should not be replaced without good cause.

Congress, in particular, moves slowly—it takes time to secure favorable consideration of new work by any Department, longer to secure the proper authorization by Congress, and finally, the necessary appropriation. The uninformed may think that all these Third District allotments "just grew," but actually they are the result of 4 years' hard work on the part of your present Representative in Congress. Whatever value I possessed to the district when elected has been increased through experience at Washington. There is nothing of more value than length of service, with its consequent seniority and influence. A diligent application to duty permits me to point with pride to this portion of my record; I shall discuss legislative features of it at other times.

CHILD LABOR AND THE WALSH-HEALEY BILL

Mrs. O'DAY. Mr. Speaker, during the debate Thursday night we had the pleasure of hearing our colleague the gentleman from Texas tell the story of his youthful struggles to support his family. He declared he had been the breadwinner of a family ever since he was 10 years old.

Without wishing to minimize the accomplishments of the gentleman from Texas nor the courage and industry of child workers, I wish, if possible, to erase the impression that this Congress regards it desirable or creditable to society that a child of 10 should be the breadwinner of a family.

No doubt many working children have been able to rise above their handicap and attain distinction in adult life, even as the gentleman from Texas has done.

But that does not excuse society for permitting conditions to exist that make it mandatory on a child of 10 to be the main support of a family. Nor does it mean that every child, so deprived of a healthy and normal childhood, is slated to outdistance his more fortunate fellows. The gentleman from Texas and those of his ilk are exceptions, or all our theories of child training are in error.

If we are to accept the premise that adult problems are good for a child of 10, we might as well throw our schoolbooks out of the window, fire all our teachers above the third grade, and discard our whole theory of education. Our colleges and universities should be closed and all our youngsters put to work as soon as they reach their tenth birthday.

We have accepted the theory that the tendency of civilization is to prolong the childhood of the race. If we are to put our children to work in their infancy, we should discard this theory immediately.

For every one overworked, overburdened child who rises to eminence in adult life there are thousands who sink beneath the too-heavy load placed on their young shoulders.

Child labor is not justified because a few individuals were able to succeed in spite of it.

The Democratic Party and especially the present administration have stood for the abolition of this blot on our civilization. Let those who know from their own experience the pangs of thwarted childhood not seek to hinder the work that is being done to save other boys and girls.

SPEAKER BYRNS, LOVER OF CHILDREN

Mr. REED of Illinois. Mr. Speaker, it was my privilege to know Speaker BYRNS personally only since the beginning of the Seventy-fourth Congress. My first impression of him on the day he was elected Speaker was most favorable. One phrase in his speech of acceptance I have never forgotten. He said:

> I subscribe to the policies, platform, and principles of my party. I shall endeavor so far as I properly can, to assist in the enactment of legislation in accordance with those principles and policies. But I have been in a minority, too. I understand its problems. And while I help the majority carry out its plans, I shall be equally insistent upon preserving fully the right of the minority to debate and record openly its position on all public questions.

How faithfully and conscientiously he carried out that pledge has been eloquently described by the leaders on both sides of this Chamber. The records of the American Congresses since March 4, 1909, when he first took his seat, afford ample proof of his greatness as a statesman, both as a fighter in the ranks of his party and as the presiding officer of this House of Representatives. But these records deal only with his public life and official services. There was an intensely human trait in the character of Speaker BYRNS that particularly appealed to me. It was his love for children. Often while passing through the reading room adjacent to the House Chamber I have seen him stoop from his great height and chat kindly with some child that chanced to be there with his father. He never failed to notice a child, and children were always attracted to him. Perhaps it was his kindly face and gentle manner.

He reminded me on those occasions of another great American, a tall man with an equally kind face, who although holding the highest office within the gift of his countrymen at a critical period when the Union of States was threatened with destruction, was never too busy, too weary, or too dignified to notice and speak kindly to a child.

I have at home a little girl, 3½ years old. Her name is Barbara Ann. Of course, she does not know what Congress is or what the word "Speaker" means. I had taught her to answer the question, "Who is the Speaker?" by saying "Mr. BYRNS." I wanted her to meet the Speaker and shake his hand and I wanted him to meet her. A few weeks ago I took her with me to the floor of the House. Then my difficulties commenced. Escaping from my clutches she dashed down the aisle of the Republican side, crossed the well at the foot of the Speaker's dias and up the aisle on the Democratic side. That was so much fun that she started back again. I realized that for me to attempt to pursue her would only make matters worse and I endeavored by motions of the hand to induce her to come back to the place where I was seated. But the spectacle of several hundred Members engaged in speech making and debate was far more attractive than the feeble efforts of a frantic father to prevent what commenced to look like a serious impairment of the dignity and decorum of the House. Again she sped down the aisle. At the foot she paused, surveyed the imposing array of clerks and officials and looked wonderingly at the presiding officer as he stood, gavel in hand, at his desk. I looked, too.

I saw a smile sweep his features. She smiled back. It was their first meeting and they both enjoyed it. Fortunately adjournment for the day was close at hand and when the gavel sounded Speaker BYRNS descended from his station and immediately stooped down and shook hands with the little disturber. He suggested kindly that perhaps she would like to occupy his seat and I will never forget the smile of pleasure and triumph that spread over her face as she clambered into his chair and turned to face an audience of several Members who applauded her generously. On the day of his death when I returned home from the office she met me at the door. Her face was perplexed and sorrowful. "Daddy," she said, "Speaker BYRNS is dead. He was a nice man. He let me sit in his chair."

Mr. Speaker, we have the authority of Him who said, "Suffer little children to come unto me", that unless we become as little children we cannot enter into the kingdom of heaven. Of such is that kingdom to which the kindly soul of Speaker BYRNS has entered.

A TRIBUTE TO SPEAKER JOE BYRNS

Mr. MITCHELL of Tennessee. Mr. Speaker, under the leave to extend my remarks in the RECORD I include the following statement made by me to the editor of the Shelbyville Gazette, published in Bedford County, Tenn., in my congressional district. This statement was made on June 11, 1936, to Mr. R. K. Pitts, with reference to the life and character of our late Speaker, Hon. JOE BYRNS, of Nashville, Tenn.:

> Tennessee and the Nation has lost one of its most beloved sons. Speaker BYRNS was loved and admired by all who knew him. He was a friend of the common people of our country and anxious to render them real service. He was honest, conscientious, and in every way capable.
>
> As Speaker of the House of Representatives he enjoyed the confidence of every Member of that body, regardless of politics. His rulings were fair, just, and always firm. The membership of our body today is in mourning and the hearts of all are saddened. It was a great shock that he should be taken so suddenly and unexpectedly, but he fell a victim to the work incident to carrying on his duties. He was always cheerful in the midst of every strain and every responsibility. Regardless of how busy he might be in his work here he always had time to speak to and a good word for every Tennessean and every constituent. He was anxious to serve them and to serve his Nation.
>
> The people, and the Democratic Party, have lost a great benefactor and friend. He was the keystone in the arch for the New Deal, and the President, in common with all of us, is saddened at his going away and has sustained a loss which cannot be replaced.
>
> Thirty years of legislative experience and active service in public life without a stain is a great tribute to any man, but it can be well and truthfully said of JOE BYRNS, as he was familiarly known to all of us, that he enjoyed this tribute at the hands of his State, his Nation, and his party. He rendered invaluable public service and thus discharged a great responsibility, which comes to men in public life who must need dedicate their best efforts and talents in behalf of the great common people, who have been so long neglected by many of those charged with public responsibility in the past. He was truly a friend of man and the pathway to his door was used by all of us. We cannot, in mere words, pay just tribute to so beloved a Tennessean. Tennessee mourns his loss and the Fifth District has lost its favorite and honored and most beloved son.

JOSEPH W. BYRNS

Mr. PLUMLEY. Mr. Speaker, there are a few of the older Members of this body who will recall the cordial friendship which existed between JOSEPH W. BYRNS and my father, when and as they served together here on this floor and in committees in days that now seem long ago.

It was my good fortune to have inherited and to share that friendship, always deeply appreciated, but now remembered as a priceless treasure.

No words of mine are necessary to, or if spoken, would or could measure the value of the services our friend rendered his country, or properly or commensurately evaluate his worth and his record as a legislator, statesman, and a man, or even begin to express the loss I feel, and all of us have sustained, in his death.

> "Words are easy like the wind;
> Faithful friends are hard to find."

He was my friend!

In his passing, something inexplicable has happened; out of our lives has gone something intangible, inexpressible, yet appreciable, the sense of the loss of which not even time can ever efface.

Yet, perhaps, as someone has said:

Perhaps we shall find at last that life and death
Are part of the same poem, rime on rime,
With but a natural pausing for the breath
As a sentence ends, that swinging out from time
Into eternity will make no break at all;
That still the perfect rhythm will be there;
That the swinging, high, sustained notes will not fall,
Nor the music falter on the waiting air.

I trust that there will be no stumbling feet
To mar the progress of that perfect thing.
The epic we call "life" is strangely sweet,
And yet, God grant upon its upward swing
It may take on, beneath an abler hand,
A meaning that the heart can understand.

WHY I VOTED AGAINST THE TAX BILL

Mr. LUDLOW. Mr. Speaker, I wish to state very briefly the reasons why I am voting against this tax bill.

I am doing so because in its final draft it places a heavy penalty and burden on small business firms that have been knocked down, and all but knocked out, by the depression and that are now struggling to get on their feet again.

It is my solicitude for the thousands upon thousands of good, honest business firms that are so beset with difficulties and that find the going so terribly hard that compels me to vote "No" on this tax bill in the form in which it is presented for our final judgment.

My particular concern is for the small and moderate-sized companies that are fighting valiantly to get back to normal conditions where they may resume operations and give regular jobs to our great army of workingmen who have been flirting for many months with starvation or who have eked out a miserable subsistence for themselves and their families on relief rolls. I sincerely believe that the reestablishment of these thousands upon thousands of small and medium-sized concerns holds the key to recovery.

It is my opinion that the Government should not harass these concerns with oppressive taxation or excessive bureaucratic dictatorship but should adopt a policy of helping them to get on their feet. That, I believe, would be real statesmanship.

Mr. Speaker, this assertion of my fundamental belief in the necessity of doing something to aid honest business is nothing new, as far as I am concerned. I have been speaking and working along that line ever since I came to Congress. I introduced the first bill to provide for loans to industries.

It was my belief then, and it is my belief now, that if the Government, instead of spending vast sums of money for synthetic work projects that do not get us anywhere toward recovery, would loan its credit in small and moderate-sized amounts to business concerns that are starved for working capital it would not be long until we would have recovery and prosperity in this country, with real jobs for all who want them, and then our self-respecting workingmen would not have to plead with someone in governmental authority for jobs of no economic value or importance in order to keep from starving.

The Government should get out of the employment field just as soon as possible. The great demand of the times is for real jobs in private industry that will keep men off of the Government rolls. I have exercised great persistency and patience in asserting this principle in season and out of season, and in successive sessions of the Congress I have introduced and reintroduced my bill providing for loans to good, solvent small concerns that now have no capital to begin normal operations.

Having sought conscientiously and with all the earnestness I could command to bring this practical aid to honest business firms in distress, to the end of rehabilitating the business structure and restoring normal employment to our workingmen, it certainly would be very inconsistent on my part if I were to vote for the adoption of a tax conference report that lays a heavy hand on the identical business concerns that I have sought to aid. Now let us see what sort of taxation this bill places on the small companies.

If no distribution of dividends were made the taxes of low-income companies would be increased as follows over the present law:

Company net income:	*Percent increase*
$1,000	15
$3,000	21
$5,000	26
$10,000	61
$20,000	98
$50,000	117
$100,000	117

With a 50 percent distribution of dividends the weaker companies still would be severely penalized, as follows:

Company net income:	*Percent increase*
$10,000	5
$20,000	19
$50,000	37
$100,000	40

Mr. Speaker, in my capacity as a Member of the House, as a member of the Appropriations Committee and as chairman of one of its subcommittees. I have made a real, sincere effort, within my feeble limitations, to influence the course of appropriations in the direction of economy. While supporting appropriations to relieve starvation and want and to attain the humane objectives of our national administration, I have opposed, and have voted against, extraordinary appropriations totaling more than $7,000,000,000 which I believed represented expenditures that ought not to be made. I realize as keenly, I think, as any one that the road to economy is the road to recovery and that we cannot hope for any permanent stability in our national affairs until we settle down to a balanced budget.

Believing in that doctrine, I believe, of course, that we must have taxes to meet expenditures and to reduce the debt that has been created, and I voted for the tax bill on its original passage in the House, hoping that the bill when it returned from the Senate for the final action of the House would be in such form that I could give it my approval and vote.

It is this final product that is before us today, and I cannot endorse it. The bill when it passed the House was aimed especially at the large corporations which were best prepared to withstand heavy tax impositions. The Senate has changed all of that and has deflected the burden to the little companies that comprise the vast majority of our business concerns on which the welfare of each community and the general welfare of the Nation so largely depend. These small companies are crippled and distressed. I want to help them, and I certainly will not vote to suck from them, in the form of taxes, what lifeblood they still have left.

THE TWO-THIRDS RULE

Mr. GASQUE. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include the following radio address which I will deliver at the National Broadcasting Co. station, Washington, D. C., on June 21, 1936, as follows:

It stands to reason that a rule which was adopted by the first Democratic national convention and has been reaffirmed by each succeeding convention of the party for more than 100 years, withstanding every attack made upon it from whatever quarter, must rest upon a substantial and enduring principle rather than upon a mere whim or any temporary or transient consideration.

Whatever may have been the genesis of the idea when it was first put into practice in the original Democratic national convention at Baltimore in 1832—whether, as then stated by its proponents, to give assurance that the nominee would be the choice of the general sentiment of the delegates rather than of a bare majority, or whether to prevent undue effect of combinations of big States operating under the unit rule—the fact is that the two-thirds requirement owes its retention to the security which it provides in the following particulars:

(1) Against nominations under the unit rule by an actual minority of the convention, whereby States with enormous populations, throwing their delegations as a unit, could turn the balance in favor of a particular candidate, although they might really include large minorities who would vote otherwise if free to exercise their own preferences.

(2) Against nominations of Presidential candidates who might, for good and satisfactory reasons, be repugnant to the sentiments and interests of States sufficiently important in the aggregate to be represented by any fraction above one-third of the delegates in a convention.

The first of these safeguards is against the naming of Presidential tickets by anything less than the free will of a majority of the delegates in the convention. The second safeguard is of the rights and welfare of a great minority, which is just as cardinal a Democratic principle as the rule of the majority. No less a personage than Thomas Jefferson laid stress upon the importance in Democratic procedure of preserving the rights of the minority.

At present it is a fashion to refer to the two-thirds rule as particularly in the interest of the South. While I think that to be true at this time, and to have been true for a number of years, the rule was not originated in the special interest of the South and could not have been retained during the century and more of its existence in any single regional interest, because at any convention it could have been abrogated by a mere majority vote of the delegates who on each occasion adopt the rules of procedure for their own assembly. At any time the two-thirds rule might turn out to be in the particular interest of the New England region of States, or the western, or central region of States, and at nearly all times it is in the interest of the less populous States, wherever they are situated, and of the States with largely rural and agricultural populations, in contradistinction to the States which overshadow most of the others in number of inhabitants and which contain the great industrial populations centered in enormous cities.

As an illustration of the manner in which Presidential nominations might be unduly influenced by the big States if the two-thirds rule were abolished without the simultaneous abrogation of its twin brother, the unit rule (which also went into operation at the first Democratic National Convention in 1832), let us take the possibility of New York, Pennsylvania, Illinois, and Texas, all throwing their delegations solidly to one candidate under the unit rule, even though there migh be a substantial minority sentiment in each of these State's delegations for other candidates. New York has 90 votes in the National Convention, Pennsylvania 72, Illinois 54, and Texas 46, or 262 altogether for the four States. There are slightly over 1,000 votes in a Democratic National Convention. It is easily conceivable—though, of course, not at Philadelphia, where there is not the slightest doubt of the renomination of President Roosevelt and Vice President Garner by acclamation—that one candidate might be chosen over another by 25 or 50 votes in the balance. With the unit rule the four States just mentioned could throw to a certain candidate not only 25 or 50 but even 100 votes of delegates who would individually prefer someone else. Unless the two-thirds rule prevailed the unit system could thus bring about the nomination of a minority candidate.

Recurring to the so-called regional veto power of the two-thirds rule, it should not be forgotten that this is just as available to the Western States, or to the New England States, or to the Central States, as it is to the Southern States. That is to say, any one of these regions can now throw its strength against the choice of any Presidential candidate whom it fears or does not like, with the same influence in the balance as that possessed by the South. These other sections have had their distinct regional trends within the party establishment—have them now, no doubt—and will certainly have them in the future. The strength and direction of these trends will vary from period to period, but they will always be in existence, more or less, and it is a part of the genius of our American institutions that they should have a liberal amount of leeway and protection.

The two-thirds rule was not a southern invention. Its first suggestion came from New Hampshire. It was charged at the time of its birth that it had been conceived in the interest of the Vice Presidential candidacy of Martin Van Buren, whom President Andrew Jackson was grooming to follow himself into the White House 4 years later. The opposition to the rule was led by a Virginia delegate and all the votes against the nomination of Van Buren for Vice President came from the South. However, there is no indication that Van Buren was in danger from any minority one-third or otherwise, for he was nominated on the first ballot by much more than a two-thirds vote.

There is nothing in the records of the first convention to discredit the statement of those who brought forward the two-thirds rule that it was being advocated because it would assure the nomination of a candidate overwhelmingly supported by the party. But an underlying purpose may have been to curb the predominance of the big States, which were not all in the North in those years of our country's youth. Virginia, for instance, had almost as many electoral votes in 1832 as Pennsylvania; that is, 26 to 29. New York had the lead, it is true, but with only 36 votes. Today Virginia has only 11 electoral votes, the same number that South Carolina, my own State, had in 1932.

The States smaller in population feared the overbalancing power of Virginia in those days hardly less than they feared that of New York or Pennsylvania. Political combinations were possible between Virginia and New York or Virginia and Pennsylvania which would have constituted the same problem in a national convention then as a combination between New York and Pennsylvania or New York and Illinois now. Texas, by the way, is now the overshadowing Southern State in number of Presidential electors and delegates to national conventions, occupying, indeed, much the same relative position toward her southern sisters as Virginia did a hundred years ago.

Detailed record of the genesis of the two-thirds rule is hardly obtainable. It must be judged by itself rather than by conjectures, however reasonable, as to the ideas which were in the minds of those who first drafted it. We need not be surprised at not having voluminous reports of those first national conventions, which were run on the principle of keeping out matters not conducive to harmony. For instance, the second convention, in 1835, permitted no nominating speeches and adopted no platform. Maybe it wasn't so foolish in those particulars, after all. We have all been wearied by interminable and superfluous nominating orations—allowing that at times we have been entertained and inspired by the better efforts, and there are some who think that platforms are chiefly a source of trouble. But that is getting away from the two-thirds rule, which I very strongly feel we should not do.

In principle and purpose, the two-thirds rule is one of those propositions that apply to all times and conditions and do not vary in their logical basis from one generation to another. Free speech is sometimes abused, the jury system is not perfect, but their basic reasons for existence are the same in one decade or generation as in another.

Of course, I am basing my defense of the two-thirds rule on the theory that the unit rule stays or goes with it. I would be inclined to favor the retention of the two-thirds rule even if we did not have the unit rule in Democratic conventions, but I should regard the necessity for it as less serious if the unit rule were not in force. At any rate, to drop the two-thirds rule without simultaneously discarding the unit rule would, as I have already undertaken to show, create the very real danger of nominating Presidential tickets against the actual preferences of a majority of the delegates because of the aggregated and solid-shotted power of the States with the biggest populations and the regions where the mighty cities are mostly to be found. The areas of the States which are chiefly rural and agricultural are much larger, their population is much sparser, their activities are much more scattered. It is much easier for the States which are comparatively small in area, but giants in population and in organization, to combine into phalanxes of two or three hundred votes at a national convention. And that is why the two-thirds rule is needed, and why it has resisted successfully up to this time all attempts to dislodge it.

In the second Democratic national convention, held in 1835 (a year and a half before the election, and also at Baltimore) a lively effort was made to prevent the readoption of the two-thirds rule. This time the South saved it, although a New York candidate, Van Buren, was nominated. Six-sevenths of the Southern delegates voted for the rule, while about two-thirds of the delegates from the North voted in the negative. There was not much opposition thereafter until the convention of 1872, held in Tammany Hall, when the attack was led by Illinois and the successful defense by New York.

Four years later at St. Louis in 1876 the battle was renewed, and the convention, while itself reaffirming the rule, adopted a resolution proposed by a Michigan delegate urging the States to instruct their delegates to the next national convention how they should vote on the subject. The result was such a Waterloo for the anti-two-thirds crusaders that the convention of 1880, meeting in Cincinnati, adopted the rules of the previous convention without even mentioning any one rule in particular and without hearing any report as to what the States had done with the great referendum.

As a matter of fact, it was well known that the State delegations of Alabama, Connecticut, Delaware, Louisiana, Maryland, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, South Carolina, Vermont, and Virginia, which combined were a majority of the convention, had been instructed to vote for the retention of the two-thirds rule; and there was no evidence that any State convention had instructed its delegates to the contrary.

In 1884 an Arkansas delegate to the Democratic national convention opened a fight on the rule, but got little support; and a Louisiana delegate to the Chicago convention in 1896 undertook to arouse sentiment against it, but did not even reach first base. Since that time there have been recurrent movements to drop the good old rule, but they have not crystallized into action at the conventions, however much talk may have been heard in the shape of scattering speeches by individual delegates. Bitter criticism of the rule was voiced in 1912 in the Baltimore convention and out of it because Speaker Champ Clark of beloved memory attained an actual majority of the votes of the convention for a few ballots and failed of the nomination because he could not muster two-thirds. We must at that very point, nevertheless, credit the two-thirds rule with having brought about the Presidency of Woodrow Wilson, under whose stainless banner the Democratic Party twice rode to victory and whose memory it will ever proudly cherish. Without the two-thirds rule Woodrow Wilson could not have been nominated.

I do not believe that the abrogation of the two-thirds rule is either desirable or advisable. In my opinion it has been the bulwark not only of proper minority rights and interests but also the bulwark of majority rights and interests because it has prevented the unit rule from making possible the nomination of Presidential candidates by a minority of delegates. In my opinion, not my own section alone but other great sections will rue the day when this time-honored regulation is scrapped; and I am very hopeful and very much inclined to think that the scrapping will not be so easy a process at Philadelphia as some people may expect.

THE TAX BILL—WHY I OPPOSE IT

Mr. PETTENGILL. Mr. Speaker, once, before the Ways and Means Committee on April 6, and again on the floor of the House on the adoption of the conference report on June 19, I spoke against the tax bill. On both occasions I was the only Member of the majority to do so, although others joined me in voting against it.

On each of the previous occasions my time was so limited that I could not discuss the proposal in a number of important details.

I do not favor the philosophy which underlies the bill.

It is an invitation to monopoly. It places small industries at a disadvantage with the powerful. It penalizes the laying of nest eggs. It assumes that it "ain't goin' to rain no more." It assumes, further, that money held in reserve is idle, whereas if forced into the hands of stockholders it becomes alive and goes to work.

Beyond all this it is an attempt to control the allocation of capital. It assumes that Government officials are more wise than the managers of business in determining what to do with the earnings of business.

Still further, it favors the stockholders of industry rather than their workers.

All this is opposed to the principles of the Democratic Party as I have learned them.

The New York Times, the country's leading Democratic newspaper, says that the bill is "a blow aimed directly at the productive processes of the country." The less wealth produced, the less to distribute.

In saying this I do not oppose but favor going after the exceptional case where the corporate form is used as a device to hide away from taxation unnecessary accumulations.

On this point, before the Ways and Means Committee, I said:

> I approach this problem from the assumption that it is socially and economically desirable to discourage corporations from improperly withholding the distribution of their future earnings.

Certainly a company like the Aluminum Corporation of America, closely owned by a few rich men who have other income and do not need their dividends, ought not to escape carrying its fair share of the tax burden. Legislation to reach cases of this sort has merit, and I favor amending our tax laws in whatever way is necessary to do so.

But certainly we ought not to revolutionize our whole corporate tax law and throw out the window everything we have learned on that subject since 1913 in order to reach the exceptional situation. We ought not to penalize 98 or 99 companies in order to reach one or two.

The Commissioner of Internal Revenue reports only 300 cases which have come to the attention of his office where companies appear to have unreasonably accumulated unnecessary reserves for the apparent purpose of avoiding taxes by their shareholders.

And yet we here propose to "soak" tens of thousands of companies in order to reach three hundred.

Here are the figures.

I attach a table prepared by the Treasury showing the tax increases under this bill.

Net income	Total tax		Increase	
	Present law	1936 revenue bill[1]	Amount	Percent
$1,000	125	144.40	19.40	15.52
$2,000	250	288.80	38.80	15.52
$3,000	380	461.10	81.10	21.34
$4,000	510	633.40	123.40	24.20
$5,000	640	805.70	165.70	25.89
$10,000	1,290	2,082.00	792.00	61.40
$20,000	2,640	5,236.00	2,596.00	98.33
$50,000	6,940	15,163.10	8,223.10	118.49
$100,000	14,440	31,502.80	17,062.80	118.16
$200,000	29,440	63,927.80	34,487.80	117.13
$300,000	44,440	96,352.80	51,912.80	116.82
$400,000	59,440	128,777.80	69,337.80	116.65
$500,000	74,440	161,202.80	86,762.80	116.55
$1,000,000	149,440	323,327.80	173,887.80	116.36

[1] Tax computation based on no distribution.

The above table is not confined to the Aluminum Corporation. It hits the "little fellow", the small company earning no more than $1,000. Take a little company that makes $2,000 and has to retain it in its business. You are increasing the tax on that little corporation 15 percent. If the company earns $4,000 net, its tax is increased 24 percent. If it earns $5,000, you are increasing its tax load 26 percent. If it earns $10,000, you are going to make it pay 61 percent more than under existing law. If it earns $20,000, you are increasing its tax burden 98 percent. Yes; 98 percent. I am not going home and tell that I voted to penalize that little company 98 percent for the privilege of retaining its earnings in its business in order to expand it and put more men to work.

When the company would forego payment of dividends in order to expand you are asking it to pay its earnings to its stockholders and not to its workmen. At the same time that you are asking the business interests of the country to expand to absorb the army of men who are still out of work you adopt the principle that the money must go to their stockholders rather than to their employees. I cannot defend it.

Where can the little businesses get funds today to expand? From the banks? Try it. From the sale of stock and go through the delay and expense of getting permission from the "blue sky" commissions? Try that. No; their only chance to get on their feet again after the beatings they have taken is to plow back their earnings, the same as practically every business in America has always done.

What is your answer to their effort to get going again, to increase their inventories, to buy more raw materials, to buy new machinery and equipment, to enlarge their plant? The answer is "98 percent."

On the other hand, take a corporation that has come through the depression with a huge surplus and is therefore in a position to pay out all its earnings to its stockholders. See the advantage you give that corporation, the strong one, over its competitor, whose only chance to survive is to retain its earnings. The fortunate company, the giant, let us say, on earnings of $1,000,000 will pay under this new bill $148,840, almost the same as under existing law. Its weaker competitor, on the same earnings and under necessity of retaining them, will pay under this bill $323,327.80, or $174,487.80 more than the first. What does that do? That permits the first corporation to underquote its competitor by the amount of tax it does not pay. It can offer its products to the public that much cheaper. If each company made 17,448 units of its product—washing machines, electric refrigerators, or typewriters, or automobiles, or plows—the first corporation can underquote the second $10 a unit. The second gets that $174,487.80 extra tax money from the sale of its product and has to add it to the price of its product. What chance to survive does the second one have? You are giving the first, by law, a $10 per unit advantage over the other.

Bear in mind this bill does not touch past accumulations of earnings. It only touches future earnings. It, therefore, gives the company with a surplus already in hand an advantage in the competition for markets. It rewards it in the future for doing in the past the very thing this bill seeks to prevent its competitor from doing. It permits it to use surpluses accumulated in the past to prevent its competitor from accumulating surpluses in the future.

This bill hits the little and helps the big. It will inevitably lead to still further concentration of capital in a few hands and encourage monopoly. I am certain that Jefferson and Jackson would never support this bill.

But, bad as this bill is, I might support it for a year or two if we were at the same time reducing outgo from the Treasury. When the Government shows a disposition to pay as it goes and to bring outgo within income I will vote to increase taxes.

When the people of this country begin to think this bill over and see how it is working out, to prevent these little businesses from expanding and putting men to work and absorbing this army of the unemployed, I anticipate that the theorists and professors who fathered this bill are going to regret it.

We cannot overlook the fact that the persons mainly concerned with corporate success are their workers. If a company closes its doors, the stockholders lose their investment, but the workers lose their jobs, often their homes. If a factory fails to expand, it may affect only one stockholder, but a dozen workers.

But this bill encourages distribution of earnings to stockholders rather than to workers.

If at the end of the year a company had earned $100,000 which it planned to use in enlarging its plant, increasing its inventories of raw materials, and in new pay rolls it would have to pay a penalty of $17,062.80 for the privilege, or 17 percent on its earnings. That sum added to the tax under existing law totals $31,502.80, or 31½ percent. This leaves the company only $68,497.20.

The $31,502.80 that the Government gets may be used to provide jobs for W. P. A. workers. As an emergency, we may all agree that this is necessary. But the company has that much less to provide jobs for its own workers. Their pay rolls shrink as Government pay rolls increase. All taxes are charged against someone's production.

I sometimes think one of the greatest reforms possible would be to make the taxpayer realize that he actually pays taxes. That would include everybody and every voter and be the best safeguard against extravagance in Government, and we have in the United States 182,651 governments, or 1 for every 700 inhabitants. Believe it or not!

All of these governments together take $650 annually out of the pockets of the average family of five. That means that that family has $650 less to spend. Every dollar appropriated from public treasuries is withdrawn from private treasuries.

"Jones pays the freight." Every time he buys gasoline, tobacco, or a thousand other things he pays the bill. Sixty percent of the tax bill of the Federal Government comes out of the pocketbook of the consumer. And this despite the highest taxes on income and inheritance in our entire history.

If every time John Public buys 10 gallons of gasoline for $1.90 he had to pay the filling station man $1.40 and then had to go and drop a half dollar in a box marked "support of government" he would take a real interest in government. He would realize that tax legislation means something to him.

This tax bill does mean something to John Q. Public. The fact that the corporation he works for signs the tax checks does not change the result. The money in the company's treasury comes from the public the same as it does when the gasoline company pays.

I repeat this is not a tax on Mellon or Ford or Rockefeller alone. Actually it may not affect their companies at all, due to huge reserves built up in past years.

As Senator BYRD, of Virginia, has pointed out, 136 of the most prosperous corporations earning $1,000,000 or more may entirely escape all increase of taxes under this bill. He says:

> Let us take, for example, the International Harvester Co. I am a farmer. We farmers think the International Harvester Co. controls the price of farm machinery in this country. It makes good farm machinery; but I desire to say that during the depression the price of this farm machinery was not reduced; and it takes more bushels of wheat, more bushels of corn, and more bushels of barley to buy a binder than at any time, perhaps, in our previous history. The International Harvester Co. has a surplus today of $74,000,000, $27,000,000 of which is in cash, and $34,000,000 of which is in Government bonds—a liquid surplus of $61,000,000. This corporation in 1934 earned $4,000,000, and paid out $8,000,000 in dividends. Therefore, the International Harvester Co. will pay only the normal tax. It will pay no surtax, because it will declare all its earnings in dividends, and therefore will not pay a surtax.
>
> Suppose the case of a competitor of the International Harvester Co. that has a large surplus, that must use a part of its earnings to build up a surplus: That company must pay a high supertax in addition to the normal tax.
>
> Let us take, then, the General Motors Co. The General Motors Co. has $292,000,000 of surplus—$183,000,000 in cold cash, and $19,000,000 in bonds. That is all the surplus that General Motors needs to operate its business. It will pay only the normal tax; yet another company that owes a debt, and that must use its money to pay a debt, must pay a surtax running up to 27 percent in order to pay that debt.
>
> Let me remind the Members of the Senate, also, that there is virtually no cushion in this bill. The only cushion in the bill is for corporations which have made legal contracts not to pay dividends prior to May 1 of this year. There is no cushion as to debts. There is no cushion for the construction of new plants or for expanding business. I think it is a very obvious thing that as long as the bill does not affect existing cash and liquid surpluses, it is to the advantage of companies which have such surpluses, and greatly to the disadvantage of growing companies which must use a part of their earnings in order to establish a surplus. I think that proposition cannot be contradicted.

If corporations are not permitted to accumulate reasonably sized nest eggs for the next rainy day, how bad will the next depression be?

Out of reserves hundreds of companies have carried on and kept men at work during the past few years when there were no earnings. During the depression American industry paid out of accumulated reserves $26,500,000,000, the bulk of which went to pay rolls.

Suppose they had not had that $26,500,000,000. What would the relief bill and the public debt be today? Could we add $26,500,000,000 to the present public debt without destroying confidence in Government bonds, with a resulting panic worse than we have ever seen?

You may say you own no Government bonds. But every bank and insurance company in the country does. None of them, and few industries, can stay solvent unless the Government stays solvent. Banks buy Government bonds and the Government insures the deposits in the banks that went to buy the bonds.

That is what corporate reserves "nest eggs" mean to John Q. Public, whether investor, insurance-policy holder, bank depositor, or worker.

On of the most disastrous failures in my district was due to the fact that what should have gone into reserves went into dividends. It directly affected thousands of homes and destroyed the real-estate values of thousands of others. This bill puts its stamp of approval on the dividend policy of that corporation.

The more dividends a company pays out the less its tax. It is rewarded for not laying away a "nest egg" and is penalized if it does.

HON. JOSEPH W. BYRNS—A DISTINGUISHED SPEAKER

Mr. CROWTHER. Mr. Speaker, the passing of the Honorable JOSEPH W. BYRNS, our distinguished Speaker of the House of Representatives, has again reminded us that "all who are born must die." After more than a quarter century of service he was stricken in the closing hours of the Seventy-fourth Congress, a veritable martyr to the demands upon his responsibilities as Presiding Officer of the House.

Speaker BYRNS was a man of unusual intellectual attainments, a lawyer of great ability, and possessed of those qualifications which distinctly marked him as a statesman rather than a politician.

He served effectively in the minority as well as the majority, and always for the best interests of the whole country. He was a forceful speaker and rendered yeoman service as majority leader in closing debate on important national issues. Though a strong and fearless partisan, he was imbued with a spirit of fairness that endeared him to all who served with him. He had achieved his life's ambition in attaining the Speakership, and no Member of the House more deserved this high honor than JOE BYRNS. His rulings were a model of fairness and he will be remembered as one of the great Speakers of the House. He has been called to a fairer land, away from the trials and tribulations of this mundane sphere.

We are all better men for having served with him. The life and character and achievements of JOE BYRNS are a message of inspiration to the young men of America.

RECIPROCAL TRADE WITH CANADA

Mr. PLUMLEY. Mr. Speaker, in December of 1935 there was negotiated with the Dominion of Canada another of the so-called reciprocal-trade agreements, pursuant to the authority granted to the President, over the objection of a minority in the House and Senate, in the Trade Agreements Act of June 12, 1934.

At previous times during this session and prior sessions of Congress I have set forth my attitude concerning this treaty, as well as incorporating in my remarks the comments of leaders in Vermont, especially of those intimately connected with Vermont agriculture. The commissioner of agriculture of Vermont was one of these. He, Hon. E. H. Jones, wrote me to the effect that—

> The so-called reciprocal-trade agreement with Canada is a one-sided affair as far as the farmers of Vermont and New England are concerned and * * * it will result greatly to their disadvantage.

He pointed out, particularly, the adverse effects it would have on the dairy industry, on the raisers of certified seed potatoes, on those engaged in the manufacture of maple sugar and the like. Similarly, the president of the Vermont State Grange, Hon. H. A. Stoddard, wrote me that—

> Speaking for the Vermont State Grange, I can say that we are very much opposed to the treaty as we believe that it will act only as a detriment to Vermont agriculture.

In similar vein spoke many another who had the interests of Vermont's agriculture at heart.

Those of us who expressed concern, when the details of the trade treaty were made public were told that we were "starting at shadows." Let us see whether or not such was the case.

I desire to submit at this point a table that I have had compiled showing the comparative figures for the trade between the United States and Canada during the present year—with the trade agreement in force—and those of 1 year ago. I would like particularly to call attention to the marked decrease in the favorable balance of trade for the United States in this short period. The table follows:

Summary figures on trade between the United States and Canada for the 4 months ending April 1935 and April 1936

[Source: U. S. Bureau of Foreign and Domestic Commerce. Monthly Summary of Foreign Commerce of the United States, April 1936, corrected to May 28, 1936, p. 4]

	4 months ending April (each year)	
	1935	1936
Exports (including reexports) from the United States to Canada	$100, 295, 712	$111, 209, 806
General imports from Canada into the United States	79, 820, 958	99, 021, 390
Balance of trade in favor of United States [1]	20, 474, 754	12, 188, 416

[1] Balance of trade computed from figures given.

Furthermore, on the basis of figures that have been furnished me by the Bureau of Foreign and Domestic Commerce of the Department of Commerce, I have had compiled the data which follows and which is self-explanatory. It shows, undeniably, the tremendous increase in imports of those commodities for which "concessions" were granted to Canada in the treaty, and which have great interest to Vermont and New England. The tables follow:

United States imports from Canada [1]

[Figures in thousands of dollars]

	1930				1931

These tables above are eloquent in themselves and need little in the way of explanation or comment. To those who say that trade has picked up by leaps and bounds, may I point to these tables and allow them to see at whose expense this increase has taken place.

Another matter in the trade agreement, loudly hailed as a concession to the United States, was the assurance that legislation would be recommended to Parliament to place a "tourist-exemption regulation" in force similar to the $100 duty exemption granted to residents of the United States coming back from a visit to Canada. I have continually striven to have this brought about since being elected to represent the people of Vermont in Congress; I realize the injustice that the set-up has worked upon the border merchants, and have tried unceasingly to have the administration take some action that would aid these border merchants. It was believed that the announcement of the Canadian concession would lead to the desired results—results that would correct the situation that led my friend, Mr. Thomson, of Swanton, to write the following:

Recently the $100 tourist-exemption matter was brought up in the Canadian House of Commons, and Mr. J. B. Mallette, Liberal member for Jacques Cartier, began the discussion by putting in a word for the poor people and urged that some consideration be given to those people who made occasional visits to the States of only a few hours and would like to take a few articles home with them. While he did not think of extending to them the $100 exemption privilege, he maintained they should receive a certain allowance. Mr. Mallette's remarks were timely, and we hope he will be able to get results. Every week a Canadian baker comes into Swanton and surrounding territory with thousands of loaves of bread, but woe betide the poor fellow from Philipsburg or Bedford who is caught by the mounties with a few cans of tomatoes, a baby-carriage spread, or some other insignificant article. Citizens of the States bring in thousands of dollars' worth of goods from Canada every day, much to the chagrin and loss of our border-town merchants. The law should be reciprocal, and the poor man should benefit alike with the rich.

Yet the action that finally was taken by the Canadian Parliament, although in the correct direction, failed to proceed far enough. The result attained was not a truly "reciprocal" provision, according to my interpretation of the term.

FARM MACHINERY INVESTIGATION

Mr. REILLY. Mr. Speaker, the Senate joint resolution now before the House for consideration is identical with House Joint Resolution 212, favorably reported by the Committee on Interstate and Foreign Commerce to the House, and is also identical with House Joint Resolution 419, introduced by me at the present session of Congress.

These resolutions direct the Federal Trade Commission to investigate corporations and companies engaged in the manufacture of farm machinery for the purpose of finding out whether or not unfair trade practices on the part of said manufacturers are responsible for the continued high prices that the farmers have been and still are compelled to pay for farm machinery.

This proposed investigation has the approval of the Federal Trade Commission and also the approval of the Budget Bureau as not being in conflict with the program of the President.

For more than a quarter of a century there has been complaint on the part of the farmers that they have been compelled to pay unjustifiably high prices for their farm machinery, and that that situation has been brought about by the fact that the agricultural-implement manufacturers, through combinations, agreements, and otherwise, have been able to keep the prices of farm machinery higher than competitive manufacturing conditions would warrant.

In 1913 Congress authorized an investigation of the International Harvester Co. by the old Bureau of Corporations, and in 1918 the Federal Trade Commission was authorized to investigate and report to Congress on the causes of high prices in the field of agricultural implements.

For some reason or other nothing was ever done in the way of carrying out the recommendations of the Federal Trade Commission made in its report in 1920 to start suits against the associations who were active in restraining trade in the farm implement industry.

According to the latest price index, the average price level of agricultural commodities that the farmer has for sale is now 105 percent of the pre-war average, while the average price paid by the farmer for what he buys is about 121 percent of pre-war prices.

In 1914, the pre-war date, a grain drill cost the farmer $85.38. In 1918, when the last investigation was ordered, a grain drill cost the farmer $143.02; and in 1935 the cost for such an implement was $151.60.

In 1914 a 7-foot grain binder cost the farmer $131.28, in 1918, $227.06, and in 1935, $238.80.

In 1914 a 5-foot mower cost the farmer $47.56, and in 1918, $82.54, and in 1935, $85.20.

In 1914 a 2-row corn planter cost the farmer $41.96, in 1918, $74.30, and in 1935, $84.70.

In 1914 a sulky hay rake cost the farmer $27.51, in 1918, $48.94, and in 1935, $49.40.

A bulletin issued by the Bureau of Agricultural Economics on January 29, 1936, indicates that the average retail cost of farm machinery to the farmer is now 148 percent of pre-war prices. This bulletin tells the story of the average increase of the retail cost of farm machinery to the farmer since pre-war days, but it is quite apparent that the increase in prices that the farmer has to pay for certain farm implements has gone up, not 48 percent but from 60 to 100 percent since pre-war times.

In view of the fact that automobiles and tractors have come down in prices greatly since pre-war times, it is not to be wondered at that the farmers are of the opinion that they are paying for their farm machinery unwarranted prices.

The farmer today can buy an automobile, and a much better automobile, for about one-half of what he would have have had to pay for an automobile of the same make in 1914. The tractor that the farmer purchases today is priced at about one-half of what he would have had to pay for the same tractor in 1914, and it would be a much better tractor today at that.

Farm machinery expenditures on the part of the farmer constitute an important item on his annual budget. The farmers of the country purchase about $300,000,000 of farm machinery annually. There is a great demand today for farm replacement machinery, and the farmers would be more willing to replace worn-out machinery if they felt and believed that they were getting a square deal in prices.

The farm machinery manufacturers hold that the farmers have no cause for complaint, because of the prices they are paying for their farm machinery, for the reason that the advance in the price of farm machinery since pre-war days is no greater than the advance in price of other articles that the farmer purchases, and that farm machinery prices are not out of line with the prices of all other commodities.

In working out their theory, the farm machinery manufacturers take credit for the reduction in the cost of tractors since pre-war days. The farm machinery manufacturers are not responsible for the reduction in price that the farmers have to pay for tractors. Tractors, like automobiles, have come down in price since pre-war days simply because there is competition in the manufacture of these two articles of farm equipment. Tractors are manufactured not only by the farm implement manufacturers but also by other industrial units with the result that there is real competition in the manufacture of tractors and automobiles, which fact is responsible for the declining prices of tractors and automobiles since pre-war days.

The Federal Trade Commission's investigation of 1918 established the fact that the high prices of farm machinery at that time were caused by combinations and agreements between certain manufacturers of said farm machinery. The farmers believe that they are no better off today than they were in 1918, as far as being free from monopoly in the farm-machinery industry, and on the face of things it would look as though the farmers have just grounds for complaint against the influence of monopoly in fixing the prices of farm machinery.

The best thing for the farmers of this country, and for the manufacturers of farm machinery, is to have an investigation for the purpose of finding out whether or not the 135 farm-implement manufacturers that make up the Farm Equipment Institute and who control the farm-machinery industry are engaged in practices that have been responsible in the past and today are responsible for farm-machinery prices being way above what they were more than 20 years ago.

If such an investigation should disprove the charge that has been made by farmers and farm organizations of the country for a quarter of a century that there is a farm-machinery trust that has been fixing prices of farm machinery without any regard to cost, then it will settle a long-standing dispute between the farmers and the machinery manufacturers and will react to the benefit of the farm-machinery industry, because then the farmers will be satisfied that they are not being held up in the prices they have to pay for their farm machinery, and they will have a more friendly feeling toward the manufacturers of farm machinery, and undoubtedly will be more willing to replace their worn-out farm machinery with new equipment.

If farm-machinery prices are too high and are kept high because of unlawful combinations and agreements between the manufacturers of such machinery, as charged by the farmers, then such combinations should be broken up or restrained and the farmers of the country should be privileged to buy their farm implements in a competitive farm-machinery market where the cost of manufacture and not trade agreements would be the controlling factor in fixing farm-machinery prices.

THE GERMANS IN WISCONSIN

Mr. SAUTHOFF. Mr. Speaker, today is set apart to pay just tribute to the German in Wisconsin, and it is peculiarly fitting that Wisconsin should be proud of her children of Teutonic origin, for no nationality has furnished more to this State than the German. Coming here when the country was still new, he not only settled the land, tilled the soil, and built up communities, but he brought with him education, industry, thrift, integrity, music, and much cultural appreciation. Stable and reliable, he cleared the fields and built his home, for he was always a home builder.

While his Yankee neighbor, coming from New York and other Eastern States, settled where he found the land best suited for raising wheat, the German was concerned about nearness to his market, and so we find him settled in the eastern counties close to Lake Michigan or the Fox River. The Yankee did not worry so much about the Lake ports, for he had come from States where canals had been built, and he was confident that the same thing would take place in Wisconsin; but the German, careful and cautious, kept near water transportation and also "Holz und Heu"—wood and hay. Furthermore, he had been trained in the old country to produce a living from little acreage, so he was satisfied with smaller holdings. The Yankee was intent on raising wheat, and when the land failed to yield sufficiently he sold out and went farther west; but the German, less venturesome, bought these farms, diversified his acreage, fertilized his fields, increased his yield, and became successful. Says Dr. Schafer:

> In the aggregate German farms in Wisconsin have long had vast sums at interest. The Institute for Research of Land Economics of the University of Wisconsin has completed investigations which show that the Nation's area of lowest farm mortgage interest rates coincides very closely with the great maple forest of eastern Wisconsin, which has been held from the first predominantly by German farmers.

Early in October 1839 Henry von Rohr brought the first German colony to Milwaukee. They came to stay and settled in Ozaukee County. Several years later another German colony settled in Dodge County. They looked for water and timber. They had little or no money, so they had to settle where there was readily accessible fuel and building material, fencing, and the many other needs for wood. Good water was essential, and so we find in the next 10 years a steady influx into these eastern counties bordering on Lake Michigan.

EDUCATION

One of the social traits which made the German immigrant of the forties and fifties a valuable asset to any community was his education. The Prussian school system had challenged the attention of the then civilized world.

> In the lowest school in the smallest and most obscure village—
>
> Says Horace Mann—
>
> or for the poorest class in overcrowded cities, in the schools connected with pauper establishments, with houses of correction, or with prisons—in all these there was a teacher of mature age, of simple, unaffected, and decorous manners.

This tribute to the Prussian school system was well deserved, because the teachers were especially well qualified for the work of the schoolroom.

> The gymnasia, the real schule, and the universities sent forth representatives of the highest German culture to honor the learned professions, the literary, philosophical, and scientific circles of America. On the basis of formal school instruction alone the historian of early Wisconsin would be compelled to assign first place in social fitness to the immigrants from Germany.

Such is the statement of Dr. Joseph Schafer, of the Wisconsin Historical Society, in his essay on the Yankee and the Teuton in Wisconsin.

While the Prussian schools were better than those in Massachusetts, nevertheless the opportunity for self-expression was much less. The New Englander had a voice in the Government, an opportunity to attend political meetings, discuss popular issues, and vote for officials. While the German

young man had no training in popular government, he had a most valuable ethical training. In school, along with his other studies, he received strict training in religion and morality, so that honesty, truthfulness, and fidelity to his word meant much to him. In addition to these virtues, the struggle for existence ever present in the vast majority of homes taught him thrift and industry. Pflicht, Sparsamkeit, and Ehrlichkeit were household words to German lads. As a result, his unsecured note was accepted in this State when he needed credit.

This German immigration came from the lower and middle classes for the most part with a strong sprinkling of educated, cultured men known as forty-eighters. These latter men came from the universities and other intellectual groups. Among their number were professors, ministers, and priests, lawyers, and doctors, and, last but not least, newspapermen, who exerted a powerful influence over their countrymen on this side of the Atlantic.

MUSIC

No history could be written of the German people, either here or abroad, without some mention of their love for music. That love was and is today for both vocal and instrumental music. We read of one of the earliest celebrations in Milwaukee and that "some excellent music was furnished by some German musicians." A fine ear for harmony and a sense of time and rhythm have made the German musician an artist of the first class.

Singing also appealed to him, especially group singing. He organized Musikvereine, Maennerchor, and held Saengerfeste. It must be remembered that the German peasant's lot was a hard one in the old country and that Sunday was his day of recreation. He and his family gathered with his fellow countrymen in some outdoor park where gymnastic exercises, bowling, and much singing were indulged in. The German relaxed from his labors and his usual seriousness gave way to jovial, friendly good-fellowship. He drank his beer and sang his songs in a happy spirit, for he was not quarrelsome, and his drinking was temperate. Drunkenness and rowdyism he frowned upon because he had learned "Anstant" in his home, his school, and his church, and he had a profound respect for decency.

Who of us can forget the simple folk songs we learned as children? Familiar to us and bound up with tenderest memories are such well-known songs as "Tannenbaum, O Tannenbaum, wie grün sind deine Blätter", "Blau is ein Bleümelein, das heisst Vergissnichtmein", "Muss i denn, Muss i denn zum Staedele hinaus", "O dies schöne land, ist mein Steierland", "Immer noch ein Traepchen", and a host of others. As long as memory lasts, so long will these strains run through our minds. With the song there was also the dance, "round" dances being the vogue, and these were indulged in with enthusiasm and hilarity. The German worked hard, and he played hard.

CUSTOMS

The German brought with him a love of home, of music, and of art which left its impress on the community where he settled. His music and his literature became world-renowned. From the simple strains of "Du, du liegst mir im Herzen" to the majestic, stately measures of The Pilgrim's Chorus from Wagner's Tannhauser, German music commands the admiration of the civilized world. From his simple, beautiful Maerchen to the learned soliloquy of Goethe's Faust, "Habe nun, ach Philosophie, Juristerei, und Medecin", German literature can compare favorable with that of any nation on earth. And where can you find the gentle, delicate lyric poetry to compare with Heinrich Heine?—

Du bist wie eine Blume,
So hold, so schön, und rein.

Paintings, sculpture, and wood carving were enjoyed and appreciated by the German, and his churches always contained some work of art. A love of these the German brought with him to Wisconsin, especially the eastern counties, where he settled in great numbers in the forties and fifties. He brought also the "Oester Haase"—Easter rabbit—and the "Hausfrau's" magic for coloring eggs; also the cheery, friendly New Year's greeting, "Glückliches Neu-Jahr", when friends and neighbors visited and wine and cake were passed. And are there any among us who can ever forget that wonder of wonders, "Weinachten"? To me no custom will ever compare with the beauty and soul-stirring feeling of this one—the glorious tree, brilliantly lighted by little colored candles; the shimmering silver; the nuts, gilded and silvered, strung about on string; candy "Kirchen"; the fairy village placed about the foot of the tree; and the solemn grandeur of "Stille Nacht, Heilige Nacht."

The family custom of members assembling at the hospitable table and celebrating someone's birthday; the age-old custom of the women meeting at 4 o'clock and partaking of coffee and "Kaffee-Kuchen"; the reading circle; the gatherings in the home; the Turn-Halle and the church—all contributed to friendly discussion and a wider range of knowledge.

POLITICAL AFFILIATIONS

The early German pioneer came chiefly from the peasant class and therefore felt more at home in the Democratic Party, which made more of an appeal to the common people. When the constitutional convention met in 1846, Dr. Franz Huebschmann, of Milwaukee, the most influential of the German element present at that convention, succeeded in securing the vote for all foreigners who were not yet naturalized but who had declared their intention of becoming citizens and had lived in the State for 1 year. This gave many of the immigrants the right to vote; but, unaccustomed to governing themselves, they followed the leadership of their editors. It was not until some years later, through the influence of many "forty-eighters", that the German element became interested in any other political affiliations.

These people were opposed to slavery and when the educated "forty-eighter" came to this country and established himself as a leader in political thought he took with him many of these immigrants. The powerful influence of such a magnetic dramatic figure as Karl Schurz was a tremendous influence in bringing many of the Germans into the Republican Party. However, it took a political upheaval to make them vote the Republican ticket, because they were slow to adopt anything new or different than that to which they were accustomed. As George Kroncke von Ahn, a German immigrant of 1873 and the father of my brother-in-law the judge here, wrote:

> They keep pretty well to their old country customs; they intermarry very seldom, and are mostly Democrats, but good and industrious people.

These people read their German papers and took the advice of their German editors. Among the latter we had such outstanding men as Karl Gustav Haas, father of our friend, Grant Haas, who welcomed us here today in the name of the Governor; also our good friend, Frank Blied, the chairman of this German Day celebration, and some years back my own uncle, Gottlieb Schmidt, one-time editor of the Staat-Zeitung and later Der Nordwesten.

In our own State there are many present today who will recall that it was the German vote that elected George W. Peck Governor because of the famous "little red schoolhouse" issue; and again it was an upheaval as a result of the World War which caused a tremendous swing to the Republican ranks in the election of 1920.

The German element has not, however, asserted itself politically, for, while it has been the predominant race for many years in Wisconsin, it has elected but one of its number Governor of the State.

WAR SERVICE

Many of those who came here in the forties and fifties did so with a very strong feeling against compulsory military service. These people settled down with the hope of never again seeing a gun or a uniform, and devoted themselves to clearing the land so as to make a good farm for themselves and their children.

The coming of the Civil War was a calamity to them. Nevertheless many of them entered military service. Some

of these immigrants were well versed in military affairs, and had seen service in the Mexican War, but the majority of them preferred to stay out of the Army.

As Dr. Schafer says:

The story of German participation in the war has often been told. Wisconsin Germans played a most honorable part in that conflict, as everyone is aware. In respect both to the numbers engaged (in proportion to population) and to the soldierly performance of duty by the men, the brilliancy of the officers, Germans have nothing to fear from comparison which might be made with the records of other population elements.

Fred L. Holmes says in his book Wisconsin's War Record:

In operations the Sixty-fourth Brigade was given the name of "Brigade Terrible", and the division the name "Division Terrible" by the French.

The part the old Wisconsin National Guard troops took in the battles from Chateau-Thierry to Fisnes, July to August 5, as given in an official order, speaks eloquently of their valor. An interesting point is that this division from Wisconsin and Michigan is made up of a great many men of German origin, who, in their shedding their blood for the United States, gloriously showed their loyalty.

On page 180 Mr. Holmes says:

Men of all racial extractions coalesced and became one in the supreme hour of war. The men of German birth or extraction, when put to the test, responded willingly and nobly—the death, the casualty, the muster rolls tell this story so that no man will dare to deny it.

TURNERS

Immediately following the Napoleonic wars, Germany was practically a vassal state. In Luetzow's famous corps were such flaming patriots as Friedrich Ludwig Jahn and the poet, Theodore Koerner. The beloved Fritz Reuter was sent to prison and his health ruined and Hauff's imprisonment cut short his life. Arndt and Grimm and the rest of the seven were driven from their chairs at the universities because they were patriots.

Turnvatter Jahn in 1811 established his Turnplatz on the Haasenheide near Berlin. As Robert Wilde says in his chapter on the history of the Turners:

His plan was to encourage bodily exercise and to foster patriotic ideals in his pupils so that with sound minds and sound bodies, inspired with love of country and passion for freedom, they might help in the liberation of their country from foreign oppression.

This great patriot, whose ideas and ideals were bound up with the slogan "Liberty and Union", wielded a tremendous influence over the young men of his day, all of which was reflected in the struggles of 1848. Their revolution a failure, unable to secure their constitution, they came to this country by the thousands, and, fortunately for Wisconsin, many of them settled here. They brought with them an intense hatred of oppression, a zeal for a clean mind in a sound body, together with excellent morals.

All these were the result of the teachings, the aspirations, and the ideals of the wonderful Turnvatter Jahn. Here in this land they saw the dawn of a new freedom, they again established their Turn societies, their music societies, and their debating clubs. With the building of their halls, the Turners established the first outstanding social centers in this country.

August Willich on June 27, 1853, at Milwaukee, enrolled a small band of German birth, and all "forty-eighters", as the first members of the Turnverein in Wisconsin. Two years later a similar society was founded at Madison, and, looking up the records, we find such well-known local names as John George Ott; the brothers Sauthoff, my father and my uncle; Heinrich Schmiedeman, father of our former mayor and Governor; John Suhr, founder of the German-American Bank, which now, under the name of the American Exchange Bank, is being served by the second and third generation of that family. Soon similar organizations sprang up in a score of other cities in Wisconsin, and so great was the growth of its movement that in 1875 a "Turnlehrerseminar" was established at Milwaukee from which trained teachers graduated regularly. These men, both young and old, were physically well trained and morally and mentally were above the average. From its ranks more than 60 percent of its total members enlisted in the Union Army.

It was the Turners of St. Louis, under the leadership of Franz Sigel, a German, who captured Camp Jackson and saved Missouri for the Union. Lincoln's bodyguard at his inauguration consisted of picked men of the Washington and Baltimore Turnverein.

From the Turners the following regiments were enrolled: The Ninth Ohio, organized and trained by August Willich; the Thirty-second Indiana; Hecker organized the Twenty-fourth and Eighty-second Illinois; Weber organized the Twentieth New York; Osterhaus organized the Twelfth Missouri; Schimmelpfennig organized the Seventy-fourth Pennsylvania; and Pfaender the Second Minnesota. Wisconsin Turners were particularly conspicuous in the Fifth, the Ninth, and the Twenty-sixth Regiments.

The "Turnhalle" is still a social center among the Germans in many of our cities, and the teachings of the Turnverein are still a healthy body, a sound mind, and clean morals.

CONCLUSION

Our people have just passed through 20 years of struggle, of misery, and of sorrow. There has been physical and mental destruction on every hand, upheavals in almost every walk of life tending to destroy the morals, the aspirations, and ideals of our people; but you and I can be certain of one thing and that is this: That the German element in Wisconsin, whether born at home or abroad, can be depended upon to the utmost to maintain and defend a love of home, a love of liberty and freedom, freedom of speech, freedom of the press, freedom of conscience in religious worship; they can be counted upon to maintain and defend democratic institutions and a republican form of government to the last dollar of their possessions and to the last drop of their blood.

DOES THE BLOOD OF HUEY LONG TRICKLE BACK TO WASHINGTON?

Mr. FENERTY. Mr. Speaker, less than a year ago an assassin's hand removed from our midst one of the most unique characters of our generation, a leader of limitless courage, of unsurpassed mental attainments, of unusual political genius, the Honorable Huey Pierce Long, Senator from Louisiana.

Another name—and a lustrous one—is added to the roll of those whom the world cannot readily forget. The lips of slander and reproach are silent, and political criticism, perhaps the most unfair that language can know, hesitates lest some incautious word should mar the expression of admiration which even his enemies cannot now withhold. Great in life, Senator Long was not less so in death, and nothing in his life became him like the leaving it. As the end drew near his thoughts were of those whom he had befriended, and shortly before his lips became forever mute he gasped, "Now what will become of my boys at the university?"

Senator Long was one of the few men in the Democratic ranks who refused to be regimented, who scorned to be a "rubber stamp." His flaming ability turned its revealing light directly and scorchingly on the trickery, the falsity, and dishonesty of New Deal politics, and when he spoke the administration writhed in fear of his devastating and unanswerable logic. He was universally recognized as the most effective political critic of the New Deal and the most serious menace to a Roosevelt renomination.

He had forged the most powerful and available wedge to be driven between the New Deal and the so-called solid South and the administration properly feared it. From Maine to California, Senator Long had his adherents, but from the Farm Belt, from little remote villages of cotton land, where sharecroppers gather on market day, from some of the wheat States beyond the Mississippi, Senator Long had a devoted following that was a tremendous danger to the continuance of the Rooseveltian power and bureaucracy. New Deal leaders in the South were frightened. Huey Long had demonstrated that he could cross swords with them and defeat them on their own ground. With Senator Long at the convention in Philadelphia next week, no one can tell what might be the fate of the President's hope to succeed himself and to have abrogated the two-thirds rule in a probable ambition, if by chance reelected, to seek in 1940 a third term.

The convention at Philadelphia would be a colorful and attractive gathering with the magnetic presence of the Senator from Louisiana. His captivating personality, his amazing ability, his contagious humor, his rapierlike speech, would have made the tumid and soporific bombast of the Roosevelt leaders seem ponderous and inane. Without him, the convention will probably degenerate into a matter-of-fact, routine assemblage, met only for the purpose of placing its servile approval on the dangerous extravagances and violated faith of the Roosevelt dictatorship. Like this Congress, the convention will be a ring-in-the-nose, phonograph-record, motley assortment of "yes men" who must, to retain their political spoils, echo and reecho the sedative evasions of their master's voice. For the man who could have made the mellifluous platitudes of the White House appear in all their vapid pomposity—is now no more. The most dreaded adversary of Franklin D. Roosevelt in the Democratic Party will not be there—and Philadelphia will find, instead of a Democratic convention that might be historic, an assemblage that will be dominated by White House compulsion and entirely lacking in the genius and glamor that Senator Long could so readily have imparted to it.

One of his biographers, Carleton Beals, who, though delineating his faults as well as his virtues, on the whole excites the reader's admiration for the deceased Senator, says of him:

Though his motives may not have been more complex than those of other men, at least all the acts of his life were heightened to an intensity that bears the hallmark of genius. * * *

But few men in history have overcome so many obstacles so rapidly or risen so swiftly to a position of power and importance. The qualities which led to this were his boundless energy, his understanding of human nature and of the common man, his curious coupling of fixed principles with the widest latitude of compromise, opportunism, and adaptibility; a dazzling and devastating power to attack, boldness and audacity, a thoroughgoing appreciation of dramatics and the ability to act, rapid shifting in tactics, a facile and ready tongue, a prodigious memory, the ability to make strong friends and destroy strong enemies, readiness to let bygones be bygones in return for servility or support, a lightning-quick facility for grasping the implications of any and all situations, a willingness to be ruthless when necessary, a quizzical and irrepressible sense of humor. * * *

He has been perhaps called a demagogue too freely, or at least without proper examination of the word. Is the man who has the power to rouse the multitude necessarily a demagogue? Is one who promises what he cannot fulfill more of a demagogue than the one who deceives the public without such promises? Certainly no President in the history of the Republic has so departed from his original campaign promises as has President Roosevelt. * * *

Above all else, whatever his sins, whatever his ultimate purposes, whatever his lack of sincerity, Huey Long has been more courageously frank and outspoken about all public problems than any other man in the ranks of the two major parties. * * *

Whatever the folly of his proposals, he will stand as a remarkable social and political critic of the evils and misfortunes of our day. In most of his attacks on national public figures he was living in a glass house; but, if nothing else, he has quickened and educated the American electorate. The masses, apparently, can only learn through cumulative disillusionment. What remarkable things Huey Long might have taught them in that line!

The Nation regrets his passing, not merely because of the splendor of his intellect or his refreshing amiability or his disdainful simplicity or his homespun but irresistible eloquence, but because in so many aspects he illustrated the spirit of initiative and opportunity which our people like to consider one of the essentially American virtues. The story of Huey Long has the pathos of romance through which, like the note of a song, there runs the melody of a minor chord in the early struggle for learning and success that knew no adventitious circumstances. He was direct, ardent, fearless, prompt to mold his own opinions, militant in their avowal, impulsive in their vindication. Though he belongs to history, it is too soon to write his story, almost too early for panegyric, for our minds are still full of his impetuous and incredible earthly image. But we pray that his audacious and restless soul may at last know everlasting repose and that perpetual light may shine upon him through all the timeless ages of eternity.

The day before Senator Long died I made this statement, as reported by the New York Times, which quoted me with substantial accuracy:

The murderous attempt on the life of Senator Long is to be deplored by all Americans who believe in our system of government. The congressional committee which is about to investigate the political activities of Senator Long in Louisiana should investigate the men who were responsible for instigating the attempted assassination.

I regard the attempt to wipe out Senator Long's life as much worse than the things that have been taking place in Louisiana.

And as the Philadelphia Evening Bulletin and Evening Public Ledger quoted my remarks:

I would not like to be in the position of the men who misled the country into believing that Senator Long had stopped the funds for the carrying out of the provisions of the Social Security Act, when, as a matter of fact, they knew there were ample funds in the hands of the President for that purpose.

That, Mr. Speaker, was on September 10 of last year. What has since been done to investigate the circumstances and motives of the murder?—a crime of the very nature which Senator Long had earlier predicted would be that of his enemies in destroying his power. Why is it that the Roosevelt administration, which does not hesitate to spend huge sums of money to track down the kidnapers of less notable citizens, does nothing about the assassination of the most picturesque and formidable man who has in our time sat in the upper house of Congress? The administration does not blush to squander millions of the taxpayer's money in useless and wasteful enterprises that result only in increasing the cost of living. It is not reluctant to allot $65,000 in its efforts to ascribe to Dr. Townsend such motives as even those who question the economic soundness of the Townsend Plan will admit have not been adequately proven against him. The New Deal shows no lack of determination in expending enormous sums of the people's tax money to ferret out an honest $5 discrepancy in an income-tax return. But, as was significantly stated recently in the weekly Social Justice:

The United States Government will not spend one penny to investigate the murder of the late Senator from Louisiana, shot down in cold blood on the steps of the State Capitol at Baton Rouge.

Can it be that the blood of the martyred Huey Long trickles back to Washington?

Can it be, Mr. Speaker? Can it possibly be? And, if so—or if not—have not the people of America a right to know it?

TOWNSEND PLAN SHOWN TO BE DEFECTIVE BY TESTIMONY OF DR. TOWNSEND AND HIS ASSOCIATES

Mr. WOLVERTON. Mr. Speaker, frequently I have been asked about the so-called Townsend plan. Occasionally these inquiries have been made by form letters asking that I "answer simply 'yes' or 'no'."

It has always been a pleasure, and, in fact, a privilege that I have sought, to make known my attitude on all matters of national legislation. I have also encouraged my constituency to feel the utmost freedom in making known to me their thoughts and opinions on matters that would come before Congress for decision. I have always given careful and thoughtful consideration to the viewpoints expressed, in order that I may give the best possible representation to those whom it is my privilege to represent.

The letters to which I have referred were unfair, although they may not have been so intended. Demand for a "yes" or "no" answer is often resorted to by a "tricky" lawyer who asks a question that is greatly involved and then demands that the witness answer "simply yes or no." I think anyone who has had experience with this type of question and this type of questioner will agree with me that it is unfair and is not calculated to bring out the facts. I have in mind an illustration of the point that I am making. It was a case being tried in court where the husband was asked, "Have you stopped beating your wife? Answer simply yes or no." To have done so would not have brought forth the truth, because if he said "yes" it would have been an admission that he had beaten her but had now stopped, and if he answered "no" then he would have been in the embarrassing situation of admitting that he was still doing so. Neither answer could be made without involving an untruth, assuming the real facts to be that he had never beaten her; and to make no reply at all was equally embarrassing, but no other course remains under such circumstances.

There were many features in connection with the proposed Townsend plan legislation that call for explanation and amendment before an intelligent and honest answer could be made. It is quite apparent that the senders of these messages, granting them to have been sincere in their efforts to advance the cause, who nevertheless were not aware of the condition or they would not have requested a "simply yes or no" answer.

Nothing can more clearly demonstrate this fact than the testimony of Dr. Townsend and Mr. Glen Hudson, an expert produced by Dr. Townsend, in their appearance before the House Committee on Ways and Means to explain the provisions of the bill introduced by Congressman McGROARTY, known as the Townsend plan old-age pension bill. The following testimony represents extracts taken from the evidence given by them in answer to questions directed to them by different members of the committee.

M'GROARTY-TOWNSEND PLAN BILL FOUND DEFECTIVE

Dr. Townsend testifying:

Mr. COOPER. Are we correct in assuming that you are here advocating that this committee favorably report the McGroarty bill as the old-age pension section of the administration measure? That is what you want us to do?

Dr. TOWNSEND. Certainly.

Mr. COOPER. You are satisfied with this bill as it now stands?

Dr. TOWNSEND. I have no doubt but that the bill would be revised. I had no doubt when it was presented that the bill would be.

* * * * * * *

Mr. COOPER. As the bill now stands—as it is presented to this committee for consideration—if you were sitting in the seats that we occupy, would you vote to report this bill, and then, as a Member of the House of Representatives, vote to pass it?

Dr. TOWNSEND. I would with certain amendments—certain corrections which have necessarily been left to the Secretary of the Treasury and which were expected to be left to the committee passing upon the bill.

Mr. COOPER. You admit, then, that the bill should be amended and changed?

Dr. TOWNSEND. Certain elements in it, yes; certain features of it.

* * * * * * *

Dr. TOWNSEND. * * * So far as statistical information is concerned, I should prefer to have that furnished by a statistician and actuary, which Mr. Hudson is.

TOWNSEND OFFICIAL TESTIFIES BILL LOOSELY DRAWN—WOULD NOT VOTE FOR IT

Mr. Glen Hudson called to testify:

Mr. HUDSON. No, sir; I do not want to be held responsible for this bill.

Mr. VINSON. Well, who is?

Mr. HUDSON. I think the bill could be changed and greatly benefited.

* * * * * * *

Mr. VINSON. You may have done that, but I did not see anything in here to keep you from pyramiding that tax. That is one of the questions that has been rising in my mind, the question of pyramiding that tax.

Mr. HUDSON. There is no way of pyramiding this tax. If it were possible to pyramid this tax, it would not amount to anything.

I want to make this explanation: This bill is there and it is in the House. But, as I said before, this bill does not meet with my approval. I would say very frankly that it does not. Naturally your body of men have the power to correct any bill before them.

Mr. VINSON. It is rather loosely drawn, is it not?

Mr. HUDSON. I would say so; yes; very loosely.

* * * * * * *

Mr. COOPER. You say they should be taxed. * * * What explanation have you to offer on that?

Mr. HUDSON. Again I state that I am not holding myself responsible for that bill. Of course, I think that you men have the power and should have, and that bill should be changed as you see fit.

Mr. COOPER. I understand you to state awhile ago very frankly—and I think you have been frank in your responses.

Mr. HUDSON. I have tried to be.

Mr. COOPER. I understood you to state awhile ago very frankly you think this bill is very loosely drawn.

Mr. HUDSON. I restate that.

Mr. COOPER. Would it be fair to ask you this question:

Suppose you sat in the seats we occupy at this table. As the bill now stands in its present form, do you think you would be safe in voting to report it and support it, as a representative of the people?

Mr. HUDSON. No; I do not.

During the examination of Dr. Townsend and Mr. Hudson innumerable conditions in the bill that called for explanation, clarification or change were brought to their attention, as well as inequities, both as to who should be beneficiaries, and, by whom the tax to support the plan should be paid, the apparent insufficiency of the tax to produce sufficient to accomplish the purpose sought, and, the likelihood of a complete failure upon the basis of the plan as laid down in the bill.

The best evidence of this is the fact that already Congressman McGROARTY has introduced two subsequent bills, and, the present indications are that further changes will be necessary and result in bills of a totally different character being introduced.

I am certain that there were many features in the bills as introduced that would not have been any more satisfactory to the aged who petitioned for the bill, had they known of their existence, than to others who had given the subject careful consideration and study. I will relate further from the testimony of Dr. Townsend and Mr. Hudson a few of these instances of a varied character because it is my opinion that they are not generally known:

FORD, ROCKEFELLER, AND MORGAN COULD RECEIVE TOWNSEND PLAN PENSION

Dr. Townsend testifying:

Mr. HILL. Now regardless of the income, from whatever source received, any citizen of the United States receiving that income who is over the age of 60 years, would be entitled to the $200 per month pension.

Dr. TOWNSEND. Yes; I agree to that.

Mr. HILL. That would, of course, include the wealthy people as well as the classes of people all down the line, all the way down to those who are in a state of poverty.

Dr. TOWNSEND. We agree that the plan shall be nondiscriminatory and applied to all citizens equally.

Mr. HILL. In other words, it would apply to John D. Rockefeller, Sr., to Henry Ford, to J. P. Morgan, as well as the man who has no means or income at all?

Dr. TOWNSEND. If they wish to acquire the pensions under the provisions of the act.

Mr. HILL. That is, they would be eligible?

Dr. TOWNSEND. Yes.

WIDOWS, ORPHANS, CRIPPLED, ET AL., NOT INCLUDED IN TOWNSEND PLAN

Mr. Glen Hudson testifying:

Mr. KNUTSON. I have gone through this bill quite carefully. It is not as liberal as I thought it was. For instance, I see that you have failed to make any provision for dependent mothers with children; you have failed to make any provision for crippled children, for blind people, or feeble-minded people. Certainly you will admit that a mother with five or six or seven small children should be more entitled to a pension than Henry Ford.

Mr. HUDSON. Oh, yes.

Mr. KNUTSON. I understand you do not claim authorship of the bill.

Mr. HUDSON. I do not.

Mr. KNUTSON. I would call that to their attention if I were you.

Mr. HUDSON. I will be glad to do so.

Mr. KNUTSON. Because it is a very serious oversight.

FARMERS REQUIRED TO PAY TAX TO SUPPORT TOWNSEND PLAN

Dr. Townsend, testifying:

Mr. HILL. Turning to section 3, that provides the means for raising the money with which to pay these pensions. It provides:

"A tax of 2 percent on the gross dollar value of each business, commercial, and/or financial transaction done within the United States."

That may be increased, under the provisions of this bill, 50 percent, or decreased 50 percent, by the President?

Dr. TOWNSEND. Yes.

Mr. HILL. That would include practically every business transaction of every nature?

Dr. TOWNSEND. Yes, sir.

Mr. HILL. It would include, of course, the sale by a manufacturer to a wholesaler; the sale by a wholesale merchant to a retail dealer; there would be a tax on sales from the retail merchant to the consumer. That is in the ordinary channels of commerce or business. Would it apply to a farmer who sold a cow or a pig?

Dr. TOWNSEND. Certainly. The farmer will have to be registered. He will have to take out a license the same as anyone else.

Mr. HILL. Would it apply to a housewife who sold a dozen eggs?

Dr. TOWNSEND. The farmer and his wife.

Mr. HILL. Or a pound of butter?

Dr. TOWNSEND. The farmer and his wife will constitute one set of licensees, of course, one business. Their aggregate sales will have to be computed at the end of each month.

EVERY CITIZEN TAXED TO SUPPORT TOWNSEND PLAN EXCEPT SO-CALLED COMMON LABORER AND STATE, COUNTY, AND LOCAL OFFICEHOLDERS

Glen Hudson, testifying:

Mr. VINSON. Mr. Hudson, turning to page 3 of your bill * * * I note that you provide for the licensing of all sellers of goods, commodities, and commercial things of value. Why is it that you fail

to provide for licensing of those who perform services, because that is a rather substantial part of the bill?

Mr. HUDSON. And they are taxable, too.

Mr. VINSON. Why do you not license them?

Mr. HUDSON. They should be.

Mr. VINSON. They should be. That was just omitted. Is there any reason for omitting that?

Mr. HUDSON. Not a bit. We want even to license the practitioners of law, in order that they may pay their tax.

Mr. VINSON. That was simply dropped out and should not have been?

Mr. HUDSON. Should not have been; no, sir. I agree with you perfectly.

Mr. DINGELL. Does that include medical men?

Mr. HUDSON. Absolutely. They are not salaried men. That also includes all commission earners, such as life-insurance agents.

Mr. HILL. Will you please define for the record—so that we can understand exactly what we are discussing here—what is a financial transaction within the terms of this bill?

Mr. HUDSON. Any exchange of money for commodities, trade, and so forth; the payment of a grocery bill is a transaction; the payment of a legal fee is a transaction.

* * * * * * *

Mr. COOPER. I wanted to direct your attention to the question which was raised in my mind by the answer made by the gentleman a moment ago. I understood you to say that, although it was not now provided in this bill, it should be provided that this tax would be levied upon personal services too?

Mr. HUDSON. Correct.

Mr. COOPER. That is, everybody.

Mr. HUDSON. Except the wage earners.

Mr. COOPER. What do you mean by "wage earners"?

Mr. HUDSON. I mean that the man who has to go out onto the street and dig ditches for $4 a day.

Mr. COOPER. What is ordinarily termed "common labor"?

Mr. HUDSON. Yes; because he is going to pay his tax in the higher cost of his living.

Mr. COOPER. And everybody except the so-called common laborer would have to pay the tax?

Mr. HUDSON. Yes, sir.

Mr. COOPER. On the amount of salary or compensation received? That is, a tax to be levied by the Federal Government?

Mr. HUDSON. Yes.

Mr. COOPER. What do you think of the legal question that would be promptly raised insofar as State, county, and municipal employees are concerned?

Mr. HUDSON. I think, from the employee's standpoint, there would be no question. There would be no objection on his part.

Mr. COOPER. I understand, but do you think the Federal Government has the right——

Mr. HUDSON. I do not.

Mr. COOPER. Under the Constitution to levy a tax on State, county, and municipal employees?

Mr. HUDSON. I do not.

Mr. COOPER. There would be all of that large number of salaried people in the country who would be relieved of this tax that you say should be levied uniformly on everybody.

Mr. HUDSON. It should, because everybody benefits.

Mr. COOPER. You admit that there would be an inequality that should not be allowed, do you not?

Mr. HUDSON. In my judgment; yes.

TOWNSEND PLAN CONTEMPLATES RAISING COST OF LIVING

Mr. KNUTSON. What are you doing in this bill? You are increasing the cost of living to those who are paying this pension?

Mr. HUDSON. Yes.

Mr. KNUTSON. You admit with your plan you are going to have at least a modified form of inflation. Otherwise you could not accomplish what you say you are going to accomplish.

Mr. HUDSON. What do you term as inflation, the increase of prices?

Mr. KNUTSON. I mean that the dollar will buy less. That is inflation.

Mr. HUDSON. That might be true. Technically speaking, I think that it is.

TOWNSEND PLAN ENCOURAGES SQUANDERING—DR. TOWNSEND WOULD PERMIT PENSIONER TO DRINK HIMSELF TO DEATH

Dr. Townsend, testifying:

Mr. HILL. He could not go out and squander it in order to get rid of it, so that he may be eligible to receive $200 the next month?

Dr. TOWNSEND. We do not care what he does with it. That is immaterial. Let him have carte blanche. Let him buy whisky with it if he wants to kill himself off as quickly as he chooses. That is immaterial. It is commerce—business—that we want in this country. We are not going to regulate people's morals in the least when we give them money to spend.

DR. TOWNSEND DOES NOT BELIEVE IN SAVING

Senator CONNALLY. Are you against saving money?

Dr. TOWNSEND. Yes, I am.

Senator CONNALLY. You are opposed to that?

Dr. TOWNSEND. Absolutely. I think it is wrong in principle. Money should not be used as a means of storing wealth.

TOWNSEND PLAN PROVIDES AN ENLARGED "SALES TAX" TO FINANCE PLAN

Dr. Townsend, testifying:

Senator BARKLEY. It is a percentage tax based on the amount involved in each transaction?

Dr. TOWNSEND. Yes.

Senator BARKLEY. So it is really a sales tax.

Dr. TOWNSEND. There is a distinction, but there is very little difference. A sales tax has to necessarily be a tax on a transaction. All taxes on transactions of a financial nature are sales taxes.

Senator BARKLEY. So it is a distinction without a difference?

Dr. TOWNSEND. Well, the public conception of a sales tax is a limited transaction tax. That is the only difference.

Senator BARKLEY. It is limited to the transactions provided by law?

Dr. TOWNSEND. It is limited to certain kinds of transactions.

Senator BARKLEY. The transactions tax (Townsend plan), would be unlimited, it would apply to all transactions involving sales?

Dr. TOWNSEND. That is what we propose to do.

Senator BARKLEY. You propose to widen the base and change the name to make it more acceptable to the public?

Dr. TOWNSEND. To make it more comprehensive.

Senator BARKLEY. The name is changed in order to get away from the term "sales tax"?

Dr. TOWNSEND. That is all.

TOWNSEND PLAN WOULD REQUIRE EACH FAMILY TO BE CHARGEABLE WITH AN AVERAGE OF $88 EVERY MONTH TO SUPPORT PLAN

Dr. Townsend, testifying:

Senator BARKLEY. According to your plan, we will say that 10,000,000 old people take advantage of it, and there are 130,000,000 people in the country; that means that this $24,000,000,000 a year would have to be paid by the remaining 120,000,000. That represents about 28,000,000 families, on the average, which would mean each family would be taxed $88 a month to raise this enormous amount of money to be paid to these pensioners. Do you know that the average income of the families of the United States today is less than $88 a month?

Dr. TOWNSEND. Yes; I know that.

* * * * * * * *

Senator BLACK. The tax should be placed on those who have the ability to pay it. I am opposed to any sales tax to pension Rockefeller, Morgan, or anybody else in that class.

CONCLUSION

I have selected these extracts from the testimony of Dr. Townsend and Mr. Glen Hudson, his witness, as given before committees of Congress. Of course, it does not represent all of the testimony. There is much more that would be equally interesting and informative. That which has been given, however, is sufficient to indicate that there are many features contained in the Townsend plan—McGroarty bill—that are not generally known. My object in submitting this testimony has been to enable those who desire a deeper knowledge of the subject than that usually given to have some basis for further inquiry and study.

Unfortunately it has been made to appear that those who do not accept the Townsend plan in its entirety are unfriendly to the aged and opposed to any relief being provided for them. Such is not a true statement of the attitude of Members of Congress toward our old folks. Every Member of Congress has deep sympathy for the aged who are without proper incomes. Members of Congress stand ready and willing to do everything possible for the needy aged, which our Constitution authorizes and which our Supreme Court will uphold.

Hon. THOMAS BLANTON, one of the most outstanding and courageous Members of Congress on the Democratic side, in a speech on the floor of this House, has well expressed a thought and a conviction that deserves repetition. He said:

NO TRUE FRIEND WILL DECEIVE

It would be absolutely futile to pass the Townsend plan when every good lawyer in the United States knows that it would be unconstitutional and that it would be annulled and set aside by the Supreme Court, and that under it not one dollar would ever be paid to any aged person in the United States.

They would be all disappointed. They would be expecting something that would not be forthcoming. They would all then say that Congress had handed them a gold brick. They would say that we had misled them. They would say that we had fooled them. They would say that we had trifled with them. They would say that we had taken their votes and support under false pretenses. They would then turn against the Congressmen who had given them a worthless law that gave them nothing, but which had cost their Government a lot of expense in passing it and in forcing the matter to be brought before the Supreme Court to be declared unconstitutional.

In conclusion, I recognize it to be my duty to support and work for old-age pension legislation that would provide substantially and adequately for the needy aged, but I am not willing to give my support to any measure that makes possible a pension for Ford, Rockefeller, Mellon, and Morgan, or any other millionaire, or anyone of less wealth who has sufficient income to care for their needs, and deny any consideration to the widow, orphan, blind, crippled, or otherwise physically handicapped in body or mind, or that will provide funds to be squandered at the expense of hard-working men and women with children to support by imposing a tax more infamous and iniquitous than any sales tax yet conceived.

I am, however, strongly in favor of legislation that will make adequate provision for our needy aged on a basis that is constitutional, safe, and sound from a financial standpoint, and that will afford real help to the aged and not a mere deception. To this I am committed. To this I will give my support. My attitude in the past, as a Member of Congress, toward humane legislation is a guaranty of my future intention and willingness to support all such legislation.

LEGISLATION PASSED BY CONGRESS TO BENEFIT VETERANS

Mr. WOLVERTON. Mr. Speaker, I wish to call attention to some of the worth-while legislation that has been passed by Congress in the last 2 or 3 years in behalf of veterans, and in the enactment of which it has been my privilege to have had a part.

(1) The passage, over President Roosevelt's veto, of legislation that made possible the cash payment of adjusted-service certificates. Approximately 4,000,000 veterans, their families, and dependents are now enjoying the benefits of this legislation, and many more millions of our citizens have indirectly felt the beneficial effect thereof.

(2) The restoration of all benefits to Spanish-American War veterans that had been taken away by the so-called Economy Act.

(3) Increased pensions under the World War rate to certain Spanish-American War veterans who had direct service-connected disabilities.

(4) Restoration of World War veterans, suffering from service-connected disabilities, to their former rates enjoyed prior to the Economy Act; and, the restoration of 75 percent of their former rates to World War veterans having presumptively service-connected disabilities.

(5) Extension of benefits to include the care of widows and orphans of the disabled World War veterans who die from causes other than the ones for which they were drawing compensation.

(6) Provisions of the above-mentioned law extended to the widows and orphans of those veterans who had presumptively service-connected disabilities, but who died of other causes, and wiped out the misconduct clause insofar as it applied to those dependents.

(7) Legislation to safeguard the estates of incompetent veterans and to protect them against the misuse of their funds by dishonest or incompetent guardians.

(8) Hospitalization was restored to veterans of all wars and even to peacetime veterans, who were receiving compensation as result of disabilities incurred in the service.

(9) A comprehensive program for the construction and improvement of veterans' hospitals at a cost of $20,000,000 and upwards.

(10) Compensation for World War veterans, Spanish War veterans, peacetime veterans, and non-veterans who were injured in the Florida hurricane, and for the dependents of the ones who lost their lives in that disaster.

The legislation to which I have directed attention is but a part of the great body of laws that have been passed in former years in the interest of veterans. All such legislation, of course, remains in force. It is interesting, however, to note how much of the legislation to which I have referred was passed to undo the wrongs and injustices resulting from the passage of the so-called Economy Act, in the early days of the present Democratic administration. It is gratifying, indeed, to me as one of the few who voted against the Economy Act, because of the harm which would result to veterans and their dependents, to see that those who were responsible for it are now willing to help in correcting the wrongs that resulted from it. There is much yet to be done. We must not lessen our endeavor until every inequity is eliminated and full justice accomplished.

In conclusion, permit me to express the pleasure and the privilege it has been to be of some service to our veterans and their dependents, not only in the passage of legislation that has made provision for their welfare, but also in assisting them to procure the benefits the law has provided for them. I am conscious of an obligation to our veterans and their dependents and to the fulfillment of such I shall give my constant endeavor.

ADEQUATE OLD-AGE PENSIONS SHOULD BE PROVIDED

Mr. WOLVERTON. Mr. Speaker, there is no question that deserves more careful and sympathetic consideration than that of providing adequate old-age pensions.

As a result of the losses sustained in this prolonged depression, men and women who have never heretofore felt the need of outside aid are compelled, because of their necessitous circumstances, to seek relief. Those who are young enough to be engaged in industry or other active pursuits hope for the day and look forward to when conditions will be again normal and they will have an opportunity to obtain employment in their usual lines of activity.

But there is an ever-increasing number who, by reason of age, cannot look into the future with any feeling other than fear. The uncertainty of obtaining employment because of advancing age presents for them a future that is dark and foreboding. It is individuals such as these who, because of adversity or lack of gainful employment in the days gone by, face the future with dread and ask to be assured of security from want in the days ahead. They wish to have removed the possibility of dependence upon others who may not be willing or able to assume the responsibility of their care.

They want forever removed the threatening possibility of poverty in old age, and the necessity of spending the closing years of their life in the poorhouse or on the county farm. Surely there is a duty to respond to this call for help, remove the fear and make possible a safe, happy, and secure old age.

Last year Congress passed the so-called security bill, the purpose of which was to provide for the present and future welfare of the aged, the crippled, the blind, the widow, the orphan, the unemployed, and those otherwise handicapped in life's battle. Although the bill as presented to Congress did not meet with my entire approval, because of the meagerness of help provided in some instances, particularly that for the aged, yet, after every effort to make its terms more liberal had been defeated, I gave my vote in support of passage of the bill because it, at least, established a principle of governmental responsibility for the aged and the others provided for in the bill.

The passage of the Federal security bill is of tremendous importance in promoting the welfare of our aged persons. It is not to be measured alone by the amount of help that has been provided, but also from the standpoint that for the first time in the history of our Nation the Federal Government has assumed, and has been charged by law, with a responsibility toward the care of our aged and the other classes named in the bill.

I was extremely disappointed, as were many other friends of our old folks, that our effort on the floor of Congress to procure more adequate provision had failed, and except for Democratic opposition the amount provided would have been considerably more; but I was conscious of the fact that with the adoption of the principle of old-age pensions, even though the amount with which it was started was not so large as it should have been, the opportunity was ever present, by congressional action and State participation, to increase the amount as the country recovered from the depression and ability to contribute was thereby improved.

There has been a further source of disappointment to those of us who from New Jersey assisted in the passage of the security bill by Congress. It arises from the fact that the administration of old-age relief in New Jersey does not give expression to the intention with which the Legislature of New Jersey passed the bill making provision for such old-age relief, nor does it carry out the intention of Congress when we passed the Federal statute. If help were given to our aged in New Jersey on the basis of what was provided by the Federal Security Act and the New Jersey Old Age Pension Act, and as was expected when we passed the bill in Congress, they could receive today as much as $45 per month.

This amount is based upon the fact that under the New Jersey statute provision has been made for as much as $30 per month. Under the Federal statute the Federal Government contribution is limited to one-half of the amount contributed by the State and not to exceed $15 per month per individual. Thus it will be readily seen that if the State should contribute $30, then the Federal Government would contribute an additional $15, making a total of $45 per month for the individual.

Unfortunately, however, New Jersey is utilizing the contribution of the Federal Government toward its own contribution instead of passing it on in full to the aged. Thus the State burden is decreased at the expense of the aged.

This action practically nullifies, so far as the aged are concerned, all the help that we as Members of Congress intended they should have. Consequently under such an administration the aged receive an amount not in excess of $30, and in most cases far less. I was dumbfounded a few days ago when my attention was called to a case of an honorable citizen over 80 years of age, who had been industrious and hard-working all of his life, but who through no fault of his own suffered losses during the present depression, and was allowed only $10 per month by the old-age-relief organization of the county in which he resided. Treatment such as this is an outrage. It must be rectified. And I pledge my best endeavors to the end that more sympathetic consideration shall be given and more substantial payments made.

It is cases such as the one I have just referred to that give rise to all kinds of "isms." I am not surprised that it does do so. I would be surprised if it did not. It is our fault that we permit such conditions to exist. It is the duty of everyone who has a kindly feeling toward our aged to make certain that such conditions are rectified by an administration of the acts as will insure being paid to the aged all that was intended by Congress and the State legislature when their respective acts were passed.

There is an additional desire upon my part with respect to our aged. It is a very keen desire to see that such further legislation is passed as will make sure that complete adequacy is provided for them. Such legislation must provide an amount that will remove any thought of fear or uncertainty as to the future. Furthermore, such legislation must recognize and take into consideration that because of bodily infirmity, or other necessitous circumstances, some individuals need and should have a larger amount than others. All must be taken into consideration in order that wise, sane, and adequate legislation may be passed.

Throughout my entire legislative career, both as a member of the New Jersey State Legislature and as a Member of Congress, I have been sympathetic toward those in need. My vote has always been cast in favor of those measures that have sought to promote the welfare of our people. I recognize a duty upon my part to continue my endeavors until full justice is done for our aged and those otherwise physically handicapped who have a peculiar claim upon governmental protection and help and in the fulfillment of this duty my earnest and sincere effort is pledged.

FURTHER AID TO THE HOME OWNER IS IMPERATIVE

Mr. ELLENBOGEN. Mr. Speaker, the depression was caused by the fact that various economic factors were thrown out of balance. One of these was real estate.

I have been interested in the problems of the home owner and of the farm owner for many years. After much study of the subject I have come to the conclusion that we must substantially reduce the burden of the home owner and farm owner before they can take their normal and rightful place in our economic system.

Beginning particularly in 1930 and proceeding at an accelerating rate until 1933, foreclosures of homes and farms took on alarming proportions. Hundreds of thousands of good, thrifty, hard-working Americans lost their homes and the savings which they had invested in them. Sheriffs' sales and writs of eviction have ruthlessly torn them from their most prized possession, the home, which they had bought with their savings after honest and hard toil for many years.

CONGRESS ESTABLISHES THE H. O. L. C.

The danger that sheriffs' sales would deprive the majority of our people of their homes was so grave that in June 1933 the Congress, under the leadership of Franklin D. Roosevelt, established the Home Owners' Loan Corporation. This Federal agency saved, up to June 11, 1936, over 1,000,000 homes in the United States by exchanging their mortgages, taxes, and other liened indebtedness for H. O. L. C. mortgages totaling about $3,100,000,000.

The chief burden upon the home owners came from excessive mortgage debts, high rates of interest, and unconscionable real-estate taxes. The home owner is entitled to equal treatment under the tax laws, which is now denied him under the antiquated system of local taxation in Pennsylvania.

REAL-ESTATE TAXES IN PENNSYLVANIA ARE CONFISCATORY

The real-estate taxes in Pennsylvania upon the homes and farms and upon the commercial properties of the people of Pennsylvania are too high. They are excessive. They are out of proportion compared to the taxes which the owners of other forms of property pay. They are confiscatory. Unless these taxes upon our homes are substantially reduced, tens of thousands of home owners and farm owners in Pennsylvania will be forced to lose their homes and farms and with them their life savings.

EXCESSIVE REAL-ESTATE TAXES ARE RESPONSIBLE FOR HIGH RENTS

Permit me to point out that tenants who do not own homes but rent dwellings or apartments are equally interested in this matter, because a large part of the rent which they pay is collected by the landlord merely to be turned over to the tax collector for real-estate taxes.

OUR HOME OWNERS BEAR THE ENTIRE BURDEN OF LOCAL GOVERNMENT AND OF THE SCHOOL SYSTEM

In 1931, $372,000,000 was levied in Pennsylvania for the needs of local government and for the maintenance of schools. Of this huge sum, only $13,000,000 came from a 4-mill tax on personal property, whereas the entire balance of $359,000,000 came from local taxes upon real estate.

UNEQUAL BURDEN OF TAXES

For every $28 levied for the cost of maintaining local government, which means the government of cities, counties, boroughs, and townships, and for the maintenance of our school system, for every $28, I say, real estate contributes $27 and concentrated wealth in the form of stocks and bonds, and so forth, contributes only $1.

It is a most flagrant example of an unequal burden of taxes. The tax assessment for 1932 and for the following years is equally discriminating. The tax situation in Allegheny County is similar.

The time has come when this inequitable system of taxation must be changed. Taxes upon real estate must be no higher than taxes upon other forms of property. To continue the present system would mean the confiscation of the homes of our people.

The bulk of the personal property in the State of Pennsylvania, as in other States, is concentrated in the hands of a few people. They have been able to so dominate the legislature and the State government of Pennsylvania as to escape taxation to meet the cost of local government and to contribute practically nothing toward education. The burden of administering the local units of government, of constructing school buildings, and of maintaining our educational system has been placed practically in its entirety on the shoulders of the home owners of Pennsylvania.

REAL-ESTATE TAXES MUST BE REDUCED

This situation is so shockingly unjust that it cries for remedial legislation.

Pennsylvanians, whether home owners, farmers, or renters, are struggling against this unbearable load of real-estate taxation. Necessity and justice both demand a change in the system of local taxation. Furthermore, it is not only wrong; it is economically unsound. Real estate will never recover its proper place until taxes on real estate are drastically reduced to a fair and equitable rate.

EXEMPTION OF UTILITY PROPERTIES MUST BE REMOVED

An important reason for the high taxes upon real estate is the fact that all real estate owned by utilities in Pennsylvania, that is, by gas and electric companies, by telephone companies, by water companies, by streetcar and bus companies, and by other utility corporations is exempted from taxation.

Those who own a little home or a small farm or a little business must pay a high tax upon real estate, but those who carry on a giant utility corporation evade all such taxation.

Exemption for churches, schools, and charitable institutions from real-estate taxes is proper; but why utility companies should escape such taxes is inconceivable.

In 1932, in Allegheny County alone, $390,000,000 worth of property was exempted from real-estate taxation—nearly 18 percent of the total of all assessed properties.

Many of the States removed utility-owned real properties from the exempted list and are now collecting taxes upon them. But not so in Pennsylvania. Here the utilities continue to receive police and fire protection, sanitation, and other services, and to use the streets and highways of our cities, counties, and municipal subdivisions, but they pay nothing for the use of these services and facilities. Instead of paying their fair and equitable share of the cost of these services and facilities, the utilities have succeeded in shifting that burden upon the home owners. This must be changed.

REPUBLICAN PARTY CONTROLLED BY UTILITIES

As long as the Republican Party in Pennsylvania has the power to block a change in this system, utility corporations will be exempt in this State because the utilities control the Republican Party and the officials elected by it.

UTILITIES OPPOSED TO ME

I have carried on a vigorous and determined fight to remove the inequitable exemption of utility corporations from real-estate taxes. I have carried on a determined fight to remove this burden from the back of the home owner where it does not belong and place it upon the utility corporations where it does belong.

Because I have carried on this fight for fair treatment of the home owners, the utilities are now supporting against me a man who has served them for many years.

EXCESSIVE BURDEN OF MORTGAGE INDEBTEDNESS

Now let us discuss, briefly, the burden of mortgage indebtedness. Home owners and farm owners everywhere in the United States are suffering from the burden of excessive mortgage debts. Mortgages on owner-occupied homes in the United States in 1932—without considering other forms of real estate and without considering farms—amounted to at least $15,000,000,000, to which should be added at least $2,000,000,000 of taxes, judgments, and municipal liens. This staggering debt is a colossal burden upon the home owner.

This huge debt burden led to wholesale foreclosure of mortgages which was only stopped by the creation by Congress of the Home Owners' Loan Corporation. Its loan activities ended on June 12, 1936. During these 3 years of activity it saved 1,018,000 homes and placed $3,090,000,000 of home-loan mortgages.

I SPONSORED MANY BILLS FOR RELIEF OF HOME OWNERS

During my career in Congress I introduced many bills affecting the H. O. L. C., all of them for one purpose—to make it easier for deserving home owners to obtain relief, or to lessen the financial burden of those who had already received home loans. Among them was a bill to guarantee the principal as well as the interest of home-loan bonds. This principle was adopted into law and made possible the successful loan operations of the H. O. L. C.

On January 3, 1935, I introduced a resolution providing for the resumption of H. O. L. C. activities—suspended by action of the H. O. L. C. Board—and a bill authorizing the issuance of additional H. O. L. C. bonds. I am glad to report that the H. O. L. C. activities were resumed and additional bonds were authorized.

HOMES WITH A STOREROOM ARE MADE ELIGIBLE

I also sponsored a measure to make dwellings containing a little storeroom, a shop, or any other small business enterprise eligible for a H. O. L. C. loan. The H. O. L. C. had held that such properties were commercial and therefore not eligible for a home loan.

Congress recognized the merits of my proposal and the act was amended accordingly, saving many a small-business man.

Mr. Speaker, I am very happy that I have been able to aid in saving more than 1,000,000 home owners in the United States and about 28,000 in the Pittsburgh district.

THESE HOMES ARE NOT PERMANENTLY SAVED UNLESS HOME-LOAN PAYMENTS ARE REDUCED

I am very glad that I was able to aid in removing the threat of foreclosure from so many home owners, but I realize that this does not mean that these homes will remain saved. In many cases the home owner will not be able to meet the large payments for interest and for the reduction of the principal mortgage debt which is required of him by the H. O. L. C. He will lose his home unless we come to his rescue and reduce these payments to a size which he can meet.

PRESENT INTEREST RATES ON HOME LOANS ARE TOO HIGH

Under the present law home-loan mortgages bear interest at the rate of 5 percent a year. This rate of interest is too high.

When the original Home Loan Act was passed in June 1933 Congress may have been justified in fixing the rate of interest at 5 percent, because at that time the bonds which were issued in exchange for distressed mortgages were guaranteed only as to interest and not as to principal and, therefore, had to carry a rate of interest of 4 percent. An additional 1 percent was necessary to absorb the losses. Therefore, the rate of interest to the home owner was fixed at 5 percent.

On January 8, 1934, I introduced a bill to guarantee not only the interest but also the principal amount of H. O. L. C. bonds. On April 27, 1934, such an amendment to the original law was finally passed. This enabled the sale of these bonds at an average rate of interest of 2¾ percent.

The bonds carrying 4-percent interest which had formerly been issued were retired.

AN INTEREST CHARGE OF 5 PERCENT TO THE HOME OWNER IS NO LONGER JUSTIFIED

A charge of 5 percent for interest to the home owner is no longer justified; it should be reduced to 3½ percent.

MY BILL PROVIDES FOR 3½ PERCENT

Why continue to charge a rate of interest which the home owner cannot pay, which is dragging him further and further, deeper and deeper into debt, and which must in the end either be written off or result in foreclosure?

Therefore, on January 16, 1935, I introduced a bill, H. R. 3974, to reduce the rate of interest on H. O. L. C. mortgages from 5 to 3½ percent and to extend the time during which the mortgage must be paid off from 15 to 25 years. I have since reintroduced this bill, and it is now known as H. R. 10638.

At the present time the home owner pays off his Government mortgage at the rate of $7.91 per thousand dollars per month, if he has a 15-year mortgage. On a $3,000 loan that means a monthly payment of nearly $24. Of course, I am not overlooking the fact that the home owner gradually, by monthly payments, pays off his mortgage, so that at the end of 15 years he owns his home free and clear of any debt.

MOST HOME OWNERS ARE UNABLE TO MAKE THESE PAYMENTS

This is indeed a fine feature of the Government loan, provided the home owner is able to make these monthly pay-

ments. But the plain fact is to the contrary; he is not able to make these payments.

If my bill is adopted, it will reduce the rate of interest to 3½ percent and will extend the date of maturity on these home loans from 15 years to 25 years. The monthly payments to the home owner will then be strikingly reduced. Under the present plan, the home owner must pay $7.91, or nearly $8 per thousand, on his mortgage. Under my bill, he will be required to pay only $5.01 per thousand.

A home owner who previously paid on a $5,000 straight mortgage $25 per month—without paying off anything on the principal and reducing his mortgage—would, under the terms of my bill, pay $25.05 instead of $39.55, as under the present law. After 25 years his loan would be fully paid off and he would own his home free and clear of all debts. In a similar case on a $3,000 mortgage he would now be paying $24, whereas under my plan he will pay only $15 a month.

INTEREST RATES TO THE HOME OWNER MUST BE REDUCED

Mr. Speaker, we are living in an era of cheap money. Bankers, financiers, and large industrial and commercial corporations can secure loans at less than 1 percent per year. The home owner who has a private mortgage is still forced to pay at least 6 percent, and in addition to that he must pay a commission for obtaining the loan, an attorney's fee for the examination of the title, and other charges. Six percent is too high a rate of interest, particularly during easy-money times. It retards and endangers recovery. The rate of interest must be reduced. The 6 percent fettish must be smashed.

LET US REALLY SAVE THE HOMES

Mr. Speaker, I consider this problem to be one of the most important of the day. There is nothing more important to a man and to his family than the home which they own.

HOME OWNERSHIP MUST BE PRESERVED

Not only is this important to the individual home owner but it is important to society as a whole. It is important to the Government. A man who owns his home, a family which lives on the soil which is theirs have something concrete, something definite which attaches them to their country and which gives them a direct interest in the welfare of the Government.

Home owners and farm owners are the backbone of the Nation. We cannot, we must not, permit them to be dispossessed, for fear that such action in the end upset the very principles upon which this Government rests.

Mr. Speaker, I hope that in the next session the Congress will pass my bill to reduce the rate of interest on home-loan mortgages and to extend the time for payment. I also hope that the interest on all other mortgages will likewise be reduced. Such action is necessary for the preservation of the homes of our people; it is necessary in the interest of the peace and safety of the Nation.

THE NEW CORPORATE TAX SYSTEM OF THE REVENUE ACT OF 1936

Mr. VINSON of Kentucky. Mr. Speaker, the tax compromise agreed upon by the House and Senate conferees resulted in a substantial victory for the principle of the undistributed-profits tax advocated by the President. The President pointed out in his message of March 3, 1936, that a tax on undistributed profits would accomplish an important tax reform, remove two major inequalities in our tax system, and stop leaks in the present surtaxes. The two major inequities were (1) the inequality existing between the taxation of corporations as compared with the taxation of other forms of business organizations, and (2) the inequity between large and small shareholders due to the existing corporate rates.

The corporate form of doing business enjoys certain advantages over individual and partnership businesses. Individuals and partnerships cannot minimize their taxes by failure to distribute their business earnings. Corporations should not be permitted to withhold from the beneficial shareholders unneeded corporate income at the expense of the revenues of the United States and to the detriment of the shareholders. All business profits should bear their just share of Federal taxes whether held in the enterprise or distributed to the beneficial owners. So far as corporations are concerned, the old law in effect permitted a deferment of any surtax on corporate earnings until they were distributed to the shareholders, and if such earnings remained undistributed they bore no surtax whatsoever.

In addition, the old law grossly discriminated against the small shareholder. By reason of the flat corporate tax collected at the source, he, in effect, paid a normal tax ranging from 12½ to 15 percent as compared with a normal tax of 4 percent paid by the individual who derived his income from other sources. Moreover, the old law has been ineffective in preventing the retention of earnings in corporations controlled by wealthy individuals. Congress has endeavored to cope with this situation since the first income-tax law but the evil has been a growing one and has resulted in many cases in making our surtax rates ineffective. It is unfair not only from the standpoint of the Government revenues but also from the standpoint of the small shareholder who is being deprived of earnings to which he is beneficially entitled, to prevent surtaxes from being imposed upon wealthy shareholders.

THE HOUSE BILL

The House bill substantially removed the inequities referred to by relieving from tax corporations which distribute all of their net earnings annually as earned and by taxing corporations accumulating their net income at a rate to compensate to a large extent for the amount of tax on the shareholder's income lost by reason of the failure to make a complete distribution. Adequate safeguards were provided to prevent unreasonable taxation of incomes in the case of corporations in distress or with inadequate earnings to take care of their immediate business needs. In my opinion, the House bill was sound, both from a practical and a theoretical standpoint. It provided for a tax upon the net income varying from zero percent to 42½ percent in the case of the large corporation, the rate being determined by the proportion of the net income which was undistributed. That is to say, if the corporation distributed all of its net income, then it would pay no tax; on the other hand, if it kept all of its net income it would pay a tax of 42½ percent. Thus the House bill treated the corporation as a conduit through which profits could pass to the stockholder without tax and the stockholder would be taxed on his dividends in accordance with his ability to pay. The House bill also gave substantial relief to small corporations with net incomes of less than $10,000. In this case the rates upon net income varied from zero percent to 29½ percent. The House bill gave certain relief to corporations from the higher rates of tax in the case where they had existing deficits, where they were under contract not to pay dividends, or where they were in debt. These were the so-called "cushion" provisions, and while they were probably open to some objection, I have no doubt but what eventually these cushions could have been worked out satisfactorily.

THE SENATE BILL

The bill as passed by the Senate retained the graduated tax on corporations found in the Revenue Act of 1935, but increased the rates by 3 percent; that is, there was a tax upon corporate net income graduated from 15½ to 18 percent. In addition, it imposed a flat tax of 7 percent upon the portion of the net income of the corporation which was undistributed. Such a system failed completely in removing the two major inequalities in our tax system referred to by the President and in stopping leaks in our present surtaxes, for the following reasons:

First. The inequality in taxation between incorporated and unincorporated business enterprises remained. Corporations could still retain their earnings in the business and pay much less tax than individuals engaged in individual or partnership enterprises.

Second. The discrimination under the Revenue Act of 1935 against the shareholder in the small-income-tax class accentuated by the Senate bill. Under the old law a shareholder might pay in the form of the corporate tax as much as 15 percent on dividends received by him as compared with a 4-percent tax in the case of an individual who received his income from other sources. Under the Senate bill, in

some cases, he would be required to pay almost 25 percent as compared with the 4-percent tax imposed upon the individual who received income from sources other than dividends.

Third. The leak in the surtax was not stopped by the Senate bill. The flat rate of 7 percent upon undistributed profits was a mere gesture and would have no effect upon compelling distribution of unneeded earnings. In fact, the Treasury experts estimated that this 7 percent rate would not cause any distribution of income. Thus, it would not result in any increase in our surtax incomes and, therefore, our surtax rates would still be ineffective under such a plan. This conclusion seems inescapable when it is considered that since dividends are now subject to the 4-percent normal rate, there is a saving to the shareholder by complete distribution of dividends of only 3 percent. This is no inducement at all for the corporation with shareholders in the high surtax brackets to distribute its earnings. Many of the wealthy shareholders are only too willing to keep the earnings in the corporation at the slight cost of 3 percent, which is more than offset by the large saving in surtaxes. The ineffectiveness of such a rate when compared with the rates under the House bill is more apparent when it is realized that the rates under the House bill were imposed upon the entire adjusted net income, whereas under the Senate bill the 7 percent rate applied only to the portion of the net income not distributed.

Fourth. The Senate bill dealt a heavy blow to the small corporation. The only relief granted to the small corporation under the Senate bill was in the graduated rates imposed for the normal tax. But the minimum graduated rate under the Senate bill was higher than the maximum rate imposed by existing law. This is shown by the following table:

	Existing law	Senate bill
	Percent	*Percent*
First $2,000	12½	15½
Next $13,000	13	16
Next $25,000	14	17
Balance	15	18

As pointed out, the House bill provided special relief for corporations with adjusted net incomes of $10,000 or less. There was under the House bill no tax in the case of complete distribution by any corporation and, in the case of the small corporation, the rates of tax varied from zero to a maximum of only 29½ percent. In fact, corporations with adjusted net incomes of $10,000 or less could under the House bill retain for surplus an amount equal to 40 percent of their adjusted net income and not pay any more tax than that imposed under existing law. It has been shown that the average rate of retention over a 10-year period is about 25 percent. Under the House bill a corporation with an adjusted net income of $10,000 could retain as much as 30 percent of its adjusted net income and pay a tax of only 7½ percent, or $750. But the Senate bill failed to recognize the distinction between large and small corporations. This is a serious matter when we consider that corporations with net incomes of $10,000 or less comprise more than 80 percent of all corporations. Out of 257,000 corporations estimated by the Treasury to report incomes for 1936, 214,000 will have net incomes of $10,000 or less. Not only did the Senate bill fail to give relief to small corporations but it actually discriminated against them in favor of the large corporations. This is shown by the following table:

Percent of increase of tax under Senate bill over existing law

Net income:	
$2,000	71
$3,000	70
$4,000	69
$5,000	69
$10,000	68
$20,000	67
$50,000	64
$1,000,000	53

In other words, the larger the corporation, the less the Senate bill increased its tax over that imposed by existing law.

CONFERENCE COMMITTEE BILL

From the foregoing discussion it will be seen that the Senate bill was not acceptable in any form. It was therefore necessary for the House conferees to get some sort of a compromise which would accomplish the tax reform suggested by the President in his message. It is believed that the conference agreement obtained resulted in upholding the objectives of the House bill and in the adoption of an undistributed profits tax with enough teeth to carry out the tax reform suggested by the President. Under the bill as agreed to in conference a normal tax was retained on corporations, but at greatly reduced rates. The following table shows the comparison of the normal tax rates under the existing law, the Senate bill, and the conference agreement:

	Existing law	Senate bill	Conference bill
	Percent	*Percent*	*Percent*
First $2,000	12½	15½	8
Next $13,000	13	16	11
Next $25,000	14	17	13
Balance	15	18	15

It will be seen from the above table that under the conference agreement the portion of the corporate net income which exceed $40,000 will bear the same tax rate as that imposed by the 1935 Revenue Act and the portion of the net income not in excess of $40,000 will pay a less tax rate than that imposed by existing law. This affords a real relief to the small corporation, especially in those cases where due to a complete or large distribution there will be little or no undistributed profits tax to pay.

The conference agreement also imposes an undistributed profits tax with real force behind it. Instead of the flat 7-percent tax contained in the Senate bill, the conference agreement provides for a graduated undistributed profits tax at the following rates:

Seven percent of the portion of the undistributed net income which is not in excess of 10 percent of the adjusted net income.

Twelve percent of the portion of the undistributed net income which is in excess of 10 percent and not in excess of 20 percent of the adjusted net income.

Seventeen percent of the portion of the undistributed net income which is in excess of 20 percent and not in excess of 40 percent of the adjusted net income.

Twenty-two percent of the portion of the undistributed net income which is in excess of 40 percent and not in excess of 60 percent of the adjusted net income.

Twenty-seven percent of the portion of the undistributed net income which is in excess of 60 percent of the adjusted net income.

I have already pointed out that the Senate bill gave practically no relief to small corporations but actually increased the tax burden on the small corporation to a much greater extent than in the case of the large corporation. In addition to the relief afforded the small corporation through the reduction in the rate of normal tax, we also succeeded in securing in the conference agreement an additional cushion for the purpose of the undistributed profits tax through the allowance of a specific credit in the case of a corporation with an adjusted net income of less than $50,000. Under such a provision, corporations with adjusted net incomes of less than $5,000 will never pay an undistributed-profits tax of more than 7 percent, although they retain all of their earnings, and corporations with adjusted net incomes

between $5,000 and $50,000 will have their taxes materially reduced by this provision.

The effect of this specific credit on corporations with varying sizes of net incomes is shown by means of the following table:

Effect of $5,000 specific credit provision

Adjusted net income	Undistributed profits tax, no dividends paid	Percent undistributed profits tax to adjusted net income	Undistributed profits tax 50 percent of adjusted net income paid in dividends	Percent undistributed profits tax to adjusted net income
$1,000	$70	7.00	$35	3.50
$5,000	350	7.00	175	3.50
$10,000	1,250	12.50	350	3.50
$15,000	2,375	15.83	700	4.67
$20,000	3,500	17.50	1,100	5.50
$25,000	4,625	18.50	1,500	6.00
$30,000	5,750	19.17	1,950	6.50
$40,000	8,000	20.00	2,850	7.13
$45,000	9,125	20.28	3,300	7.33
$50,000	10,250	20.50	3,750	7.50
$60,000	12,300	20.50	4,500	7.50

It is plain from the foregoing table that a corporation with an adjusted net income of less than $5,000 may retain all of its earnings without paying an undistributed profits tax of more than 7 percent of its adjusted net income; that a corporation with an adjusted net income of $20,000 may retain all of its earnings without paying more than a 17½-percent undistributed profits tax; and that a corporation with an adjusted net income of $50,000 may retain all of its earnings without paying an undistributed profits tax of more than 20½ percent. These rates are, of course, based upon total retention of earnings. They will be materially reduced in the case of dividend distributions. For instance, in the case of a 50-percent distribution, the undistributed profits-tax rate in the case of a corporation with an adjusted net income of $10,000 or less will be 3½ percent; of a corporation with an adjusted net income of $20,000, 5½ percent; and of a corporation with an adjusted net income of $50,000, 7½ percent. In the case of the average distribution, which is around 60 percent, the rates will be 2.8 percent in the case of adjusted net incomes of $1,000, $5,000, or $10,000; 3.8 percent in the case of an adjusted net income of $20,000; and 5.3 percent in the case of an adjusted net income of $50,000.

In order to compare the actual tax results of the House bill, the Senate bill, and the conference committee bill, I am submitting the following chart showing comparatively the taxes under these bills which would be paid by a corporation with a net income of $10,000 and by a corporation with a net income of $100,000, with various amounts distributed in dividends:

Corporation with net income of $10,000

Dividends paid	House bill	Senate bill	Conference report
0	$2,967	$2,178	$2,082
$1,000	2,612	2,108	1,862
$2,000	2,258	2,038	1,678
$3,000	1,903	1,968	1,508
$4,000	1,548	1,898	1,387
$5,000	1,193	1,828	1,317
$6,000	838	1,758	1,247
$7,000	535	1,688	1,177
$8,000	280	1,618	1,107
$9,000	90	1,590	1,040
$10,000	0	1,590	1,040

Corporation with net income of $100,000

Dividends paid	House bill	Senate bill	Conference report
0	$42,500	$23,219	$31,502
$10,000	37,500	22,519	28,802
$20,000	32,500	21,819	26,102
$30,000	27,500	21,119	23,402
$40,000	22,500	20,419	20,979
$50,000	17,500	19,719	18,779
$60,000	13,125	19,019	16,994
$70,000	9,375	18,319	15,348
$80,000	6,000	17,619	14,271
$90,000	2,857	17,440	13,840
$100,000	0	17,440	13,840

Let us first consider the foregoing table relating to a corporation with a net income of $10,000. It will be seen that under the conference report less tax is paid by such corporation than under either the House bill or the Senate bill when no dividends whatsoever are declared. When 30 percent of the net income is distributed in dividends, it will be seen that the conference agreement provided a total tax of $460 less than the Senate bill. With a normal distribution of about 60 percent of the net income, the tax under the House bill was $838; under the Senate bill, $1,758; and under the conference report, $1,247. Thus, at this point the conference report results in a fair average between the House and Senate bills.

In respect to corporations with net incomes of $100,000, it will be observed that the maximum tax with no dividend distribution under the House bill was $42,500; under the Senate bill, $23,219; and under the conference report, $31,502. Thus, it is obvious that while the conference report does not produce a maximum tax equal to the House bill, it is still substantially above the Senate bill and sufficiently so to discourage the unwise accumulation of corporate surpluses. It should be observed that under the House bill the total tax varies from zero to $42,500, a spread which gave assurance that unnecessary accumulations of profits would not be made. On the other hand, under the Senate bill the tax varied from $17,440 to $23,219. It seems obvious that this difference in tax was not sufficient to encourage the distribution of dividends. This is especially true, since it must be remembered that under all the bills dividends are now made for the first time subject to the normal tax, and when the stockholder takes into account his 4-percent normal rate he really saves only 3 percent by the complete distribution of dividends. Under the conference report the minimum tax is $13,840 and the maximum tax $31,502. In my opinion, this is a sufficient difference to assure a fair distribution of dividends. Moreover, while the Treasury estimated that the 7 percent undistributed profits tax imposed by the Senate bill would not result in any increase in revenue from surtaxes, it estimated that the graduated undistributed profits tax provided for in the conference agreement would yield additional revenue from increased income subject to surtaxes in the amount of $279,000,000.

The following tables will show that under the conference agreement the percentage of increase over the Revenue Act of 1935 is greater in the case of a large corporation than in the case of the small corporation. The reverse was the case under the Senate bill.

Net income	Total tax		Increase	
	Present law	Conference agreement [1]	Amount	Percent
$1,000	$125	$144.40	$19.40	15.52
$2,000	250	288.80	38.80	15.52
$3,000	380	461.10	81.10	21.34
$4,000	510	633.40	123.40	24.20
$5,000	640	805.70	165.70	25.89
$10,000	1,290	2,082.00	792.00	61.40
$20,000	2,640	5,236.00	2,596.00	98.33
$50,000	6,940	15,163.10	8,223.10	118.49
$100,000	14,440	31,502.80	17,062.80	118.16
$200,000	29,440	63,927.80	34,487.80	117.13
$300,000	44,440	96,352.80	51,912.80	116.82
$400,000	59,440	128,777.80	69,337.80	116.65
$500,000	74,440	161,202.80	86,762.80	116.55
$1,000,000	149,440	323,327.80	173,887.80	116.36

[1] Tax computation based on no distribution.

Net income	Total tax		Increase	
	Present law	Conference agreement [1]	Amount	Percent
$10,000	$1,290	$1,363.60	$63.60	4.93
$20,000	2,640	3,160.80	520.80	19.73
$50,000	6,940	9,519.40	2,579.40	37.17
$100,000	14,440	20,302.00	5,862.00	40.60
$300,000	44,440	63,052.00	18,612.00	41.88
$400,000	59,440	84,427.00	24,987.00	42.04
$500,000	74,440	105,802.00	31,362.00	42.13
$1,000,000	149,440	212,677.00	63,237.00	42.32

METHODS FOR RETAINING EARNINGS WITHOUT PAYMENT OF UNDISTRIBUTED PROFITS TAX

It may be proper to state that under the House bill or the conference agreement numerous methods may be employed by a corporation if it desires to retain the earnings in its business. I refer to the sale of stock rights, the retention of cash in the business by the use of taxable stock dividends, or the issue of interest-bearing notes to shareholders. These methods are not to be considered as tax avoidance at all, for the income in question has gone through the surtax mill.

The issuance of stock rights is one method whereby a corporation can secure capital for its business without cutting down its dividend distributions, and thereby avoid the undistributed-profits tax. A striking example of this method is shown in the case of the American Telephone & Telegraph Co., which, during the period from 1921 to 1931, inclusive, paid regular dividends at the rate of $9 per share, the dividends aggregating about $854,000,000 during 10 years. During this 10-year period, the corporation offered rights to its stockholders in 1921, 1922, 1924, 1926, 1928, and 1930, and in the aggregate raised $958,000,000 of capital from its stockholders through the sale of additional stock to them, or $104,000,000 more than the aggregate dividends paid to them during the period.

The method of issuing taxable stock dividends is a means whereby the corporation can actually retain earnings in the treasury without paying the undistributed-profits tax. This is because we allow the corporation a credit against its undistributed net income for taxable stock dividends before applying the undistributed-profits tax. This method was provided for in the House bill. In fact, when the House bill was pending before the House, I developed this theory in a speech on the floor. In this connection, I quote the following from my remarks on the floor:

The case of Eisner against Macomber, as I recall, involved a corporation with $1,000,000 common stock. There was a declaration of a $500,000 stock dividend to the common-share holders. The Court held, and I think correctly, that where each shareholder got his proportionate part of the new stock there was no change in his ownership in the corporation. That, in a corporation with a million-dollar capital, the distribution of another half million to the holders of the common stock made no change in ownership. The shareholder who owned a share of stock would own one and a half shares in the increased structure, and therefore there was no change in the ownership so far as he and the corporation were concerned.

It has been evidenced throughout the years that there are innumerable stock dividends that are taxable. The issuance of stock, either common or preferred, or bonds, in payment of dividends may change the proportion of ownership among the shareholders. For instance, let us take this illustration: You issue preferred-stock holders common stock to satisfy dividends declared to preferred-stock holders. You have introduced additional common stock. It is in the hands of persons other than the present common-stock holders; consequently there is a change in the proportion of ownership in the common-stock holders.

The Supreme Court in one case laid down the rule that the yardstick in respect of the taxability of stock dividends was the character or kind of stock and the change in proportion of ownership. I submitted in the RECORD yesterday a statement prepared for me by Mr. Kent, Acting General Counsel of the Bureau of Internal Revenue, setting forth decisions of the Supreme Court where stock dividends were held to be nontaxable; and other cases where the Supreme Court and the Board of Tax Appeals held that stock dividends were taxable. In this connection I pointed out that in the April volume of the Columbia University Law Review a gentleman, in whom we have great faith and confidence, the Honorable Roswell Magill, wrote a very comprehensive and illuminating article on the taxability of stock dividends.

Since that time the Supreme Court has sustained this view in an opinion by Justice Roberts in the case of *Koshland* v. *Helvering* (56 Sup. Ct. 767), decided May 18, 1936. In that case the taxpayer purchased nonvoting preferred stock upon which she subsequently received a dividend in common stock. The Court held that the dividend in common stock was income to the shareholder, as it gave her an interest different from that which her former holdings represented. Thus, a corporation through the issuance of taxable stock dividends can retain the necessary cash and still secure the advantage of the dividend credit and avoid the payment of the undistributed-profits tax.

The third method is that whereby the corporate directors, instead of declaring a dividend, may issue notes of the corporation carrying a certain rate of interest. There have been cases of where bonds have actually been distributed among the shareholders instead of cash by way of dividends, and such bonds are taxable under the law as dividends according to their fair market value at the time they are issued. There is thus a choice between giving shareholders an additional interest as creditors or increasing their equity in the enterprise by giving them stock. To take a concrete illustration, suppose that a corporation has a net income of $100,000 for 1936, and it has a $75,000 obligation falling due which it has not made provision for meeting in other ways. If it issues interest-bearing notes to its shareholders to the extent of $75,000, the indebtedness of the corporation is really being transferred from a third party to the persons who are the real owners of the enterprise.

These methods will generally benefit the small corporation to a greater extent than the large. In this connection, I wish to quote the following statement from Mr. George C. Haas, Director of Research and Statistics for the Treasury Department:

It is a good general rule that the principal stockholders in small, struggling and newly established corporations are men of much smaller total incomes than the principal stockholders in large, prosperous, and well-established corporations. If, therefor, such principal stockholders subscribe back to the corporation for additional shares all or part of their dividend receipts, less the personal income tax thereupon, the proportion of the gross dividend receipts subscribed back by them will be much greater in the case of the average small corporation than in the case of the average large one. The great importance of the difference which exists because of the differing individual income-tax rates upon different income classes can best be seen when it is noted that while dividends which fall in the bracket between $10,000 and $12,000 of stockholders' individual incomes will be reduced by only a personal income tax of 11 percent, or less than the present corporation taxes, the dividends which fall in the income bracket between $100,000 and $150,000 will be reduced by a 62 percent individual income tax. In other words, a greater proportion of the earnings of small corporations will be available for reinvestment, when paid out to their stockholders, than of large corporations. I submit that this differential will give smaller corporations a chance to catch up upon their larger rivals which they never had under any previous tax legislation.

DEFICITS

Another phase of the conference committee bill which will materially aid the corporation with a deficit will be found in that provision which provides that the dividends of a corporation up to the amount of its currrent net income shall constitute a taxable dividend in the hands of the shareholder even though the corporation had a prior-year deficit in excess of its current earnings. The old rule in this case was that such distributions constituted a return of capital and were not taxable dividends to the stockholder but reduced his basis in the case of subsequent sales, and under the old rule the corporation would get no dividend credit. Under the new rule this situation is reversed. The stockholder pays tax on his dividend, does not reduce his basis, and the corporation receives the benefit of the dividend credit, thereby reducing its undistributed net income subject to the undistributed profits tax.

DIVIDEND CARRY-OVER

The provision allowing a dividend carry-over for 2 years, contained in the House bill, has been preserved in the conference committee bill. This is a very meritorious and equitable provision. Suppose, for instance, that a corporation computes its net income to be $20,000 and pays $20,000 in dividends. Under this circumstance, of course, it would pay no undistributed-profits tax. But suppose upon audit of the taxpayer's return by the revenue agent the net income is determined to be $10,000. Without the dividend carry-over, $10,000 of dividend credit would be lost to the corporation. Under this provision, however, the $10,000 can be carried forward into the next year and treated as if it were a dividend paid in that year and used to reduce the undistributed net income for that year. If it is not absorbed in that year, the excess can be used in the next year.

BANKS, INSURANCE COMPANIES, AND FOREIGN CORPORATIONS

The provisions of the House bill exempting banks, insurance companies, and foreign corporations from the undistributed-profits tax and imposing in lieu thereof a flat rate of tax were agreed to by the conference committee in substantially the same form as passed by the House. In the case of banks and insurance companies, the law requires them to maintain certain reserves, and it was felt that it would be unwise to levy a tax upon them for retaining earnings which they were required by law to retain. The conference agreement also adopted the House method of taxing nonresident aliens and foreign corporations not doing business in the United States. As in the case of the House bill corporations in receivership were not subject to the undistributed-profits tax. The conference agreement subjects such corporations only to the graduated normal tax imposed upon ordinary corporations.

Our old tax law contained a system of taxing nonresident aliens and foreign corporations which, possible of defense on a theoretical ground, was entirely impracticable of enforcement. The conference committee bill, which follows the general theory of the House bill, is a very substantial improvement in respect to the practical taxation of these foreign individuals and companies. This system will produce substantially greater revenue than at present.

LIQUIDATIONS

Another substantial defect in existing law which was cured under the House bill and also cured under the conference committee bill was in relation to the complete liquidation of holding companies. In a large number of cases such liquidation was effectually prevented by the provision of the existing law which provided that 100 percent of the gain should be taken into account upon a complete liquidation. This has been changed under the bill so that the capital gain bracketed rates will apply to such liquidation. This new system will bring in substantial tax, will encourage the liquidation of useless companies, and be fair to all concerned. The Treasury estimates additional revenues from this source. The estimated increase is $33,000,000.

CONCLUSION

In conclusion, let me reiterate my firm conviction that the House bill set forth a plan of taxation eminently fair and productive of substantially increased revenue. The Senate bill, in my opinion, did not give any substantial recognition to the theory of the undistributed-profits tax and created a tremendous burden on corporations without regard to their ability to pay. The small corporation was tremendously burdened under the Senate bill. As far as the conference committee bill is concerned, while I do not believe it is as sound from a theoretical standpoint as the House bill, I do consider that it will give a fair test of the undistributed profits tax system. Moreover, I believe that the conference committee bill gives fairer treatment to the small corporation and that the bill is certain to produce substantial amounts of added revenue, and alleviate to a large extent the inequities of the present system.

A BRIEF REVIEW OF THE SECOND SESSION OF THE SEVENTY-FOURTH CONGRESS

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me.

The second session of the Seventy-fourth Congress, which adjourned on June 20, was, contrary to general belief, about 1 month shorter in duration than the average length of sessions, over a period of 15 years.

To adequately review the legislation passed at this session would be impossible in the time allotted to me. I shall therefore only touch upon the more important matters, or those measures which have commanded a widespread interest.

APPROPRIATIONS

First, as to appropriations for the Government, a subject much discussed in these days, the total appropriations for the fiscal year ending June 30, 1937, was $6,800,000,000. This amount, however, included $1,425,000,000 for relief; $517,000,000 to start the Social Security Act in operation; $1,000,000,000 to assist agriculture; $600,000,000 for payments to veterans, in addition to the bonus; and $365,000,000 for public works.

THE PUBLIC DEBT

The public debt now amounts to $34,000,000,000, a stupendous sum of money, but only about 10 percent of the Nation's wealth or worth. Few businesses, corporate or individual, can boast of a balance sheet showing an indebtedness of only 10 percent of its total value. The public debt of the United States is still much less per capita than that of any of the large nations of the world, and the interest charges are still less.

In the press and over the radio one reads and hears reckless statements that this administration has inflicted on the people, for generations to come, a debt burden of thirty-five billions. These partisan spokesmen deliberately conceal the fact that this administration inherited a debt of twenty-two billion, six billion of which was the deficit, piled up from failure to balance the annual Budget, during the last 2½ years of the previous administration.

It should also be borne in mind that the present public debt of thirty-four billion includes the two and one-quarter billion paid out to veterans under the bonus, and that of the total amount about four and one-half billion is recoverable through collateral and security held by the Government lending agencies.

Another interesting fact is that while the immediate burden on the taxpayer amounts to eight hundred and five millions a year in interest, that amount, due to low interest rates, is much less than in 1923 when the total debt was much lower in amount.

TAXES

The Revenue Act of 1936 is estimated to raise about seven hundred and eighty-five million in taxes. This measure, made necessary by reason of the decision of the Supreme Court of the United States holding the Agricultural Adjustment Act was unconstitutional and, further, by reason of the law for the immediate payment of the bonus going into effect over the President's veto, applies solely to corporations and is based on their income. They do not pay taxes until they make a profit and most of the taxes will not be payable if the profits are distributed to the stockholders. Most small corporations will pay less taxes than they did before, by reason of this new law.

RELIEF

The one billion four hundred and twenty-five million appropriated for work relief, together with the unexpended balance of the previous appropriation of four billion eight hundred million, will provide three billion five hundred million for relief for the coming year. This amount is equal to the sum spent for this purpose last year and together is about equal to the deficit during the last half of the previous administration.

AGRICULTURE

To aid the farmer to the extent of $1,000,000,000, Congress passed the Soil Conservation Act to take the place of the Agricultural Adjustment Act held invalid by the Supreme Court. Likewise there was passed the Farm Mortgage Act, providing one hundred and twenty-five million to aid drainage and irrigation districts. The act regulating commodity exchanges, and the act permitting compacts among the tobacco-growing States will also be of assistance to those 25,000,000 of our people engaged in agriculture.

RURAL ELECTRIFICATION

Congress authorized the expenditure of four hundred and ten millions over a period of 10 years to bring electricity to the farms and the rural communities.

HOUSING

Unfortunately the Wagner-Ellenbogen Housing Act to provide for low-cost housing and slum clearance was presented to Congress too late in the session to be enacted into law. This long-range program will undoubtedly be put into effect early in the next session.

In the meanwhile, the present National Housing Act, under the Federal Housing Administration, was strengthened and extended to provide hundreds of millions of dollars for the modernization of houses and the alteration of multiple dwellings such as apartments.

THE ANTI-CHAIN-STORE BILL

This bill, more appropriately called the price-discrimination bill, and popularly known as the Robinson-Patman bill, is designed to aid the small merchant, the corner grocer, and druggist so he can stay in business and compete with the large chain organizations and not be swallowed up in monopolies.

LABOR

A number of bills became law aiding labor generally and Government employees in particular. Among these was the so-called Walsh-Healy bill regulating hours and wages and prohibiting child labor on Government contracts. Railroad employees were aided by legislation. Government employees were assured reasonable hours, vacation leave, and sick leave.

FLOOD CONTROL AND RELIEF

Three hundred and twenty millions of dollars was allotted for the control of floods throughout the entire country, while two hundred and seventy-two millions was provided for flood control on the lower Mississippi. In addition to these amounts the Reconstruction Finance Corporation was authorized to loan fifty millions to aid sufferers in the areas flooded during the past spring.

NEUTRALITY

Early in the session Congress by resolution took a firm stand that this country should not become involved in the disputes of foreign nations, but would maintain a strict neutrality. Subsequent events proved the wisdom of this course.

SHIP SUBSIDY

Our Nation has never yet developed an adequate merchant marine so vital to business and employment in times of peace and so indispensable in times of war. Other nations by means of financial aid to shipbuilders and operators have developed their merchant fleets which we were compelled to use to transport our soldiers and supplies during the World War. Under the bill which was passed the Government will render financial aid in the building and operation of ships to meet the differences in such costs between this country and those amounts in other countries.

In this connection several bills became law providing greater safety for passengers on ships in an attempt to avoid the horrible losses in the fate of the *Morro Castle* and other vessels.

THE BONUS

The long-discussed problem of the immediate payment of the adjusted compensation service certificates was solved in this session of Congress by the law paying to over 3,000,000 of our veterans of the World War two and a quarter billions of dollars. This payment was made on June 15 and already its effect has been felt, in the wide distribution of these funds, in the stimulation of business, and building.

The foregoing necessarily only touches the high spots of the session. Over 400 bills of a public nature became law and a like number of bills of a private nature. The major work of the session was to follow up and continue the program initiated by the administration when it took office in March 1933. To that end the session, while comparatively short, was continuous and driving on its Members. The efficacy of its work will be valued when sufficient time will permit retrospection.

RADIO'S TOWN CRIER—HAMILTON DALTON

Mr. FENERTY. Mr. Speaker, under leave to extend my remarks, I include herewith a report taken stenographically of my speech at a dinner tendered to an eminent radio commentator, Mr. Hamilton Dalton, in the La Fayette Hotel, Philadelphia, on the evening of June 13, 1936:

It is a real pleasure to be present with you tonight to pay tribute to the distinguished radio commentator, who has won a preeminent place in the ranks of his profession. As we look about us here and behold Democrats and Republicans, men of every creed, profession, and occupation, assembled to do him honor, when that eminent artist and cartoonist, Jerry Doyle, rises to tell us that "Ham" Dalton is without a peer in his ability to hold a radio audience, when that prominent real estate man of the Northeast, Mr. Richard Damerau, speaks so fervently of his friend, when Mr. Charles Stern portrays his talents in such glowing colors, when men here belonging to different political parties speak of Mr. Dalton's utter absence of partisanship in his radio talks, surely we must all adopt as our own the phrase which the internationally famous Philco radio commentator, Mr. Boake Carter, applied to Mr. Dalton when he said: "When better commentators are made, 'Ham' Dalton will be better yet."

It is not known to all Philadelphians that our guest of honor, the author of Philadelphia's widely known motto, "Whoever you are, wherever you live, if you're for progress you'll like Philadelphia", is a newspaperman who came into the profession of radio commentator by what might be called a fortuitous circumstance. It was while he was employed on the copy desk of the Atlanta Georgian and American that he was invited to call upon the commentator for these papers some evening to attend a broadcast. The following Sunday evening, if I remember the manner in which "Ham" has told the story to some of us, he visited the studio of the well-known Mike Thomas just before the broadcast began. The occasion was an interview by the radio member of the staff of the associate sports editor of the same newspaper, Jimmy Burns, with whose writings all southerners are familiar. Imagine the consternation that seized the visible audience in the room when Mr. Thomas suddenly became ill from overwork and handed his manuscript to Mr. Dalton with the injunction to take his place on the program.

It is difficult to imagine "Ham" Dalton as being nervous under such conditions, but he himself assures us that it was only many days later, when he was accustomed to substitutinb for his ill coworker, that he finally became confident and unafraid of the then dreaded microphone.

It was during the course of that experience that Mr. Dalton conceived the idea of publicly welcoming by radio the new chief of police of the Georgia metropolis and thus making it possible for all of the citizens of Atlanta to take part in the ceremony. He utilized the broadcast to pay tribute to the rank and file of the police department, which had been spoken of adversely in some of the newspapers. It is worth remembering that such was the success of his broadcast concerning the heroic and self-sacrificing work which the police department in Atlanta, as in every city, is called upon to do, that Mr. Dalton is still remembered and beloved by the members of the Department in Atlanta.

Sometime later, when the manager of WGST, the Columbia station in Atlanta, Mr. Loren Watson, sent for Mr. Dalton and suggested the advisability of entering the radio profession, his offer of a position was speedily accepted. As it transpired, the gentleman who is known in Philadelphia as radio's town crier and most forceful commentator was offered opportunity to work in even larger radio fields. He finally elected to head the Philadelphia Electric Co.'s program over Station WCAU in this city. Surrounding himself with an orchestra, under the masterly direction of Harold Micklin, the Wanderer's Quartet, and a soprano soloist, our guest of honor began his work in this city on September 19, 1932. These splendid musical productions continued under his guidance until the following December, when he resigned to become radio's town crier, a free-lance commentator without compensation.

It was then that he originated the well-known motto, over the Philadelphia Station WPEN, "Whoever you are, wherever you live, if you're for progress, you'll like Philadelphia." This was but the beginning of the series of broadcasts through which Mr. Dalton later drew to himself hundreds of thousands of men and women in the unseen audiences reached by radio stations in the cities of Providence, New York, Trenton, Philadelphia, Wilmington, Baltimore, and Washington. The telephone wires of his studio were kept busy with local and long-distance messages from those of low and high degree, either to express their admiration or to challenge what "radio's most forceful commentator" had asserted. So illuminating were some of Mr. Dalton's broadcasts that in many instances men of both political parties holding high public office in the several States and in the National Government telephoned for copies of his broadcasts, in order to study the suggestions for betterment in public life and office which Mr. Dalton had made.

It is not surprising, then, that on another occasion, no less than 17,000 copies of his talk on International Currency were sent to the American people and over 5,200 Philadelphians wrote to him in commendation of his remarks in one broadcast over Station WIP, while from the people of the metropolitan area of this city he has received more than 200,000 letters, few of them expressing disapproval or disagreement. I sometimes wonder how this young man could personally read and answer so much mail, in addition to the task which was imposed upon him by the very nature of his radio work and his repeated invitations to speak at several dinners in an evening.

Philadelphia owes a debt of gratitude to the guest of the evening for his incessant urging upon the people of the Nation the necessity of understanding the progressive spirit with which our people are imbued. I believe that it was his constant emphasis upon the good qualities of the city and his unceasing efforts for the beautification of Philadelphia, as well as his pleas for fair treatment to the police and firemen, that won for him over a year ago the annual award of the Philadelphia Chapter of the Hotel Greeters of America under the leadership of Mr. Daniel Crawford, Jr., international president of that body.

Of immediate interest to the many lawyers who are assembled here tonight is the story told a few moments ago by that eminent member of the Philadelphia bar, Mr. William J. Brady, that Mr. Dalton was the only one permitted to broadcast an eyewitness story of the riots which occurred some time ago at the Eastern Penitentiary.

The gentleman to my left, Mr. Charles A. McCullough, who was for many years a distinguished and efficient member of the police department, informed me earlier in the evening that upon that occasion the prison radios were turned on, in the hope that the broadcast would have a quieting effect upon the disturbers and other inmates who were placed in danger by the actions of the few disgruntled prisoners. Our illustrious Philadelphia jurist, the Honorable Harry S. McDevitt, with his accustomed interest in all that makes for betterment of the conditions in our prisons as elsewhere, took part in that broadcast.

Mr. Dalton's descriptive ability, his emphatic, incisive manner of speech, his wide understanding of languages, his clear comprehension of the problems that beset the people, his unqualified defense of the American Constitution and the Supreme Court against those who insidiously assail them, his devotion to the cause of Philadelphia development, have been shared over the radio with millions of Americans in a manner that charms his listeners, even as they pause to ponder the weight of his message.

With the spirit of hospitality and cordiality that has ever characterized the people of Philadelphia, "Ham" Dalton has been welcomed as an adopted son to whom the people of Philadelphia justly look with pride and admiration.

It is for this reason that leaders of Philadelphia thought and action have tonight assembled here to pay tribute to radio's town crier, who undoubtedly appears to be the pioneer of a professional group that, I venture to say, will play a mighty and tremendous part in the future development of our city and the Nation.

DEATH OF SPEAKER BYRNS

Mr. CHANDLER. Mr. Speaker, under general leave to extend my remarks I submit herewith resolutions adopted by the Tennessee delegation on the death of the late Speaker BYRNS. Mr. Speaker, while under the shadow of the overwhelming loss of our colleague, Hon. JOSEPH W. BYRNS, the Tennessee delegation in the House of Representatives met on June 4, 1936, and adopted the following resolutions:

It is with the deepest regret and most profound sorrow that the Members of the Tennessee delegation in the House of Representatives have received the very sad intelligence of the untimely passing of our warm personal friend, esteemed colleague, and distinguished fellow Tennessean, the Honorable JOSEPH W. BYRNS, Speaker of the House of Representatives.

No man in the House of Representatives from Tennessee had the length of service as that of Speaker BYRNS, and no Member of the House exceeded him in the affection of his colleagues.

Distinguished as a leader, loyal and faithful as a public servant, true as a friend, and patriotic as a genuine American and Tennessean, JOSEPH W. BYRNS' place in the history of the Nation will live long in the hearts of the people of this country.

He served with credit and distinction as a Representative from the Hermitage district of Tennessee for nearly 28 years. Early in his congressional service he was honored by membership on the important Appropriations Committee of the House and presided with marked ability as chairman of this committee and later as majority leader of the House. He was elected Speaker unanimously on the convening of the Seventy-fourth Congress. His service in that great position was always marked with an unusually high degree of devotion to duty, and with the utmost consideration for both the majority and the minority, as well as every individual Member of the House, whose confidence and affection he enjoyed to the fullest. His arduous duties and his efforts to bring to a conclusion the present session of Congress overtaxed his strength and brought his notable career to a close in the very height of his usefulness to the Congress and to the Nation.

It has not only been our privilege to enjoy a very close and devoted friendship with Speaker BYRNS, but also to have known for many years most pleasantly his charming wife and splendid son, and we recognize the irreparable loss sustained by them.

Therefore be it resolved by the members of the Tennessee delegation in the House of Representatives:

That we record these expressions of the grateful appreciation of serving with the Honorable JOSEPH W. BYRNS and of having his true friendship.

That we express our deepest regret and most heartfelt sympathy to his dear wife and son and other members of his family in their overwhelming loss.

That we shall ever cherish his memory, endeavor to emulate his noble character, and that we acknowledge our lasting debt of gratitude for the privilege of having been so closely associated with him.

That a copy of these resolutions be furnished the family, to the press, and presented for inclusion in the CONGRESSIONAL RECORD.

SAM D. MCREYNOLDS, *Chairman,*
JERE COOPER,
CLARENCE W. TURNER,
J. RIDLEY MITCHELL,
HERRON PEARSON,
J. WILL TAYLOR,
B. CARROLL REECE,
WALTER CHANDLER, *Secretary*

RECESS

Mr O'CONNOR. Mr. Speaker, I move that the House now stand in recess until 10: 30 o'clock tomorrow morning.

The motion was agreed to; accordingly (at 10 o'clock and 27 minutes p. m.) the House stood in recess until tomorrow, Saturday, June 20, 1936, at 10: 30 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

875. A letter from the Secretary of War, transmitting a letter from the Chief of Engineers, United States Army, dated June 15, 1936, submitting a report, together with accompanying papers and illustration, on a preliminary examination and survey of Frankfort Harbor, Mich., authorized by the River and Harbor Act approved August 30, 1935 (H. Doc. No. 511); to the Committee on Rivers and Harbors and ordered to be printed, with an illustration.

876. A letter from the Secretary of War transmitting a letter from the Chief of Engineers, United States Army, dated June 15, 1936, submitting a report, together with accompanying papers and illustration, on a preliminary examination and survey of Elokomin Slough, or River, Wash., authorized by the River and Harbor Act approved August 30, 1935 (H. Doc. No. 510); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII,

Mr. KENNEDY of Maryland: Committee on Claims. S. 949. An act for the relief of R. R. Purcell; with amendment (Rept. No. 3046). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. S. 1790. An act for the relief of Margaret Murphy; with amendment (Rept. No. 3047). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. S. 2575. An act for the relief of Emma Gomez; without amendment (Rept. No. 3048). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. S. 2576. An act for the relief of Manuel D. A. Otero as administrator of the estate of Teresita S. Otero, deceased; without amendment (Rept. No. 3049). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. S. 3143. An act for the relief of the Passaic Valley sewerage commissioners; without amendment (Rept. No. 3050). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. S. 3484. An act for the relief of Edward Y. Garcia and Aurelia Garcia; without amendment (Rept. No. 3051). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland; Committee on Claims. S. 3808. An act for the relief of R. D. Stephens and Vera Stephens; without amendment (Rept. No. 3052). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. S. 4160. An act for the relief of F. M. Loeffler; without amendment (Rept. No. 3053). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. S. 4362. An act for the relief of Rufus C. Long; without amendment (Rept. No. 3054). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. S. 4363. An act for the relief of B. W. Winward; without amendment (Rept. No. 3055). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. S. 4456. An act for the relief of the estate of Charles White; without amendment (Rept. No. 3056). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. S. 4591. An act for the relief of the children of Rees Morgan; with amendment (Rept. No. 3057). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. S. 4616. An act for the relief of G. A. Trotter; without amendment (Rept. No. 3058). Referred to the Committee of the Whole House.

Mr. CARLSON: Committee on Claims. H. R. 2917. A bill for the relief of Peter Karampelis; with amendment (Rept. No. 3059). Referred to the Committee of the Whole House.

Mr. EVANS: Committee on Claims. H. R. 4966. A bill for the relief of Lewis Clark; with amendment (Rept. No. 3060). Referred to the Committee of the Whole House.

Mr. SEGER: Committee on Claims. H. R. 8111. A bill for the relief of John Munro; with amendment (Rept. No. 3061). Referred to the Committee of the Whole House.

Mr. PITTENGER: Committee on Claims. H. R. 9420. A bill for the relief of the estate of Cornelius P. Young; with amendment (Rept. No. 3062). Referred to the Committee of the Whole House.

Mr. PITTENGER: Committee on Claims. H. R. 9421. A bill for the relief of the estate of Alexis Romm; with amendment (Rept. No. 3063). Referred to the Committee of the Whole House.

Mr. TOLAN: Committee on Claims. H. R. 11017. A bill for the relief of Raymond E. Payne and Anna R. Payne; with amendment (Rept. No. 3064). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. H. R. 12086. A bill for the relief of John McShain, Inc.; with amendment (Rept. No. 3065). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. H. R. 12671. A bill for the relief of the First, Second, and Third National Steamship Companies; with amendment (Rept. No. 3066). Referred to the Committee of the Whole House.

Mr. KENNEDY of Maryland: Committee on Claims. S. 2976. An act for the relief of John Edgar White, a minor; with amendment (Rept. No. 3067). Referred to the Committee of the Whole House.

Mr. HOUSTON: Committee on Claims. H. R. 12147. A bill for the relief of the New York & Baltimore Transportation Line; with amendment (Rept. No. 3069). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. DIRKSEN (by request): A bill (H. R. 13014) to amend the Interstate Commerce Act to prohibit reduction of freight rates from rail-shipment points on account of indirect water competition; to the Committee on Interstate and Foreign Commerce.

By Mr. KOPPLEMANN: A bill (H. R. 13015) to amend the Revenue Act of 1932 with respect to the deduction for estate-tax insurance; to the Committee on Ways and Means.

By Mr. FLETCHER: A bill (H. R. 13019) to amend the Social Security Act (Public, No. 271, 74th Cong.); to the Committee on Ways and Means.

By Mr. BUCHANAN: Joint resolution (H. J. Res. 639) to provide certain administrative expenses for the Division of Territories and Island Possessions, Department of the Interior, and for other purposes; to the Committee of the Whole House on the state of the Union.

By Mr. GASQUE (by request): Joint resolution (H. J. Res. 640) authorizing the President to proclaim January 1 of each year (or any other date) as a day of fasting and prayer; to the Committee on the Judiciary.

By Mr. BUCHANAN: Joint resolution (H. J. Res. 641) making appropriations for the payment of expenses incurred in an election contest for a seat in the House of Representatives from the Twentieth Congressional District of the State of New York; to the Committee of the Whole House on the state of the Union.

My Mr. MASSINGALE: Joint resolution (H. J. Res. 642) to enable the Secretary of Agriculture to apply such methods of control of grasshoppers as in his judgment may be necessary; to the Committee of the Whole House on the state of the Union.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BULWINKLE: A bill (H. R. 13016) for the relief of Azor Pruett and C. C. Carter; to the Committee on Claims.

By Mr. GILDEA: A bill (H. R. 13017) granting a pension to Louisa Stauffer Everett; to the Committee on Invalid Pensions.

By Mr. HARTLEY: A bill (H. R. 13018) for the relief of Harry James Foster; to the Committee on Naval Affairs.

By Mr. WIGGLESWORTH: A bill (H. R. 13020) for the relief of Agatha Milauskas Yakavonis (nee Agatha Milauskas); to the Committee on Immigration and Naturalization.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

11125. By Mr. CULKIN: Petition of 12 residents of Madison County, favoring passage of House bill 8739; to the Committee on the District of Columbia.

11126. By Mr. PAREDES: Resolution No. 23 of the municipality of Luisiana, Laguna Province, Commonwealth of the Philippines, adopted by unanimous consent at a meeting of the municipal council, held April 8, 1936, urging the immediate approval by the Congress of the United States of the Dockweiler bill, which is House bill 8000, Seventy-fourth Congress; to the Committee on Ways and Means.

11127. Also, Resolution No. 34 of the Municipal Council of the Municipality of Bay, Laguna Province, Commonwealth of the Philippines, approved unanimously at a meeting held on April 11, 1936, appealing to the sense of justice of the American Congress and requesting passage of the Dockweiler bill, being House bill 8000, Seventy-fourth Congress, in order to preserve the coconut industry in the Philippines and enable the Filipino people to keep on buying American goods; to the Committee on Ways and Means.

11128. Also, Resolution No. 35 of the Municipal Council of Paete, Laguna Province, Commonwealth of the Philippines, adopted at the regular meeting of the council, held on April 12, 1936, at that municipality, requesting the approval by the Congress of the United States of the Dockweiler bill (H. R. 8000), Seventy-fourth Congress; to the Committee on Ways and Means.

11129. Also, Resolution No. 7 of the municipality of Longos, Province of Laguna, Commonwealth of the Philippines, unanimously adopted at the regular meeting of the council held the 30th of May 1936 at the municipality, requesting the American Congress to approve the Dockweiler bill; to the Committee on Ways and Means.

11130. Also, Resolution No. 84, of San Pablo, Laguna, respectfully requesting Congress passage of the Dockweiler bill (H. R. 8000) and indorsing High Commissioner Frank Murphy's radiogram to the honorable the Secretary of War of the United States on March 24, 1936, transmitting a petition of assemblymen representing coconut-producing provinces, and an appeal to Congress on behalf of 4,000,000 Filipinos to approve the said Dockweiler bill for reasons set forth therein; to the Committee on Ways and Means.

11131. Also, Resolution No. 22 of the municipality of Pila, Province of Laguna, Commonwealth of the Philippines, unanimously adopted at the special meeting of the council, held on April 20, 1936, at the municipality, endorsing High Commissioner Murphy's radiogram to the Philippine Resident Commissioner at Washington sent through the honorable the Secretary of War, to the effect that assemblymen representing coconut-producing provinces appeal to Congress on behalf of 4,000,000 Filipinos to approve the Dockweiler bill (H. R. 8000); to the Committee on Ways and Means.

11132. Also, Resolution No. 29 of the municipality of Alaminos, Province of Laguna, Commonwealth of the Philippines, unanimously adopted at a regular meeting of the council held on April 20, 1936, at the municipality, that, in view of the impending ruin threatening the coconut industry, which is the means of livelihood of the people in the locality, due to the imposition of excise tax on coconut oil in the United States, said municipality joins the petition for the approval by the American Congress of the Guffey-Dockweiler bill seeking the elimination of the said excise tax; to the Committee on Ways and Means.

11133. Also, Resolution No. 35 of the municipality of Magdalena, Province of Laguna, Commonwealth of the Philippines, unanimously adopted at the special meeting of the council, held on April 22, 1936, at the municipality, that the 3-cents per pound excise tax levied in the United States on coconut oil imported from the Philippines lowers the average price of copra and coconuts to only half of normal prices compared with former years, thus seriously hampering the economic life of the Islands, and, further, because said excise tax is violating both the latter and the spirit of the Tydings-McDuffie Independence Act; that said municipality recommends to the American Congress the approval of the Dockweiler bill; to the Committee on Ways and Means.

11134. By Mr. PLUMLEY: Petition of some 40 citizens of Morristown, Vt., with reference to antigun legislation, opposing general disarmament, and seeking protection for private rights of citizens; to the Committee on the Judiciary.

11135. By Mr. TREADWAY: Resolutions adopted by the General Court of Massachusetts, urging Federal legislation requiring the marking of articles made of imitation leather; to the Committee on Interstate and Foreign Commerce.

SENATE

SATURDAY, JUNE 20, 1936

(Legislative day of Monday, June 15, 1936)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

THE JOURNAL

On request of Mr. ROBINSON, and by unanimous consent, the reading of the Journal of the proceedings of the calendar day Friday, June 19, 1936, was dispensed with, and the Journal was approved.

CALL OF THE ROLL

Mr. ROBINSON. I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Clark	Lewis	Reynolds
Ashurst	Connally	Loftin	Robinson
Bachman	Copeland	Lonergan	Russell
Bailey	Davis	McAdoo	Schwellenbach
Barkley	Dieterich	McGill	Sheppard
Benson	Duffy	McKellar	Shipstead
Bilbo	Frazier	McNary	Steiwer
Black	George	Maloney	Thomas, Okla.
Bone	Gerry	Metcalf	Thomas, Utah
Borah	Gibson	Minton	Townsend
Brown	Glass	Moore	Truman
Bulkley	Guffey	Murphy	Tydings
Bulow	Hale	Murray	Vandenberg
Burke	Harrison	Neely	Van Nuys
Byrd	Hastings	Norris	Wagner
Byrnes	Hatch	Nye	Walsh
Capper	Hayden	O'Mahoney	Wheeler
Caraway	Holt	Pittman	
Carey	King	Pope	
Chavez	La Follette	Radcliffe	

Mr. LEWIS. I announce that the Senator from Alabama [Mr. BANKHEAD], the Senator from Colorado [Mr. COSTIGAN], and the Senator from Nevada [Mr. MCCARRAN] are absent because of illness; and that the Senator from Massachusetts [Mr. COOLIDGE], the Senator from Oklahoma [Mr. GORE], the Senator from Kentucky [Mr. LOGAN], the junior Senator from Louisiana [Mrs. LONG], the senior Senator from Louisiana [Mr. OVERTON], the Senator from South Carolina [Mr. SMITH], and the Senator from Ohio [Mr. DONAHEY] are unavoidably detained from the Senate.

Mr. MCNARY. I announce that the Senator from California [Mr. JOHNSON] is absent because of illness, and that the Senator from Vermont [Mr. AUSTIN], the Senator from New Jersey [Mr. BARBOUR], the Senator from Iowa [Mr. DICKINSON], the Senator from New Hampshire [Mr. KEYES], and the Senator from Maine [Mr. WHITE] are necessarily absent.

The VICE PRESIDENT. Seventy-seven Senators have answered to their names. A quorum is present.

TRIBUTE TO THE LATE SENATOR DUNCAN U. FLETCHER

Mr. LOFTIN. Mr. President, I have a communication from the Public Printer, addressed to the President of the Senate, enclosing resolutions embodying a beautiful tribute to my late colleague, DUNCAN U. FLETCHER, senior Senator from Florida, by the officials and employees of the Government Printing Office. I ask unanimous consent to have printed in the RECORD the letter from the Public Printer, as well as the resolutions enclosed.

There being no objection, the letter and resolutions were ordered to be printed in the RECORD, as follows:

UNITED STATES GOVERNMENT PRINTING OFFICE,
Washington, D. C., June 20, 1936.

The PRESIDENT OF THE SENATE,
The Capitol, Washington, D. C.

DEAR MR. PRESIDENT: I have the honor to transmit herewith a resolution of sorrow adopted by the officials and the employees of the United States Government Printing Office upon hearing of the death of the Honorable DUNCAN U. FLETCHER, chairman of the Joint Committee on Printing.

During the many years that the late Senator FLETCHER was a member of the Joint Committee on Printing he proved to be a most faithful and helpful friend to the officials and employees of the United States Government Printing Office, and in recognition of his deep interest and helpfulness the officials and employees of the office wish by this act to express their heartfelt sympathy in the loss of their distinguished friend.

Cordially yours,

A. E. GIEGENGACK,
Public Printer.

A resolution

Whereas the officials and the employees of the United States Government Printing Office have heard with profound sorrow of the sudden death of the Honorable DUNCAN U. FLETCHER, senior Senator from the State of Florida; and

Whereas the late Senator FLETCHER was a member of the Joint Committee on Printing from 1911 to 1918, and from 1921 to 1936, during which period he served as chairman of the committee from 1913 to 1918 and from 1933 to 1936; and

Whereas during all of the years while a member of the Joint Committee on Printing Senator FLETCHER proved to be a most faithful and helpful friend to the officials and employees of the United States Government Printing Office: Now, therefore, be it

Resolved by the officials and employees of the United States Government Printing Office, That they extend their heartfelt sympathy to the bereaved widow and other members of the family of our departed friend; and be it further

Resolved, That a copy of these resolutions be transmitted to the United States Senate, a copy to the Joint Committee on Printing, and a copy thereof to the family of our deceased friend.

DELAWARE VALLEY TERCENTENARY COMMISSION

The VICE PRESIDENT appointed Mr. GUFFEY, Mr. MOORE, Mr. TOWNSEND, Mr. DAVIS, and Mr. BARBOUR as the members on the part of the Senate of the United States Delaware Valley Tercentenary Commission, established under the provisions of the joint resolution (H. J. Res. 499) authorizing and requesting the President to extend to the Government of Sweden and individuals an invitation to join the Government and people of the United States in the observance of the three hundredth anniversary of the first permanent settlement in the Delaware River Valley, and for other purposes, approved June 5, 1936.

SEGREGATION OF THE FUNCTIONS OF DEALER AND BROKER

The VICE PRESIDENT laid before the Senate a letter from the chairman of the Securities and Exchange Commission, transmitting, pursuant to law, a report on the feasibility and advisability of the complete segregation of the functions of dealer and broker, which, with the accompanying report, was referred to the Committee on Banking and Currency.

PETITION

The VICE PRESIDENT laid before the Senate a cablegram from the president of the Senate of Puerto Rico, on behalf of that senate, favoring the enactment of pending legislation creating a commission to investigate the situation in regard to the granting of independence to Puerto Rico, with certain amendments thereto, which was ordered to lie on the table.

REPORT OF THE BANKING AND CURRENCY COMMITTEE

Mr. ADAMS, from the Committee on Banking and Currency, to which was referred the bill (S. 4670) to authorize the coinage of 50-cent pieces in commemoration of the three hundredth anniversary of the original Norfolk (Va.) land grant and the two hundredth anniversary of the establishment of the city of Norfolk, Va., as a borough, reported it with amendments and submitted a report (No. 2454) thereon.

"MORRO CASTLE" AND "MOHAWK" INVESTIGATIONS—REPORT OF THE COMMITTEE ON COMMERCE

Mr. COPELAND. I ask unanimous consent to make an additional preliminary report from the Committee on Commerce in connection with the *Morro Castle* and *Mohawk* investigations, with particular reference to recommendations for necessary legislation. I ask that it be printed as part 4 of Senate Report No. 776.

I request also that the report with the accompanying draft of proposed legislation be printed in the RECORD.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

The report referred to is as follows:

[S. Rept. No. 776, pt. 4, 74th Cong., 2d sess.]

"MORRO CASTLE" AND "MOHAWK" INVESTIGATIONS

Supplementing the Committee's Reports No. 776, submitted June 3, 1935, No. 776—part 2, submitted February 6, 1936, and No. 776—part 3, submitted May 20, 1936, the following additional preliminary report is submitted, with particular reference to that portion of Senate Resolution 7 requiring recommendations for necessary legislation.

INTERNATIONAL REGULATIONS FOR PREVENTING COLLISIONS AT SEA

For many years there has been an international agreement on the regulations for preventing collisions at sea to be followed by ships of all nations while on the high seas and in waters adjacent thereto. The rules now in force were contained in an act approved August 19, 1890, which has since been amended in various minor parts. It is vitally important that these international regulations be brought up to date, as many changes in procedure have become desirable since the present ones were made effective.

1929 CONVENTION

Among other matters pertaining to safety of life at sea, these international regulations for preventing collisions at sea were considered by the International Conference on Safety of Life at Sea in 1929, and a revised set of regulations was drawn up by the conference and submitted to the various maritime nations. In these new regulations, the wording has been somewhat clarified and many minor changes have been made to bring them up to date. The predominance of power-driven vessels over sailing vessels, the use of the radiotelegraph for distress signals, and the availability and necessity for better lights were all considered. As yet, these regulations have not been brought into effect, and of course cannot be brought into effect until all the maritime nations have agreed not only to the wording, but also as to the date upon which the rules are to become effective. While the United States of America was a signatory to the convention, we have not yet ratified it. Nevertheless, the duty devolves upon us to be prepared to put the new international regulations for preventing collisions at sea into effect on the same date as the other maritime nations.

NEED OF LEGISLATION

As the international regulations for preventing collisions at sea are now part of our statute law, it is necessary that this law be amended so that the new regulations can be made effective, and the same procedure should be followed as was followed in making effective the law of August 19, 1890, which was done by authorizing the President to fix the date upon which the regulations would become effective, thus making it possible to have these regulations effective in all countries on the same date.

The proposed legislation, quoted below, which contains the revised regulations and empowers the President to put them into effect by proclamation, is strongly recommended for enactment by the Subcommittee on Commerce for the furtherance of safety of life at sea.

A bill to adopt regulations for preventing collisions at sea

Be it enacted, etc., That the act entitled "An act to adopt regulations for preventing collisions at sea", approved August 19, 1890, as amended, is amended to read as follows:

"SEC. 2. The following regulations for preventing collisions at sea shall be followed by all public and private vessels of the United States upon the high seas and in all waters connected therewith, navigable by seagoing vessels:

"PRELIMINARY

"In the following rules every steam vessel which is under sail and not under steam is to be considered a sailing vessel, and every vessel under steam, whether under sail or not, is to be considered a steam vessel.

"The words 'steam vessel' shall include any vessel propelled by machinery.

"The term 'under steam' shall mean under any mechanical power.

"A vessel is 'under way' within the meaning of these rules when she is not at anchor or made fast to the shore or aground.

"The length of a vessel shall be deemed to be the length appearing in her certificate of registry.

"RULES CONCERNING LIGHTS, ETC.

"The word 'visible' in these rules, when applied to lights, shall mean visible on a dark night with a clear atmosphere.

"ARTICLE 1

"The rules concerning lights shall be complied with in all weathers from sunset to sunrise, and during such time no other lights which may be mistaken for the prescribed lights or impair their visibility shall be exhibited.

"ARTICLE 2

"A steam vessel when under way shall carry—

"(a) On or in front of the foremast, or if a vessel without a foremast, then in the forepart of the vessel, a bright white light, so constructed as to show an unbroken light over an arc of the horizon of 20 points of the compass, so fixed as to throw the light 10 points on each side of the vessel, viz, from right ahead to 2 points abaft the beam on either side, and of such a character as to be visible at a distance of at least 5 miles.

"(b) Either forward or aft of the white light mentioned in subdivision (a) a second white light similar in construction and character to that light.

"Vessels of less than 150 feet in length shall not be required to carry this second white light, but may do so.

"(c) These two white lights shall be so placed in a line with the keel that one shall be at least 15 feet higher than the other and in such a position that the lower light shall be forward of the upper one, and higher than the lights mentioned in article 2 (d) and (e). The vertical distance between the two white lights shall be less than the horizontal distance. The lower of these two white lights, or if only one is carried, then that light shall be placed at a height above the hull of not less than 20 feet, and, if the breadth of the vessel exceeds 20 feet, then at a height above the hull not less than such breadth, so, however, that the light need not be carried at a greater height above the hull than 40 feet.

"(d) On the starboard side a green light so constructed as to show an unbroken light over an arc of the horizon of 10 points of the compass, so fixed as to throw the light from right ahead to 2 points abaft the beam on the starboard side, and of such a character as to be visible at a distance of at least 2 miles.

"(e) On the port side a red light so constructed as to show an unbroken light over an arc of the horizon of 10 points of the compass, so fixed as to throw the light from right ahead to 2 points abaft the beam on the port side, and of such a character as to be visible at a distance of at least 2 miles.

"(f) The said green and red side lights shall be fitted with inboard screens projecting at least 3 feet forward from the light, so as to prevent these lights from being seen across the bow.

"In naval vessels of special construction in which it is not possible to comply fully with the provisions of this article as to the position of lights or their range of visibility, those provisions shall be followed as closely as circumstances will permit, and naval vessels in which it is not practicable to carry the second white light referred to in subdivision (b) of this article shall not be required to carry it.

"ARTICLE 3

"A steam vessel when towing another vessel shall, in addition to her side lights, carry two bright white lights in a vertical line one over the other, not less than 6 feet apart, and when towing more than one vessel shall carry an additional bright white light 6 feet above or below such lights, if the length of the tow, measuring from the stern of the towing vessel to the stern of the last vessel towed, exceeds 600 feet. Each of these lights shall be of the same construction and character, and one of them shall be carried in the same position as the white light mentioned in article 2 (a), and the lowest light shall be carried at a height of not less 14 feet above the hull.

"The vessel towing and the vessels towed, except the last vessel of the tow, may carry in lieu of the light required in article 10, a small white light abaft the funnel or aftermast, for the tow to steer by, but such light shall not be visible forward of the beam.

"ARTICLE 4

"(a) A vessel which is not under command shall carry, where they can best be seen, and, if a steam vessel, in lieu of the lights required in article 2 (a) and (b), two red lights, in a vertical line one over the other, not less than 6 feet apart, so placed that the lower light shall not be less than 14 feet above the hull, and of such a character as to be visible all round the horizon at a distance of at least 2 miles; and shall by day carry in a vertical line, one over the other not less than 6 feet apart, where they can best be seen, two black balls or shapes each two feet in diameter.

"(b) A vessel employed in laying or in picking up a submarine cable shall carry, in lieu of the lights required in article 2 (a) and (b), three lights in a vertical line, one over the other, not less than 6 feet apart, so placed that the lowest of these lights shall be not less than 14 feet above the hull. The highest and lowest of these lights shall be red, and the middle light shall be white, and they shall be of such a character as to be visible all round the horizon, at a distance of at least 2 miles. By day she shall carry in a vertical line, one over the other, not less than 6 feet apart, where they can best be seen, three shapes not less than 2 feet in diameter, of which the highest and lowest shall be globular in shape and red in color, and the middle one diamond in shape and white.

"(c) The vessels referred to in this article, when not making way through the water, shall not carry the side lights, but when making way shall carry them.

"(d) The lights and shapes required to be shown by this article are to be taken by other vessels as signals that the vessel showing them is not under command and cannot therefore get out of the way.

"These signals are not signals of vessels in distress and requiring asisstance. Such signals are contained in article 31.

"ARTICLE 5

"A sailing vessel under way, and any vessel being towed, shall carry the same lights as are prescribed by article 2 for a steam vessel under way, with the exception of the white lights mentioned therein, which they shall never carry.

"ARTICLE 6

"Whenever, as in the case of small vessels under way, during bad weather, the green and red side lights cannot be fixed, these

lights shall be kept at hand lighted and ready for use; and shall, on the approach of or to other vessels, be exhibited on their respective sides in sufficient time to prevent collision, in such manner as to make them most visible, and so that the green light shall not be seen on the port side nor the red light on the starboard side, nor, if practicable, more than two points abaft the beam on their respective sides.

"To make the use of these portable lights more certain and easy, the lanterns containing them shall each be painted outside with the color of the light they respectively contain, and shall be provided with proper screens.

"ARTICLE 7

"Steam vessels of less than 40, and vessels under oars or sails of less than 20, tons gross tonnage, respectively, and rowing boats, when under way, shall not be required to carry the lights mentioned in article 2, but if they do not carry them they shall be provided with the following lights:

"1. Steam vessels of less than 40 tons shall carry:

"(a) In the forepart of the vessel, on or in front of the funnel, where it can best be seen, and at a height above the gunwale of not less than 9 feet, a bright white light constructed and fixed as prescribed in article 2 (a), and of such a character as to be visible at a distance of at least 3 miles.

"(b) Green and red side lights constructed and fixed as prescribed in article 2 (d) and (e), and of such a character as to be visible at a distance of at least 1 mile, or a combined lantern showing a green light, and a red light from right ahead to two points abaft the beam on their respective sides. Such lantern shall be carried not less than 3 feet below the white light.

"2. Small steamboats, such as are carried by seagoing vessels, may carry the white light at a less height than 9 feet above the gunwale, but it shall be carried above the side lights or the combined lantern mentioned in subdivision 1 (b).

"3. Vessels under oars or sails, of less than 20 tons, shall, if they do not carry the side lights, carry, where it can best be seen, a lantern showing a green light on one side and a red light on the other, of such character as to be visible at a distance of at least 1 mile, so that the green light shall not be seen on the port side nor the red light on the starboard side: *Provided*, That where it is not possible to fix this light, it shall be kept lighted and ready for use, and shall be exhibited in sufficient time to prevent collision.

"4. Small rowing boats, whether under oars or sail, shall only be required to have ready at hand a lighted lantern showing a white light, which shall be temporarily exhibited in sufficient time to prevent collision.

"The vessels referred to in this article shall not be obliged to carry the lights prescribed by article 4 (a) and article 11, last paragraph.

ARTICLE 8

"Sailing pilot vessels, when engaged on their stations on pilotage duty and not at anchor, shall not show the lights required for other vessels but shall carry a white light at the masthead, visible all round the horizon at a distance of at least 3 miles, and shall also exhibit a flare-up light or flare-up lights at short intervals, which shall never exceed 10 minutes.

"On the near approach of or to other vessels they shall have their side lights lighted ready for use, and shall flash or show them at short intervals to indicate the direction in which they are heading, but the green light shall not be shown on the port side nor the red light on the starboard side.

"A sailing pilot vessel of such a class as to be obliged to go alongside of a vessel to put a pilot on board may show the white light instead of carrying it at the masthead, and may, instead of the side lights above mentioned, have at hand ready for use a lantern with a green glass on the one side and a red glass on the other, to be used as prescribed above.

"A steam pilot vessel, when engaged on her station on pilotage duty and not at anchor, shall, in addition to the lights and flares required for sailing pilot vessels, carry at a distance of 8 feet below her white masthead light a red light, visible all round the horizon at a distance of at least 3 miles, and also the side lights required to be carried by vessels when under way.

"All pilot vessels, when engaged on their stations on pilotage duty and at anchor shall carry the lights and show the flares prescribed above, except that the side lights shall not be shown.

"When not engaged on their stations on pilotage duty, they shall carry the same lights as other vessels of their class and tonnage.

"ARTICLE 9

("This article does not apply to Chinese or Siamese vessels.)

("The expression 'Mediterranean Sea' contained in subsections (b) and (c) of this article includes the Black Sea and the other adjacent inland seas in communication with it.

"Fishing vessels and fishing boats, when under way and when not required by this article to carry or show the lights hereinafter specified, shall carry or show the lights prescribed for vessels of their tonnage under way.

"(a) Open boats, by which it is to be understood boats not protected from the entry of sea water by means of a continuous deck, when engaged in any fishing at night with outlying tackle extending not more than 150 feet horizontally from the boat into the seaway, shall carry one all-round white light.

"Open boats, when fishing at night, with outlying tackle extending more than 150 feet horizontally from the boat into the seaway, shall carry one all-round white light, and, in addition, on approaching or being approached by other vessels shall show a second white light at least 3 feet below the first light and at a horizontal distance of at least 5 feet away from it in the direction in which the outlying tackle is attached.

"The lights mentioned in this subdivision shall be of such a character as to be visible at a distance of at least 2 miles.

"(b) Vessels and boats, except open boats as defined in subdivision (a), when fishing with driftnets, shall, so long as the nets are wholly or partly in the water, carry two white lights where they can best be seen. (Dutch vessels and boats when engaged in the 'kol', or hand-line fishing, will carry the lights prescribed for fishing with driftnets.) Such lights shall be placed so that the vertical distance between them shall be not less than 6 feet and not more than 15 feet, and so that the horizontal distance between them, measured in a line with the keel, shall be not less than 5 feet and not more than 10 feet. The lower of these two lights shall be in the direction of the nets, and both of them shall be of such a character as to show all round the horizon and to be visible at a distance of not less than 3 miles.

"Within the Mediterranean Sea and in the seas bordering the coasts of Japan and also, as regards Union of Soviet Socialist Republics vessels, in the seas (excluding the Baltic) bordering the coasts of the Union of Soviet Socialist Republics, sailing fishing vessels of less than 20 tons gross tonnage shall not be obliged to carry the lower of these two lights; should they, however, not carry it, they shall show in the same position (in the direction of the net or gear) a white light visible at a distance of not less than 1 sea mile on the approach of or to other vessels.

"(c) Vessels and boats, except open boats as defined in subdivision (a), when line fishing with their lines out and attached to or hauling their lines, and when not at anchor or stationary within the meaning of subdivision (h), shall carry the same lights as vessels fishing with drift nets. When shooting lines, or fishing with towing lines, they shall carry the lights prescribed for a steam or sailing vessel under way, respectively.

"Within the Mediterranean Sea and in the seas bordering the coasts of Japan and also, as regards Union of Soviet Socialist Republics vessels, in the seas (excluding the Baltic) bordering the coasts of the Union of Soviet Socialist Republics, sailing fishing vessels of less than 20 tons gross tonnage shall not be obliged to carry the lower of these two lights; should they, however, not carry it, they shall show in the same position (in the direction of the lines) a white light visible at a distance of not less than 1 sea mile on the approach of or to other vessels.

"(d) Vessels, when engaged in trawling, by which is meant the dragging of an apparatus along the bottom of the sea—

"1. If steam vessels, shall carry in the same position as the white light mentioned in article 2 (a), a tricolored lantern so constructed and fixed as to show a white light from right ahead to two points on each bow, and a green light and a red light over an arc of the horizon from two points on each bow to two points abaft the beam on the starboard and port sides, respectively; and not less than 6 nor more than 12 feet below the tricolored lantern a white light in a lantern, so constructed as to show a clear, uniform, and unbroken light all round the horizon.

"2. If sailing vessels, shall carry a white light in a lantern, so constructed as to show a clear, uniform, and unbroken light all round the horizon, and shall also, on the approach of or to other vessels, show where it can best be seen a white flare-up light or torch in sufficient time to prevent collision.

"All lights mentioned in subdivision (d), 1 and 2, shall be visible at a distance of at least 2 miles.

"(e) Oyster dredgers and other vessels fishing with dredge nets shall carry and show the same lights as trawlers.

"(f) Fishing vessels and fishing boats may at any time use a flare-up light in addition to the lights which they are by this article required to carry and show, and they may also use working lights.

"(g) Every fishing vessel and every fishing boat under 150 feet in length, when at anchor, shall exhibit a white light visible all round the horizon at a distance of at least 2 miles.

"Every fishing vessel of 150 feet in length or upward, when at anchor, shall exhibit a white light visible all round the horizon at a distance of at least 2 miles and shall exhibit a second light as provided for vessels of such length by article 11.

"Should any such vessel, whether under 150 feet in length, or of 150 feet in length or upward, be attached to a net or other fishing gear, she shall, on the approach of other vessels, show an additional white light at least 3 feet below the anchor light, and at a horizontal distance of at least 5 feet away from it in the direction of the net or gear.

"(h) If a vessel or boat when fishing becomes stationary in consequence of her gear getting fast to a rock or other obstruction, she shall in daytime haul down the day signal required by subdivision (k); at night show the light or lights prescribed for a vessel at anchor; and, during fog, mist, falling snow, or heavy rainstorms, make the signal prescribed for a vessel at anchor. (See subdivision (d) and the last paragraph of article 15.)

"(i) In fog, mist, falling snow, or heavy rainstorms, drift-net vessels attached to their nets, and vessels when trawling, dredging, or fishing, with any kind of dragnet, and vessels line fishing with their lines out, shall, if of 20 tons gross tonnage or upward, respectively, at intervals of not more than 1 minute, make a blast; if steam vessels, with the whistle or siren, and, if sailing vessels, with the foghorn; each blast to be followed by ringing the bell. Fishing vessels and boats of less than 20 tons gross tonnage shall not

be obliged to give the above-mentioned signals; but, if they do not, they shall make some other efficient sound signal at intervals of not more than 1 minute.

"(k) All vessels or boats fishing with nets or lines or trawls, when under way, shall in daytime indicate their occupation by displaying a basket where it can best be seen. If vessels or boats at anchor have their gear out, they shall, on the approach of other vessels, show the same signal on the side on which those vessels can pass.

"The vessels required by this article to carry or show the lights hereinbefore specified shall not be obliged to carry the lights prescribed by article 4 (a) and the last paragraph of article 11.

"ARTICLE 10

"A vessel when under way shall carry at her stern a white light so constructed, fitted, and screened that it shall throw an unbroken light over an arc of the horizon of 12 points of the compass, viz, for six points from right aft on each side of the vessel, and of such a character as to be visible at a distance of at least 2 miles. Such light shall be carried as nearly as practicable on the same level as the side lights.

"In small vessels, if it is not possible on account of bad weather or other sufficient cause for this light to be fixed, a light shall be kept at hand lighted and ready for use, and shall, on the approach of an overtaking vessel, be shown in sufficient time to prevent collision.

"In naval vessels of special construction in which it is not possible to comply with the provisions of this article as to the position of lights or their range of visibility, those provisions shall be followed as closely as circumstances will permit.

"For vessels engaged in towing, see article 3, last paragraph.

"ARTICLE 11

"A vessel under 150 feet in length, when at anchor, shall carry forward, where it can best be seen, but at a height not exceeding 20 feet above the hull, a white light in a lantern so constructed as to show a clear, uniform, and unbroken light visible all around the horizon at a distance of at least 2 miles.

"A vessel of 150 feet or upward in length, when at anchor, shall carry in the forward part of the vessel, at a height of not less than 20 feet above the hull, one such light, and at or near the stern of the vessel, and at such a height that it shall be not less than 15 feet lower than the forward light, another such light.

"Between sunrise and sunset all vessels when at anchor in or near a fairway shall carry, forward, where it can best be seen, one black ball 2 feet in diameter.

"A vessel aground in or near a fairway shall carry by night the above light or lights and the two red lights prescribed by article 4 (a), and by day, where they can best be seen, three black balls, each 2 feet in diameter, placed in a vertical line one over the other.

"ARTICLE 12

"Every vessel may, if necessary, in order to attract attention, in addition to the lights which she is by these rules required to carry, show a flare-up light or use any detonating or other efficient sound signal that cannot be mistaken for a prescribed distress or fog signal.

"ARTICLE 13

"Nothing in these rules shall interfere with the operation of any special rules made by the government of any nation with respect to additional station and signal lights for two or more ships of war or for vessels sailing under convoy, or with the exhibition of recognition signals adopted by shipowners, which have been authorized by their respective governments and duly registered and published.

"ARTICLE 14

"A vessel proceeding under sail when also under steam or other mechanical power shall carry in the daytime, forward, where it can best be seen, one black cone, point upward, 2 feet in diameter at its base.

"SOUND SIGNALS FOR FOG, ETC.

"ARTICLE 15

"All signals prescribed by this article for vessels under way shall be given—

"1. By 'steam vessels' on the whistle or siren;

"2. By 'sailing vessels and vessels towed' on the foghorn.

"The words 'prolonged blast' used in this article shall mean a blast of from 4 to 6 seconds' duration.

"A steam vessel shall be provided with an efficient whistle or siren, sounded by steam or some substitute for steam, so placed that the sound may not be intercepted by any obstruction, and with an efficient foghorn, to be sounded by mechanical means, and also with an efficient bell. (In all cases where the rules require a bell to be used a drum may be substituted on board Turkish vessels, or a gong where such articles are used on board small seagoing vessels.) A sailing vessel of 20 tons gross tonnage or upward shall be provided with a similar foghorn and bell.

"In fog, mist, falling snow, or heavy rainstorms, whether by day or night, the signals described in this article shall be used as follows, viz:

"(a) A steam vessel having way upon her shall sound, at intervals of not more than 2 minutes, a prolonged blast.

"(b) A steam vessel under way, but stopped and having no way upon her, shall sound, at intervals of not more than 2 minutes, two prolonged blasts, with an interval of about 1 second between them.

"(c) A sailing vessel under way shall sound, at intervals of not more than 1 minute, when on the starboard tack, one blast, when on the port tack, two blasts in succession, and when with the wind abaft the beam, three blasts in succession.

"(d) A vessel, when at anchor, shall, at intervals of not more than 1 minute, ring the bell rapidly for about 5 seconds.

"In vessels of more than 350 feet in length the bell shall be sounded in the forepart of the vessel, and, in addition, there shall be sounded in the after part of the vessel, at intervals of not more than 1 minute, a gong or other instrument, the tone of which cannot be confused with the ringing of the bell.

"(e) A vessel when towing, a vessel employed in laying or in picking up a submarine cable, and a vessel under way, which is unable to get out of the way of an approaching vessel through being not under command, or unable to maneuver as required by these rules, shall, instead of the signals prescribed in subdivisions (a), (b), and (c) of this article, at intervals of not more than 2 minutes, sound three blasts in succession, viz, one prolonged blast, followed by two short blasts.

"A vessel towed, or if more than one vessel is towed, the last vessel of the tow, shall, at intervals of not more than 2 minutes, sound four blasts in succession, viz, one prolonged blast, followed by three short blasts: *Provided*, That this signal is not required when it is impossible to keep the vessel manned.

"When practicable, the vessel towed shall make this signal immediately after the signal made by the towing vessel.

"(f) A vessel aground in or near a fairway shall give the signal prescribed in paragraph (d), and shall, in addition, give three separate and distinct strokes on the bell immediately preceding and following each such signal.

"Sailing vessels and boats of less than 20 tons gross tonnage shall not be obliged to give the above-mentioned signals; but if they do not, they shall make some other efficient sound signal at intervals of not more than 1 minute.

"(Belgian and Dutch steam pilot vessels, when engaged on their station on pilotage duty in fog, mist, falling snow, or heavy rainstorms, are required to make, at intervals of 2 minutes at most, one long blast with the siren, followed after 1 second by a long blast with the steam whistle and again after 1 second by a long blast on the siren. When not engaged on their station on pilotage duty, they make the same signals as other steamships.)

"SPEED OF SHIPS TO BE MODERATE IN FOG, ETC.

"ARTICLE 16

"Every vessel shall, in a fog, mist, falling snow, or heavy rainstorms, go at a moderate speed, having careful regard to the existing circumstances and conditions.

"A steam vessel hearing, apparently forward of her beam, the fog-signal of a vessel the position of which is not ascertained, shall, so far as the circumstances of the case admit, stop her engines, and then navigate with caution until danger of collision is over.

"STEERING AND SAILING RULES

"PRELIMINARY—RISK OF COLLISION

"Risk of collision can, when circumstances permit, be ascertained by carefully watching the compass bearing of an approaching vessel. If the bearing does not appreciably change, such risk should be deemed to exist.

"ARTICLE 17

"When two sailing vessels are approaching one another so as to involve risk of collision, one of them shall keep out of the way of the other, as follows, viz:

"(a) A vessel which is running free shall keep out of the way of a vessel which is close-hauled.

"(b) A vessel which is close-hauled on the port tack shall keep out of the way of a vessel which is close-hauled on the starboard tack.

"(c) When both are running free, with the wind on different sides, the vessel which has the wind on the port side shall keep out of the way of the other.

"(d) When both are running free, with the wind on the same side, the vessel which is to the windward shall keep out of the way of the vessel which is to leeward.

"(e) A vessel which has the wind aft shall keep out of the way of the other vessel.

"ARTICLE 18

"When two steam vessels are meeting end on, or nearly end on, so as to involve risk of collision, each shall alter her course to starboard, so that each may pass on the port side of the other.

"This article only applies to cases where vessels are meeting end on, or nearly end on, in such a manner as to involve risk of collision, and does not apply to two vessels which must, if both keep on their respective courses, pass clear of each other.

"The only cases to which it does apply are when each of two vessels is end on, or nearly end on, to the other; in other words, to cases in which, by day, each vessel sees the masts of the other in a line, or nearly in a line with her own; and, by night, to cases in which each vessel is in such a position as to see both the side lights of the other.

"It does not apply, by day, to cases in which a vessel sees another ahead crossing her own course; or by night to cases where the red light of one vessel is opposed to the red light of the other, or where the green light of one vessel is opposed to the green light of the other, or where a red light without a green light, or a green light without a red light, is seen ahead, or where both green and red lights are seen anywhere but ahead.

"ARTICLE 19

"When two steam vessels are crossing, so as to involve risk of collision, the vessel which has the other on her own starboard side shall keep out of the way of the other.

"ARTICLE 20

"When a steam vessel and a sailing vessel are proceeding in such directions as to involve risk of collision, the steam vessel shall keep out of the way of the sailing vessel.

"ARTICLE 21

"Where by any of these rules one of two vessels is to keep out of the way, the other shall keep her course and speed.

"(When, in consequence of thick weather or other causes, such vessel finds herself so close that collision cannot be avoided by the action of the giving-way vessel alone, she also shall take such action as will best aid to avert collision. (See articles 27 and 29.))

"ARTICLE 22

"Every vessel which is directed by these rules to keep out of the way of another vessel shall, if the circumstances of the case admit, avoid crossing ahead of the other.

"ARTICLE 23

"Every steam vessel which is directed by these rules to keep out of the way of another vessel shall, on approaching her, if necessary, slacken her speed or stop or reverse.

"ARTICLE 24

"Notwithstanding anything contained in these rules, every vessel, overtaking any other, shall keep out of the way of the overtaken vessel.

"Every vessel coming up with another vessel from any direction more than two points abaft her beam, that is, in such a position, with reference to the vessel which she is overtaking, that at night she would be unable to see either of that vessel's sidelights, shall be deemed to be an overtaking vessel; and no subsequent alteration of the bearing between the two vessels shall make the overtaking vessel a crossing vessel within the meaning of these rules, or relieve her of the duty of keeping clear of the overtaken vessel until she is finally past and clear. As by day the overtaking vessel cannot always know with certainty whether she is forward or abaft this direction from the other vessel, she should, if in doubt, assume that she is an overtaking vessel and keep out of the way.

"ARTICLE 25

"In narrow channels every steam vessel shall, when it is safe and practicable, keep to that side of the fairway or mid-channel which lies on the starboard side of such vessel.

"ARTICLE 26

"Sailing vessels under way shall keep out of the way of sailing vessels or boats fishing with nets or lines or trawls. This rule shall not give to any vessel or boat engaged in fishing the right of obstructing a fairway used by vessels other than fishing vessels or boats.

"ARTICLE 27

"In obeying and construing these rules due regard shall be had to all dangers of navigation and collision, and to any special circumstances which may render a departure from the above rules necessary in order to avoid immediate danger.

"SOUND SIGNALS FOR VESSELS IN SIGHT OF ONE ANOTHER

"ARTICLE 28

"The words 'short blast' used in this article shall mean a blast of about 1 second duration.

"When vessels are in sight of one another, a steam vessel under way, in taking any course authorized or required by these rules, shall indicate that course by the following signals on her whistle or siren, viz:

"One short blast to mean, 'I am directing my course to starboard.'

"Two short blasts to mean, 'I am directing my course to port.'

"Three short blasts to mean, 'My engines are going full speed astern.'

"NO VESSEL UNDER ANY CIRCUMSTANCES TO NEGLECT PROPER PRECAUTIONS

"ARTICLE 29

"Nothing in these rules shall exonerate any vessel, or the owner or master or crew thereof, from the consequences of any neglect to carry lights or signals, or of any neglect to keep a proper lookout, or of the neglect of any precaution which may be required by the ordinary practice of seamen, or by the special circumstances of the case.

"RESERVATION OF RULES OF HARBORS AND INLAND NAVIGATION

"ARTICLE 30

"Nothing in these rules shall interfere with the operation of a special rule, duly made by local authority, relative to the navigation of any harbor, river, or inland waters.

"DISTRESS SIGNALS

"ARTICLE 31

"When a vessel is in distress and requires assistance from other vessels or from the shore, the following shall be the signals to be used or displayed by her, either together or separately, viz:

"In the daytime—

"1. A gun or other explosive signal fired at intervals of about a minute;

"2. The International Code signal of distress;

"3. The distance signal, consisting of a square flag, having either above or below it a ball or anything resembling a ball;

"4. A continuous sounding with any fog-signal apparatus;

"5. The international distress signal made by radiotelegraphy of radiotelephony, or by any other distance signaling method.

"At night—

"1. A gun or other explosive signal fired at intervals of about a minute;

2. Flames on the vessel (as from a burning tar-barrel, oil-barrel, etc.);

"3. Rockets or shells, throwing stars of any color or description, fired one at a time, at short intervals;

"4. A continuous sounding with any fog-signal apparatus;

"5. The international distress signal made by radiotelegraphy of radiotelephony, or by any other distance signaling method.

"The use of any of the above signals, except for the purpose of indicating that a vessel is in distress, and the use of any signals which may be confused with any of the above signals, is prohibited.

"ARTICLE 32

"All orders to helmsmen shall be given as follows: 'Right Rudder' to mean 'Direct the vessel's head to starboard.' 'Left Rudder' to mean 'Direct the vessel's head to port.'

"SEC. 3. That all laws or parts of laws inconsistent with the foregoing regulations for preventing collisions at sea for the navigation of all public and private vessels of the United States upon the high seas and upon all waters connected therewith by seagoing vessels, are hereby repealed.

"SEC. 4. This act shall take effect at a time to be fixed by the President by proclamation issued for that purpose."

FURTHER REPORTS

As our work proceeds, we shall make further reports in accordance with the provisions of Senate Resolution No. 7.

SAFETY IN THE AIR—DEATH OF SENATOR CUTTING (REPT. NO. 2455)

Mr. COPELAND. Mr. President, I ask unanimous consent from the Committee on Commerce to submit on my own part and that of the Senator from Missouri [Mr. CLARK], as well as the Senator from Ohio [Mr. DONAHEY], who has given his permission to be joined in the report, a preliminary report on the disaster in the air in which Senator Cutting was killed, and on safety in the air.

Unfortunately this report was not ready before the Senator from Maine [Mr. WHITE] was called from the city, and unfortunately, likewise, the Senator from California [Mr. JOHNSON] is ill. However, I think the report will be found to be of interest to all the Members of the Senate, as we all loved Senator Cutting. I ask unanimous consent that the report be printed in the body of the RECORD following my remarks.

Mr. NORRIS. Mr. President, I did not hear all the Senator said. Is this a preliminary report?

Mr. COPELAND. It is a preliminary report so far as ultimate action of the committee is concerned, but I have referred particularly to the part of the report which relates to the Cutting disaster.

Mr. NORRIS. Has the committee taken all the evidence and made all the investigation of that matter it will make?

Mr. COPELAND. I think I may say, so far as regards the death of Senator Cutting, that practically all of the evidence has been taken. There are some official reports which we wish to scrutinize, but we have reached a very definite conclusion regarding the incident.

Mr. NORRIS. That conclusion is contained in the report?

Mr. COPELAND. It is.

Mr. NORRIS. Will there be another report on the death of Senator Cutting?

Mr. COPELAND. Not particularly. There will be another report on aviation, on safety in the air, but, so far as the death of Senator Cutting is concerned, I venture to say that this practically completes the report.

Mr. NORRIS. With that statement of the chairman of the committee, I add to his request a request for unanimous consent that the report be printed as a Senate report, as well as in the RECORD. I think Senators ought to have the report in pamphlet form. Will the Senator agree to that?

Mr. COPELAND. That is very agreeable to me. I think it would be quite desirable.

The VICE PRESIDENT. Is there objection to the request of the Senator from New York?

There being no objection, the report was ordered to be printed as a Senate report and to be printed in the RECORD as follows:

The Committee on Commerce, who were directed by resolution (S. Res. 146) to investigate certain airplane accidents in interstate air commerce, submit the following report:

INTRODUCTION

Our colleague, Senator Cutting, was killed in an airplane accident at Atlanta, Mo., on May 6, 1935.

It was in the transition period between contact and blind flying that this crash occurred. A new type of airplane capable of sustaining flight with one of its power plants out of commission enabled modern operation practices to come into being and increased safety in flying. With the ability to sustain flight and go on to the destination, even after one engine had failed, the pilots were able to ascend to great altitudes, irrespective of fog, rain, storms, or mists. They could face periods of bad weather which had often interrupted flying. This improvement added greatly to safety and permits the completion of many more schedules than was possible previously. Blind flying, radio aids on the ground, and conversations between the ground and the plane were great factors in a new method of flying on scheduled air lines.

The best pilot in the old times was the one who could fly through all kinds of difficulties by keeping the ground in sight and working his way through because of his familiarity with landmarks, such as rivers, hills, railroads, and other prominent features of the landscape. But with the advent of modern operations and confidence in the ground organization, the picture changed. The best pilot was one who could take advantage of altitude and go up where there was no chance of encountering hilltops or other dangerous obstacles en route.

This transition, even today, more than a year since the Cutting accident, has not been traversed completely. There are still pilots who cling to the old-time methods, especially when they get into an emergency situation. But, on the whole, the record for safety is mounting rapidly. When modern operations are coupled with modern equipment everywhere installed, the risk of flying will reach the minimum.

The circumstances leading up to the Cutting accident are quite material. A Washington party engaged the Transcontinental & Western Air Express, Inc., for what is known as a charter flight. In charter flights, even now, old-time methods are usually employed, and often with the single-engined, obsolescent type of equipment. When this particular charter flight started out from Washington they were fortunate in having a modern plane and at the helm, from Washington to Kansas City, Howard E. Hall, first pilot in Transcontinental & Western Air Express, Inc. Mr. Hall is a man thoroughly familiar with modern practices and one of the strongest crusaders for modern practices in flying. At Kansas City the Washington party transferred to a new machine, which was manned by a new crew, Messrs. Bolton and Greeson, the pilot and copilot, respectively, who were later in charge of the machine in which Senator Cutting was killed.

We have studied the log of the flight from Kansas City to Los Angeles and find that the equipment was in perfect shape. Mr. Louis W. Goss, the superintendent of the Pacific Division of Transcontinental & Western Air Express, Inc., met this charter flight on its arrival on April 30 and instructed Bolton and Greeson to stand by for the return trip. In due course it was arranged that they should take off Saturday, May 4, at 2 o'clock, but weather conditions east of Albuquerque were very bad, and westbound ships were not getting through. Consequently the charter party decided to take the train and get aboard an airplane at Albuquerque or some place east of there if and when weather conditions improved. This released Bolton and made the plane and crew available for a regular run east.

It should be noted that airplane *323*, the plane under discussion, had made a short test flight of some 20 minutes, and now that it was available it was dispatched on a round trip to Winslow late on the evening of May 4. On the short flight over Los Angeles and on this trip to Winslow and back the pilot reported that his radio transmitter was not functioning properly on night frequency (Witness Goss, p. 736, Department of Commerce record of investigation).

Goss, the superintendent at Glendale, immediately advised the radio technician, and the latter removed the transmitter from the plane, checked it thoroughly, cleaned all contacts and relays, reinstalled it, and checked it on day and night frequencies. It was made ready for the ill-fated flight six, originating at Glendale on May 5 at 4 p. m. The usual ground test before its take-off showed it to be in perfect condition.

FACTS ABOUT PLANE, EQUIPMENT, PERSONNEL, AND PASSENGERS AT THE TAKE-OFF, MAY 5, 1935, AT 4 P. M., GLENDALE, CALIF.

Let us pause in a chronological review of the flight and the circumstances leading up to it. First, we will consider the actual conditions existing when the trip originated at Glendale, Calif. We will enumerate them under the four classifications used in the standard practice by Government departments in the investigation of causes of accidents. These are personnel, matériel, miscellaneous, and doubtful.

I. Personnel

There is abundant evidence to show that the pilot was proficient and expert in his technical requirements. He had been checked out as recently as April 26 on flight 2 between Kansas City and Columbus. This was done by an officer of the airline, Mr. Lawrence G. Fritz, who is intimately familiar with all pilots and who regularly makes the check. The pilot's physical qualifications were 100 percent, as indicated by his last medical examination, but, what is probably more important, by his general demeanor before take-off and during the flight. (See testimony of Mr. Goss, p. 733, and Mr. Mesker, a passenger, p. 761, Department of Commerce record of investigation.) The statement of Pilot J. D. Graves, dated July 30, 1935, who took off just before Bolton on the first section of flight 8 from Albuquerque, is interesting. Graves speaks therein highly of both Pilot Bolton and his copilot, Greeson, summing up his testimony by saying Bolton was considered as one of the outstanding young men in his profession.

Bolton's regular run was from Newark to Kansas City, but on this charter flight he was covering the line from Kansas City to Los Angeles. He was thoroughly familiar with the western half of the transcontinental run, and, as a matter of fact, until the year before that had been his regular tour of duty for a long time. It should also be noted that the accident actually took place east of Kansas City, at a point covered by his regular weekly assignments. There can be no allegation of inferior professional equipment or unfamiliarity with the terrain on the part of the personnel flying the ship.

II. Matériel

As modern equipment has so much to do with safety in modern operations, we will go into this in considerable detail:

1. The airplane itself: A Douglas DC–2, the well-known, modern passenger airliner, thoroughly equipped with the latest known safety devices and capable of maintaining its altitude with full load if one power plant failed. It had a cruising speed of roughly 180 miles per hour with 60 percent of the power in use, and dropping down from 180 to 150 to 120 miles per hour during the climb after taking off and during the let-down when approaching its destination.

2. Equipment.—(a) The automatic pilot: This device, costing some $5,000, operates on a gyroscopic principle. No other airline in the country on domestic runs uses this equipment. This machine will keep the craft in straight and level flight on a predetermined course, "relieving the human pilot of strain and fatigue and giving him more time to devote to navigation, radio communication, and checking of instruments." (See Bulletin No. 1, Bureau of Air Commerce, Civil Aeronautics in the United States, Aug. 1, 1935).

(b) Controllable pitch propeller: This enables the pilot to take off with one setting of the propeller blades and then to cruise with another setting, in much the same way that an automobile driver shifts from low to second and then to high gears.

(c) Two-way radio: This permits the pilot to keep in touch with the company's ground organization and to take advantage of the radio range beacon guidance, as well as the weather broadcasts, offered by the Federal airways system.

(d) The artificial horizon: This device in use on airlines for about 5 years and operating on the gyroscopic principle tells the pilot when he is banking, climbing, diving, or flying at a normal altitude. It shows a miniature airplane against a straight line, representing the horizon, and is particularly useful in blind or "over the top" flying.

(e) The rate-of-climb indicator: This instrument shows the pilot when, even though the ground is not visible, he is nosed down or upward and in such a way that he may estimate fairly accurately his rate of descent in numbers of feet per minute.

(f) The directional gyro: The pilot adjusts this instrument to the compass course he wishes to fly. He then flies the airplane, or lets the automatic pilot fly it, so that this instrument gives the reading for the course at all times.

(g) The sensitive altimeter: This modern barograph, operating on the same old principle used by the early balloonists, has the advantage that it registers altitude within very narrow limits. In fact, while it does lag appreciably, it registers fairly accurately a descent of only 10 feet.

(h) The manifold-pressure gage: This instrument measures horsepower by gaging the pressure of the gas mixture in both engines' manifolds. The pilot knows that his engine may be safely operated at a stated manifold pressure at a given altitude and watches this instrument from time to time because he can detect, just as a doctor might detect trouble in one's heart with a stethoscope, any trouble that might be brewing.

(i) Miscellaneous instruments, such as oil-pressure gages, temperature pressure gages, and fuel-tank levels: These instruments perform their obvious functions and reveal instantly in flight the true condition they respectively indicate.

(j) De-icing equipment: On the leading edge of an airplane's wing and tail surfaces to break up the film of ice which forms there under certain conditions. With this device the ice is blown away before it can build up into a contour which would destroy the lift of an airplane's wing.

(k) Carburetor heating device: These heaters were developed shortly before this accident by this company exclusively at that time. They enable the pilot to draw from his exhaust sufficient heat to prevent the carburetor congealing with ice, as in modern airplane engines it is very apt to do, when the atmospheric temperature is low and the other necessary icing conditions prevail.

(l) Landing flaps: The DC–2 was one of the first airliners to employ the landing flap. This acts as a brake while the airplane is

landing, even before it has made contact with the ground. It is extremely useful in high-speed airliners, for it permits them to make contact with the earth on landing at a very much reduced speed and does not impair either controllability or flying qualities.

(m) Retractable landing gear: On the DC–2 airplane the pilot pulls up his wheels (retracts them). This not only enables him to fly at an increase of about 15 miles per hour with the same power but also enables him, because of the reduced drag, to fly along with one engine completely dead, even though the gas tanks and the cargo space and weight are at its top limit.

3. Ground aids to navigation: As the ground aids are part and parcel of a modern operation carried on by a plane as equipped above, a paragraph describing them is in order:

The Federal airways system: Every day and night the beacon lights, intermediate landing fields, radio stations, and weather-reporting facilities of the Federal airways system serve airmen flying all over 20,000 miles of routes in the United States. The navigation aids are established and maintained by the Air Navigation Division of the Bureau of Air Commerce and are available to everyone.

This particular company, the T. W. A., not satisfied with the intensity of weather information and forecasting, or with the ability of their pilots to interpret the Government information adequately, had established a meteorological service of their own. This has a staff of four men at Glendale, Calif., alone, and others at strategical points on its system.

The Government, from airway keepers at points all along the airway, report at regular sequence every hour, over a teletype system on the ground, local weather conditions and general forecasts. This information is handed out from the Government station on an airport to the fliers at that airport and also is broadcast by radio over the radio range beacon. The radio range transmitter is housed usually several miles away from the airport and is operated by remote control. This removes the high towers to a distant place and also makes for less radio interference from other radio stations near the airport. Weather maps are prepared and posted at airport stations and handed to the pilots before the take-off. The United States Weather Bureau has worked out and published in a pamphlet full instructions standardizing the practices and insuring the highest efficiency in the personnel, even at a remote station far away in the waste places and mountain tops along an air line.

Light beacons are established all along an airway, located on towers that rotate six times a minute, and can be seen from great distances, provided the pilot's eye comes into the focus of the reflector. Irrespective of this, it may be seen for several miles on nights of good visibility and for several hundred yards around, even in thick fog. At each beam tower fixed projectors, called course lights, point forward and backward along the airway, showing red where there is no landing field available but green when a place where a plane may get down is available. This is an additional aid of great value. These rotating beacons, as a general rule, are stationed from 10 to 15 miles apart, and on fair nights, when his airplane is in full flight, sometimes as many as five of them are visible simultaneously ahead and behind the plane.

More important to the pilot under modern methods of operation, however, are the radio range beacons established for the purpose of giving directional guidance to the plane. The pilot and copilot have earphones and tune in on the radio range beacons. When the plane is on course he hears a long-drawn-out humming sound. But this is intermittently broken by the code signal, which is given twice in rapid succession. If the pilot gets off his course, the steady hum breaks up and he hears the "dot-dash, dot-dash, dot-dash" of the Morse telegraphic code. If he moves to the other side of the on course, he would hear "dash-dot, dash-dot, dash-dot."

Periodically this chain of signals is broken by the announcer at the sending beacon, who comes on the air, cutting off completely the guidance and recognition signals. He broadcasts the ceiling, sky conditions, weather obstructions, temperature, wind direction, and other items that may be of value to a man flying along in the air. This seance takes from 1 to 2 minutes.

About every 50 miles along an airway there are intermediate landing fields. At each of these is a nighttime signal, a green light indicating that there is a field. The outline and general shape of the field are indicated by white lights around the border, with green lights at a few points, the latter being at the ends of the best runways. At an occasional station, as at Kirksville, a marker beacon enables the pilot to check his position and, with the benefit of the latest type, actually to land when the weather is bad. It is the airway keeper who operates the teletype, used as indicated above, for gathering weather information.

This ground equipment must be considered under the heading of matériel. It is part and parcel of a modern operation, such as was carried on the night of May 5 and 6, 1935, when Senator Cutting was killed.

III. Miscellaneous

There are many miscellaneous items connected with the operation of the airways. About the time of this accident the Regulations Division of the Bureau of Air Commerce had collected them and published them in a volume known as the Operations Manual. In fairness to the company concerned in the crash, it should be pointed out that their desire to cooperate prompted them to become the first airline in the United States whose manuals had been approved by the United States Government. This information had been put into what is called a "pilot's kit", an elaborate wallet constantly carried by the pilot on his knee. It contains maps, regulations, radio information, etc.

The company is on its honor to abide by these manuals, but, as a check-up, the Government employs flying inspectors to make sure that the manuals are complied with strictly. This relieves the pilot of much of his discretionary power, but, of course, does not take away from him completely his ability to "act on his own", just as a ship captain would act at sea in an emergency. The employment of the manuals is one of the products of the transition period and since that time has been adopted as a contribution to safety by most of the airlines. Conditions of weather—night or day—and of all the terrain approaches to airports, etc., are covered explicitly in the manuals. The pilot is left in no doubt whatsoever as to what he should do, not only in normal but also in abnormal conditions.

IV. Undetermined causes for trouble

Under the heading "Undetermined and Doubtful Causes of Accidents", your committee places the subject of radio operation as it applies to airlines. We find that the radio broadcasters and users had not worked out with the Federal Communications Commission regulations suitable to their particular purpose. In fact, it may be startling to learn that, when the Federal Communications Commission checked up on the radio activity of the Cutting flight, they found violations. The report of the Federal Communications Commission finds as follows:

"As a result of this investigation, it has been found that the cause of the accident was not due to the failure of the company's radio system to function." (See report, Federal Communications Commission, quoted p. 258, vol. I, hearings, Subcommittee on Safety in the Air.)

THE CUTTING PLANE

With the equipment we have just described, the plane started from Los Angeles (Glendale Airport) at 4 p. m. on May 5, 1935. The take-off was normal, and Kingman, Ariz., reported the ship directly overhead at 5:35 p. m. On the 5:40 regular radio schedule, when the pilot must indicate his position, Bolton reported himself 10 miles east of Kingman at 12,000 feet altitude and stated that the weather was clear, the ceiling unlimited, and the temperature 35° F.

Approximately 2 hours later, at 7:35 to be exact, Winslow, Ariz., reported the plane directly overhead. The pilot Bolton, with his plane and passengers, arrived safetly at Albuquerque at 8:50 p. m., or 10 minutes ahead of schedule.

This flight had been quite uneventful, although undoubtedly very delightful for the passengers, sailing high at 12,000 feet over the mountains out over the level plains. Mrs. Mesker, a passenger (p. 761, Department of Commerce Investigation), who had known the pilot for some 3 years, states that, as was wont, Pilot Bolton came back into the cabin "for a nice little visit." Mrs. Mesker's husband was also a pilot, and a general conversation was carried on, reviewing events since last they met. The conversation only lasted about 5 minutes and Bolton returned to his place in the cockpit. Mrs. Mesker did not have an opportunity to converse with him again.

As for the mechanical and flying qualities of the plane, there is one interesting notation on the report blank reading as follows: "Transmitter will not work on night frequency."

This fact was called to the attention of the field manager, who in turn instructed Mr. Charles Bates, the radio technician, to inspect the radio transmitter and put it in working order. Bates is a man who checks the company radio sets on the line and travels up and down the airway in doing so. It happened that this expert was at Albuquerque at that particular moment. The report shows: "Bates partly removed the transmitter from its frame and checked several items, such as tubes and connections, etc. 'As scheduled departure time was drawing near, the pilot went to the rear of the plane and talked with Mr. Bates—working in the radio compartment. Bolton told Bates not to check further since day frequency was working O. K., and that a delay would occur if he, Bates, removed the transmitter for a further check. In the meantime the field manager and pilot had both talked via phone to Supt. A. D. Smith relative to weather conditions, forecasts for the period, etc. As ground fog was forecast to form between Wichita and the Flint Hills and a 6,000-foot overcast was reported at Cassoday, authority was given for the flight to proceed on instruments. The day frequency was checked on the ramp before departure and functioned satisfactorily.' "

It is contended that there is no real hazard in using radio day frequency instead of night frequency. Either should suffice, provided receiving stations all along the line are notified, as they duly were in this case. It might also be noted that this particular airplane, unlike most airliners on other systems, had four crystals and four transmitting channels, two (day and night) west of Kansas City, and two (day and night) east of Kansas City. In addition there was the two-way set for use with the beacons and with the ground stations, and a third auxiliary or emergency set capable of receiving on a distinct and separate power supply when needed, but the latter was never used.

FLIGHT FROM ALBUQUERQUE TO KANSAS CITY (SENATOR CUTTING ABOARD)

Only one passenger got on board the plane at Albuquerque. That was Senator Cutting. He took his place in seat 9. This is about midway up the fuselage of the airplane and somewhat nearer the trailing or rear edge of the wing.

Of the 13 human beings aboard, 5 were killed. From the survivors and from the radio contacts with the plane it is possible to get a pretty accurate idea of everything that happened until Wichita, Kans., was passed. Here Pilot Bolton was heard for the

last time. The pilot's own story would, of course, be invaluable, but as he perished, the nearest possible reconstruction of the conditions of the flight from the standpoint of the crew is found in the statement of Pilot J. D. Graves, who was preceding Bolton, some 30 minutes ahead of the latter. His statement reflects so closely what must have been the experience of Bolton that we are quoting his words in full and underscoring such words as are most valuable to us in the endeavor to arrive at the cause of the crash.

"During preparations at the field for take-off at Albuquerque I was informed Bolton was following our flight 8 on flight 6 and was about on schedule, 30 minutes behind us. Along with McFerren, my copilot, we checked over the weather map and reports, and estimated what our flying altitude, winds aloft, and cruising speed would be. It was a perfect night to fly, and as the weather was all clear except for a moderately high overcast at Kansas City, we gave it no special concern. The pilot who brought our ship in from Los Angeles said the weather had been perfect all the way over, tail winds, air smooth, and clear skies. I discussed the functioning of our airplane with the pilot who brought it in, and as it was satisfactory, signed the clearance for the flight on the weather report after asking for permission to fly instruments. The weather did not necessarily indicate instrument flight, as it was possible from the reports to fly underneath the overcast at Kansas City. I asked for instrument clearance as a matter of routine, as I thought we might be flying high and would have to descend through the overcast. I noted that the forecast stated Kansas City would remain open until after our arrival.

"The mountain division superintendent was not available at the moment, so I requested my instrument clearance be given to me via radio in flight as soon as the superintendent could be contacted.

"As we taxied away to take-off we saw Bolton landing at Albuquerque.

"The flight from Albuquerque to Kansas City was unusually good because of quartering tail winds and pleasant temperatures and smooth air. The passengers slept all the way, some even through the landing at Kansas City.

"It was no effort to make schedule time and we at one point reduced our throttles as we were making over 200 miles an hour, and intended to pass up Wichita. The static conditions throughout were moderate and we had no trouble making all our radio contacts. However, we were unable that night to hear any ship's radio reports in the air, although we heard ground stations talking to other ships. We flew at 12,000 feet and 10,000 feet all the way.

"Although I had no apprehension as to the weather up to arrival at Kansas City, I always make a practice of carefully watching an overcast condition; and at regular intervals, about every hour, I requested via radio confirmation that the Kansas City ceiling would remain above limits. Each time until near Kansas City I was assured it would remain above limits. The ceiling reports ranged around 2,000 feet above sea level up until we were within 18 minutes of Kansas City. Although I did not hear Bolton on his radio, I am sure he received the messages to me and had the benefit of all the weather data I asked for and received. I was not, and am sure he was not, worried about the weather. The reports presented a very simple weather problem and one we had both had many, many times. The anticipation of having to descend through an overcast is nothing at all to be concerned about when the proper facilities are available even when ceilings are very low.

"As you no doubt have my statements as to details of the trip I will not reiterate them here. Suffice it to say we kept a very complete navigation log during the flight. Estimated and recorded our upper air winds and checked our cruising speed at frequent intervals. Our fuel functioning was normal, and we estimated our arrival over Kansas City on schedule, 2 a. m., while many hundreds of miles west of our destination. We made this arrival good with no effort, and due to our use of throttles and power output arrived with an ample supply of fuel, as we had estimated our consumption accurately.

"My only concern was felt when I received the special 600-foot ceiling report from Kansas City when we were 18 minutes out. This was a decided drop, and I wanted to quickly verify this, as it might go a lot lower. Although I was not trying to think for Bolton, too, I wanted full details for his benefit as well as mine. As our own company observers assured us the ceiling was 800 feet or over and would remain above limits, I was certain we could land safely, as we were very close. Since the top of the clouds was 6,500 and we could see the glow of Kansas City through them, a fairly high ceiling was indicated, regardless of official reports, which are often erroneous. It is not good practice for a pilot to think in terms of any other flight ahead or behind him, as no two flights, pilots, or ships, render the same problem. I was not concerned about Bolton, because I knew him to be a good pilot and knew he would handle his flight on his own judgment. I do not know what he thought of me as a pilot, but I am sure he would not follow me blindly, thinking I would keep him out of trouble, nor would he consider his ability superior to mine. He undoubtedly flew his own ship on his own judgment.

"We had no trouble landing except for interruption of the radio range by the operator to give weather broadcasts, contrary to my request for continuous operation. Due to this condition, we were forced to make two approaches on instruments. The actual ceiling was above the minimum when we arrived, as we saw the river and beam station from 2,000 feet above sea level. I was confident that we would have no trouble and had let my copilot fly the ship from a point east of Wichita to the point over the Kansas City range station. He performed a perfect job, and after I took the ship to make our instrument approach for landing, calmly proceeded to gather all additional weather information at our alternate fields. I am sure Bolton heard all this, or most of it, as he was only 100 miles behind us.

"All the messages we received were clear and informative, and I cannot think of a thing that myself or Bolton could have wanted or needed in the way of information. I was slightly impatient about having to make two attempts on the beam approach, as I wanted to get out of Bolton's way, but our landing was finally executed with no trouble.

"As we landed and taxied across the field I perceived the weather conditions getting worse rapidly. The visibility was decreasing, due to an increase in mist falling from the upper strata and the lower scattered clouds were thickening and merging with the upper layer, thus lowering the ceiling.

"We were not in Bolton's way, as he was a good 30 minutes behind us, and I had my copilot inform our office as soon as we were below the overcast; this was a good 10 minutes before Bolton could possibly have arrived, and he must have received a message.

"As soon as we landed I went into the depot and gave the weather conditions to the dispatcher on duty. I told him conditions were getting bad, but to tell Bolton if he did not like the reports from his alternate fields to make an attempt at Kansas City by coming in on the SW leg at minimum altitude, as I thought the ceiling was higher along the river where we had come through and this leg of the beam lies along the river.

"I think Bolton made an attempt to land at Kansas City. He was not heard, nor were we on our first attempt. This is due to wind conditions usually. I think after his failure to land at Kansas City he proceeded at once to Kirksville, where he was directed to go, and where his best ceiling was reported within his fuel range. That is what I would have done.

"I had no apprehension for Bolton even after he failed to appear at Kansas City; and, in fact, was somewhat relieved he had a better place to go, as Kansas City was offering at that time very questionable weather conditions for landing."

Bolton's plane traveled at almost exactly the same speed as Graves. One is safe in assuming that Bolton closed in on Graves roughly 19 minutes during the time Graves consumed 20-odd minutes in effecting his landing at Kansas City. In other words, Bolton was only 10 minutes out when Graves landed there. Even flight 5, well below Wichita and going the other direction, heard Graves talking constantly to Kansas City, calling for the beam to be made constant. There is no question that Bolton heard it all, too, and may even have throttled back somewhat to delay his arrival at Kansas City. This is unfortunate for the weather was, of course, closing in rapidly and every minute counted.

Let us for a moment go more deeply into the radio contacts between Bolton after he took off from Albuquerque, N. Mex., at 9:15 p. m., exactly on schedule. One radio frequency, as we stated, was quite sufficient, provided stations were notified.

We find that Albuquerque advised Amarillo that Bolton, flight 6, was to be worked on day frequency. The Wichita operator heard the plane answer Albuquerque on the 9:55 regular schedule and again heard the plane (Bolton) call Albuquerque shortly after 10 p. m.

The plane passed over Amarillo at 11:58 p. m. It was heard by Rhynsburger, the operator at Wichita, at 1:34 a. m. A few minutes later it was reported by flight 5, which had just met it and exchanged customary landing-light signals. Copilot Evan Lewis, flight 5, stated he heard flight 6 acknowledge receiving Wichita's broadcast of weather information (p. 831, Department of Commerce investigation).

Lewis met both flight 8 and flight 6 duly, and we call attention to the fact that Bolton flashed on his lights as a signal. We feel this important, for at one time the committee's experts were suspicious that there had been a drain on the batteries due to a faulty starter button. This would cause radio failure and account for the night frequency difficulties. But when one finds Bolton flashing on his lights, leaving his warning signals on and being liberal with his power, dispels suspicion that there was a battery drain.

When Lewis heard Bolton say "Okay" to Wichita, that was the last message from the plane. Transmission at best that night was none too good. (See Graves' statement.) The weather at Kansas City changed from overcast, few breaks, 2,500 feet, 7 miles visibility, at 10:52 p. m., to overcast, hazy, 2,500 feet, 5 miles, at 11:52 p. m.; then to overcast, hazy, 2,500 feet, 5 miles, at 11:52 p. m.; then to overcast, low scattered at 700 feet, light fog, sprinkling, 1,500 feet, 5 miles, at 00:52 p. m.; then decreased to overcast, light mist, light fog, 600 feet, 3 miles, dew point up a point to 47 (49, 47), at 1:52 a. m.

Both the company and the Government meteorologists, even with this noted change in hourly sequence, still predicted that Kansas City would remain open until morning.

Flight 8 arrived over the Kansas City radio station at 1:59 a. m., spent 22 minutes in making two attempts on instruments before completing landing. The second attempt was necessary, due to interruption of beam just as the plane approached the station on first attempt.

And now we come to one of the saddest and most unfortunate occurrences that has been written in air-line operation. But to appreciate it one should be familiar with some of the background.

Quoting from the hearings before this committee, we find Senator CLARK interposing: "That is just a counterpart of the Cutting accident, is it not?" Mr. Frye replied, "Exactly."

"That" referred to was an accident that occurred January 1, 1935, 4 months and 6 days before the Cutting accident. The grave question for this committee to determine obviously then is who is responsible for a duplicate accident? Also, what steps had been taken between January 1 and May 6 to prevent a recurrence?

In the old days of contact flying, when radio ranges were first set up, it was proper to interrupt a radio beam for the purpose of broadcasting weather. But with the advent of modern practice it had been found that sometimes a pilot coming in "blind" for a landing, "riding a beam", will suddenly encounter such an interruption. Obviously that evil should have been corrected immediately, so that when a pilot was obliged to resort to this maneuver he could expect favorable response to his request to the range operator for continuous beam.

"That", referred to by Senator CLARK, was an accident described in the hearings on page 280 and sequence. To recount this story is very nearly to recite the circumstances met by Graves (flight 8) on his arrival at Kansas City at 1:59, when the ceiling had dropped to 400 feet and the visibility to only 1,000 yards. So low were the clouds that some of the high buildings nearby were obscured by occasional low scud. At the same terminal (Kansas City), on January 1, 1935, the same thing occurred:

"About a week ago we damaged a ship at Columbus, Mo., in a forced landing, which we think would have been prevented had we been able to have the Kansas City beacon station kept in continuous operation while two planes were trying to get in. The first plane spent 30 minutes trying to get in. The second plane, which had to fly around Kansas City all the time this was going on, was then delayed 20 minutes longer, due to the broadcasting of totally useless weather information, and by then ceiling had lowered and the visibility had decreased to such an extent that, although the pilot got under the ceiling, he was unable to get into the field and had to head east for Marshall, Mo., which was reporting adequate ceilings. At the time the plane arrived over Marshall the ceiling was still being reported as 1,100 feet, although the first plane, which had gone in and landed there, reported the beacon on the field to be in the fog. Plane no. 2, which had flown from Chicago to Kansas City and had then spent 50 minutes waiting for the first plane to clear, and in attempting to get in himself, went on to Columbus, Mo. (committee note: Compare with Kirksville), and, due to the fact that his gas was getting low, landed in the emergency field, in spite of the fact that visibility was poor and almost solid scud was drifting over the field at an altitude of 150 feet. The same situation prevailed there as at Marshall in that the Department's weather observer was still reporting 1,000-foot ceiling. Fortunately the result of the landing was only approximately $10,000 damage to the plane, as none of the passengers was injured. However, the whole thing could have been avoided if the radio-beacon station at Kansas City had been kept in operation as common-sense dictates, as he could have either landed at Kansas City earlier or left Kansas City with ample fuel to go to other points where better conditions prevailed."

It was developed in testimony before our committee that from the time of this accident until the Cutting repetition, the Chief of the Air Navigation Division resented allegations made by the president of Transcontinental & Western Air, Inc., that changes were being made all over the country by that division on the airlines without notice. A wire from him, December 24, 1934, sent to R. W. Schroeder in the Bureau of Air Commerce, but in the other division, the Regulation Division, read as follows:

"I want to enter vigorous protest against the changing of airway facilities from day to day without notification to air-line operators. I understood at our August meeting that this practice was to be discontinued and that operators' approval would first be secured. This has not been done and is going to result in fatal accidents if not immediately corrected. I suggest that changes be made only on definite dates at intervals of 90 days, and that operators be given 30-day notice so new maps and charts can be made up and all personnel fully informed in advance of changes.

"Merry Christmas.

"JACK FRYE."

Mr. Martin replied under date of December 27 (see pp. 277 and 278, committee hearings), evidencing personal resentment: First, that the wire had not been sent to him—"first of all, the responsibilities for changes in airways facilities is mine"; and second, that anyone should dare criticize the airway division, and denying the allegations made—"reference is made to your statement that no changes in airways facilities without the operator's approval. This is contrary to any knowledge that I possess. It is a fiction of convenience", etc.

Mr. Frye wrote the Bureau on January 7, 1935, and again on January 23, listing the changes made on the T. W. A. lines (the route which was being flown by Senator Cutting). There was plenty of sugar-coating in the correspondence on both sides but the thicker the coating, the more bitter was the substance beneath.

Whether or not this petty squabbling caused the Cutting crash is a question. Certain it is that very little attention was paid to the accident of January 1, at Columbia, referred to above, and which resulted because the Department of Commerce cut the beam as the pilot was coming in for a landing. No heed was paid to Frye's two letters in January (p. 281, hearings) "demanding that these things be operated this way"—meaning what should be done when a pilot was using the beam for a blind landing, as was the case with Graves and Bolton.

So it was that when Graves on flight 8 arrived at Kansas City, he consumed 22 minutes in landing when it should only have required 5. Bolton was only allowed one pass at the field when his plane came along 10 minutes later with Senator CUTTING and the others aboard.

Graves' statement, quoted above, reveals the difficulty he had. The committee can assume that the range may have been cut when Bolton was actually attempting that first "pass at the field", in carrying out his instructions.

We are confident that Bolton would have landed Senator Cutting's plane safely at Kansas City had it not been for this cutting of the beam. We feel certain that had the Bureau of Air Commerce complied with Frye's letters of January 1935, Graves would have come easily on his first "let-down" for a landing. He would have consumed 5 instead of 22 minutes and Bolton would have been permitted to come on in, in due course, for his scheduled stop at Kansas City.

The committee does not feel that the Bureau of Air Commerce has refuted the company's claims that it had been trying for 4 months to prevent a recurrence of the January 1 accident. According to departmental testimony it is shown that the Department complied only in a half measure, and excused it on the ground that it was a "regulation" and therefore the interruption of the beam for Graves and Bolton was justifiable.

Only 6 days before the Cutting crash a halfway attempt at complying with Frye's recommendation was made (see 5 (c) below). But, as a matter of fact, this proposal was nullified by rule 5 (d), hereafter quoted. This places the responsibility squarely on the shoulders of the Department. If the Commerce man on duty actually did refuse to give continuous beam operation, he is absolved by the following rule, but the Department showed incompetence by promulgating an absurd ruling to cover such emergency situations. Let it be clear that the Bureau of Air Commerce admits one of the interruptions of the beam alleged by Frye (B–16, Mr. Mulligan's statement).

The following is a quotation of the rule covering continuous beam operation, May 1, 1935:

"5. (c) At stations where facilities for broadcasting on a frequency of 236 kilocycles are not available, the scheduled and special weather broadcasts shall be made on the range frequency. Exception: When specifically requested to provide maximum radio range service for the landing of specified aircraft, the local ceiling and visibility shall be broadcast on the range frequency at the time of the scheduled weather report broadcast followed by the announcement: 'Remainder broadcast postponed.' At 5-minute intervals after scheduled broadcast time, the operator will ascertain if the aircraft has landed and will complete the broadcast as soon as the aircraft has landed excepting that broadcasts of airway weather shall be canceled if necessary to delay more than 20 minutes.

"5. (d) Special weather reports shall be broadcast on the range frequency immediately upon receipt at all times." (See Mulligan's statement, p. B–7.)

To obtain a picture of the situation at Kansas City at the critical moment in this investigation, we deem it advisable to quote verbatim certain testimony from the committee record, pages 287 and 288, volume I:

"Pilot Graves arrived over the Kansas City radio beam station 3 miles from the airport at 1:59 a. m. on May 6. He was coming in on the radio beam and saw the beam station from 1,250 feet above the ground, which is 550 feet above the Department of Commerce minimum for that station.

"He would have landed within 3 minutes through the lower scattered clouds but for the fact that the Department of Commerce radio operator suddenly cut off the radio beam despite the previous request to maintain it continuously. As a result, the safety of his passengers required him to go up into the overcast until the beam was resumed. Exactly the same thing happened on the second approach and again he was forced back.

"The CHAIRMAN. That previous request was the request made by the T. W. A. officials?

"Mr. FRYE. It was made by the pilot on this flight to the T. W. A. ground station at Kansas City, and the T. W. A. radio operator and dispatcher at Kansas City called the Department of Commerce station there at 1:45 a. m., 14 minutes before Graves arrived, requesting the continuous operation of the station. They gave the continuous operation through 50-minute period. This is broadcast on every 5 minutes, and it was continued through the 50 minutes, and I believe the 55, then on the very minute that the pilot arrived, or about the time of his arrival the beam was cut off to broadcast weather after it had been requested that the continuous beam be maintained.

"The CHAIRMAN. I think you told me there were no other airships in that vicinity at the time?

"Mr. FRYE. No, sir; except the ship which was coming in, and which needed the continuous beam, and also because he was without a course where he was flying when this was cut off.

"The CHAIRMAN. That was more important, in your judgment, than the weather forecast?

"Mr. FRYE. Very much so.

"Senator JOHNSON. How long did it take for the weather broadcast to be made?

"Mr. FRYE. Sometimes a minute, maybe 2 or 3 minutes. Of course, a fellow in close to a station like this Graves was, just approaching on the station, if the broadcast had been continued,

he would have made a certain turn down the beam for his landing in the field. There were obstructions to the north and south of him, and with the beam off he could not be certain he was going to maintain this course, so he had to pull back up into the clouds and go back out toward Omaha to get organized for another approach.

"The CHAIRMAN. Would that be like a man who was overboard, and the chap on shore said, "I cannot send you a life preserver for a few minutes, because I have got to broadcast the weather?"

"Mr. FRYE. Exactly; that is correct.

"Senator CLARK. As I understand this matter, Graves is criticized because he did land in Kansas City and Bolton is criticized because he did not land?

"Mr. FRYE. Yes, Senator; that is it exactly. I will continue with this a little further.

"As a result, the safety of his passengers required him to go up into the overcast until the beam was resumed. Exactly the same thing happened on the second approach and again he was forced back.

"He made three approaches to the field before he was able to land.

"The CHAIRMAN. And in each instance they were broadcasting and cut off the beam?

"Mr. FRYE. And in each instance they were broadcasting and cut off the beam. The last time they only cut it off for about 10 seconds, but the pilot knew he was over the station. When you get exactly over the station, you get a cone of silence that lasts for a few seconds, then the signal comes on loud, indicating you have passed the station.

"Mr. Graves is here, and he can probably tell you better how it happened.

"The last time he was not certain whether he has passed over the cone of silence, so he had to go up and do it all over again.

"During this time, Bolton was ordered to stand by while Graves proceeding with his delayed landing. In the meantime, the ceiling continued to lower, but even when he finally landed at 2:24, after 25 minutes delay, but we figure out it would take him 3 minutes to land, so that the delay was actually 22 minutes, the true ceiling, as observed by Graves and his copilot, was above the Department of Commerce minimum.

"Despite these difficulties, Graves brought the plane down and his passengers are alive today. If he had been sent to Kirksville in the face of the erroneous weather reports from there, that might not have been the result.

"After the Department of Commerce reviewed Pilot Graves' experience they said he had violated section 7–F of chapter 8, because the ceiling was too low for a safe landing and decided also that he had violated section 59–J by doing an act in connection with aircraft which is contrary to the public safety and interest and detrimental to the morale of the pilots and mechanics and fined him $500."

The committee fears bias in this matter. We are constrained to believe that an attempt was made to throw the blame on the company by raising the issue of so-called violations.

INVESTIGATIONS

Aside from our own, there were three distinct investigations of that accident. It is unfortunate in many ways that allegations of prejudice have been made against all three. The interests of safety and of progress would better be served if such contentions were impossible. Our recommendations will cover suggestions to prevent them in the future. (See ch. 10.)

In its general investigations the committee employed questionnaires, hearings where witnesses appeared, and personal inspection and surveys. In the case of this particular accident, we were obliged to study and review the three investigations above mentioned, send experts to the scene of the crash, and hold hearings where competent witnesses testified before our committee.

ITEMS IN DETERMINING CAUSES OF ACCIDENTS

Tabulated below will be found a comparison of these three investigations. To this we will add our observations and findings, but before doing so it is necessary to make a categorial pronouncement as follows:

In all accidents the most important items in determining the cause are, first, the actual spot where the crash occurred; second, the time at which it happened; third, the safety factors, mechanical and human, lacking at the moment of impact; and fourth, the contributing factors which might be termed "unnecessarily present."

AIDS NEAR SCENE OF CRASH

The scene of Pilot Bolton's crash is within the present range of the MRL radio station at Millard airport near Kirksville, to which the plane was headed. The spot is normally within the sweep of the three nearby rotating searchlights on towers, stationed 10 miles apart on the old "contact" flying airway, Kirksville to Kansas City. From 1,200 feet on a clear night, the last signals he would expect were the boundary lights visible, together with the red lights atop the radio towers there. These Bolton never saw, because if he had he could have landed from the low altitude, even in terrible weather, on an airport with such perfect approaches as are found there.

NO PROOF ALL SIGNALS WERE NOT RECEIVED BY PILOT BOLTON

Evidence exists that Bolton's radio sending set on day frequency, was working as far east as Witchita. From there on we find no proof that he could not receive all signals. At no time did he break the seal and utilize the emergency receiving set in his plane. After leaving Kansas City he entered on his log certain "wind aloft" data not transmitted until he must have been under way to Kirksville.

There was evidence in abundance that Bolton was a very conscientious pilot. He knew that to land below a 700-foot ceiling at Kansas City would be a violation of regulations. He had heard and was probably perturbed by the worrying orientation problem being solved by Pilot Graves, the man who preceded him on the first section. He heard about the delays and troubles related to his colleague's landing, when the latter consumed some 22, instead of the normal 4 or 5 minutes, for a "sit down." He heard the vain calls for the cessation of the useless and uncalled for general weather reports when the radio was urgently required to give a continuous beam, so that he might guide his plane down without fear of coming near to the high buildings in the vicinity of the Kansas City airport.

BOLTON FOLLOWED INSTRUCTIONS

Even a fleeting glimpse of the airport at Kansas City (reported by one of the survivors) did not lure him to dive as many a pilot has dived, and often will again, down through a hole in the clouds to a steep glide-in landing. Cooly he followed instructions, "Make one pass at the field, and if you don't break through, go on toward Burlington and land at the first open field." He knew that the weather observer at Kirksville was reporting favorable ceilings, none less than 1,200 feet. He was beckoned on there, not by pastures green, but by the equivalent in flying parlance, "tail winds and happy landings." Even if the weather closed down somewhat there, he felt sure that the dispatcher at Kansas City was correct in sending him on to Kirksville, where ground orientation facilities of Millard Field existed. There, he knew, were a small-type radio range, boundary lights, and, above all, a large, wide field, high, well drained, hard surfaced, with unexcelled approaches.

With a sense of relief at being freed from such an overwhelming problem as Pilot Graves had accomplished successfully, he must have pulled up for the comparatively short, simple flight to Kirksville, where, on the hourly sequence, clouds were reported consistently high and landing facilities were the very best. "If it closes in there," he surely thought, "my last reserves are the range to guide me in where no tall buildings can possibly intervene, and the lights which I can pick up when I let down."

BOLTON PROCEEDED TOWARD KIRKSVILLE ON THE KANSAS CITY BEAM

To pick up the Kansas City range on its true "on course" was a simple matter. With his eyes shut (provided the beam leg was reaching out on its normal 53° bearing) he knew he would in a definite number of minutes come squarely over the airport. Pilots can estimate time of arrival almost to the minute. There was no need to wait for the let down until he reached a cone of silence because 1,200 feet at Kirksville was well above regulations for a descent. Over Brookfield, only 35 miles, or 10 minutes from his destination, he started the slow, easy, nose-down lowering, which he knew would not disturb the dozing or sleeping passengers.

INACCURATE WEATHER DATA RECEIVED—CONTACT FLYING

Forecasts, he knew, are not reliable; both the Government and his company forecasters at Kansas City, he found out 20 minutes before, had erred; but observers on the job at Kirksville, reporting weather at that very moment, could not be wrong. Down and down he descended slowly, ever proceeding toward his destination and riding the "on course" signal of the Kansas City beam. "I won't even have to pick up the Burlington range," he calculated, "because I'll soon contact Kirksville, which on this night normally should be heard at least 10 miles out, and even if the Kansas City beam is swinging or askew, I'll hit the north leg of the Kirksville beam—anyway, check my quadrants and 'come on in.'"

But as he lowered he did not break through the dense haze. "I am down now to the 1,200-foot ceiling, another few feet, a few more, but still no sign of the ground. What's wrong with that weather man at Kirksville and his 1,200-foot ceiling?" Turning on his headlight, it still flashed a milky glow. This, he knew, meant that he was still in the overcast. At last the ground, but oh so close! Just how close it was difficult to say because ragged, jagged "scud" clouds intermittently cut off his view, as at 150 miles per hour these dashed past.

There was still no sign of the last reserves provided by the Government for just such situations; no flashes of a beacon, mushy but useful; no "dot dash, dash dot", in the "A" or "N" quadrant of Kirksville. He knew that if the new Kirksville radio were "out", his only recourse lay in the last two reserves, the flashing beacon lights, the boundary lights with the red lights on top of the towers. The situation demanded that he keep the ground in sight.

Contact flying was nothing new to Pilot Bolton. But in contact flying under such conditions as he faced, one must keep just below the low hanging wisps of clouds, not feet, but inches below. It would not do to go up into the thick again, for the gas was running low. The field could not help but appear soon, he thought, because he had ridden the Kansas City beam truly on the "on course." There was no need of going into either radio beam twilight, for he knew well that no other ships were out on that route, or anywhere near him at that time of night, 3:20 a. m. For 9 miles, according to eyewitnesses, he flew thus, 4 of them after having straightened out to parallel a highway

with its telephone poles in flat perspective showing in the glow of the dimmed light from his plane, or the intermittent flash from his nose lights. Snapping on his headlight for an instant, he realized or reckoned that he had inadvertently eased up into the overcast, probably as he had been dialing the radio or nodding to Greeson, his trusty copilot.

In split seconds Bolton lowered a few feet to keep below the overcast. There was no time to watch the altimeter now, or study anything but the ground. Down a "draw" or gulley, only 792 feet long and 300 feet wide, taking only 3 seconds to traverse, he lowered in flight some 4 yards. Directly ahead was a rise in the ground and a tree; off to the right was a white house, standing out menacingly in the glow.

"I must swerve", he thought. But in flying, even a slight turn demands a little lowering of the wing to prevent skid or slip. This maneuver used up the few odd feet he was above the ground level and his wing tip very lightly scraped the terrain. The plane was slightly out of control, but still the pilot might make a flat landing since his wheels were up and would not trip him. But the upgrade beyond was too much. Fate, not Bolton, now held the stick. He landed creditably under the circumstances, but the inevitable happened—some of his passengers were killed and others fatally injured.

PILOT BOLTON DISPLAYED CHARACTER

Bolton himself, mortally wounded and bleeding profusely, displayed such nerve and coolness in the few minutes that followed, that no one could possibly allege carelessness, lack of loyalty to duty, selfishness, or a character that would shirk, or under any circumstances disobey the law or tradition. Uncomplainingly, he told everyone who asked him what had happened, that he was "out of gas", an expression the schools teach the pilot to say when he is forced down. Bolton was low on gas—too low to venture up again into the overcast, which would have meant another time-consuming orientation, but he did not whimper even though he knew he had been "let down" in trying to land. He was the victim of fallible ground aids to navigation in which he trusted implicitly.

WEATHER CONDITIONS AT TIME AND PLACE OF CRASH

Eight minutes from him was the flat, firm airport; 5 minutes to the west were the slow rotating light beacons. Around him was fog, mist, and rain. Evidence shows that it was raining so hard, or had been, that it was not possible for the survivors to ignite some old papers as a distress signal or flare.

Twenty-five citizens in the vicinity of the airport have sworn that the weather was bad all night. One Government weather observer alone, the man sending out the weather sequences, is authority for the statement that between 2 a. m. and 3 a. m. the ceilings were never less than 1,200 feet. Several affidavits were obtained by the Department of Commerce to substantiate the claim of their employee, but they are so unconvincing and indefinite as to time and cover points so far removed from the main issue, that they are of little use in evidence, certainly as to the ceiling height and horizontal visibility between 1:30 and 3 a. m., May 6, 1935.

ALLEGATIONS OF ABSENCE FROM DUTY OF AIRWAY-KEEPER JONES

There is in evidence before this committee an affidavit from Cleo Ronk, which states in effect that a Department of Commerce official approached him January last asking for a formal statement to the effect that the weather was good. Neither this possible misdemeanor nor an allegation that the airway keeper was absent from the airport necessarily reflects on the Bureau of Air Commerce higher-ups. But in our investigations we have found an abundance of evidence to indicate an unwillingness on the part of the Chief of the Air Navigation Division even to consider that such error could be possible. The airway keeper might, or might not, be indicted by a grand jury on the strength of the several affidavits of good citizens who gladly furnished them because of their interest in air safety. Whether or not he was guilty need not be determined by this committee. But it is a fact that the man has since been promoted and still holds a Government job. In our opinion, he should have been suspended, and a fair and impartial investigation should have been held. Such a procedure is still in order, and is recommended.

SEVERITY OF WEATHER CONDITIONS BETWEEN 3 AND 4 A. M.

Your committee does not choose to sit in a judicial capacity on whether or not Jones was guilty of neglect of duty. But something is wrong with a weather reporting and forecasting system which will lure a planeload of passengers on to an airport where weather conditions were as bad as it seems they were. An employee of the Sinclair Prairie Pipe Line Co., L. W. Cockrell, who gages oil tanks 30 feet high every hour, said in his affidavit that at 3 a. m. and 4 a. m., "This fog was so dense that it would strike your face like a mist, and was like pea soup with ink poured in it." The tank which Cockrell climbed is located 6 miles, over comparatively flat country, from the Millard Airport, and 10 miles from the scene of the accident.

CAUSE

Cause of the T. W. A., Atlanta, Mo., crash of May 6, 1935

Pilot Bolton, having been obliged to pass up his landing at Kansas City, under direction from proper authority, set a course for Kirksville (Millard) Airport. No evidence of mechanical failure having been found, his safe arrival and landing at this alternative destination was dependent upon three aids to navigation furnished by the Bureau of Aeronautics, Department of Commerce:

First, dependability of the northeast leg of the Kansas City radio range.

Second, he needed the normal operation of the MRL ratio station at Kirksville.

Third, he needed the best efficiency on the three rotating light beacons on the last 20 miles southwest of Kirksville (Millard) Airport, Mo.

All three failed him.

Northeast leg of Kansas City radio range off course

The northeast leg of the radio range was off course, and brought him directly over the spot where the accident happened. Had this beam been "on line", where normally it should have been, he would have broken through right on the airway. He would then have been in the path of the lighted beacons, over more level terrain than he actually found, would have picked up the boundary lights, and landed easily.

That this alinement of the northeast leg of the Kansas City radio range was squarely over the path Bolton was directed to take is proven by the fact that Pilot Vernon I. Powers, of Braniff Airways, following the same beam, was heard by the survivors on the ground and was vertically overhead one-half hour after the Cutting crash. On such a night as this, with no other ships in the vicinity, there is no good reason why two first-rate pilots would fly more than a mile to the right of the true "on course" beam signal. Each unbeknown to himself was flying "on course", but in reality 11 miles off the correct path. The committee is forced to conclude that the reason for those concurring positions was that the beam both pilots were following was seriously off direction at a point 118 miles from Kansas City.

Any doubt that the beam was off is dispelled when one reads the affidavit of Lieutenant Bredouw of the United States Army Air Corps Reserve, on active duty at the time of the Cutting accident. He flew the beam the next afternoon, at the first opportunity after the weather became fairer, and found the "on course" of the beam to be squarely over the scene of the accident. This demonstrated it was far from where it should have been and was an important factor in causing the terrible calamity.

Four days later, too, on May 10, Inspector Jacobs of the Bureau of Air Commerce, reported the beam was still off, a distance of some 4 miles. "The south edge of the 'on course' signal of the northeast leg of the Kansas City range was found to be directly over the town of La Crosse, Mo.", he stated. (La Crosse is exactly half way between the scene of the accident and the Kirksville (Millard) Airport.)

Condition of MRL radio station at Kirksville

But the accident might have been avoided in spite of this defect had there not been the feature of another reserve aid, provided by the Government for just such emergencies. In a written report, this inspector of the Department of Commerce who flew over the scene May 10 states that he "was unable to hear the Kirksville radio range at a point about 2 miles away from the station with the volume of the receiver tuned 'full on.' At a point about 1 mile south of the Kirksville field, the Kirksville radio range signals came in with about the same intensity as the Kansas City radio range but it was necessary to have the volume tuned 'full on' to receive a satisfactory radio signal. Radio reception conditions were only 'fair', at the time of these tests, as there was considerable static."

Today, right over the scene of the accident, the signals from this station come in clearly, almost with the force and clearness of a full nearby range beam. The Kirksville station devices were rectified after the accident. The inspection required by regulations after installation had never taken place, and the station's chances of being in working order were about the same as when an inexperienced person sets up a farm lighting set. It may light up the incandescent lamps, but the improper setting before inspection and adjustment will probably result in giving extremely dim light. The light may be there, but its usefulness is negligible until adjusted under competent direction.

The rotating beacons

Granted these two failures had occurred, Pilot Bolton still had a good chance of flying "contact" and arriving safe and sound. This would have been the case had he been able to pick up the very last reserve aid provided for him by the Air Navigation Division of the Bureau of Air Commerce—the rotating beacons. In murky weather these lights cannot be seen very far, especially if the wattage is low. In good weather their chief value is their capacity for being seen, while in the direct focus of the beam, from extremely long distances. In bad weather pilots have had to rely on the piling up of candlepower because the directional, pencil-like shaft is conspicuous by its absence. It cannot penetrate fog, but it does "spill" all around and serves a useful purpose in that it sheds some light. This milky "mush-over", as they call it, has proven helpful to many a pilot lost on the bleak prairies on dark and stormy nights such as the night of the Cutting crash. Any one of three of these lights might have caught the pilot's eye in the mixture of scud, low clouds, patches of mist, and varying ceilings. This is specially true in Bolton's case, because at the altitude of, roughly, 100 feet that he maintained on the last half minute of his flight he was on about the same level as the beacons

which are westward and on higher ground, really on what is a flat plateau lying between the town of La Plata and Kirksville.

We are of the opinion that acts of omission caused the failure of the first two reserves above mentioned, and an act of commission, the last. To be specific: The Kansas City radio range was off course, and the radio station at Kirksville was dangerously weak. Both these defects were due to lack of effective inspection. The light beacons were useless.

Laxity of maintenance of aids to air navigation

Records of the Department of Commerce reveal that the aids to navigation in the district which includes the airway Kansas City to Kirksville (Millard Airport), Mo., were not maintained according to regulations legally in existence. Your committee has studied carefully all the maintenance sheets of the Bureau of Air Commerce and finds as follows:

In the Third District where this wreck occurred, with headquarters at Chicago, Ill., under the supervision of Manager Carl McCluer, servicing was completed at but 5 of the 19 stations audited during the first 90-day period of the year 1935. It is noteworthy that servicing had been neglected at those stations in the vicinity of the Cutting crash, namely: Kansas City, Mo.; Knoxville, Mo.; Kirksville, Mo.; and Burlington, Iowa. During the second quarter, including May 6, the date of the Cutting crash, only 2 of the 19 stations audited were serviced in accordance with the prescribed regulations. This would tend to indicate that the district manager had gained the impression regulations regarding servicing and maintenance were no longer to be enforced. It is to be presumed that this lack of maintenance, as prescribed by regulation, contributed to the failure of the aids needed by Bolton as his last reserves in the emergency.

Similar records in the Bureau of Air Commerce show that the new station (MRL type) at Kirksville (Millard) had never been inspected after installation, as it should have been, in accordance with regulations and the rules of common sense.

REDUCED BEACON WATTAGE

There is positive proof that dependence was placed on the beam penetration of the rotating beacons, forgetful of their usefulness as glow lights in a fog. They had been cut, ill advisedly, by orders, from 1,000 watts to 500 watts, without due approval of those who use them. This was done to effect a trifling economy, thereby imparting their usefulness in foggy weather when actual quantity of candlepower counts, not focus.

We doubt very much whether Bolton could have done any better had he been flying but 1 hour, instead of 9 hours and 15 minutes, before he ran into this situation. His manipulation of the plane while doing contact flying in those last few seconds indicates remarkable control of all his faculties, and perfect response of his nervous and muscular reflexes. The very fact that he set his plane down at its high landing speed in such a bad piece of ground without fatally injuring all aboard, is in itself convincing evidence of this.

We deliberately avoid mention of a number of controversial points which have come out, all of them leading up to the time when these three reserves proved to be lacking or useless. To consider further would serve no useful purpose. When the three reserves required at the time of the emergency were out, no more is needed to prove a case of Government negligence, to put it mildly.

OFFICIALS ENTRUSTED WITH THE PROTECTION OF PROPERTY AND LIFE IN AIR TRANSPORTATION

Senate Resolution No. 146, under which this committee is working, prescribes as follows:

"* * * and to investigate fully and thoroughly interstate air commerce, the precautions and safeguards provided therein, both by those engaged in such interstate air transportation and by officials or departments of the United States Government; and to investigate fully and thoroughly the activities of those entrusted by the Government with the protection of property and life by air transportation, and the degree, adequacy, and efficiency of supervision by any agency of Government, including inspection and frequency thereof * * *."

Under the Air Commerce Act of 1926, Public, No. 254, Sixty-ninth Congress, the Department of Commerce is charged with this responsibility. There are other agencies of the Government that have secondary powers, but these are not considered at this time. We confine ourselves to complaints we have found against the Bureau of Air Commerce itself, the agency within the Department of Commerce delegated with this responsibility, and to a survey of the allegations made against the chief of that Bureau, his two assistants, and the Aeronautic Information Section.

I. GENERAL CHARGES AGAINST THE BUREAU ITSELF AND THE COMMITTEE'S FINDINGS

Complaints against the Bureau may be divided into two categories: Organization and administration efficiency in operation.

(a) *Organization*

(1) The general complaint coming from everyone, both in the manufacturing and operating industry and from the public generally, is that the Bureau does not at this time have sufficient prestige or rank within the Department of Commerce to make for efficiency. It is pointed out that with the promulgation of Executive order of June 10, 1933, aeronautics in the Department of Commerce was relegated to the status of a Bureau. Until then it had been the aeronautics branch of the Department of Commerce, as recommended by the Morrow Board and as enacted in the Air Commerce Act of 1926.

The committee finds that such a claim is well-founded. As pointed out elsewhere in this report, it is impractical at this time to establish new agencies in the Government, and the proper place for the three main functions—promotion, regulation, and airway facilities—is within the Department of Commerce. But the work in aeronautics is still in such a state of flux that the activity should not be relegated to the status of a bureau. It should be returned to the dignified position it held as of June 10, 1933.

(2) It is alleged that personnel and financial control is outside the Bureau and in the hands of the Administrative Assistant to the Secretary of Commerce, thereby embarrassing the Director and his two assistants.

We find this to be true. For example, the Assistant Director in charge of Air Regulation, to appoint a man, must consult his own chief and the latter, in turn, must get the approval of the Administrative Assistant. To function smoothly, the Administrative Assistant should accept the recommendations of the Bureau chief and pass them immediately to the Secretary of Commerce for his approval.

(3) It is alleged that personal promotional and political activities cropping up here and there makes for inefficiency.

The committee finds that this is true. New construction and promotion of interesting developments is much more alluring to personnel than routine procedure. Without wishing to suppress in any manner the functions of the Bureau, the committee believes that, as in any good busines, all development and promotional work within the Bureau should be kept apart and entirely separate and distinct from the routine matters of the Bureau. Every automobile concern, for example, in the United States which has allowed its experimental work to be scattered throughout its production plant has failed and gone into bankruptcy. Violation of a sound business principle which demands that all experimentation be kept separate is just as fatal in this Government Bureau as in a private business.

(4) It has been alleged that too much power rests in Washington and that the Bureau should be organized so that its functions are decentralized over the length and breadth of the United States and its Territorial possessions.

To give the local representative of the Director of the Bureau facultative power, locally, to decide all routine matters and act upon them without the approval of Washington would solve this problem. The committee feels that this would make for much greater efficiency. Take, for example, the case of airplane accidents. Minor crashes occurring throughout the country are now inspected locally, but when a major accident occurs a high-ranking delegation proceeds from Washington. Invariably, this procedure results in an unnecessary publicity which does anything but promote and encourage aeronautics, as intended in the Air Commerce Act.

(5) It has been stated that the Bureau does not take advantage of the cooperation offered by many States and has failed to encourage State activities that might develop the functions of the Department of Commerce. The committee believes this is true.

To encourage development of State cooperation, and to assist State officials who might be interested, anxious, and willing to develop this, your committee prepared the bulletin on State Aeronautical Legislation Digest and Uniform State Laws, Bureau of Air Commerce Aeronautics, Bulletin No. 18, referred to elsewhere.

(6) That the Bureau of Air Commerce has no head who will assume full responsibility and that there is too much shifting of responsibility within the Bureau and lack of decision.

The commttee is obliged to find that this is true. It was caused by the fact that at first three men were placed at the head with equal status and when one, subsequently, was made chief, he became "top man" in name only, and did not enjoy the complete loyal cooperation, support, and obedience to which he was entitled. We refer to this again.

(b) *Administrative efficiency*

(1) It has been alleged time and again that the Bureau is not carrying out efficiently its functions, as prescribed in the Air Commerce Act.

The committee believes this to be true, but finds the trouble is largely a question of organization. No legislation is needed to correct this situation, which is purely one of administration. Every man in the Bureau, with the possible exception of the Director and his two assistants, should be on a civil-service status, because the Bureau cannot afford to lose good men who have had long experience in aeronautical matters within the Bureau at the expense of the Government.

(2) It has been alleged that good men were dismissed from the Bureau for political reasons with the advent of the new administration and at the expense of efficiency and safety. The committee definitely finds this to be a fact in the cases of Miller and Bourne, and this subject is gone into in greater detail later.

(3) That the Bureau does not prepare its annual estimate efficiently for presentation before congressional committees. This contention was sustained during the life of this committee in February 1936, when the appropriations for the fiscal year 1937 were being discussed before the House Appropriations Committee. Reading the evidence seems to indicate that the committee gained the impression the Bureau did not know itself what it wanted, what the funds were provided for, or what different items of construction and maintenance would cost.

(4) It has been alleged that the Bureau is inclined to stress one phase of aeronautical development and routine, to the embarrassment of another. The committee does not agree fully with this allegation but feels that there could be considerable improvement by budgeting carefully all activities encountered in the carrying out of the Bureau functions.

(5) It has been alleged that the Bureau does not cooperate with other agencies of the Government. The committee has been unable to establish this as a fact and believes that it is not true.

(6) That there is no merit system in the Bureau which would make for efficiency. When the committee considered the case of Wall, Mount, Miller, and Bourne, not to mention that of Clement, it was constrained to agree that in the last 2 years the man who worked each day sufficiently to get by that day had less chance of being dismissed than the one who, as a member of the Bureau, would energetically work long hours to carry out the functions prescribed in the Air Commerce Act.

II. CHARGES AGAINST THE DIRECTOR OF AIR COMMERCE

As Senate Resolution 146 demands that this committee investigate the individuals most directly concerned with providing safety, we have had to take heed to the different allegations presented from time to time with respect to the higher officials in the Bureau of Air Commerce.

In considering these it has been advisable to divide them into two classifications: Those alleging lack of qualifications, experience, and background and those alleging inefficiency in administration.

(a) *Lack of qualifications, experience, and background*

We believe that the Director of Air Commerce has all the necessary qualifications and experience to justify him holding the office of Director of Air Commerce. Any allegations made in this respect were as to lack of experience, not in matters aeronautical but in business and governmental duties. While he was not empowered to name his assistant directors and was selected at a time when he, with those two, were of equal rank and standing, yet we do find that on his entrance to office, to offset any lack of experience in financial accounting and control within the Bureau, he appointed three men to act more or less as efficiency experts, namely, Harriss, Sangree, and Mount. It may have been that these gentlemen were too efficient in their duties. But the fact remains that only one is active at the present time. We have been informed in reliable sources within the Government departments that he has invariably cooperated to the full with other agencies of the Government so that any allegations as to qualifications may be ignored.

(b) *Inefficiency in administration*

With regard to administrative inefficiency, if, as we have pointed out, the organization of the whole Bureau is such that it is impossible for it to be effective in carrying into effect those objectives of the Air Commerce Act, then it is rather difficult to gage the efficiency of the Director in his work. By looking at it in a broader way, the contention would be well founded that he should have done everything in his power to bring about changes in organization which would make for greater efficiency. We find that he did make several attempts to do this, but with no avail. The assistant directors, particularly the chief of the Air Navigation Division, had too much power and did not cooperate as fully as they might have in taking a broader view of things, having in mind the functions of the whole Bureau and not of their individual responsibility. It was impossible for the Director, therefore, to effect a reorganization, even though he tried. Several organization charts were prepared and amended, but it did not "clean house", as so many people in the industry believed for such a long time was essential.

Here are some of the allegations which have been made as to efficiency and what the committee feels is a fair finding in each respective case.

(1) That he has too many interests and therefore certain duties are neglected.

The director of any bureau must, of necessity, have large and varied interests. In a good organization, it is essential that he be an executive. This means that he must rely upon his subordinates in order that he may have plenty of time to scan the latter's work and check up on how it is coming along, in an attempt to do the job. The Director of Air Commerce cannot be expected to administer the details of his subordinates, but he should be familiar with everything that is going on, even to the last detail, and he should coordinate the activities of all to a common purpose.

We do not find that the Director has too many interests, but we do believe that he was not as familiar as he should have been with what was going on in the different departments. We are inclined to attribute this to the fact that there were too many aspiring heads within the Bureau. This condition is not quite so apparent at the present time. In February of this year, for example, the antipathy—and we cannot call it anything else—which existed between the Air Navigation Division and the Air Regulations Division, undoubtedly due to Colonel Johnson's wise activity, was eliminated to a large degree. In direct proportion as that feeling was eradicated, the safety factor in aeronautics definitely was improved.

(2) That he does not get out into the field enough.

In such a big responsibility, reaching throughout the length and breadth of this great country, it would be well for the Director of Air Commerce to spend most of his time in the field, especially when so much under the present plan is centered in Washington. It is absolutely impossible to make intelligent decisions on the important problems in aviation affecting safety unless one gets out on the air lines, attends most large aviation meets, personally appears before the meetings of State aviation officials and similar organizations, and actually flies, himself, in miscellaneous or nonscheduled flying, even though he does not himself pilot the plane. To do this efficiently would demand that the Director spend at least 50 percent of his time in the field. This may not be true after flying has become crystallized, but in the present stage of flux it is positively essential.

In all fairness, the committee is forced to point out, however, that such work in the field demands loyal lieutenants to act as the Director thinks in the latter's absence. Until July 1, 1935, the Director of Air Navigation Division was not working close enough with the Director himself, and during his appearance before our committee in open hearings April 29, 1936, the Director of the Air Navigation Division did not display the loyalty to the Director of Air Commerce which would permit the latter to leave Washington 50 percent of his time.

(3) It has been charged that he publicized unduly the $700 airplane, and therefore ruined the sale of small planes to the embarrassment of certain manufacturers.

In finding that this is a fact, the committee does not want to hold this against the Director as a very material fault. It is very evident that something must be done to correct the lamentable record for fatalities in miscellaneous flying. This requires a safe vehicle and an inexpensive one. Unless airplanes are safe inherently, accidents will occur in the hands of those who inevitably will own one. Much flying will be done by those who are determined to fly in cheap and obsolete planes. The Director, in engineering a solution of the impassé into which miscellaneous flying operations have become entangled, did err in publicizing the $700 airplane before the vehicle was a reality. But in all fairness to the Director we have had to consider the wave of enthusiasm for inexpensive planes that has been sweeping Europe recently.

We will not consider the question of whether it would be advisable, but we do believe that an airplane or autogiro that will be safe and inexpensive will be constructed to sell for $1,500 within the next 5 years. As we are convinced that it must be an airplane which will lend itself to modern operation methods, we are definite in our statement that the price of the private safe airplane will for the next 3 years be much closer to a figure of $4,000 than the $700 plane which has caused so much anxiety within the industry.

(4) It has been alleged that he was not justified in his safe-plane development.

The committee cannot agree in this contention. It is of the opinion that the work of the Bureau in this direction is worthy of commendation. The development of the autogiro and of the three-wheeled safe planes carried on or encouraged by the Bureau at comparatively low cost to the Government has not been just another attempt. It has been productive of some valuable contributions to the science of safe flying and should be continued.

III. CHARGES AGAINST THE CHIEF OF THE AIR NAVIGATION DIVISION

These are in two classifications: Those alleging lack of qualifications, experience, and background, and more specific allegations.

(a) *Lack of qualifications, experience, and background*

Many persons in Government circles and in the private industry have alleged that the Director of the Air Navigation Division did not have sufficient qualifications on assuming office. A summary of his experience and qualifications submitted by the Bureau to this committee claims for him "United States Army Air Corps, commissioned officer (pilot), 1917–18." Anyone reading this would naturally think he was in the Army in aviation 2 years during the World War. As a matter of fact, on checking up with The Adjutant General of the Army, we find that he was only in the Army 1 year, including the few weeks waiting for reporting and the few months as cadet and second lieutenant, respectively. His chief contribution to aeronautics was a three-volume work covering all phases of the subject, wherein he appears as author of Commercial Aeronautics.

(b) *Specific allegations*

(1) Without considering the complaints against this assistant director which have come from the industry and from personnel within his division, the committee has been embarrassed so many times in its investigation of the Air Navigation Division that it is hardly necessary even to consider those that have come to us, but, rather, to depend on our own contacts.

While there was the appearance of cooperation, there was a continual undercurrent of distrust in the sincerity of the work the committee was doing. It may suffice to say that every attempt made by the committee to point out what might be termed an irregularity was met with defiance or apparently evasive statements. His attitude seemed to be that there "could be no wrong" within the Air Navigation Division. From about the beginning of this year the committee has had no confidence in the efficiency of the Air Navigation Division. It is forced to feel that this situation has contributed more than any one factor to the well-known unsatisfactory condition of the important Bureau of the Government charged with aviation safety.

It may have been the lack of background which caused him to listen to the suggestions made by subordinates and prompted him to carry them over the head of the Director of Air Commerce to higher places. But be that as it may, the fact remains that the relationship of the head of this committee to the Director of Air Navigation Division has been anything but satisfactory. The committee has no difficulty whatsoever in appreciating the discouragement that has existed in the hearts of men within his Division.

(2) That he carried on interoffice politics within the Bureau to the embarrassment of the important safety responsibility he held.

This official spent so much time on interoffice politics that there resulted confusion, lack of confidence, and allegations by his own personnel of unfairness and unfitness.

(3) It has been alleged that he failed to back up his subordinates after having given them difficult assignments, that he would use a subordinate as a cat's-paw, so that if things worked out all right he would get the credit himself, but if the work failed the blame would be on the subordinate.

This was true, in fact, in the case of Jay A. Mount. The problems presented to the committee because of this case might never have come up, to the embarrassment of this committee.

(4) It has been alleged that a questionnaire was sent to all transport pilots in the United States for the purpose of obtaining endorsement of the work of the Air Navigation Division.

While the committee does not put a great deal of weight on questionnaires sent out by a Government official to people more or less under control of Government, a great deal of good did come from the constructive suggestions sent in response. We have compiled these, and the synopsis is in our records. From the press release, given when the Bureau of Air Commerce studied the replies, one gleaned an entirely erroneous impression as to the true situation on air navigation facilities. It is so easy to juggle figures in statistics and have them convey a wrong impression that the whole procedure was brought into question. The newspapers, as a result of the press release, were inclined to pat the Bureau on the back, but we have no doubt that if the excerpts which we have gleaned from the questionnaires and answers had been before the editors at the same time the stories would have been different.

Among the papers referred to us by the Department of Commerce we find a memorandum to the Secretary of Commerce dated March 1, 1935. This memorandum is signed by the Honorable John Dickinson, then an Assistant Secretary of Commerce.

The subject of the memorandum is "Removal or furlough of Thomas Bourne, L. C. Elliott, I. D. Marshall, and G. C. Miller as district managers of the Bureau of Air Commerce at Newark, Fort Worth, Chicago, and Salt Lake City, respectively." These four employees of the Bureau of Air Commerce were indefinitely furloughed without pay by telegrams issued on February 4, in accordance with a vote of the personnel committee on that date. For some reason there seems to have been a change of heart, and on February 11 there was a further order that the employees in question should be temporarily relieved from their duties and instructed to report to Washington.

Apparently the Secretary of Commerce determined to look further into the matter of the separation of these employees from the Service. In any event, the memorandum to which reference has been made quotes Mr. Dickinson as saying:

"In accordance with your oral instructions, I am personally rendering this report. * * *

"Immediately after the issuance of the original telegraphic order of the Bureau of Air Commerce on February 4, certain facts came to my attention which seemed to require that the case should be fully gone into in order to determine whether or not the intent of that order should be carried out. These facts may be summarized under two headings:

"1. That the removals were being made primarily or largely because the men in question had served in the Bureau under the previous administration and in order to make room for new appointees who would owe their position to the present administration; and

"2. That insofar as the removals might be justified on the basis of lack of efficiency or competence on the part of the employees in question, the judgment of competence or incompetence rested upon the reports of, and was connected with, the relation of these men to another hold-over employee of the Bureau, Mr. J. A. Mount, and involved an effort on the part of Mount to secure their removal because they were personally obnoxious to him.

"The committee, while I sat with them, examined Director Vidal, Mr. N. Sangree, Assistant to the Director, and Mr. J. A. Mount, Superintendent of Maintenance, as well as three of the persons affected, namely, Messrs, Bourne, Marshall, and Miller.

"My findings with regard to the two above-mentioned points are as follows:

"1. Irrespective of the reasons which may have actuated the officials of the Bureau of Air Commerce in originally recommending the removals, Assistant Secretary Mitchell, who sat as a member of the committee while the three managers were being examined, asked each and every one of them whether they did not think that the approval of the New Deal by the people of the United States as expressed in the election of President Roosevelt required a clean sweep of Government employees connected with the old deal and whether they did not think that having held their jobs for a number of years it was time for them to get out and let others have a chance at these attractive and lucrative jobs. He put this question repeatedly and stated in no uncertain terms that it was his opinion that it should be answered in the affirmative, and that new people owing their appointment to the new administration should be given the jobs in order that these good things might be spread around.

"There can be little doubt that these questions and expressions by Assistant Secretary Mitchell addressed directly to the affected managers must leave no uncertainty in their minds that the desire to create jobs for others was the determining factor in the mind of the Assistant Secretary in charge of the Bureau, irrespective of the reasons which may have operated upon the Bureau officials themselves."

The charge was made by witnesses before our committee that the efficiency of the Bureau of Air Commerce had been seriously impaired by politics. This charge is confirmed not alone by former Assistant Secretary Dickinson but by the testimony of two of the employees referred to in this memorandum. For instance, on May 28 Mr. Thomas B. Bourne testified: "I then contacted the Assistant Secretary, Mr. Ewing Y. Mitchell, who informed me that I should be willing to step out of the Government service after 9 years and give some of the boys on relief a chance."

Continuing his testimony, Mr. Bourne stated, page 2094 of the hearings: "Later on, in a personnel meeting, Mr. Mitchell told me I was not in accord with the New Deal, and I told him that my interpretation of being in accord with the New Deal was to get supporters for the New Deal rather than to drive people away from it, as he was doing."

In letters to Senator TYDINGS and Senator GOLDSBOROUGH it was alleged that Mr. Bourne was not cooperating fully in the maintenance of the airways. It was alleged that the action was taken purely "for administrative reasons; no charges were preferred against Mr. Bourne."

Mr. Miller, another employee who had been dismissed, was a witness before our committee. He stated that in the summer of 1934 Mr. Martin said of him that he "was the best qualified district manager to take over the responsibility of placing the fifth district on an efficient working basis." On February 4, 1935, a telegram from Martin advised Miller that he was relieved of his present duties and placed on indefinite furlough status. An outstanding statement of Mr. Miller's, found on page 2145 of the record, bears out the fear expressed by former Assistant Secretary Dickinson that removals were being made "to make room for new appointees who would owe their positions to the present administration." The following is Mr. Miller's statement: "Two main questions that stick out in my mind, and probably so because they were considerably shocking, was the question wherein Mr. Mitchell asked, in effect, if I did not think that those who had been associated with the old administration should be let out and replaced by people who were favorable, I think he stated, to the New Deal. The other question was a direct question as to why I had not taken every opportunity to remove mechanicians and other civil-service employees and replace them with new blood, as he expressed it."

When asked to interpret the expression "new blood", as to whether it might mean more efficient personnel, Mr. Miller replied: "That, of course, is entirely a supposition on my part, but my reaction at that time was that he meant people who would be acceptable to himself and the New Deal, as he expressed it."

It might be said in passing that apparently no charges were ever made against Mr. Miller. Whatever they were, they were based on statements made by Mr. Mount. "As a matter of fact", he said, "on every occasion when I demanded that I be furnished with written charges, I was advised there were no charges against me."

Reverting to Secretary Dickinson's memorandum, we find the following on page 4:

"The principal charge brought by Mr. Mount against District Managers Bourne and Marshall was their delay in completing inventories of the supplies in their districts in accordance with the schedules of the new system of property accounts. Their answer was that this delay was largely occasioned by the above-mentioned shift of property which coming simultaneously with the request for the inventory slowed down the latter. Mr. Mount also charged that since July 1934, when the system of keeping records of maintenance was instituted, mechanicians subject to these two managers were shown by the reports not to have been diligent in servicing the aids in their sectors. The managers retorted that the purpose of the check-up was to disclose such negligence on the part of the mechanicians and that they were doing everything in their power to improve the situation.

"The case of Manager Miller presents a somewhat different situation. Mr. Mount stated that Mr. Miller had been entirely cooperative with him in inaugurating the system of property accounts at Forth Worth, Tex., where Mr. Miller was originally manager, and which was the first depot at which the system was introduced. Apparently no claim of inefficiency was made against Mr. Miller prior to September 1 last, when he was transferred to Salt Lake City.

"On the other hand, a question may be raised as to the desirability of keeping Mr. Mount in his present position in view of his temperament and the possibility that because of this a similar situation might arise between him and anyone else who was chosen to fill the position of district manager. There is the added fact that Mr. Mount is at the present time under charges of falsification in connection with his pay account. Still a third question which arises, however, is whether, in view of the very high degree of confidence which has been reposed in Mr. Mount by Director

Vidal, Mr. Mount could be removed altogether from the service, apart from the question of his pay account, without bringing the present administration of the Bureau of Air Commerce into disrepute.

"The consideration last advanced places a serious obstacle in the way of a solution of the difficulty by the dismissal of Mr. Mount. On the other hand, the dismissal of the district managers, which seems to be required if Mr. Mount retains his present position, undoubtedly subjects the Bureau to criticism on substantial grounds for making removals of experienced men on highly questionable grounds. I suggest that for these reasons neither of the above alternatives seems to offer a way out of the difficulty, and that in my opinion there is a practicable third alternative which should be adopted. This would be to transfer Mr. Mount, provided the matter of his pay account is satisfactorily cleared up, to one of the district managerships in the field, where he would be given an opportunity to display what actual administrative ability he may have in a position which would not bring him into conflict with any of the district managers between whom and himself the present situation of personal antagonism has grown up. In the second place, Mr. Mount's present position as superintendent of maintenance might be filled by one of the district managers whose cooperation has not been brought into question, namely, Mr. Polk, of Atlanta, or Mr. A. O. Preil, of Oakland, Calif., or Mr. Elliott, of Fort Worth. In the third place, the remaining district managers might be shifted about between the districts in order to increase their efficiency and sustain the position which the Bureau has taken that their activity has not been all that it should have been.

"I recommend this course on the ground that it will not necessitate any action which would imply that the Bureau had misplaced its confidence in Mr. Mount or, on the other hand, had taken an unwarranted attitude in its implied criticism of the district managers. At the same time it would avoid the necessity of going through with the dismissal of these men, which, in my opinion, would afford a basis for criticism which would be extremely hard to meet.

"The position of district manager is a highly important one, requiring not merely broad aviation experience but business ability and administrative capacity of a kind which is impossible to prove except by experience. These positions are in no way connected in the slightest degree with any policy-forming activity of the Government. They are purely technical and administrative. I believe that for the Department to put itself in the position of sanctioning removals from such positions on other grounds than incompetence or breach of trust would be to take a step backward in the highly important matter of improving the personnel of the Government service. If the Government service in its nonpolitical branches is to prove attractive to young men of ability and training, the policy of the Government with regard to appointments and removals as to such positions must be one which will hold out the prospect that competence and competence alone is sufficient to insure the opportunity to serve. Nothing could be more destructive of such assurance than anything which would promote the belief that a mere change in the political superstructure of the Government would be followed by dismissals based on no better ground than the fact of service during the preceding administration."

The conditions surrounding the removal of I. D. Marshall from the service are not dissimilar to those relating to Thomas Bourne and G. C. Miller. It is apparent to us that these men should not have been removed. Perhaps it is too late to recommend their reinstatement, but, to say the least, if any stigma attaches to them by reason of their detachment from the Government service, they are entitled to be cleared of all criticism.

When it comes to the matter of J. A. Mount, we face a complicated problem. There will always continue the suspicion that he was dismissed because of his frank statement to our committee of the conditions existing in the Bureau of Air Commerce and the navigational aids having to do with safety in aviation. There is no need to enlarge upon this matter. Technically, the Department had reason to act as it did. One of the charges preferred might be explained away; yet if the pound of flesh had to be forfeited, there is legalistic excuse for that action. The members of the committee do feel that their wishes regarding Mount were lightly treated, but it is unnecessary to say anything more on this subject. There can be no doubt that the charges made by him as regards failure of maintenance of the radio beams, the station lights, and other navigational aids, were abundantly proven. It is not necessary to take his testimony alone, because there were many other witnesses who confirmed the charges made by Mr. Mount.

We can hardly understand the unwillingness of those in charge of the Bureau of Air Commerce to frankly concede the many defects in the administration of the important duties of this branch of the Government.

Reasons could be found in the way of lack of appropriations and perhaps lack of sympathy from higher-ups. But we were impressed by a lack of frankness and the unwillingness of those in immediate charge of the work to cooperate with the committee.

We fear that the Secretary of Commerce undertook the impossible when he sought to have successful operation of the Bureau by placing three men with coordinate powers in charge of the Bureau. Certainly there has been grievous lack of cooperation, and in our opinion there are defects so fundamental that they must be remedied before there can be proper administration of this important Bureau.

We question the professional equipment and preparation of Mr. Rex Martin. A man of much larger experience is needed for this position. He must be chosen, not with reference to his political affiliations but strictly because of his professional ability, his known success as an administrator, his possession of tact and qualities of leadership. These qualities are not combined in Mr. Martin. We can say this without any reflection upon his character, his zeal, or his desire to do a good job. We have no doubt that he is far more capable than are the members of this committee. But for a place of great responsibility such as he is filling a larger man is needed.

Concerning Colonel Cone, we have no recommendation to make. He came through the ordeal without criticism.

When we approach the question of what to recommend regarding Mr. Vidal, nominally in charge of the Bureau of Air Commerce, we are at a loss. He is an amiable gentleman. He has a good background. Our fear is that he is too amiable, that he is lacking in iron, positiveness, and the determination to keep the employees under his direction functioning according to schedule.

It is unpleasant for us to be required to reflect in any manner whatever upon individuals. We wish we could be spared this necessity, but we strongly recommend to the Secretary of Commerce that he thoroughly overhaul the Bureau of Air Commerce with a view to improving its administrative officials. Some one person must be given the responsibility in the way of oversight of this Department, its personnel and many activities. It may be difficult to find exactly the right individual for the position; but until there is greater firmness, greater experience with men, larger knowledge of the problems involved, there can be no hope of improvement in the Bureau of Air Commerce.

We shall present our complete report early next year.

ROYAL S. COPELAND, *Chairman.*

ENROLLED BILLS AND JOINT RESOLUTIONS PRESENTED

Mrs. CARAWAY, from the Committee on Enrolled Bills, reported that on June 19, 1936, that committee presented to the President of the United States the following enrolled bills and joint resolutions:

S. 283. An act for the relief of Beatrice I. Manges;

S. 1794. An act to effectuate certain provisions of the International Convention for the Protection of Industrial Property as revised at The Hague on November 6, 1925;

S. 2047. An act to promote the general welfare of the Indians of the State of Oklahoma, and for other purposes;

S. 2119. An act for the relief of Amos D. Carver, S. E. Turner, Clifford N. Carver, Scott Blanchard, P. B. Blanchard, James B. Parse, A. N. Blanchard, and W. A. Blanchard, and/or the widows of such of them as may be deceased;

S. J. Res. 278. Joint resolution to modify and extend the act entitled "An act to include sugar beets and sugar cane as basic agricultural commodities under the Agricultural Adjustment Act, and for other purposes", approved May 9, 1934, as amended, and for other purposes;

S. J. Res. 280. Joint resolution to ratify and confirm the appointment of Isaac Gans as a member of the Alcoholic Beverage Control Board of the District of Columbia; and

S. J. Res. 286. Joint resolution fixing the date of meeting of the Seventy-fifth Congress.

ASSISTANCE TO STATES IN PROGRAMS OF EDUCATION

Mr. HARRISON. Mr. President, I ask consent to introduce for reference to the Education and Labor Committee a bill relative to Federal assistance to the States for public education.

The VICE PRESIDENT. Without objection, the bill will be received and referred, as requested by the Senator from Mississippi.

The bill (S. 4793) to promote the general welfare through the appropriation of funds to assist the States and Territories in providing more effective programs of public education was read twice by its title and referred to the Committee on Education and Labor.

Mr. HARRISON. Mr. President, I ask unanimous consent to insert in the RECORD a statement in explanation of the bill that I have just introduced.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FEDERAL ASSISTANCE TO THE STATES FOR PUBLIC EDUCATION

The time has arrived when the Government of the United States through its Congress must more fully discharge its obligation in the support of schools for the masses of our citizens.

Even before the onslaught of the depression thousands of our rural schools did not have sufficient funds to pay for long enough school terms. Our rural teachers for the most part were the most poorly paid public servants in the Nation. During the depression conditions have become still worse. Over 100,000 schools attended by over 3,000,000 children have been forced into a practical state of bankruptcy. School terms have been shortened until in whole States the average is not more than 6 months per year. High schools have been closed and reopened on a tuition basis, thus barring the poor. During the depression school districts have increased their indebtedness by nearly $1,000,000,000 in order to keep going and to provide for increasing enrollments. Farmer's taxes on real estate, a large part of which goes to support schools have in a vast majority of the school districts of the Nation reached the maximum consistent with justice and good business. The Federal Government must more fully discharge its obligation toward its children everywhere.

FEDERAL CONTRIBUTIONS TO EDUCATION

From the earliest days of the Republic the Federal Government has made financial contributions, directly or indirectly, to the States for the establishment and maintenance of public educational institutions on all levels. From the Revolution to the Civil War the Federal Government endowed higher and common schools with lands and made grants of surplus tax moneys.

Following the Civil War, land grants to new States were continued and the policy of direct money grants begun. The Morrill-Nelson Act (1862 and 1890), appropriating funds for land-grant colleges and universities; the Hatch Act (1887), appropriating money for the establishment of agricultural experiment stations in connection with land-grant colleges; the Smith-Lever Act (1914) and the Capper Ketchum Act (1928), providing for agricultural extension work through land-grant colleges; and the Smith-Hughes Act (1917) and subsequent similar acts for vocational education in agriculture, trades and industries, and home economics all illustrate a fundamental interest of the Federal Government in the fostering of public education.

PUBLIC EDUCATION A MATTER OF FIRST IMPORTANCE

That public education is a matter of first concern for the Federal Government, as well as for States and communities, is evidenced by the fact that ours is a representative form of government founded upon the democratic principle that final power and authority rests upon the will of the people. Being founded upon the authority of the ballot, the Government, in order to perpetuate and protect its ideals, purposes, and institutions, must see to it that each individual citizen is given full and free opportunity to acquire the knowledge, attitude, and will to exercise intelligently, honestly, and effectively the privilege of suffrage. That public education is a necessary function of government founded upon the principles of democracy has been well recognized by statesmen from the early days of the Republic:

"In a country like this, where every man may reap his own harvest, which, by proper attention, will afford him much more than is necessary for his own consumption, if there cannot be money found for education, there is something amiss in the ruling political power."—George Washington.

"If a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be. There is no safe deposit (for the functions of government) but with the people themselves; nor can they be safe with them without information."—Thomas Jefferson.

"Education, to accomplish the ends of good government, should be universally diffused. Open the doors of the schoolhouse to all the children in the land. Let no man have the excuse of poverty for not educating their offspring. Place the means of education within his reach, and if he remain in ignorance, be it his own reproach. * * * On the diffusion of education among the people rests the preservation and perpetuation of our free institutions."—Daniel Webster.

"Popular education is necessary for the preservation of those conditions of freedom, political and social, which are indispensable to free individual development. And * * * no instrumentality less universal in its power and authority than government can secure popular education. * * * Without popular education, moreover, no government which rests upon popular action can long endure. The people must be schooled in the knowledge, and, if possible, in the virtues, upon which the maintenance and success of free institutions depend."—Woodrow Wilson.

If, according to the Declaration of Independence, one of the inalienable rights of man is the right to life, liberty, and the pursuit of happiness, it must necessarily follow that the right to be educated is an inalienable one. No man has liberty nor can pursue happiness who is permitted by his country to grow up in the thraldom of ignorance. The opportunity to have one's abilities, aptitudes, and capacities developed to their fullest potentialities is necessary to the pursuit of happiness and is, therefore, the inalienable right of every American child.

The preamble to the Constitution of the United States declares that the Constitution is ordained and established "in order to form a more perfect union, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity." It is an obvious fact to enlightened people everywhere that none of these blessings is possible unless each generation of citizens is educated. Hence the schools are our most fundamental public institutions and are a matter of first concern for our Government.

MOBILITY OF POPULATION COMPELS FEDERAL INTEREST

The interest of the Federal Government in the schools of the people is further reflected in the great mobility of our population. There is an increasing amount of movement of people from one State to another. In 1930, one out of each five native-born persons in the United States was living in a State other than that in which he was born. The percentage of persons living in a State other than that of birth has increased each decade since 1900 and has remained fairly constant since 1870. The percentage of interstate migration ranges from 7.8 in Maine to 57.5 in Wyoming.[1] In fact, some of the States that now have the best supported systems of public education have the highest percentages of citizens born in other States. For example, in California more than two and one-half million of her four and one-half million American-born population first saw the light of day in other states.[2] Thus it happens that each of the States has a vital interest in what kind of educational facilities are offered in each of the other States, and education becomes a national problem.

MORE CHILDREN AND LESS WEALTH IN SOME STATES COMPELS FEDERAL INTEREST

The facts concerning the distribution of the Nation's population of educable age also make it to the interest of the Federal Government to take steps to guarantee a fair distribution of educational opportunity. Among the States there are great differences in the number of children as compared to the number of adults. In one State the number of persons 5 to 20 years old is only 25 percent of the total population, while in another State the number is 41 percent. In these same States, if we consider the number of children of elementary and high-school age as compared to the

[1] Data for 1900–1920 are from Fourteenth Census of the United States, 1920, Population, vol. II, table 13, p. 620. Data for 1930 adapted from Fifteenth Census of the United States, 1930 (press release, Mar. 21, 1932) and from Population Bulletin (second series), United States Summary, table 32, p. 24.

[2] Eells, Walter Crosby, Nations Schools, vol. 13, no. 22, May 1934.

number of persons of productive age, 21 to 65 years old, we find that in the first State there is only one child to 3.4 adults, while in the second State there is one child to 1.4 adults.[3] The State with the relatively small number of children has three times as great per-capita wealth and per-capita income as the State with the relatively large number of children.[4] There is small wonder then that the first State spends nearly five times as much per pupil for schools as the second State.[5] If, in the first State, the number of children were more than doubled, and the wealth and income reduced by two-thirds, the two States would then be in comparable position with respect to the education of their children.

For the Federal Government, in the face of these facts, to stand aloof on the theory that children can have equality of scholastic opportunity if the States will take proper action can result only in continued injustice to millions of the Nation's children and future citizens.

Under present conditions the most money for schools is being spent in States and communities that have the fewest children, and on children who in turn will have the fewest children.[6] The pursuit of this policy is detrimental to the national welfare and an injustice to the children of the country. Only the Nation, as a taxing and spending unit, can change this undesirable condition.

SOME STATES RICH, SOME POOR

If the Federal Government could be sure that equitable effort by States and local units of government would protect the inalienable rights of all children by the provision of adequate educational opportunities, it may be that the matter of supporting schools could be left entirely to the States and their communities. It is now a well-established fact that equitable effort on the part of the several States and their local subdivisions will not and cannot provide adequate schools for all the Nation's children.

It is so well known in all our States that the communities and local governmental units differ widely in their ability to pay taxes that larger dependence on State support and decreased dependence on local support of schools has become a necessity and an actuality in a large majority of the 48 States. Since 1930 the proportion of State support as compared to local support of schools has increased by more than one-third.[7]

The same economic conditions that have made increased State support of education necessary have made inevitable Federal participation in the financial support of our schools. The concentration of wealth and its ownership, the increased corporate form of ownership, and increasing economic interdependence of States and regions of the Nation have resulted in insurmountable differences in the ability of States to raise revenue for the support of schools. All of the best-known measures of wealth, income, and spending ability of the several States lead inevitably to the conclusion that the richest State is from six to eight times as rich per capita as the poorest and is more than that many times as able to pay taxes for the support of schools and other necessary governmental services.[8]

Recently studies have been made showing that if the second model tax plan recommended by the National Tax Association were put into effect in each of the 48 States and each State spent for public schools the average amount spent per pupil in the Nation as a whole, the richest State would find it necessary to spend only 16.5 percent of its tax resources for schools, while the poorest would have to spend 96.5 percent, leaving practically nothing for all other governmental services. There are 12 States that would have to spend more than 50 percent of their tax resources for schools while there are 11 States that would have to spend less than 25 percent for that purpose.[9]

RICH OPPORTUNITY, POOR OPPORTUNITY

The differences in the economic ability of the States to support public schools are directly reflected by the differences in educational opportunity offered in the respective States. The average length of school terms in the richest State is more than 9 months per year, as compared with only 6.5 months in the poorest State. Differences in the expenditures per pupil, salaries per teacher, and value of school property per pupil are about 5 to 1 in favor of the richer States.[10]

STATE'S EFFORTS VERSUS STATE'S ABILITY

It is frequently said by persons who do not believe that the Federal Government should assist the States in the support of public education that the States can support adequate schools if they want to and if they will make the necessary effort. The truth of that statement will be determined by what is defined as adequate and upon what effort is to be construed as reasonable. The determination of these standards is, I think, a relative matter to be judged in terms of what States usually do about them.

In order to show what the States are doing on the average and to show to what extent the public schools of States are determined by their economic ability, I am placing in the RECORD two tables referred to as exhibits A and B.

All the known facts as to the ability of the States to pay taxes, the effort they make to support schools, and the amount they spend for schools show that the adequacy of the schools of a State is largely determined by the economic ability of that State to pay taxes and not by the effort made to pay for schools. For example, the State of South Carolina, according to the latest researches, ranks forty-sixth among the States in economic ability per capita to raise public revenues, forty-fourth in the expenditures per pupil for schools, but ranks eighteenth in the percentage of tax resources devoted to schools. My own State of Mississippi ranks seventh in her effort to support schools, but in spite of that fact ranks forty-sixth in expenditures because she ranks forty-eighth in economic ability.[11] On the other hand some of the States that make the highest expenditures per pupil, because of great wealth, do so with the least effort. The facts presented are an irrefutable argument against the contention that adequate support of public schools is a matter of State willingness.

The need for Federal assistance in the support of public education is therefore fundamentally based upon economic necessity.

FEDERAL STIMULATION OR FEDERAL SUPPORT

As has been said previously, the Federal Government has from its beginning been continuously aiding the States in the support of educational institutions. A large part of the direct money grants to the States has been based on the principle of stimulating the States to undertake new kinds of educational work, as, for example, vocational education. These grants have been made on condition that States and localities match dollar for dollar the Federal appropriations. For the purpose of getting new and needed types of education started such policy is good and effective. What the States need today, however, is not stimulation to further effort, but funds to pay for educational opportunities needed and wanted by our people. The time has arrived for the Federal Government to assume its fair share of the cost of all education in all the States and to guarantee sufficient funds to support the kinds of education it has so effectively stimulated. What is now needed is the guarantee of an acceptable standard of educational opportunity for all the children of all the people.

STATE AND LOCAL CONTROL

It is inherent in the development of the system of public education in this country that it should be subject to State and local control. Public schools grew up as local institutions. From the beginning they have been close to the people and administered by local boards of education usually elected by vote of the people. Upon the founding of the Union the control of the public-school system was left as a prerogative of the States, and every State constitution accordingly has declared the maintenance of public schools to be a primary function of the State. The States in turn have delegated broad powers to local units of government in the establishment, support, and control of public schools. Thus local control of the public schools is a part of the American tradition and an indigenous part of our system of democratic government. It should remain so.

Let it be remembered, however, that it is a well-accepted principle of American Government that the Federal Government should and legally can assist the States financially in carrying on services and functions of government that essentially belong to the States. Internal improvements and grants for educational purposes already cited are examples in point.

It does not necessarily follow that control must follow the dollar. It is certain that the Congress of the United States will not undertake to control the public schools while at the same time appropriating funds for their support. Control being a matter of policy to be determined by legislation, it is not thinkable that Members of the Congress elected by the people would usurp the management of an institution so close to the homes and lives of the people as our public schools. The assertion that they would is an insult to the intelligence and integrity of the elected representatives of the people and a lack of faith in the potent influence of the ballot. I feel perfectly safe in the assertion that not one in a hundred Members of the Senate or House of Representatives of the present Congress would advocate or vote for any measure calling for Federal control of our schools. The fabricated bogeyman of Federal control is but a flimsy excuse for failure to admit squarely the economic and social justice of Federal assistance to the States for public education.

PRINCIPLES AND PROVISIONS OF BILL

I have introduced a bill to promote the general welfare through the appropriation of funds to assist the States and Territories in providing more effective programs of public education. This same bill has been introduced in the House by Congressman BROOKS FLETCHER, of Ohio, a Member of the House Committee on Education.

It provides for an initial appropriation of $100,000,000 and an increase of $50,000,000 annually until a maximum of $300,000,000

is reached. It is thought that such gradual increase in funds will give ample time for the States to make sound plans for the expansion and improvement of their schools and will be a wiser course than the immediate appropriation of the full sum needed.[12]

There are certain provisions in this bill to which I wish to direct attention:

1. It provides for appropriations to the States to be used by them for schools. The manner in which the funds received shall be used for the maintenance of a program of public education is left wholly to the respective State legislatures.

2. All control, administration, and supervision of schools and educational programs is reserved strictly to the States and forbidden to all Federal officers and agencies. (See sec. 11.)

3. The basis of apportionment of funds to the States and Territories is the number of persons 5 to 20 years old in each State and Territory.

This method of apportionment is based upon the principle that the Federal Government should provide for the support of schools in all the States somewhat in proportion to the Federal interest in the education of the entire population. Admitting that the Federal interest is, at this time, not subject to accurate measurement, it can be safely asserted that the amount provided in this bill does not exceed the Federal Government's fair share of the cost of educating the citizens of the Nation.

EXHIBIT A.—*Economic ability of the States to pay taxes, and educational opportunity offered*

States	Tax-paying ability per capita	Current expenditures for public schools per pupil enrolled	Rank on tax-paying ability	Rank on opportunity as shown in column 3
(1)	(2)	(3)	(4)	(5)

[4] Ashby, Lyle W., The Efforts of the States To Support Education. Research Bulletin of the National Education Association, vol. XIV, no. 3, May 1936, p. 150. Taxpaying ability is based on taxes that could be raised in each State through the application on the second model tax plan of the National Tax Association. Funds required to support schools are based on the national average per pupil. The percentages here are those found by dividing the cost of a program of education in each State equal to the national average by the total taxpaying ability in that State.

[5] The ranks in this column are based on the smallest percentage being assigned rank 1, and the largest rank 48.

PROPOSED FEDERAL MONETARY AUTHORITY

Mr. BORAH. Mr. President, I ask unanimous consent to have printed in the RECORD a proposed bill to establish a Federal monetary authority and dealing with the subject of control of the value of the currency under the Constitution of the United States. This bill represents the views of a number of persons who have given much time and study to the subject, and some of the farm leaders are also interested in the subject.

There being no objection, the proposed bill was ordered to be printed in the RECORD, as follows:

A bill to establish a Federal Monetary Authority, in order to maintain a stable value for the dollar and to prevent the injustices and economic disturbances caused by inflation and deflation, to establish thereby a dollar which a generation hence will have the same purchasing and debt-paying power as that to be attained under the provisions of this act in the near future, and to control the value of the currency as required by the Constitution of the United States under section 8, article 5

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

Section 1. It is hereby declared to be the policy of the United States to restore as promptly as possible and maintain the normal purchasing power of the dollar, which shall, for the purposes of this act, be the average purchasing power of the dollar for basic commodities during the years 1924, 1925, 1926, 1927, and 1928, the average of the years being par, or 100.

POWERS OF THE FEDERAL MONETARY AUTHORITY

SEC. 2. (a) The Federal Monetary Authority established hereinafter in this act shall have power—

(1) To issue currency certificates in such amounts as the Authority from time to time finds necessary to carry out its powers. Such currency certificates shall be legal tender at face value for all debts, public and private, and shall be in such denominations, not less than $1, and in such size and form as the Authority may prescribe. All other authority of law to issue or reissue currency, except subsidiary coins, silver certificates and circulating notes of the national-banking associations, shall cease on the sixtieth day after this act goes into effect; and the authority to issue or reissue circulating notes of national-banking associations shall cease 2 years after the date of approval of this act. At the expiration of this 2-year period, circulating notes of national-banking associations shall be redeemed by them. For this purpose the Federal Monetary Authority shall supply its currency certificates for use in redeeming their outstanding notes receiving in exchange such eligible assets as may be available.

(2) To buy or sell gold bullion, bars, and coin in the free gold market at home or abroad whenever, in the judgment of the Authority, the price of gold in the free gold market is such as to make it desirable either to augment or reduce the gold reserve held by the Federal Monetary Authority. No such sale of gold bars shall be of an amount of gold less than $5,000 in value. All forms of lawful money heretofore redeemable in gold shall hereafter be redeemable only in circulating currency issued by the Authority. The Federal Monetary Authority may redeem in gold, at the current selling price fixed by it, its circulating currency, but only if such gold is necessary for use in the settlement of net debit balances in the international trade of the United States arising from ordinary commercial and financial transactions and for no other purpose. The decisions of the Federal Monetary Authority as to whether or not such net debit balance exists shall be absolute and final. For the purposes of this paragraph the Authority shall maintain a supply of gold bars of such weight and fineness as it may determine. All gold in the custody of the Authority shall be converted into such bars, which shall bear the stamp of the United States.

After the date of approval of this act no gold shall be coined, except for foreign countries, in accordance with the act of January 29, 1874 (U. S. C., title 31, sec. 367), and no gold bullion, bars, or coin or silver bullion or bars shall be exchanged or deposited with, or purchased, paid out, or delivered by the Government, except through the Authority as herein authorized.

(3) The Monetary Authority is hereby authorized and directed to purchase silver bullion, bars, and foreign coin at the prevailing market price, but not in excess of $1.29 an ounce, to sell such silver to the Secretary of the Treasury for coinage in such amounts as the Secretary of the Treasury deems necessary; and to sell silver bars at the prevailing market price. The aggregate of such purchases of silver bullion and bars shall be at least 1,000,000,000 ounces within 5 years, except that no purchase of silver bullion shall be made by the Authority at any time if at such time its aggregate holdings of silver exceed in value 25 percent of the value of the gold held by the Authority.

(4) To rediscount for any Federal Reserve bank, at rates to be established from time to time by the Authority, any notes, drafts, bills of exchange, or acceptances, bearing the endorsement of such Federal Reserve bank, and heretofore eligible as collateral security for Federal Reserve notes.

(5) To purchase and sell any interest-bearing obligation of the United States with a maturity from date of purchase not in excess of 12 months.

(6) To purchase and sell in the open market bankers' acceptances and bills of exchange bearing the endorsements of two or more domestic banks and eligible for rediscount by Federal Reserve banks.

(7) To purchase and sell foreign exchange.

(8) Hereafter to exercise the powers vested in the Secretary of the Treasury by section 11, paragraph 26 (n) of the Federal Reserve Act, as amended.

(b) The Authority shall not receive current funds for deposit, exchange, or collection other than for its own account.

FEDERAL RESERVE AND TREASURY GOLD

SEC. 3. All gold coin, bars, and bullion now or hereafter held in the Treasury shall be held in custody for the Authority and delivered upon order of the Authority.

THE FEDERAL MONETARY AUTHORITY

SEC. 4 (a). There is hereby established an independent agency of the Government to be known as the Federal Monetary Authority. The powers and duties vested in or imposed upon the Authority by this act or other law shall be exercised or performed by the executive officers of the Federal Monetary Authority at the direction of a board of seven directors to be appointed by the President of the United States, by and with the advice and consent of the Senate. These directors shall be charged with responsibility for managing the dollar equitably with reference to the interests of agriculture, industry, commerce, finance, and labor with a view to maintaining a stable dollar with unvarying buying power in relation to a cross section of principal basic commodities.

(b) The President shall designate one of the directors as chairman of the Board; who shall be the chief executive officer of the Authority. The chairman of the Board shall receive compensation at the same rate as is now or may hereafter be provided by law for the Chief Justice of the Supreme Court of the United States, and the other directors shall receive compensation at the same rate as is now or may hereafter be provided by law for Associate Justices of such Court. The directors shall hold office during good behavior. A director shall be removable from office by concurrent resolution of both Houses for failure to carry out the mandates imposed by the provisions of this act. A director may otherwise be removed only upon impeachment and conviction by the Senate under the Constitution of the United States for misbehavior in office, treason, bribery, or other high crimes or misdemeanors. The directors, other than the chairman, shall have precedence according to the dates of their commissions, or, in case of directors

whose commissions bear the same date, according to seniority of age. In case of a vacancy in the office of the chairman, or of his inability to perform the duties of his office, the other director who is first in precedence shall perform such duties until such disability is removed or another chairman is appointed and duly qualified. Five directors of the Board shall constitute a quorum.

(c) The Monetary Authority shall render to the Congress, not less than once in each year, a report upon its operations and calculations. At such times as the President, or the Congress by concurrent resolution, may determine, the President shall cause an audit and report to be made to him of the operations of the Authority. Such audit shall be made available for inspection by representatives of the Banking and Currency Committees of the Senate and of the House of Representatives. The President shall make public such audit and report if such action, in the opinion of the Monetary Authority, is consistent with the public interest.

(d) The net profits derived from the operations of the Authority, after deductions for such reserves as the Authority deems necessary, shall from time to time be transferred to the Treasury upon direction of the President.

DECLARATION OF POLICY

SEC. 5. (a) The United States Bureau of Labor Statistics is hereby directed to cooperate in such manner as may be called for by the Federal Monetary Authority in calculating and maintaining currently a suitable index of not less than 40 principal basic commodity prices weighted according to their importance in the economy of the United States. Periodical reports of calculations and of the methods of calculation shall be made once a month.

It shall be the duty of the Federal Monetary Authority to maintain the dollar substantially constant at par or 100 in purchasing power in relation to this index of prices of basic commodities.

(b) The powers of the Authority shall be exercised to such extent and in such manner as, in the judgment of the Authority, will best effectuate the declared policy.

EFFECTIVE DATE

SEC. 6. This act shall take effect July 1, 1936, or sooner by proclamation of the President.

SHORT TITLE

SEC. 7. This act may be cited as the "Monetary Authority Act for 1936."

LOUD-SPEAKING SYSTEM IN THE SENATE CHAMBER

Mr. BILBO submitted the following resolution (S. Res. 326), which was ordered to lie on the table:

Whereas it is evident to every Member of the Senate, as well as to all visitors to the Senate galleries, that the acoustic properties of the Senate Chamber are very poor and unsatisfactory; and

Whereas it is the ardent wish and desire of every Member of the Senate, as well as visitors to the galleries, to hear and understand every statement and speech made by Members of the Senate; and

Whereas the recent developments of loud-speaking instruments are so thoroughly improved and perfected that they can be installed upon the top or side of each Senator's desk without obstruction and inconvenience, making it possible for every Senator to be heard in all parts of the Senate Chamber and galleries as well when speaking from his desk; and

Whereas it is necessary for Senators in the rear of the Senate Chamber to leave their seats and occupy, or attempt to occupy the seats of other Senators at the front and near the President's chair if they hear or understand anything that is said and done, and in doing this it is not only embarrassing to the intruder, or trespasser, but it is exceedingly annoying to the older Members of the Senate who, by right of seniority, occupy these seats of advantage; and

Whereas if it were possible for each and every Member of the Senate to hear everything that is said and done on the floor of the Senate, it would bring about a more satisfactory and expeditious transaction of the business of the Senate; and

Whereas the Senate Rules Committee has the power, right, and authority to direct the installation of a loud-speaking system in the Senate: Now, therefore, be it

Resolved, That the Rules Committee be respectfully requested and urged to give favorable consideration to the proposition of directing the Sergeant at Arms to install a loud-speaking system in the Senate Chamber before the convening of the first session of the Seventy-fifth Congress.

STATEMENT ON THE WORLD POWER CONFERENCE BY SENATOR GUFFEY

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a statement by me on the Third World Power Conference.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON THE WORLD POWER CONFERENCE

As Congress will adjourn shortly, I take this opportunity to report on what has been done in preparation for the Third World Power Conference to be held in the city of Washington, September 7–12. You will remember that last February the Congress authorized the Government to extend an invitation and appropriated $75,000 for the expenses of the World Power Conference, and an official invitation in accordance with this legislation was issued by the President.

As I am now informed, the response to this invitation guarantees a notably successful conference. Definite acceptances have been received from 39 nations, including all the great industrial powers. This assures us that at the Third World Power Conference—the first to be held in this country—some 50 nations will be represented, about 700 delegates will come from foreign nations, and total attendance will be around 3,000.

Perhaps the most significant feature of this conference is the cooperation between representatives of government and private industry. The utility and electric industries are contributing to the support of the conference. Their representatives are taking an extremely active part in the work of the conference committees and in the preparation of conference program papers.

This active cooperation has been evident to all who have come into contact with the preparations for the World Power Conference.

You may want to ask: Who is running this World Power Conference? Well, in the first place, the officers of the conference are:

Honorary president, President Franklin D. Roosevelt; honorary vice president, Secretary of the Interior Harold L. Ickes; chairman, William F. Durand, the distinguished scientist and consulting engineer, now resident in California, whose services have so often been requisitioned by the Government; the director of the conference, Mr. O. C. Merrill, consulting engineer and former executive secretary of the Federal Power Commission.

Active direction of the conference and all preliminary planning are in the hands of a working executive committee of 19, composed of Morris L. Cooke (chairman), C. W. Appleton, James C. Bonbright, Floyd L. Carlisle, Frank D. Comerford, Gano Dunn, Robert H. Fernald, A. C. Fieldner, Daniel C. Green, David E. Lilienthal, William McClellan, Frank R. McNinch, Maj. Gen. Edward M. Markham, O. C. Merrill, I. E. Moultrop, T. W. Norcross, Richard Southgate, C. E. Stephens, and Joel David Wolfsohn.

In other words, this committee is practically evenly divided between representatives of the public and of private industry. From the beginning all regular meetings of the committee have been well attended and its members have been in frequent consultation on questions of conference policy. Everybody is hard at work, and they are getting results.

How about the World Power Conference program? Who is responsible for it? Let me tell you very briefly: The first World Power Conference was held in London in 1924, taking up all phases of power, both technical and economic. The Berlin Conference in 1930 and some of the regional conferences in between ran largely into technical discussions. So it was decided by the permanent organization of the World Power Conference to concentrate on economic issues pertaining to power production and distribution at the next conference. After the decision to meet in this country a draft was made of a program, listing 18 papers under the general heading of The National Power Economy. This was submitted last October and November to 47 individuals, including the entire executive committee, which had by this time been chosen. A few slight changes were suggested and made. This program was unanimously approved on November 19 at a meeting of the executive committee, at which 16 of the 19 members were present. The program was distributed in final printed form on December 12 and met with general commendation.

The World Power Conference has developed an efficient organization. A small staff is now working in offices in the Interior Building. This includes writers, translators, editors, and secretaries handling necessary publicity and the conference papers.

Several publications designed to stimulate attendance at the conference have been issued, in most cases in English, French, German, and Spanish. Other bulletins on specific phases of conference activities are in preparation.

In order to arouse more interest in the conference and to explain plans of the American committee, three envoys were sent to foreign countries. Dr. Roscoe R. Hill, Chief of the Classification Division of the National Archives, visited every South American capital. Dr. Charles K. Ludewig, of the Pan American Union, went to Mexico and Central America. Dr. Harlow S. Person visited 13 countries and 18 cities in Europe.

I might explain that each participating country in the World Power Conference has been asked to submit one or more papers dealing with each of the 18 heads into which discussion of the general topic is divided. Up to date, I am told, there have been received for editing and printing 200 program papers from 22 countries.

I have pointed out that the Washington program is largely economic—and for excellent reasons. But the desire of engineers from abroad to become acquainted with the latest engineering practice in this country will be amply satisfied. The sessions of the second congress on large dams, held concurrently with the Third World Power Conference, are strictly technical. Moreover, a series of World Power Conference technical study tours have been planned under the sponsorship of the engineering societies of the United States and the trade associations of industries concerned with power.

These will take the foreign delegates through plants, laboratories, power projects, etc., in or near New York, Pittsburgh, Schenectady, Niagara Falls, Cleveland, Detroit, Chicago, Zanesville, and into the Tennessee Valley, with one tour taking delegates to the important power projects on the Pacific coast. Delegates may take these tours either before or after the conference. Prospective delegates from abroad have shown great interest in

these tours, which engineers and scientists look upon as a valuable new departure in connection with a conference of this sort. Besides the inspection trips on the tours, there will be round-table discussions based on the study of the most significant examples of modern practice of power engineering both here and abroad.

Meetings of the conference will be held in Constitution Hall and Government auditoriums. The convention headquarters will be in the Mayflower Hotel. At the conference sessions the language problem will be solved by the simultaneous transmission from the platform of utterances in four languages—English, French, Spanish, and German—by means of a telephone apparatus.

Exhibits at the conference showing the latest developments of power will include displays from Government power agencies, electrical manufacturers, and utilities. Space in the National Museum and the Mayflower Hotel will be used. The Rural Electrification Administration will show an electrified farm a few miles from Washington.

So there will be plenty to see as well as to hear at the World Power Conference.

But let me return to the program for a minute. The list of American writers on the conference program, as made public, contains many notable names—such representatives of government as Isador Lubin, Judson C. Dickerman, Robert E. Healy, Arthur Morgan, H. H. Bennett, Basil Manly, J. D. Ross; of the utilities as Floyd L. Carlisle of Consolidated Edison, John E. Zimmerman of United Gas Improvement, James F. Fogarty of North American, Harrison G. Roby of the Byllesby organization, W. S. Finlay of West Penn Electric, and Norman R. Gibson of Niagara-Hudson. Government agencies are cooperating with private agencies in the preparation of these papers.

In every case where a session subject involves a sharp difference of opinion each point of view will be presented.

Thus the conference will provide a forum where all sides of controversial questions involving power may be presented fully and freely without recourse to politics or personalities.

This is, indeed, one of the primary functions of the Third World Power Conference. It will put the power economy questions which agitate so many countries on a broad international basis. It will afford opportunity for comparing experience in the various attempts to solve these problems. It will give engineers and technicians a rare chance on the study tours to study operation and construction under varying conditions. Thus the Third World Power Conference will aid in the technical progress of power production and distribution. And it will also help us to understand those problems upon whose solution depends the full realization of the industrial, economic, and social benefits of the power age.

Some members of the congress are members of the American committee of the World Power Conference; others have been chosen as delegates from their States. And all are invited to become members of the conference, or at least to arrange their plans for the summer so as to attend some of the sessions in Washington the first week in September. In fact all American citizens interested in any of the technical or economic problems of power will be welcome.

CONDITION OF AGRICULTURE

Mr. HARRISON. Mr. President, as agriculture prospers, so prospers the Nation. When the hand of spoliation grips the throat of agriculture, those engaged in every other business are adversely affected.

During the last year of the Hoover administration, agriculture dropped to depths of economic despair and reached the most critical point in our history. For 12 years, agriculture leaders had been pointing out to those in authority that the rules of our economic game were so framed that farmers simply could not win. They pleaded for a change in those rules, so that the farmers might be given an equal chance with those engaged in other industry. Those of us who were then in authority and whose hearts were attuned to the farmers' progress and welfare, week by week charged the ramparts of special privilege and sought to carve a legislative pathway, that those engaged in agriculture might find their way out of the economic wilderness through which they had groped so long. But our pleas were steadfastly ignored, and our efforts were repulsed. There were sops; there were gestures; but nothing effective was done to remove the handicaps under which the farmers labored.

In those 12 years the American farmers' share in the national income had declined in startling fashion. It went from 20½ percent in 1919 to 7½ percent in 1932. The power of the agricultural population to buy factory goods and commercial, financial, and professional services was almost nullified. The result was disastrous for the whole Nation. Trade dropped off; bank deposits declined; the merchant was faced with insolvency; transportation on the railroads became negative; men and women by the millions were thrown out of employment on the farm, in the factory, and in commercial institutions. Business became paralyzed. With unerring certainty the reasons were traceable to the deplorable conditions in agriculture.

My own State of Mississippi did not escape the consequences of this unfair treatment of agriculture. How could it, when about 65 percent of its population live on farms and virtually two-thirds of its area is in cultivation? Mississippi, in fact, furnishes a startling example of what was happening to the agricultural industry of the whole Nation.

During the 4-year period from 1924 to 1928 the gross income of Mississippi farmers from crop and livestock production averaged $268,000,000 a year. In the last year of the Hoover administration, 1932, it tumbled to $97,000,000.

This loss of farm purchasing power struck at all trade and all industry in my State. Misery and hardship prevailed throughout when agricultural, commercial, and industrial activity came to a standstill in the years immediately before Franklin D. Roosevelt was inducted into office.

That was the picture of the 12 years before 1933, but since that year there has been a complete transformation in agriculture. President Roosevelt entered the White House in March of that year. Under his leadership the Federal Government has launched measure after measure for the restoration of farm purchasing power, and bill after bill has been passed intended to cure agriculture of its ills and give health and strength and vigor to its economic life and place it upon an equal footing with that of other industries.

A few months ago Chester C. Davis, then Administrator of the Agricultural Adjustment Act, and now the farmers' representative on the Federal Reserve Board, addressing a group in New York City, said in part:

> My task is to inquire into the extent to which the Agricultural Adjustment Act has contributed to national recovery, as well as to farm recovery. * * * While total retail trade for the United States was still shrinking, being only $25,000,000,000 in 1933, as compared with $25,600,000,000 in 1932, rural retail sales rose from $3,900,000,000 in 1932 to $4,700,000,000 in 1933. In 1934 rural retail sales advanced further, to an estimated $5,800,000,000, while total retail trade rose to $28,500,000,000. According to preliminary estimates, rural retail trade for 1935 will increase to $6,900,000,000 and total retail trade to $30,700,000,000. There is no question that, in point of time, a measure of industrial recovery has followed farm recovery; nor that increased rural buying has been an important part of the general improvement.

Let me return to my own State for another example, an example of what has happened among my own people, engaged in agriculture since 1933. Their cash receipts, from the sale of their principal farm products, increased from $70,000,000 in 1932 to $132,000,000 in 1935. The farmers in my State who cooperated in the cotton-, corn-, and hog-adjustment programs for that year received in rental and benefit payments, under the Agricultural Adjustment Act, $15,500,000. Mississippi farmers received 87 percent more for their principal products in 1935 than they had received during the last year of the Hoover administration.

A further explanation of their increased prices lies in the important increases in prices of farm products between the last year of the Hoover administration and since Mr. Roosevelt and the Democratic Party has had control of the Government, increases that occurred with the removal of most of the burdensome surpluses which had been forcing farm prices down, and the establishment of a better balance between production and market requirements, while Government loans to producers, secured by commodities themselves, enabled farmers to take advantage of rising prices and to hold their products for a favorable market, instead of being compelled to dump them on a glutted market at harvest time, and take what they could get for them.

I would not minimize the beneficial effect to the farmers of my State in the form of adjusted payments. It was not a negligible factor in increasing farm income. For many farmers the benefit payment was a most important part of the cash receipts, and these payments, added to the profits from cotton options in connection with the 1933 cotton program, and with the price-adjustment payments made in 1935 to assure producers of 12 cents a pound for their cotton,

totaled $48,000,000 that was distributed in Mississippi in less than 32 months.

The following table tells the story of the price rises in important farm products of my State between the last Hoover year and 1935:

Annual average prices received by Mississippi farmers, 1932 and 1935, for commodities enumerated

Commodity	Unit	1932	1935 (preliminary)
		Cents	*Cents*
Corn	Bushel	54.0	80.0
Oats	Bushel	33.0	63.0
Cotton:			
Lint	Pound	6.82	11.30
Seed	Ton	1,219.0	3,370.0
Hogs	Hundredweight	385.0	690.0
Beef cattle	Hundredweight	235.0	335.0
Veal calves	Hundredweight	345.0	460.0
Chickens	Pound	11.0	13.8
Butterfat	Pound	14.0	25.0
Eggs	Dozen	12.2	20.1
Potatoes	Bushel	72.0	90.0
Sweetpotatoes	Bushel	53.0	75.0

Not a farm product the price of which, due to the efforts of the Roosevelt administration, has not been increased from 50 percent to 100 percent. Take cotton as an example. It stands out boldly. In 1932 the farm value of cotton lint and cottonseed had fallen to forty-six and one-half million dollars from a figure of one hundred and ninety-two and one-half million dollars in 1929.

The first crop-adjustment program launched under the Agricultural Adjustment Act was the one for cotton in 1933, the first year of the Roosevelt administration. That year the value of the cotton crop rose to $69,000,000. In 1934 it rose to $89,000,000, and in 1935 to more than $90,000,000. Adding the cotton rental and benefit payments, profits on cotton options and price-adjustment payments in connection with the 1935 crop, gives a total for that year to the cotton farmers of Mississippi of one hundred and seven and one-half million dollars. This is an increase of 134 percent over the last year of the Hoover administration of farm value of lint and seed.

Anyone can appreciate how important and beneficial the program was to my State when more than 90 percent of the farmers of Mississippi raise cotton.

As a matter of information, here is a table that shows by counties in the State of Mississippi the distribution of rental and benefit payments and profits from cotton options:

Rental and benefit payments and profits on cotton options made in connection with the cotton and corn-hog programs from the beginning of those programs through Feb. 29, 1936, for the State of Mississippi, by counties

County	Cotton	Profits on cotton option	Corn-hogs	Total
Adams	$141,809.47	$28,285.02		$170,094.49
Alcorn	298,703.99	48,201.98	$726.23	347,632.20
Amite	312,784.24	55,880.14		368,664.38
Attala	312,113.93	70,214.77		382,328.70
Benton	167,863.22	39,848.14		207,711.36
Bolivar	2,944,473.26	626,457.36		3,570,930.62

I do not believe there can be found a more appreciative and patriotic lot of farmers in the country than in my State of Mississippi. They welcomed the agricultural adjustment; they voted for the cotton program under the Bankhead Act, submitted to them by the Agriculture Department, under the provisions of the act itself, by an overwhelming vote of 9 to 1.

This indicates the fine cooperative spirit and sentiment of the cotton farmer of Mississippi. They felt the tragic blow, and gave full expression to their feelings when the highest Court of our land held the Agricultural Adjustment Act unconstitutional. I do not know when I will receive so many earnest appeals and sincere solicitations as I did following that decision in letters by the thousands that came to me from the farmers of Mississippi, pleading for me and my colleagues in the Congress, the President and his associates, to find a substitute that might be workable and sustain them in their efforts to control production and maintain reasonable prices. And it is gratifying to me to receive such fine and grateful expressions from the farmers of every part of my State for the enactment at this session of Congress of the Soil Conservation Act. They know by that act, even though these benefit and rental payments intended to curtail production cannot longer be collected out of the processing tax, that they will receive, under the terms of the law and out of the Federal Treasury direct, those benefit payments for soil conservation and protection.

But these acts are only a part of the work of the Roosevelt administration in behalf of agriculture. Congress has made available to the Agricultural Adjustment Administration some

$50,000,000 to assist in the eradication of cattle diseases. The money is being spent in furthering and stimulating a campaign long under way for this purpose, in which the Federal Government and the States have cooperated. Under it some 1,231,500 Mississippi cattle have been tested for tuberculosis and about 50,230 for Bang's disease. Three hundred and twenty-seven thousand dollars have been allotted to and expended in Mississippi for the eradication of tuberculosis, and already for the eradication of Bang's disease nearly half of the $300,000 allotted to Mississippi has been expended.

Milk is an important source of farm income in Mississippi. Milk producers in that State have been deriving an average annual income of about $7,000,000, and the importance of the measures undertaken to safeguard the health of cattle herds and make them more efficiently productive can hardly be overestimated. The health of the people who consume milk cannot be measured in dollars and cents.

Year before last the screw-worm menace that kills cattle, sheep, and swine became prevalent in southern Mississippi. Federal funds were immediately granted and every effort extended, through experts' advice and other means, to assist the counties to fight and eradicate this dreaded menace.

The burden of Mississippi farmers has been measurably lightened by the activities of the Farm Credit Administration and the Resettlement Administration. During the Roosevelt administration the following number and amount of loans have been made by agencies under the supervision of the Farm Credit Administration:

	Number	Amount
Federal land banks	1,645	$5,229,500
Land-bank commissioners	11,205	10,029,475
Production Credit Association	24,204	11,221,621
Emergency crop loans	51,291	2,758,727
Total	88,345	29,239,323

By scaling down indebtedness and by reducing interest and extending maturity dates the Federal land banks and land-bank commissioners have enabled large numbers of farmers to retain possession of their farms, while the Production Credit Association and emergency crop loans have permitted an even greater number to purchase the seed, livestock, and equipment they needed to continue their farming operations. The emergency crop loans have not averaged a large amount in Mississippi. The number made was less than 60,000, and the average was only $54; but these small loans have been a godsend to many worthy small Mississippi farmers who, by means of them, have been able to stay off the relief rolls. These hard-working people did not want charity. They needed enough credit to continue planting and working. It is most gratifying to the Representatives of Mississippi in Washington that Mississippi farmers rank at the top in paying back these loans to the Government.

I shall always take pride in the fact that when this depression overtook us I employed my every effort and influence in trying to give some relief to the Federal land banks through appropriations out of the Federal Treasury that the unfortunate people in my State and elsewhere who were unable to meet their installment payments might be given every reasonable continuance that their farms might be saved to them. No doubt there are thousands of most deserving men and women who have lost their farms through foreclosure, not because of any fault on their part but because of the extraordinary economic conditions confronting the country, making it impossible for them to meet their obligations. I have no doubt that many mistakes have been made and errors committed in some of these foreclosures. My every sympathy goes out to those unfortunate people; but I do know that those of us here in sympathy with them have made every plea and performed every act, from making appropriations out of the Federal Treasury to writing letters to the heads of governmental agencies, in the hope that some way might be found to give them relief and assistance.

The Resettlement Administration allotted $3,570,000 for loans to 15,000 Mississippi farm families, and on May 12 of this year $2,684,489 had already been advanced on 14,500 loans.

Up until May this year more than 12,000 grants to 7,380 different families in Mississippi had been made through the Resettlement Administration in Mississippi, and I am told that this amount will be increased perceptibly before the end of the fiscal year. Five hundred and seventy-nine farmers have had their debts reduced through the Resettlement Administration.

In addition to the rural rehabilitation program, which directly affects the greatest number of persons, the Resettlement Administration is carrying on in Mississippi two other programs. Liberal appropriations have been made for that purpose. One of them, the land-use program, returns to public ownership and develops for public uses agricultural lands which cannot support the farmers now living on them. The other, the resettlement program, offers to farmers, from submarginal lands—to successful rehabilitation clients, to those who have been tenants, sharecroppers, or dispossessed owners, and to newly married young people of agricultural background who are without other resources—the opportunity to settle upon good agricultural land and thus to become again self-supporting and independent members of their communities. In such conditions as now confront us, as a social and economic advancement, why should not aid and assistance be given to those unfortunate individuals whose sole possession consists of a large family, in many cases, and lands unsuitable for economic production of crops or the unhealthful conditions of which threaten the length of human life? And so, for the first time in history, this Government—in Mississippi as well as elsewhere—has offered to these unfortunate individuals aid and assistance in the purchase of their land and the opportunity to buy elsewhere, so that fruit may be gathered from their labors and hope and encouragement take root in their breasts.

Who can find fault with a governmental policy that seeks to give to the ambitious young man and young woman, whose whole background has been reflected in agriculture and whose every fiber of their being is attuned to the spirit of agriculture, an opportunity to join hands and provide a home and lay the foundation of real citizenship?

The Resettlement Administration has already obligated to purchase in Mississippi 112,000 acres of submarginal land at a cost of $676,000. Two projects have been approved in the northern section of the State embodying lands in the counties of Winston, Noxubee, Oktibbeha, Choctaw, Chickasaw, and Pontotoc. Funds are now available for the acquisition and development for public use of the lands embodied in these projects.

The Federal Government has planned 12 rural resettlement projects in the State. It is now purchasing land and doing construction work on six active projects that together will cost $900,000 and benefit more than 250 families. Four of these projects are already established. The McComb City homesteads in Pike County; the Magnolia homesteads in Lauderdale County; the Tupelo homesteads in Lee County; the Hattiesburg homesteads in Forrest County. The other two projects are the Richton homesteads, in Perry County, which seeks to take care of more than 50 families, and the Mississippi tenant security project, covering all or part of 10 counties, for more than 100 families.

Farm improvement in Mississippi under the Roosevelt administration includes the State's share in the national reforestation program, designed primarily to preserve our natural resources and indirectly to help prevent floods. The Federal Government has already spent or obligated over $3,000,000 on the De Soto National Forest of Mississippi, and the total cost of this project when completed is expected to exceed $5,000,000. This forest reserve was created out of submarginal land which the farmer could not use profitably.

Thousands of trees best suited to the Mississippi climate have been planted, and many other measures have been taken to protect and improve the forests of the State.

Under the reforestation program, when the sale of timber, grazing rights, or other assets results in a profit to the Federal Government, 25 percent of the gross returns are to be turned over to the county in which the land is situated for school and road improvements.

Recently the activities of the National Forestry Commission were broadened and additional funds allocated for the purchase of lands. At this session of Congress we added $2,500,000 more for that purpose. Mississippi has received greater benefits under this program than has any other State in the Union. More than 1,000,000 acres are to be acquired under the program.

Assisting in this great program of reforestation and the fighting of soil erosion and its resulting floods, the Civilian Conservation Corps has played an important part in Mississippi. The number of young men working in Mississippi under this program increased from 4,400 in the spring of 1933 to over 12,200 in the summer of 1935. Altogether more than 20,000 young men have been enrolled in the Civilian Conservation Corps of our State.

In addition to the important material accomplishments of the Civilian Conservation Corps, the remarkable educational program of this organization has been of great value to the unemployed youth of our country. Not only do they receive food and shelter and clothing while being paid for their work, but as a result of their training these young men will be better prepared to meet the problems of life. The educational program includes vocational training and practical academic courses made available to young men who otherwise would not be able to continue their education. This well-rounded program provides for the mental and spiritual development of youth as well as for physical welfare, while at the same time preserving the natural resources of Mississippi.

An allocation was made by the Works Progress Administration for the construction of a starch plant at Laurel. This experimental project, already meeting with success, means much to the farmers of the southern part of the State, by creating an important market for their sweet potatoes, from which the starch is made. This starch was recently tested and used by the Bureau of Printing and Engraving and found entirely satisfactory as an adhesive for postage stamps and for similar uses. That Bureau alone uses 1,000,000 pounds of starch a year, and the importance of this development is therefore readily realized by Mississippi farmers.

New automobile registrations in Mississippi increased 250 percent, going from 7,368 in 1932 to 25,799 in 1935. The rise in automobile purchases meant, among other things, an increased gasoline consumption. Consumption of gasoline in Mississippi went from 107,623,000 gallons in 1932 to approximately 147,335,000 gallons in 1935.

The number of commercial failures in Mississippi, according to a reliable trade organization, declined from 330 in 1932 to 156 in 1933, and to but 66 in 1935. In other words, failures of the type mentioned in Mississippi were last year only 20 percent of what they had been 3 years earlier.

The indexes of increased economic activity that I have given are but a minor part of the flood of evidence that all of us have witnessed.

The new agricultural conservation program, authorized by the Soil Conservation and Domestic Allotment Act, is now in full swing in Mississippi. Our farmers are cooperating magnificently in it. Soil erosion in Mississippi has already caused untold damage, while overcropping and the failure to rotate crops properly have also taken their toll in valuable soil fertility. The Soil Conservation Service finds that gullying, in different degrees of severity, has affected more than 14,000,000 acres of Mississippi farm lands, and sheet erosion has damaged more than 19,000,000 acres. It is appalling to note in the report of that service that only 10,480,833 acres, or 34.5 percent, of the Mississippi land, exclusive of large cities, have suffered little or no erosion. These figures relate only to erosion and do not take into account the serious losses in soil fertility; nor do they consider the damage caused by floods and other disasters directly or indirectly related to land abuse.

In 1934 the Soil Conservation Service created an important soil-erosion project on the watershed of Okatibbee Creek, in Lauderdale and Kemper Counties, Miss., along with small areas in Newton and Neshoba Counties, involving about 155,000 acres. The project has been a cooperative one participated in by farmers and agricultural specialists and the business men of the State. Those who are familiar with it know how much it has benefited not only growers in that region but in other parts of the State by convincing them of the necessity for and the feasibilty of practical soil protection.

The A. A. A. crop-adjustment programs, of course, were concerned with wise land use. The cotton contract for 1934–35, for instance, specified use of the rented acres only for soil-improving crops, erosion-preventing crops, food crops for consumption by the producers on his farm. Of the nearly 36,000,000 acres shifted from soil-depleting crops in the 1934 crop year in the United States it has been estimated that about one-third was put in pasture or meadow crops, and one-third in emergency forage crops and crops that supplied food and feed for home use, while the remaining one-third was fallowed to conserve moisture and control weeds, planted to farm woodlots, or left idle. The acreage left idle was very small. A marked trend toward increased pasturage of all kinds is already apparent in Mississippi. According to the Bureau of the Census, the acreage devoted to pasturage increased 22½ percent from 1929 to 1934. At the same time, the acreage devoted to all hay and sorghums for forage more than doubled.

The new agricultural conservation program attacks the problem of soil erosion and soil depletion more directly than the crop-control programs, and there can be no doubt that it will prove one of the most constructive plans ever undertaken by any national administration since the beginning of the Republic. The benefit payments granted to farmers who have adopted the good soil practices will compensate them in part for the expenditures involved.

At the same time, the important shifts from soil-depleting crops, such as cotton, which are export surplus crops, to soil-conserving crops, such as alfalfa or clover, have been made in the efforts of Mississippi farmers to improve their land. Such shifts should have a most beneficial effect in preventing surpluses and balancing supply with demand for the farm commodities on which Mississippi farmers depend for their livelihood.

Since reference has been made to cotton, I want to take a moment to call attention to the encouraging cotton report just published by the Bureau of Agricultural Economics of the Department of Agriculture. According to this report, cotton consumption in this country during the 9 months ended April 1936 totaled 4,649,000 bales, or almost 12 percent more than it was in the corresponding period of the 1934–35 season, while exports in the August 1, 1935–April 30, 1936, period were 5,167,000 bales, or about 33 percent greater than they were in the same 9 months of the 1934–35 season. Continuing, the report states that if the present rate of world consumption is maintained, the world carry-over of American cotton on July 31 of this year will be only about 7,300,000 bales, or the smallest carry-over since 1930. Lest I sound as though all danger of a collapse in cotton prices has been definitely removed, I must point out that a carry-over of 7,300,000 bales would still be 1,250,000 bales greater than the average world carry-over of American cotton during the 10 years 1923–32.

The facts and figures I have cited show the scope and the degree of the amazing change that has taken place in the country as a whole, with Mississippi as a typical example, since President Roosevelt took the helm of the ship of

state and steered it away from the rocks and shoals that threatened it with disaster. During that period we have seen despairing farmers, businessmen, manufacturers, laborers transformed into persons who not only hope but know that our America can be saved if all those who are striving to make it a better place in which to live are given a fair chance to earn the good things that make life worth while.

In every administrative move for improving the condition of the farmer and assisting agriculture either through legislation or otherwise, I have given my full and wholehearted cooperation and support. If I am prouder of one part of my legislative record than any other since I have been a Member of the American Congress, it is my effort to make the burdens of the farmers of my State lighter, their opportunities greater, and a stronger economic position for them and those engaged in agriculture throughout the country.

If there be one class above all others who will stand like embattled warriors, giving this administration and those who have cooperated with it their sustaining support, it is this great army of men and women engaged in agriculture in America.

UNION PARTY PLATFORM

Mr. FRAZIER. Mr. President, I ask unanimous consent to have printed in the RECORD the Union Party platform—the new third party.

Mr. KING. Mr. President, who are the candidates of that party? [Laughter.]

Mr. BARKLEY. Where did the party hold its convention?

Mr. KING. I am not so much interested in the platform as I am in the candidates.

Mr. FRAZIER. Representative LEMKE, of North Dakota, is their candidate for President, and, as I understand, a Mr. O'Brien, from Massachusetts, is candidate for Vice President.

Mr. KING. I congratulate North Dakota.

There being no objection, the platform was ordered to be printed in the RECORD, as follows:

First. America shall be self-contained and self-sustained—no foreign entanglements, be they political, economic, financial, or military.

Second. Congress and Congress alone shall coin and issue the currency and regulate the value of all the money and credit in the United States through a central bank of issue.

Third. Immediately following the establishment of the central bank of issue Congress shall provide for the retirement of all tax-exempt, interest-bearing bonds and certificates of indebtedness of the Federal Government and shall refinance all the present agricultural mortgage indebtedness for the farmer and all the home-mortgage indebtedness for the city owner by the use of its money and credit which it now gives to the private bankers.

Fourth. Congress shall legislate that there will be an assurance of a living annual wage for all laborers capable of working and willing to work.

Fifth. Congress shall legislate that there will be an assurance of production at a profit for the farmer.

Sixth. Congress shall legislate that there will be assurance of reasonable and decent security for the aged, who, through no fault of their own, have been victimized and exploited by an unjust economic system which has so concentrated wealth in the hands of a few that it has impoverished great masses of our people.

Seventh. Congress shall legislate that American agricultural, industrial, and commercial markets will be protected from manipulation of foreign moneys and from all raw material and processed goods produced abroad at less than a living wage.

Eighth. Congress shall establish an adequate and perfect defense for our country from foreign aggression either by air, by land, or by sea, but with the understanding that our naval, air, and military forces must not be used under any consideration in foreign fields or in foreign waters either alone or in conjunction with any foreign power. If there must be conscription, there shall be a conscription of wealth as well as a conscription of men.

Ninth. Congress shall so legislate that all Federal offices and positions of every nature shall be distributed through civil-service qualifications and not through a system of party spoils and corrupt patronage.

Tenth. Congress shall restore representative government to the people of the United States to preserve the sovereignty of the individual States of the United States by the ruthless eradication of bureaucracies.

Eleventh. Congress shall organize and institute Federal works for the conservation of public lands, waters, and forests, thereby creating billions of dollars of wealth, millions of jobs at the prevailing wage, and thousands of homes.

Twelfth. Congress shall protect small industry and private enterprise by controlling and decentralizing the economic domination of monopolies to the end that these small industries and enterprises may not only survive and prosper but that they may be multiplied.

Thirteenth. Congress shall protect private property from confiscation through unnecessary taxation with the understanding that the human rights of the masses take precedence over the financial rights of the classes.

Fourteenth. Congress shall set a limitation upon the net income of any individual in any one year and a limitation of the amount that such an individual may receive as a gift or as an inheritance, which limitation shall be executed through taxation.

Fifteenth. Congress shall reestablish conditions so that the youths of the Nation, as they emerge from schools and colleges, will have the opportunity to earn a decent living while in the process of perfecting and establishing themselves in a trade or profession.

EXPORT TRADE AND AMERICAN FARM PROBLEM—ADDRESSES BY CHESTER C. DAVIS

Mr. MURPHY. Mr. President, I ask unanimous consent to have printed in the RECORD two speeches by Mr. Chester C. Davis, A. A. A. Administrator, one having been delivered at Des Moines, Iowa, on the subject of International Trade and the American Farm Problem, and the other at St. Paul, Minn., on the subject Unshackling Our Export Trade.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

INTERNATIONAL TRADE AND THE AMERICAN FARM PROBLEM

It is a real pleasure to meet again with some of the men who have been and are now on the firing line in charge of the farm programs under the agricultural adjustment and related acts. The moves toward decentralization to the States, counties, and communities, both of responsibility and administration, which we had been working for in connection with the old Triple A program, seems to be advancing splendidly under the new.

Since I returned less than a week ago from 2 months in Europe, I am sure you know a great deal more than I do about the progress that is being recorded under the Soil Conservation Act. I want to learn more about it while I am out in the field on this trip. Of one thing, however, I am wholly confident—that any program which is rooted in strong local and county associations of farmers will not go very far wrong, and that any program which lacks that firm foundation in the soil is likely to have something the matter with it.

This section of the country has played an important part in developing the agricultural policy of the United States.

I remember this State of Iowa, and this city of Des Moines, as one of the historic battlegrounds in the long fight for equality for agriculture. My mind goes back to one period in that fight, from 1923 to 1928.

In those days we were exporting farm products in large volume. But that alone did not solve the farmers' problems. There were two reasons.

In the first place, the price our farmers got for their exportable surplus production of certain problem crops automatically pegged the price for all they sold in the home market as well.

In the second place, we were exporting in that volume only because we were lending the money to our foreign customers with which to pay for those exports. It amounted to sending a shipload of wheat and lard to Europe, and sending in the same boat the money with which to pay for it—and then standing on the pier and cheering because we had an export market.

We were actually giving our farm products away to whatever extent the foreign nations did not repay the loans—and you know how much that was. To that extent it wasn't really a foreign market; it was foreign relief work at the expense of American investors and taxpayers.

In other words, much of our export market from 1922 to 1929 was artificially supported in a way that could not long continue.

When we stopped lending money, that false foundation finally gave way, and a rapid sequence of events followed. The lost export market caused supplies to pile up at home. The unsold supplies drove prices down to desperation levels. Yet the individual farmer continued to produce unsalable supplies because he was forced by these low prices to strive for maximum production to meet his high fixed charges.

The result was the economic stomach ache that was felt 'round the world.

In our fight at that time for equality for agriculture, in a Nation which was committed to the protective tariff and which had raised the tariff wall in 1922 under the Fordney-McCumber Act, we were asking that the tariff be made effective for American farmers, for the producers of our export crops. The idea was to maintain back of the tariff wall a domestic price that would be independent of the world price for the surplus, and then to arrange for the sale of our surplus products at the world price. Remember that although artificially supported, a foreign market for most of our surpluses did exist in those days.

The farmers of the West, South, and North, with the aid of business interests which recognized not only the justice of the

farmers' fight for equality but the ultimate and permanent benefit to business as well, twice secured the passage of a bill embodying those principles from a sympathetic Congress.

It was vetoed twice by an unsympathetic President.

In the meantime a new world situation was developing, a different problem calling for different treatment.

By 1929 it was perfectly clear to many of us that this particular system of farm relief we had been advocating would not fit the new world conditions. Two entirely new factors had entered into the scene.

One was that we had finally stopped lending billions abroad. That knocked the props out from under our artificial export market.

The other was that Europe was not only back into its prewar production stride, but was pushing forward into new highs, spurred on to still greater production by the desire for self-sufficiency in the face of a possible war.

Our former customers abroad established new devices to bar out imports, or to control their volume exactly where they wished. Our Government had shut its eyes to these facts. It had led the world in lifting tariffs toward exclusion; and at the same time, with its left hand knowing not what its right hand did, it had demanded debt payments—and optimistically planned for continued and expanded exports beside! It talked optimism when it should have faced facts.

I want to say right here that in 1929 I reached the conclusion that the old methods of farm relief embodied in the McNary-Haugen bills, for which we had been fighting, simply would not work in the new set of world conditions that confronted the Nation then. I made my position clear right then to my associates. I told them that I had trotted my last heat in that race. A new policy was needed to square with the existing facts.

One man in the Government in the early twenties who gave all the force of his great official and personal power to the farmers' fight was that great citizen of Iowa, the then Secretary of Agriculture, Henry C. Wallace.

This State, and this city, gave the Nation another great Secretary of Agriculture in the person of his son, Henry A. Wallace. He had picked up the fight where his father had dropped it. But Henry A. Wallace, too, had reached the conclusion that the old tenets of the farm fight were not applicable to the new day. He was one of the many who realized that the new conditions demanded a different treatment.

Some men are so made that they can readily change the plans of their march toward an objective when the lay of the land has changed so fundamentally that the original path is blocked, especially if they see that a somewhat different route will bring them quickly to the same objective. And some men, equally sincere in their devotion to agriculture, are so made that they do not readily change the plans of their march.

And the lay of the land had changed fundamentally. After the war we were no longer a debtor nation, but had become the greatest creditor nation in modern history. Export outlets are still of enormous importance to us, because our farm productive plant was built and geared to that end. We must work and plan for them. But the point I want to make is that we must move for them with a clear forward perspective and understanding of the conditions we are up against.

Our domestic farm program, if it is to work satisfactorily for the farmers in the Nation, must be based on the realistic understanding of the facts of world trade as they exist. It was for the purpose of getting as clear a picture as I could of the conditions among our former customers abroad that I have just now spent 2 months in Europe, where I talked with farmers and Prime Ministers and import and export traders, with Secretaries of Agriculture and farm-organization leaders, with economists and businessmen, and even with dictators.

On my return I find four propositions, all of vital importance to agriculture, that have been or are being discussed seriously, though how widely I am not in position to say. Let me state those four propositions:

First, that if this Nation will only adopt the so-called two-price system, which includes subsidizing the sale of our surpluses abroad, it can find export outlets for its agricultural products, no matter what their volume may be.

Second, that we as a nation should move further in the direction of national self-sufficiency by adopting a policy of exclusion, of isolation, and of higher tariffs, and by imitating the import control devices that are now prevalent in Europe.

The third proposition has been discussed in the past and it might arise again. It assails any farm program that assists farmers to adjust production to demand on the ground that it is based on economics of scarcity.

Fourth, that the present Government program which seeks through reciprocal-trade agreements to obtain a general lessening of international barriers in the interest of freer and larger trade should be abandoned, and a system of strictly bilateral trade treaties with other nations should be substituted in its stead.

I am glad you have given me the opportunity to discuss these four propositions here today.

Now, let us look for a minute at the first of these propositions—that the "two-price system" would regain our world markets. This means, of course, unlimited production with the surplus sold abroad at whatever prices will move it, the difference between domestic and world prices being made up to exporters by Government subsidy. The removal of surplus is expected to produce high domestic prices, and these high prices are to be protected by the policy of exclusion of imports. That is the principle.

I am not going to discuss it fully here, because I am convinced the farmers themselves realize that it cannot recapture world markets in the old volume under conditions that exist today. I do not see how the forces which opposed the two-price plan can seriously consider endorsing it as the program for agriculture now. The leaders then in power fought it all through the long struggle from 1923 to 1928, at a time when it had a chance to work. Now that the export market on which it fully depends is so largely closed, I do not see how those who opposed it then can completely reverse themselves.

I realize that export subsidies may be useful at times to meet special conditions with special crops. But dependence on that principle as a major part of our farm program can only lead us back into disaster. I am convinced that the double-jointed policy of exclusion and subsidized exports advocated by some is utterly contradictory and unworkable. Other nations can exclude too. If we should load the *Normandie* or the *Queen Mary* with subsidized wheat or lard and head it for Europe at full speed, the nations there would meet it at the dock with restrictions amounting to embargoes already in effect.

Unless we buy proportionately as we expand our sales, we cannot "jimmy" increased exports into the European market, no matter how much we subsidize, or apply other high-pressure systems to induce them to take more of our goods. The executives of any important nation can, under present powers and without waiting for legislative action, move instantly to checkmate any advantage we might seek to gain in export volume through subsidies.

The second of these propositions, as it is being discussed today, really seems to be advanced as part and parcel of the first, the two-price system. I refer to the policy of exclusion, of national isolation supported by higher tariffs or quotas, or import licenses. I am convinced that a national policy of exclusion can only be disastrous for our farmers. It is necessary to remember that continued big-scale production by our farmers depends on foreign outlets—and also that the greatest handicap to our sales abroad of lard and cotton and tobacco and fruit is the lack of dollar exchange in foreign countries which can be applied to the purchase of our goods. Let me review just one illustration of how this was impressed upon me time and time again in the European countries I visited.

Dr. Schacht, the German Minister of Economics, told me definitely that Germany, in order to buy our lard and cotton and other products, must be able to sell us goods or to complete an arrangement with a third country by which German goods will move to satisfy her purchase obligations. Dr. Posse, of the German Ministry of Economics, also told me that Germany was forced to buy lard and cotton, much against her will, from countries where she could pay with goods, instead of from us, because she does not have the necessary dollar exchange to trade with us. Germany used to buy 20 percent of all our farm exports; in 1935 she took less than 7 percent. That is a good customer on the way out of the door. Further exclusion would reduce German purchases still more, of course.

But what would happen if we did lose our export market for cotton, for example, as we inevitably must if this Nation is committed to a policy of self-sufficiency, of isolation, and exclusion?

Let me remind this Corn Belt audience of two simple facts about the Cotton Belt and ask one question. Then I will suggest an answer.

The two facts are: 1. About half of our national cotton crop is exported every year. 2. About 58 percent of our total farm population live in the cotton States, and they receive only 38 percent of the total national farm income, in spite of their being fortunate enough to have an export outlet for half their crop.

My question is: What would happen to that 58 percent of our farm population if our cotton exports were sacrificed in the race for isolation?

I said I would suggest an answer. It is not a pleasant one. The direct result would be sharp reduction of an income always pitifully low, of half our farm population. This would strike quickly and terribly into the industrial and the rest of the agricultural fabric of the Nation.

The ghost of that lost market would appear in various forms to haunt the exclusionists who unwittingly brought it on us in the name of "protecting the American standard of living."

That ghost would stalk across the land in the form of a crippled national farm buying power, resulting in closed factories, idle carriers, and increased unemployment. Land forced out of cotton without compensating benefits in the 16 cotton States would be turned into competition with crops grown elsewhere until the adjustment and distress had spread into every State of the Union.

People talk a great deal about the desirability of becoming self-sufficient in sugar production in the United States. I pick that as an illustration because self-sufficiency in sugar would have definite repercussions on corn-hog farming here in Iowa.

During the first 12 months after the Cuban trade treaty went into effect in September 1934, opening the doors a little wider for the entrance of Cuban sugar into the United States, our lard exports to Cuba nearly doubled, with an increase of 16,000,000 pounds. This increase alone represents a demand for the corn-hog production from 80,000 average Iowa corn acres, or the equivalent of the entire average sugar-beet acreage of your neighboring Corn Belt State of Nebraska, which is also one of the principal sugar-beet States.

We must not jeopardize our really valuable export markets because some people view with alarm a sprinkle of imports that have come in over the top of the tariff wall during the last 2 years. Suppose we should decide to shut out all farm imports through prohibitive tariffs amounting to embargo. Don't think that agriculture would not have to pay a price. Every time the farmer sits around the table in a tariff-bargaining game, well-organized corporate industries come away with the blue and red chips and leave the farmer with a few of the white ones. As we move our tariffs up toward the exclusion point, our exports automatically fall. We must not delude ourselves that we can play that game and at the same time develop exports, too.

I have been amazed at the agitation that has been stirred up over the agricultural imports in 1934 and 1935. I do not need to repeat figures to show how much the drought was responsible for those imports. They have already been laid before you. I do want to say, however, that if low agricultural imports are an index of farm prosperity, then what was the matter with agriculture in the United States in 1932 and 1933 when our farm imports were the lowest in 40 years? Is it the conditions of 1932 which we want again? In spite of the drought, the value of our agricultural imports for 1934 and 1935 was much less than the average for the last 10 years and less than the average for the last 20 years.

Secretary Wallace in a recent speech at Lincoln, Nebr., gave the country a thorough, and I think unanswerable, discussion of the question of agricultural imports. I hope most of you have read it or will read it. There is just one point I want to repeat from that speech. If the farmers demand a policy of exclusion in the agricultural field, they must be prepared to go along when nonagricultural industries demand it, and in this way assist in committing the Nation to a policy that will effectively strangle our hope for a revived foreign market.

Now, the third of the farm propositions which I mentioned a moment ago has to do with the criticism of the agricultural programs under the A. A. A. on the ground that they—I quote from the critics—"are based upon the economics of scarcity." We heard much of that criticism last year and it may be revived. I want to leave a few observations with you in case it bobs up again.

I think I speak what is in the minds of the farmers of this country when I say that they are strong for the economics of plenty, but they want it practiced clear across the board in the business life of the Nation as well as by the farmers. Why should the farmer be asked to stand alone among the producers of the Nation, operating to the limit of his plant's capacity and throwing his output on the market for what it will bring and then turn around to buy what he needs from industries that really understand the economics of scarcity and know how to apply it because they have practiced it so long?

Let's take a specific illustration that comes close home to the farmer: Manufacturers of farm implements in 1929 employed 41,663 wage earners in 293 establishments. In 1933 they employed only 11,140 wage earners in 170 establishments. What did they do about their prices? Well, that is interesting, too. The farm-implement industry cut its prices from an index of 98 in 1929 to an index of 90 in 1932, a price cut of less than 10 percent. Contrast that with your $10 hogs in June 1929 and your $2.50 hogs in June 1932.

The farm-implement industry in practicing the economics of scarcity produced only $30,000,000 worth of goods in 1933, as compared to $277,000,000 worth in 1929, a curtailment of 90 percent in value due chiefly to volume. That is an enormous reduction of production, a thorough acceptance of the economics of scarcity.

To be sure, the income of the farm-implement companies shrank during that period as well as their profits. The combined net deficit for the International Harvester Co. and Deere & Co. in 1932 exceeded $13,000,000, as compared with net profits of $52,000,000 in 1929. Perhaps that was sufficient justification for cutting production; I am not commenting on that. But you Iowa farmers know what kind of deficits you had during those years too.

I cannot understand the way of the man's mind who ruthlessly practices in his own business the very principle of production control which shocks him so when the farmers get into it on a much more moderate scale. I would like for this Iowa audience and the Nation to remember the fact that nonagricultural industry brought its 1932 production down to less than half of the 1929 volume, for the 5 years following 1929—while agriculture in 1932 provided the country with as much farm production as it did in 1929.

In the economic conditions faced by farmers here and abroad, the point is continually driven home to me that agriculture is a national problem affected by forces which are international. This is recognized by the nations of Europe which quickly feel and adjust themselves to changes in their export markets. In 1931, Denmark and Holland lost part of their export market for pork because England reduced imports of ham and bacon. Whereas, under the same circumstances, the United States waited 2½ years to act, the governments of Denmark and Holland, two of the most liberal and democratic countries in Europe, grasped the problem at once and within a year introduced production control in order to protect their farmers from the consequences. They had no supreme court to question their programs once they had been adopted by the representatives of the people. Their farmers are better off and realize that they are better off than they would have been without control. I do not mean to say they are contented. No farmers anywhere like to cut acreage, but the farmers of those countries are thrifty and they would rather adjust their production than to commit economic suicide by producing for a market which no longer exists.

The fourth and last of the subjects I mentioned a moment ago which are being discussed in the country today is the present vigorous effort of our Government to restore our foreign trade on a sound and on a natural basis.

Foreign commerce to flourish and continue must be built on a foundation of 2-way trade and mutual benefit—not a forced 1-way trade and a 1-way benefit. Our Government has been for some time promoting a system of reciprocal-trade agreements designed to accomplish a better balance of trade throughout the world and to free commerce by reducing or eliminating the trade barriers which penalize the world today. These agreements are not strictly bilateral, but are generalized throughout the world, through the judicious use of the most-favored-nation principle. This generalization of benefits is mutual, of course, with the other party to the agreement giving us the general benefit of trade concessions it has made or may subsequently make to other nations.

I expect to discuss this subject at greater length at a meeting similar to this at St. Paul day after tomorrow. In general, the choice seems to be one between our present reciprocal policy, and one which requires strict governmental control over imports and exports similar to those now operating in Europe, to be set up in the United States. During recent weeks I had a fair opportunity to observe how far government control of imports and exports leads in the direction of government monopolies, and the licensing and regimentation of business, internal as well as external. Unless I am completely mistaken in the attitude of American citizens, that certainly is not the path they would choose to follow.

I think that for best results, talk, like trade, should flow in both directions. I have opened up far too many subjects in this talk today to be able to discuss any one of them fully and satisfactorily, and I realize that many topics in which you are keenly interested have not been touched on at all, but perhaps the best thing in any speech is its end and I am approaching mine now.

The problem of agriculture is broader than the farm. It affects the Nation vitally. It faces us with a double challenge and calls for a double effort.

We must recognize that we need to restore our foreign trade, and that foreign commerce to flourish on a permanent basis must be on a sound foundation of two-way trade and mutual benefit. That principle cannot be dodged. We must bend every effort to secure that freer commerce, to bring peace out of the economic war that afflicts the world today.

Then we must recognize, realistically, that we do not have that desired condition yet and in the meantime—in the all-important meantime—we must meet the economic exigencies that do exist whether we like them or not. Until they are corrected we must live with them. Until our foreign outlets are restored we must help the American farmer to cooperate with his neighbor in a concerted effort to shift his farming operations with an eye to the effective foreign and domestic market.

UNSHACKLING OUR EXPORT TRADE

The place of foreign trade in our American farm problem is an important one. Increase the foreign trade in our farm products and our agricultural problem would fade accordingly; decrease our foreign trade and our agriculture would fade accordingly. On the satisfactory solution of our foreign-trade problem depends much of the future of American agriculture.

I returned just last week from 2 months in some of those European countries which stand on the other side of the counter from us in most of our trade relations, as buyers of what we sell and as sellers of what we buy. I wish that I might have found some magic or legerdemain to solve the whole problem quickly and painlessly. I am convinced that there is no such easy way out.

I stated my belief day before yesterday in Des Moines that under existing conditions merely the large-scale use of farm export subsidies, the two-price system, could not solve our farm problem. For one thing, a subsidy program which does not include an effective method of production control carries the seeds of its own destruction. The export market we had just before 1929, which, in my opinion, could have made the plan work then, is now much diminished because of the increased self-sufficiency of European nations in production of foodstuffs and because we have stopped lending Europe money to buy goods as we did then. I am confident also that foreign countries would defeat such a program through offsetting measures; they all have executive authority to erect trade barriers overnight to protect their own producers from outside cutthroat competition.

As you know, the purpose of all export subsidy proposals is to sell surpluses abroad so that the price on the remainder of the crop will rise to the top of the tariff wall. With men in this audience, I fought for years to make the tariff effective for agriculture on our domestic consumption. Now, largely as a result of the 1934 drought, the tariff has become fully effective on wheat, livestock, and livestock products, so that farm prices are high enough to attract some imports into this country over the

top of our tariff wall. This is a sign that for once our tariffs are reflected in raising our domestic farm prices.

If in the present changed conditions in the world the big-scale use of export subsidies, without production control, would work to get our world markets back, I would be the first to say so. You know that I worked with you for years for enactment of the McNary-Haugen bill, which was an export-subsidy proposition. Plenty of nations in the world are using export-subsidy methods. I talked with many men in Europe who are operating them. But I became convinced in 1929 that the time had passed when our farmers could rely upon them as the single great mainstay of an effective agricultural program.

An important obstacle to foreign sales of farm products is that as a nation we want to sell all and buy nothing—and that won't work. Trade is exchange of goods. It has to move both ways. If it does not, there is no trade.

We need a sense of proportion in sizing up the obstacles in the way of attaining agricultural prosperity and in choosing the best methods to overcome those obstacles. Looking at the problem deliberately, two considerations seem to stand out as vital. They are:

First, we must shape our course so as to regain and to maintain our export markets for farm products without sacrificing farm income on domestic consumption in so doing.

Second, we must retain a rate of agricultural production that will satisfy the needs of the home market, plus the export markets we can get, without breaking down our domestic farm-price structure by producing quantities in excess of what the market will take at fair prices.

I am afraid that in anxiety over matters that are relatively minor, such as imports, we sometimes lose sight of the supreme importance of these two things.

World conditions have changed so that the old method of letting things drift will neither get back our export trade nor help farmers hold their production at levels that will yield a fair income from what the home market will take. Hence, I believe farmers everywhere will look forward to cooperation beginning in 1938 in making essential adjustments of production through use of these State-Federal programs which will become available at that time.

The two-price system has to be revised sharply in order to work for American farmers under present world conditions. It will injure farmers far more than help them to try to force unlimited quantities of farm products on the world market in its present state. This would only invite retaliations and close up some of the export outlets that still remain to us. The only way the two-price system can serve producers of major farm crops now is to use it skillfully in conjunction with production control, so that domestic farm prices can be maintained while quantities of farm exports which the world really wants, and will take without protest, can move readily in world trade at the going world price.

Here in the great spring-wheat market of the Northwest, I would like to illustrate specifically what I mean. The international wheat advisory committee gave me estimates that the world trade in wheat for the year 1935–36 will be 480,000,000 bushels, compared with the yearly average of 770,000,000 bushels for the period from 1922 to 1927, inclusive. This is a loss of nearly 300,000,000 bushels. Now, I think it is clear that we might, with production control and a fair quota of exports, work the two-price system for American wheat producers. But to take the lid off completely and expect to export any wheat surplus we produced, no matter how big, would wreck our actual wheat market, first abroad and then at home. So I say we want to move forward, not backward, and regain our markets abroad while maintaining our prices at home.

Laying that proposition aside for a moment, I wish you would turn with me to examine the reasons for my conviction that the policy of national self-sufficiency, of exclusion, and isolation would, if adopted, lead to disaster for the farmers and for the Nation.

If, in pursuance of this exclusionist policy, the farmers get hothouses reared over them, it will only be had by raising hothouses over other industries which are more powerful and much more adept than the farmers in tariff trading. The immediate result will be less American buying, and the later result will be, inevitably, less export sales. This would hit hardest at cotton, tobacco, wheat, lard, and fruits, because they are normally our largest export farm commodities. It would cost the American public unreasonable prices. It would use in the production of new crops only a small fraction of the acreage which has been and should be devoted to production of crops for export.

That policy would simply carry to further extremes the folly of the Smoot-Hawley Tariff Act which contributed, perhaps, the most important impetus to the world movement in the direction of import restrictions and trade barriers that have throttled international commerce—so vital to the prosperity of our American agriculture. If that exclusionist policy embodied in the Smoot-Hawley Tariff Act was the salvation for our farmers and for the country, then why the crisis of 1932–33?

In order to develop the effect of this exclusionist or isolation policy on our exports, let me reduce it to the simplest possible illustration which shows that if we are going to continue to export goods we must take goods in return. Let us imagine a world which has been reduced to six men who have a limited supply of gold to use as a medium of exchange. One of them produces and consumes more than any of the others. He decides to quit buying from the others, but to keep on producing at a rate that requires the others to buy from him, unless his surplus production is to pile up and overwhelm him. If others buy from him, they must send him gold and eventually he will have it all. That forces the others to adopt the same principle, and trade among them breaks down.

Apply that principle to the United States. And remember that in some commodities our export is enormously important. We consume at home less than half of our cotton production, for instance—and 58 percent of our total farm population live in the Cotton Belt. More than 75 percent of some types of our tobacco is dependent upon export. Much of our land production depends on export. Sacrifice the market of these great groups of producers, and sacrifice their income and buying power accordingly, and the repercussions on the agriculture and industry of the whole Nation are enormous.

That is why I mention cotton and tobacco here in Minnesota. If the cotton and tobacco regions are forced to such a drastic adjustment of acreage, their labor and land will be devoted to something else. Those regions have dairying possibilities, which a forced change would develop to the menace of the dairy industry in this and other States. If driven to it, those regions can develop indefinitely the production of various feeds for hogs. Eventually the surplus acres will shift to competition with the North and West, and distress will be equalized throughout agricultural America.

One other reminder on the subject of exclusion, or isolation. Europe is away ahead of us in devices to control imports, and to channelize trade to the countries with which they can actually trade, or to countries whose exchange they can secure readily through triangular or multiangular trade. Those countries can hold clear out of the trade picture any nation that tries to get away with exclusion. And while I am not a prophet, my guess is that they would.

Now, of course I have been talking about practically pure exclusion. Many who belong to this same general school of thought hold that we can get back for our farmers their old export markets and protect them against foreign competition by a system of Government selected imports and exports. They tell us that we should copy Europe's methods and ourselves establish rigid control of imports and exports and embark on a system of bilateral trade balancing.

Let us see how that has been working out in Europe. During my conversations in 11 European countries in April and May, with our own official representatives and our businessmen abroad, and with the leaders of foreign governments and trade, I was told that these European countries do not like the system in which they are enmeshed, but they can't let go of the bear's tail. With few exceptions they expressed hope for the return of freer trade, now shackled with their restrictions and quotas and strictly bilateral balances. The exceptions are those nations that feel themselves forced to develop their home or empire production as protection against the menace of possible war.

From our standpoint there are two serious defects in the bilateral-barter-quota system. The first is that it multiplies controls and forces regimentation, the most drastic regimentation not only of the import and export business but of agricultural, manufacturing, and trade in general.

The most complex and drastic controls of both imports and exports characterize the whole system—and yet, strangely enough, it is advocated by some here who criticize as regimentation the effort of 3,000,000 of our farmers who, with the aid of the Government, sought to manage their production so as to lessen the shock of lost export markets. These critics have argued for the European method of direct barter and selective imports, with all the attendant regimentation, as a means to get rid of the cooperative effort of our farmers.

The European controls are amazing in their extent and authority. They include strict and unbeatable quotas; government monopolies in which all trade is centralized by law; licenses for every step of business operation; barter trades between nations with government allocation of business among private firms; compulsory production control; subsidies for production; licenses covering every individual transaction and the necessity of permission before exchange can be used for the buying of goods from abroad. In some countries an individual trader can export only if the government monopoly or bureau will give him permission. I hope we never have to adopt such a system here.

The second objection is that it doesn't increase trade. The system has helped to strangle and decrease international commerce, to impede the flow and reduce the output of goods and hence decrease employment, to lower living standards for both farmers and laborers, and to breed continual fear that the trade war in which it engages them will be followed by military war.

They are sick of it, as I mentioned before. The German people are by no means as ardently devoted to self-sufficiency as they were a few years, or even a few months, ago. The French have already spent two and one-half billion francs trying to get rid of their surplus production of wheat which they developed within the last few years and the problem is still with them. The domestic price in recent months has been about $1.62 per bushel compared with a world price of about half that.

In nearly every country the leaders with whom I talked said that the only reason they adopted the exclusion and barter system

was that they had been forced to it by the trade policies of others. Much of the blame is laid at the door of our own Smoot-Hawley tariff.

Of course, I realize that the unfavorable consequences of this policy in Europe do not necessarily mean it would be disastrous for us. But an examination shows that, on account of our present trade-balance position, if we would submit our trade relations to a barter basis with European nations we would be worse off than we are. That is, if we would balance our imports and exports with each country, our exports would fall off, simply because they are now larger than our imports. And our farmers would be hit the hardest.

That "favorable balance" as we used to call it, has existed for many years. Our exports to the United Kingdom, France, and Germany are usually twice as large as our imports. Only Czechoslovakia, of all the 11 countries I visited, sells us more than we sell her. If we sit down, country by county, to balance our trade with those nations, I do not see how we could fail to get the worst of it. Every country which now buys more from us than we buy from it, will try to force us to even up our account. The result will be, we lose instead of gain in export trade.

I returned from Europe convinced that American farmers and the Nation will seriously endanger the ground they have gained since 1932 if they allow themselves to be swept into adoption by this country of the European system of exclusion and barter.

This leads to consideration, as it relates particularly to farm products, of the course now being followed by this Government in striving to reopen the world markets through the negotiation of a series of reciprocal-trade agreements.

Instead of import exclusion or strict bilateral trade balancing, with their byproducts of international ill will, tariff retaliation, reduced trade, and regimentation, our Government is promoting reciprocal-trade agreements through judicious use of the most-favored-nation principle to generalize concessions among the countries of the world. Generalization is not confined to our own concessions; it is mutual. That point is sometimes misunderstood or misrepresented. The countries which enter into reciprocal agreements with us agree to give us the advantages and concessions which they have given or may give to others. This policy leads to better balance of trade and to freer commerce throughout the world by reducing or eliminating international barriers under which trade now suffers. In order to make sure that this country's tariff concessions do not result in importation of quantities so great as to work serious injury to important domestic groups, import or tariff quotas are provided when there is indication that they may be needed. When a tariff quota is exhausted further imports come in at the regular rate of duty.

The United States now has concluded 14 of these agreements. I was in France on the day the terms of the American-French agreement were made public. Both the American and French business and Government leaders were pleased with the accomplishment, which historically was a great one. It was the first general trade agreement between the United States and France in over 100 years. The Director of Commercial Accords in the French Government, who had much to do with negotiating the agreement, says that the United States will benefit in larger measure than France under the agreement, but that unquestionably both nations are going to be helped.

Eight of these agreements have been in effect long enough to give us some idea of how they are working. Our agricultural exports to these eight countries during the first quarter of 1936 increased 15 percent above our farm exports for the same quarter last year compared with an increase of only 5 percent to the countries with which we have no trade agreement. It is, of course, too early to measure accurately the long-time effects of these agreements, but I want to drive this one point home in your attention and memory: The tariff concessions we are making under these agreements do not extend further than to bring the rates upon the products covered by the agreement down from the Smoot-Hawley rates to those under the Fordney-McCumber Act. Many concessions do not even go that far.

Many well-meaning people, some of them, I regret to say, in positions of responsibility to agriculture, have attacked the trade-agreement policy of the Government on the ground that it modifies our tariff rates, in some particulars cutting them below rates fixed in the Smoot-Hawley Act. I submit that these men are taking on themselves the role of defenders of that vicious bill, which history has already repudiated.

Opponents of the trade-agreement program also claim that the use of the most-favored-nation principle gives away trade advantages greater than those we get in return and that through generalizing our concessions we open the gates to a flood of imports from the rest of the world. But our concessions are usually on commodities of which the country signing the agreement is the principal source. Hence the granting of these same concessions to other countries has a much smaller effect on our imports than has been represented.

I repeat that if those countries with which we have agreements or reciprocal most-favored-nation relations make further agreements with other countries and further reduce their tariffs or other import restrictions the United States gets the benefit of these reductions.

Soon after completion of the trade agreement with Belgium, that country decided to eliminate an import tax amounting to one-half franc per kilo—about 4 cents per pound—on lard. The tax was of course eliminated on imports from the United States. On a barter arrangement, our corn and hog farmers would not have received this automatic concession.

Sweden negotiated an agreement with Spain soon after the conclusion of the trade agreement with the United States. In our agreement with Sweden we were not able to induce that country to give us any assurance in regard to the imports of oranges for the reason that we have been in the past a very small source of supply. But Spain was able to get Sweden to agree to continue oranges on the free list and consequently, by virtue of the most-favored-nation clause in our agreement with Sweden, oranges from the United States are guaranteed freedom from import duties upon importation into Sweden.

Similarly, Sweden completed an agreement with South Africa reducing its duties on apples and pears during the months of May and June. Exports of apples and pears from the United States to Sweden during these months automatically secure the benefit of lower duties.

I appreciate that some farmers here in the Northwest have been worried about the possible effects of the Canadian agreement, particularly with reference to cattle and to cheese. At an earlier time there was some fear about other products, such as cream. As you know, cream, among other products dealt with in the treaty, is protected by a tariff quota. However, Canadian exporters, far from using up the quota, have apparently found the American market so unattractive to cream that only 7,000 gallons, a drop in the cream vat, came in during the first 3 months the agreement was in effect.

It is true that there has been an increase in imports of live cattle and of cheese since the agreement went into effect, and farmers in the Northwest who are close to the border naturally want to know what the facts are.

The increase in Canadian imports for the first quarter of 1936 over the first quarter last year was 34,000 head. This compares with a total inspected domestic slaughter of 3,200,000 head of cattle and calves for the same period, or about 1 percent, which is an amount so small as to have no measurable effect on price. About half the Canadian imports are of the stocker and feeder type, purchased chiefly by farmers. While imports were increasing from February and March through April of this year, the prices on stocker and feeder cattle in St. Paul were actually rising, from $6.60 to $7 a hundred pounds, and this increase was somewhat greater than the increase that was taking place at Kansas City and Chicago.

While Canadian cattle imports showed a marked increase under the agreement, total cattle imports for the first quarter of 1936 were only 5,000 head, or 5 percent, over imports for the same period last year. This increase is so minute when compared to domestic slaughter as to have had no influence on the general cattle price situation.

A different situation exists with respect to cheese imports. Canadian imports, under the agreement, increased strikingly in the early months of this year. But the total imports of cheese showed only a slight upward trend over the same period last year; that is, from 16,300,000 pounds to 16,900,000, or less than 4 percent. However, over 3,000,000 pounds of these imports in the present year were from Canada, while the Canadian figure for the same period last year was only 350,000 pounds.

Imports of cheese from Canada in April dropped to less than 400,000 pounds, or about 75 percent under the March figure. There is every reason to believe that the normal trend of cheese imports under the Canadian agreement will be much lower than the trend of the first quarter of this year, when export enthusiasm in Canada had run a little too high.

Time is passing, and I want now to return to general phases of our foreign trade.

If total absence of imports is what our farmers really want, they came closest to it in 1932, when wheat prices were at their lowest level since the days of Queen Elizabeth, other farm prices were at the bottom, and agriculture was on the rocks.

Both imports and exports normally increase with rising prosperity and revival of trade. Any increase in world prosperity and in the prosperity of this country will be accompanied in the future as in the past by substantial increases of both exports and imports. Whether prosperity causes the increases or the increases cause prosperity, no one can say, but the two go hand and glove.

At the very outset of my remarks I said that the place of foreign trade in our American farm problem is one of great importance.

Now, in the light of the discussion that followed, I want to sum up on the one hand the things that in the present world situation seem to me to be the greatest dangers to American farmers and those which, on the other hand, seem to offer our agriculture the greatest hope of further progress.

To my way of thinking, American agriculture would be gravely endangered if it should be forced or induced to give up the ground it has gained since 1932. For agriculture to become the cat's-paw of the rock-ribbed industrial protectionists, plunging into a hysterical exclusionist drive to bar out all imports, would destroy our export markets and injure ourselves. To try to force unlimited quantities of farm exports onto limited world markets

by using a two-price system without any production control would be another way to hurt ourselves. To junk our reciprocal trade agreement program and go to a bilateral barter system would be a third way to damage ourselves. The advances made by agriculture in the past 3 years should not be sacrificed by these methods or any other mistaken methods that may be proposed.

The future of American agriculture should be bright if we adhere to policies which are based upon the principle that world markets and domestic markets are related parts of a whole. If farmers hold fast to measures which protect their prices at home, and which are designed to regain and maintain their markets abroad, then they can continue their march toward recovery.

METHOD OF PRESIDENTIAL ELECTIONS—CONSTITUTIONAL AMENDMENT

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD an article written by Mr. William C. Lee, member of the Proportional Representation League.

The article suggests an amendment to the Constitution of the United States providing a different way for electing the President from the one which is now used. As these suggestions are always of general public interest, I feel justified in making this request.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Hon. CLARENCE F. LEA, Representative in Congress from the First District of California, has a project which, to a person not rigidly habituated to things as they are, seems a very good proposition. He points to the well-known fact that when we have an election of the President of the United States, each State goes as a unit. Each candidate gets all or nothing. Mr. LEA thinks the electoral votes of each State ought to be divided amongst the respective candidates in proportion to the votes at the polls.

In Mr. LEA's State of California, there were 847,902 votes for Hoover and 1,324,157 for Roosevelt, or 8 Republicans for every 12 Democrats, yet the total number of the State's electoral votes had to go for Mr. Roosevelt, just as though everyone in California had been for him.

In the previous election, 1928, there were only twice as many votes for Mr. Hoover as for Governor Smith; yet all the electoral votes of California were counted for Hoover, when one-third of the people had officially stated, by their ballots, that they wanted someone else.

Counting all the votes of a State for any candidate who receives only a large part of them, Mr. LEA asserts, is most unjust.

How has this come about? It is because the Constitution of the United States says that the choice of Presidential electors in each State shall be regulated by the legislature. No one else can do anything about it.

The men who run for the office of Presidential elector are not legally bound to vote for their party's candidate. That they will do so is only an understanding. The Constitution tells them to use their judgment.

But in these days when there are such fierce differences and fundamental controversies about social organization, when so many people want to change our governmental set-up, and when so many others are disloyally trying to nullify the present Constitution in its most important part (the Bill of Rights), it is easy to see that conditions may arise when electors may feel themselves to be released by the unforeseen conditions and no longer morally bound to vote as they had expected to vote when they ran for the office of elector. They may feel under moral obligation to do what they think is necessary for the welfare of the country, discharging their duties as electors in accordance with the Constitution instead of in accordance with custom.

When this happens there is going to be trouble. And it will happen, too. Suppose the candidate thus elected does not have a majority of the popular vote, either.

In 1876 the feeling ran high when Mr. Tilden, who received the most votes, was held not to be elected after all. But at that time the country had just got through with a civil war, and the issues were not so vital. Next time an unfairly defeated party may not take it lying down.

If a man drives an automobile for 5 miles over mountain roads covered with glassy ice without mishap, does that show it is safe for him to drive 10 miles farther? If he has actually skidded once, shall we consider him a smart man or a fool if he goes right on? Americans think they are smart, but generally they do not have the good sense to prevent accidents until after one has occurred. Our car took a skid in 1876, and some people think serious harm did result then. We are liable to skid right over the edge next time.

The present block-vote system is injurious because it fails to spread the election campaign, with its benefits of enlightenment, all over the country. Nearly all the hot contest is carried on in the few States that are doubtful. Those that are sure one way or the other simply look on and talk about it. What is the use of bothering with them? We know in advance how they will go. Some people do not vote from conviction but only from habit.

The present way places an undue strain of excitement and temptation to corruption on those States in which the principal parties are equally divided, and in which therefore each party exerts itself to win the grand prize of all the votes from those States.

The block system prevents the selection of Presidential candidates, as a rule, from any except a few pivotal States. This goes against the feelings of the other States and narrows the range of choice of able men for the great office.

Congressman LEA has submitted an amendment to the Constitution under which the office of Presidential elector will be abolished. All voters at the polls will vote directly for Presidential and Vice-Presidential candidates. Each State will have the same number of electoral votes as now, but these electoral votes will be divided amongst the candidates in proportion to the votes at the polls. Suppose there are 10 electoral votes from some State. One candidate might receive 4.63 electoral votes; another, 4.27; and a minor candidate might receive 1.10; whereas under the present system all 10 votes would go to the largest minority. These fractional votes then will be added up with the similar votes from other States and the candidate receiving a plurality of all the electoral votes will be considered elected.

Thus every voter has a real voice in the election.

People all over the country ought to become informed about this extremely important reform. They should discuss it during the Presidential campaign and write to their Members of Congress in both Houses demanding action.

They might also ask for copies of the speeches, hearings, and reports that have been made on this proposition. The House Committee on Election of President, Vice President, and Representatives in Congress has reported favorably on it, in two Congresses.

Mr. LEA has pointed out that if New York and Nevada both are equally divided between the two main parties, except that New York has 5,000 majority for one side and Nevada has 5,000 majority for the other side, there will be exactly the same number of citizens in the two States favoring either of the two candidates, but the one who has his extra 5,000 in New York will carry 47 electoral votes, while the one who has his 5,000 majority in Nevada will carry only 3 electoral votes. It looks like a big victory. It is no discredit to either State that it has the number of electoral votes that it does have, or that its people divide as they do; but it is outrageous that the election should be carried by such legalized ballot-box stuffing as that.

SECURITIES ISSUED AND SOLD BY PUBLIC UTILITY HOLDING AND OPERATING COMPANIES

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD a manuscript entitled "New Securities Issued and Sold by Public Utility Holding and Operating Companies", for the printing of which I have obtained an estimate.

There being no objection, the manuscript was ordered to be printed in the RECORD, as follows:

RE: NEW SECURITIES ISSUED AND SOLD BY PUBLIC UTILITY HOLDING AND OPERATING COMPANIES DURING THE YEAR 1935 AND 5 MONTHS ENDED MAY 30, 1936, 17 MONTHS' PERIOD

The very complete and detailed data compiled on the accompanying sheets show that public utility holding and operating companies—electric light, power, and gas—issued and sold during the year 1935 new securities to the amount of, at par value	$1,076,412,080
And during the first 5 months of 1936, i. e., to May 31, they issued and sold new securities to the amount of, at par value	644,124,900
Total amount issued and sold for the 17 months ended May 31, 1936	1,720,536,980
New securities "registered" in May with the Securities and Exchange Commission for early sale	144,643,000
Grand total	1,865,179,980

The entire amount, $1,076,412,080, of new securities put out during the year 1935 were issued and sold after the introduction into Congress of the Wheeler-Rayburn bill. Of this latter amount, $533,260,000, par value, or close to 50 percent of the total, were issued and sold between the time the bill was introduced and its enactment into law.

It was during this period that the opponents of the bill—led and influenced largely by the "Committee of Public Utility Executives"—were declaring the bill to be a "destructive" measure and predicting that its passage would practically be ruinous to the electric light and power industry. Evidently investment houses, investors, both private and institutional, did not believe or agree with these statements and predictions, because of the fact that after the passage and approval by the President of the act and for the remainder of the year, they purchased $543,152,080, par value or over 50 percent of the $1,076,412,080 new securities issued and sold by public utility holding and operating companies during the year 1935. It should further be noted that the annual interest rate on $1,032,634,080, or 95.9 percent of the total new

securities sold, ranged from 3½ percent to 4½ percent, the average interest rate amounting to but 3.86 percent. And of this $1,032,634,080 of new securities, $915,634,500, or 88.7 percent, the interest rate is only 3½ percent to 4 percent.

Even when money is plentiful, capital demands a rate of interest or return in keeping with the known or indicated risk involved.

The interest rates as above set forth and applying as they do to over 88.7 percent of the new securities in one instance and to 95.9 percent in another instance clearly indicates that capital and investors saw, in these new public-utility securities, no more than the usual risk connected with any high-grade security.

The enormous amount of new securities, namely $1,865,179,980 as shown above not only speaks for itself as a definite and well-defined contradiction to the oft-repeated and unwarranted assertion that the Wheeler-Rayburn bill, if passed, would stifle utility financing, but as a further contradiction to this and similar misleading statements we present the fact that the public-utility companies which issued and sold these new securities are located in 27 different States; the latter ranging from Maine on the North, to Louisiana in the South, and from the Atlantic Coast States in the East to California on the Pacific coast, including, of course, many States in the interior; and as the properties or systems of a number of the issuing companies extend into adjoining States, it is evident that close to 35 States are represented, as it were, in this large amount of new financing.

The broad and varied geographical field thus covered or included in the new securities and companies putting out same in the past 17 months, conclusively shows that the electric light and power industry, either as a Nation-wide or localized business, has not been destroyed, injured, or impaired.

In connection with and appropriate to the above it might be well to give here some data as to the life or maturities of these new security issues aggregating $1,856,951,980.

The securities consist of bonds, debentures, notes, preferred and common stocks. The two latter are of course, without maturity; the notes and debentures are of short-time serial maturity and the life of the bonds ranges from 14 years to 35 years the average life or maturity being about 26 years with 25 percent of the total number of issues being 25-year maturity and 41 percent of the total having a 30-year maturity.

The most of these were for refunding purposes. In the majority, of cases companies "calling" for redemption, at prices ranging from 102 to 105, outstanding security issues bearing annual interest charges ranging from 5 percent to 6½ percent.

The result will be a tremendous yearly saving in "fixed charges." This yearly saving must and will prove of material benefit to the stockholders of the refinanced company, and more particularly to the common-stock holders, in that considerable of the earnings heretofore used for payment of bond-interest charges will be available for dividends or larger dividends on the common stock.

In addition to the gain to investors in the latter, through thus receiving larger dividends, they will benefit through the increased value thereby accruing to their stock—it naturally will be worth more and command higher prices—and the greater stability also given to it; all of which will also accrue to and similarly benefit the preferred stock. So that the equity holders, the investors in the company's junior securities are assured either increased income, or more regular income, plus larger market value for their holdings.

Yet opponents of the bill, especially public-utility officials, both orally, in communications, and through printed statements to the Senate and House Interstate Commerce Committees, which held lengthy hearings on the bill, repeatedly and unqualifiedly asserted that the bill, if passed, would cause immense losses to the equity holders, if not practically wipe out their investments in this respect.

In connection with the above, please remember that for the 17 months ended May 31, 1936, there was actually marketed $1,720,536,980 of new securities, with $144,643,000 "registered" for early sale; or a total of $1,865,179,980 put out by public-utility companies in that period.

The average annual interest rate on same being 3.86 percent and as low as 3 percent, as against interest rates on the bonds called for redemption ranging from 5 percent to 6½ percent. The large yearly saving in "fixed charges" will amount to hundreds of thousands of dollars.

The average maturity (life) of these new securities is 26 years; and as the large annual saving above shown will be effective for this long period of 26 years, the total saving becomes enormous and the benefit to the equity holders simply immense; yet the Public Utility Act of 1935 is a "destructive" measure and a ruinous one to public utilities—electric light, power, and gas—and especially to investors in junior securities of same; that is, according to statements, assertions, and representations made by members and associates of the committee of public-utility executives—also known as the Gadsden committee—in their efforts and fight to defeat and prevent the passage of the Wheeler-Rayburn bill.

The facts set forth in this article and as shown on the accompanying sheets are sufficient proof that this committee indulged in—to put it mildly—continued misrepresentation also in unwarranted and misleading predictions as to the future disastrous effect of the bill upon utility holding and operating companies.

And it is particularly pertinent to note that of the 62 public-utility companies which marketed the new securities covered by this article, that 27 companies were either subsidiaries of member companies of the Gadsden committee, or were member companies themselves—please get this straight, that over a large majority of the membership of this committee issued and sold new security issues and at lower interest rates than their then outstanding bonds and securities were carrying; notwithstanding their unqualified claims that the passage of the Wheeler-Rayburn bill would prevent this very thing—these 27 companies comprising 43.5 percent of the total number marketing the new securities.

In the year 1935, 28 or 50 percent of the 56 issues sold were of this committee group; they selling in that year 1935, $686,620,080 par value, or 63.8 percent in amount of the new securities sold.

During the first 5 months of 1936, this committee group marketed $300,454,900 par value, or 45.1 percent of the total put out.

Of the seven companies which registered new securities with the S. E. C. in May, for early sale, three are of this committee group, the securities amounting to $77,493,000 par value, or 53.6 percent of the total amount registered for marketing.

This is a record of actualities, of the issuance and sale of bonds, debentures, and stocks by members of a committee and its associates organized to oppose and to defeat the passage of the Wheeler-Rayburn bill and who indulged in every form of misrepresentation and direful predictions to that end.

List of companies that contributed to the Committee of Public Utility Executives

(The Gadsden committee)

Holding companies:		
American Gas & Electric Co		$7,890
American Water Works & Electric Co., Inc		5,000
Columbia Gas & Electric Corporation		5,000
Commonwealth & Southern Corporation		13,140
Electric Bond & Share Co	$8,957	
American & Foreign Power Co., Inc	1,370	
American Power & Light Co	3,913	
Electric Power & Light Co	2,543	
National Power & Light Co	1,957	
Power Securities Corporation	195	
United Gas Corporation	1,174	
Lehigh Power Securities Corporation	1,956	
Total contributed by Electric Bond & Share Co. and its intermediate holding companies		22,065
New England Power Association		5,865
Niagara-Hudson Power Corporation		7,920
The North American Co	$13,125	
Illinois Power & Light Co	5,000	
Total contributed by North American Co. and its intermediate holding company		18,125
Pacific Lighting Corporation		5,000
Penn-Southern Power Co		1,410
Standard Gas & Electric Co		14,010
Stone & Webster, Inc		5,145
United Gas Improvement Co		10,755
United Light & Power Co		5,610
Total contributed by holding companies		126,935
Operating or independent companies:		
Consolidated Gas, Electric Light & Power Co. of Baltimore		3,000
The Detroit Edison Co		6,630
Pacific Gas & Electric Co. (operating and holding company)		5,000
Public Service Electric & Gas Co., New Jersey		10,500
		25,130
Total contributed by holding companies		126,935
Total contributed by operating or independent companies		25,130
Total contributed by all companies		152,065
Additional amount requested by the committee		50,000
Total amount available to the committee		172,065
Amount paid two attorney firms by the Edison Electric Institute		150,000
Total used by the committee and associates against the Wheeler-Rayburn bill		322,065

(Based on data furnished to the Senate Lobby Investigation Committee by Mr. P. H. Gadsden.)

List of public utility holding and operating companies (electric light, power, and gas) that issued and sold new securities during the year 1935, and essential data relative to the securities

Annual interest rate (per-cent)	Name of company and securities	Amount sold, par value	Date of filing, 1935	Approximate date of sale, 1935	Date of maturity	Parent or holding company
5½	Wisconsin Public Service Corporation,[1] Milwaukee, Wis., first-lien and refunding-mortgage bonds, series C.	$7,000,000	Jan. 24	Mar. 22	1959	The Standard Gas & Electric Co.[1 2]
4	Pacific Gas & Electric Co.,[1] San Francisco, Calif., first- and refunding-mortgage bonds, series G.	45,000,000	Mar. 8	Mar. 28	1964	Pacific Gas & Electric Co.[1] (an operating and holding company).
3¾	Southern California Edison Co., Ltd., Los Angeles, Calif.; refunding-mortgage gold bonds.	73,000,000	Mar. 30	Apr. 22	1960	Independent company.
4¼	Androscoggin Electric Corporation, Augusta, Maine, first-mortgage sinking-fund bonds.	4,000,000	Apr. 11	May 7	1955	New England Public Service Co.
4	San Diego Consolidated Gas & Electric Co.,[1] San Diego, Calif., first-mortgage bonds.	15,500,000	May 9	May 29	1965	The Standard Gas & Electric Co.[1 2]
3¾	Commonwealth Edison Co., Chicago, Ill., first-mortgage bonds, series H.	29,500,000	May 17	June 6	1960	Commonwealth Edison Co. (an operating and holding company).
5½	Southern Utah Power Co., Cedar City, Utah, first-mortgage sinking-fund bonds.	500,000	May 25	June 28	1960	North American Gas & Electric Co.
3½	Central Hudson Gas & Electric Corporation, Poughkeepsie, N. Y., first- and refunding-mortgage bonds.	9,765,000	June 4	July 1	1965	Central Hudson Gas & Electric Corporation.[3]
4	Pacific Gas & Electric Co.,[1] San Francisco, Calif., first- and refunding-mortgage bonds, series G.	30,000,000	June 5	June 26	1964	Pacific Gas & Electric Co.[1] (an operating and holding company).
3¾	Consumers Power Co., Jackson, Mich., first-lien and unifying-mortgage bonds, series of 1935.	18,594,000	June 7	June 28	1965	Commonwealth & Southern Corporation.[1]
3½	Edison Electric Illuminating Co. of Boston, Boston, Mass., first-mortgage sinking-fund bonds, series A.	53,000,000	June 11	July 19	1965	Independent company.
3¾	Southern California Edison Co., Ltd., Los Angeles, Calif., refunding-mortgage gold bonds, series B.	35,000,000	June 12	July 1	1960	Do.
3¾	Cleveland Electric Illinuminating Co., Cleveland, Ohio, general-mortgage bonds.	40,000,000	June 25	July 15	1965	The North American Co.[1]
4½	Public Service Co. of Northern Illinois, Chicago, Ill., first-lien and refunding-mortgage bonds, series I.	16,000,000	June 28	July 23	1960	Public Service Co. of Northern Illinois[4] (an operating and holding company).
3½	Duquesne Light Co., Pittsburgh, Pa., first-mortgage refunding bonds.	70,000,000	June 28	July 18	1965	The Standard Gas & Electric Co.[1 2]
3½	Consolidated Gas Electric Light & Power Co. of Baltimore, Baltimore, Md., first- and refunding-mortgage bonds, series M.	7,326,000	Private sale	July 1935	1965	Independent company.
5½	North Central Gas Co., Casper Wyo., serial refunding bonds.	750,000	June 28	Aug. 1	1941–52	The Northern Utilities Co.
4	Southern California Gas Co., Los Angeles, Calif., first-mortgage and refunding bonds.	15,000,000	July 9	July 29	1965	The Pacific Lighting Corporation.[1]
3½	Public Service Electric & Gas Co., Newark, N. J., first- and refunding-mortgage bonds.[1]	50,000,000	Private sale	July 30	1965	The Public Service Corporation of New Jersey.
4¼	Iowa Electric Light & Power Co., Cedar Rapids, Iowa, first mortgage, series D.	3,000,000	do	July–August	1955	Independent company.[5]
3¾	Public Service Co. of New Hampshire, Manchester, N. H., first-mortgage bonds, series C.	5,400,000	Aug. 2	Aug. 26	1960	The New England Public Service Co.
4	Coast Counties Gas & Electric Co., San Francisco, Calif., first-mortgage bonds, series B.	3,000,000	Aug. 8	Aug. 28	1965	The Pacific Public Service Corporation.
3½	Central Hudson Gas & Electric Corporation, Poughkeepsie, N. Y., first-lien and refunding-mortgage bonds.	1,000,000	Aug. 10	Sept. 3	1965	Central Hudson Gas & Electric Corporation.[3]
5	Savannah Electric & Power Co., Savannah, Ga., first- and refunding-mortgage gold bonds, series F.	4,500,000	Aug. 16	Aug. 23	1955	Stone & Webster, Inc.[1]
4	Bangor Hydro-Electric Co., Bangor, Maine, first-lien and refunding-mortgage bonds.	425,000	Private sale	Aug. 17	1954	Independent company.
	Southern California Edison Co., Ltd., Los Angeles, Calif.:					
4	First- and refunding mortgage gold bonds	30,000,000	Aug. 23	Sept. 17	1960	Do.
2½–3¾	Serial debentures	27,500,000	do	do	1936, 1940, 1945	Do.
	Atlanta Gas Light Co., Atlanta, Ga.:					
4½	Gas mortgage bonds	5,000,000	Aug. 27	Oct. 2	1955	Central Public Utilities Corporation.
6	Preferred stock, cumulative	1,300,000	do	do		
3½	Consumers Power Co., Jackson, Mich., first-lien and unifying-mortgage bonds, series of 1935.	19,172,000	Aug. 31	Sept. 23	1965	Commonwealth & Southern Corporation.[1]
4	Detroit Edison Co.,[1] Detroit, Mich., general and refunding mortgage bonds, series F.	49,000,000	Sept. 5	Sept. 26	1965	Independent company.
4	Pacific Gas & Electric Co.,[1] San Francisco, Calif., first- and refunding-mortgage bonds, series G.	20,000,000	do	Sept. 25	1964	Pacific Gas & Electric Co.[1] (an operating and holding company).
5	Worcester Gas Light Co., Worcester, Mass., first-mortgage bonds, series A.	1,000,000	Sept. 13	Oct. 22	1965	Associated Gas & Electric System.
4½	Pacific Lighting Corporation,[1] Los Angeles, Calif., sinking-fund debentures.	10,000,000	Sept. 18	Oct. 8	1945	Independent (holding company).
4	Central Maine Power Co., Augusta, Maine, first- and general-mortgage bonds, series G.	15,600,000	Sept. 20	Nov. 14	1960	New England Public Service Co.
3½	Dayton Power & Light Co., Dayton, Ohio, first-lien and refunding-mortgage bonds.	20,000,000	Sept. 21	Oct. 14	1960	Columbia Gas & Electric Corporation.[1]
3¾	Connecticut Power Co., Hartford, Conn., first-lien and general-mortgage bonds, series A.	2,500,000	Sept. 26	Nov. 26	1965	Independent company.
4	Virginia Electric & Power Co., Richmond, Va., first- and refunding-mortgage bonds, series A.	37,500,000	Oct. 22	Oct. 22	1955	Stone & Webster, Inc.[1]
	Cleveland Electric Illuminating Co., Cleveland, Ohio, preferred stock, cumulative, $4.50 series, 254,995.8 shares.	25,499,580	Oct. 9	Oct. 31		The North American Co.[1]
4	Blackstone Valley Gas & Electric Corporation, Pawtucket, R. I., mortgage and collateral-trust bonds, series C.	7,300,000	Oct. 10	Oct. 30	1965	Stone & Webster, Inc.[1]
4	Columbus Railway Power & Light Co., Columbus, Ohio, first-mortgage and collateral-trust bonds.	26,000,000	do	do	1965	United Light & Power Co.[1]
5½	North Central Gas Co., Casper, Wyo., first-mortgage sinking-fund bonds.	1,000,000	Oct. 15	Nov. 14	1955	The Northern Utilities Co.
5½	Iowa Southern Utilities, Centerville, Iowa, first- and refunding-mortgage bonds, series of 1935.	5,000 000	Oct. 28	Nov. 21	1950	Independent company.
4	Los Angeles Gas & Electric Co., Los Angeles, Calif., first- and general-mortgage bonds.	40,000,000	Oct. 29	Nov. 19	1970	Pacific Lighting Corporation.[1]
	Monongahela West Penn Public Service Co., Fairmont, W. Va.:					
4½	First- and general-mortgage bonds	22,000,000	Oct. 20	Nov. 4	1960	American Waterworks & Electric Co., Inc.[1]
6	Debentures	7,500,000	do	do	1965	Do.

[1] Was a member of and cash contributor to the Committee of Public Utility Executives. This committee was organized to and did vigorously oppose the passage of the Wheeler-Rayburn bill.

[2] Standard Gas & Electric Co. controlled by the Standard Power & Light Corporation.

[3] Niagara-Hudson Power Corporation owns 30 percent of the voting-trust certificates for common stock of the Central Hudson Gas & Electric Corporation. Niagara-Hudson Power Corporation was a member of and a cash contributor to the Committee of Public Utility Executives.

[4] Public Service Co. of Northern Illinois is affiliated with the Commonwealth Edison Co. through the Commonwealth Subsidiary Corporation.

[5] This issue was registered with the Securities and Exchange Commission Mar. 30, 1936.

Sources of information: Registration statements filed by the companies listed with the S. E. C.; prospectuses of the various companies; Moody's Public Utilities; Moody's and Poor's cumulative indexes.

TEXAS DAY CELEBRATION—ADDRESS BY MARSHALL R. DIGGS

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Hon. Marshall R. Diggs, executive assistant to the Comptroller of the Currency, at the Texas Day celebration of the San Diego Exposition, May 24, 1936.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to represent our Vice President and to bring his greetings to you former Texans and all Californians who so greatly honored him in 1932. He was most anxious to be with you today—you in whom he has such interest—but, as you know, during his term as Vice President, Mr. Garner has never left Washington while Congress was in session.

For my part, I am particularly delighted to be here at this great outpouring of former Texans—or might I say Texans—for once you become inoculated with the air, the sunshine, and the spirit of Texas you are always a Texan. However, if any place could make you temporarily forget your native State, it would be California.

These two great States have much in common. Both were part of Spain. Both were part of Mexico. Texas is the largest State in the Union. California is the second. Each State boasts of about 6,000,000 population and they ranked fifth and sixth in the census of 1930. Some States have only few industries and natural advantages, but California and Texas are most fortunate in having varied natural resources, varied crops, and varied climate.

Of course, the whole world knows that California's climate is perennially perfect—while Texas admits that she has extremes of heat and cold. No doubt you have heard that Amarillo is the hottest place in the United States in the summer and the coldest spot in the winter. The great size of the States and the varied conditions remind me of the three blind men, who having heard of an elephant—wanted to know what it was like—so they were taken to one. The first blind man felt over its trunk and said, "Oh, it is like a snake." The second touched the elephant's great side and said, "No, it is like a house", while the third feeling the hind leg said, "No, an elephant is like a tree." So it is with our two States. Those of us who see only one section cannot begin to visualize what other parts of the State offer. In order to display to yourselves as well as to outsiders what you are as a whole—you have this spendid exposition.

This year the Lone Star State, the only State which was ever recognized as an independent republic, is observing the one hundredth anniversary of its independence by staging a gigantic centennial.

The main exhibition will be held at Dallas. However, in order that as many historic spots and as much of interest as possible shall be seen, Fort Worth, Houston, San Antonio, and other cities are holding celebrations too. The entire State is actively cooperating in this centennial observance. You will visualize the vastness of this display when you will recall that Texas today—much of its original area divided among sister States—still is larger than all New England, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, and West Virginia. Texas, which the majority of Americans have always thought of as a land of cattle, still holds leadership in this field. In addition, it is the number one cotton-producing State, the largest producer of oil and gas, and the producer of 85 percent of the world's sulphur supply. Wheat, rice, sugar, lumber, salt, granite, fish, roses, and evergreens are but some of the Texas products figuring importantly in our national scheme. You in southern California probably realize all too well what a tremendous quantity of fruit and vegetables are raised in our Rio Grande Valley.

Texas and California have something else in common. This something is intangible. It cannot be seen. It can only be felt. We have felt it over a period of years. You have felt it—not so long perhaps—but so deeply that between us this sentiment has become national. This last, most important, most worthy bond is our love for, and admiration of, that greatest living son of the Lone Star State, John Nance Garner, the Vice President of the United States.

Surely there could be no greater proof of his friendliness and love for people than his kindly face. What we are—what we feel—is indelibly stamped on our countenances as we grow older. You have seen the hard grim jaw of the man who treads people under foot—the wily cunning eye of the man who knowingly tricks others—but the man with the twinkling eye—with the hearty laugh—is a friend of man. Those of you who have seen Mr. Garner will agree with me that he is such a one. The door to his office is always open. No man in Washington is easier to reach than he. He greets you with a smile and has you believe he is glad to see you, rather than annoyed because you take up his time. We love him because he loves people and because he is honest. I do not believe he ever intentionally deceived a man in his life. Forthright and direct, he has never broken a promise, and possibly because of these traits he has never lost a friend. No man cherishes friendship more. "The secret of getting along

with men," he once said, "is being honest with them and never telling them anything but the truth."

It will be recalled that in 1932 this distinguished Texan, through no effort whatsoever upon his part, was proposed for the Presidency by large numbers of friends who were well acquainted with his great ability as a leader and statesman. After the name of Mr. Garner had been placed in nomination by Senator TOM CONNALLY, of Texas, the nomination was seconded by the Honorable WILLIAM GIBBS MCADOO, of California.

In this speech, Senator MCADOO paid glowing tribute to the favorite son of Texas, saying in part: "Of no man can it be more truly said that he is the unaided architect of his own fortunes. There is much, of course, that he owes to the indomitable spirit handed down by frontier forebears, but all else is the creation of his own energy and self-reliance. Not Abraham Lincoln, educating himself by the light of pine knots and splitting rails to pay for books, is more hand hewn than this simple plainsman who has lifted himself to a place of honor and distinction without other help than his sheer ability and stark resolution."

When Franklin Delano Roosevelt was nominated for the Presidency, John Nance Garner was the unanimous choice for the Vice Presidency.

The history of the Garner family is closely interwoven with that of Texas. The ancestors of the Vice President were pre-Revolutionary Virginians, and migrated to Tennessee during the pioneer days. It is significant that the Garner family comes from Virginia, through Tennessee, which combination also produced the most colorful figure in Texas history—Sam Houston.

John Nance Garner, born in a log cabin near Blossom Prairie in northeast Texas, was educated like most boys of his day in a log schoolhouse. He was fond of outdoors and still likes nothing better than to slip away on a fishing trip with a small group of intimate friends. When he was 18 years old John Garner decided to study law. His meager savings enabled him to enroll at Vanderbilt University. Because of ill health he could not finish college, but, with the determination which has since made him so successful, he read law in a local attorney's office and was soon admitted to the bar. Not long after that he moved to the place where his home has been ever since, Uvalde, in the southwestern part of the State. After having been county judge, he was elected to the State legislature, and during his second term played a large part in carving out the Eighteenth Congressional District which included Uvalde. Needless to say, he was elected as its first Representative to the Congress, where he remained until he became Vice President.

Throughout these years his closest friend, most intimate helper, has been Mrs. Garner. She is serving as his active secretary now and has done so through all their many years in Washington.

Mrs. Garner told me that one afternoon she and Mr. Garner drove out in their horse and buggy on a road overlooking Austin. They were discussing his running for Congress, and Mr. Garner said: "Well, if I do run and am elected we must never forget our home is in Texas." John Garner's heart has remained in Texas. He has never owned a home in Washington. But when Congress adjourns he takes the first train back to Uvalde.

New Congressman Garner arrived in Washington while Theodore Roosevelt was President. His main interests were finance, taxation, and economics.

Speaker Cannon put him on a committee that had not met for years, but instead of idling our ambitious friend employed his time forming friendships on both sides of the House and in studying the House rules. This last activity stood him in good stead in years to come.

His gifts for leadership became more and more apparent, and as years and the fate of politics took the old leaders off the scene Garner forged to the front. He was well equipped for the big roles he was to fill. He had physical toughness, earnestness, courage, conviction, ability, and vigor. A fast thinker and a hard hitter, he was picturesque in debate. President Wilson relied on him in many delicate matters, and he was summoned frequently to the White House.

In the Seventy-first Congress he became minority leader. Mr. Garner has always liked his job, but he probably never enjoyed anything so much as this leadership. Certainly he never appeared to better advantage.

The Democratic majority in the Seventy-second Congress unanimously nominated Garner for the Speakership. This was the highest elective office held by any Democrat in the Nation at the time. Mr. Garner made every effort to cooperate with President Hoover. Intense partisan though he was, he issued a statement asserting "when such issues as now confront the country are under consideration, it is no time for partisan politics."

Vice President Garner is the only living man who has been Presiding Officer of both Houses of Congress. Just one other man has ever held both offices.

John Nance Garner walked directly from the Speaker's dais in the House of Representatives on March 4, 1933, to the Vice President's dais in the Senate Chamber. That was the breaking of a precedent. But Vice President Garner had been breaking precedents for a great many years, and he is still breaking them.

One precedent he shattered was in being the first nominee for Vice President of the United States not to receive formal notification of his nomination from a committee. Instead Senator ALBEN W. BARKLEY, temporary chairman of the 1932 Democratic National Committee, notified him by letter, and Garner wrote his reply, put a 3-cent stamp on the letter containing the acceptance, and mailed it to BARKLEY.

He has smashed another precedent in being the first Vice President of the United States not to leave Washington while Congress is in session.

He has set a precedent of being the only Vice President not to make any formal speeches anywhere in the United States during his term of office. He gives his opinion freely and forcefully in the meetings of the President's Cabinet, but he believes that President Roosevelt should define policies. He is the silent member of the firm of Roosevelt and Garner.

Silent though he is, all the Nation knows that he is not inactive. He has undoubtedly played the most important role of any Vice President in modern history. In an administration that has enacted more far-reaching legislation than any in decades, his more than 30 years' knowledge of parliamentary mechanics, his ability to see situations, his familiarity with the rules and the temperament of the Senate and House, his balance, and his shrewd judgment of the effect of legislation has made him invaluable in many exigent matters.

Vice President Garner has risen higher in public office than any Texan since Sam Houston, first president of the republic. Texas is proud that in its centennial year, 100 years after Sam Houston led his ragged Texas army to victory at San Jacinto, John Garner is being renominated for Vice President of the United States.

Texans sometimes like to refer to him as a "typical Texan." I have never thought he was. I think he is an unusual Texan—an unusual American.

BRIDLING OUR LAST FRONTIER—ARTICLE FROM NEW YORK TIMES

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the New York Times of May 31, 1936, entitled "Bridling Our Last Frontier."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE BASIN OF THE COLUMBIA RIVER A FEDERAL PROJECT NOW UNDER WAY AIMS AT TRANSFORMING A REGION THAT IS LARGER THAN NEW ENGLAND

By Richard L. Neuberger, Portland, Oreg.

The power age has come to one of the last frontiers of the United States. Three thousand miles from Washington—almost as far from the hub of the American Government as are the British Isles—workmen and engineers are weaving two giant dams across the surging waters of the Columbia River. At Bonneville, Oreg., and at Grand Coulee, Wash., the long-awaited Columbia Basin project is at last becoming a reality. In natural settings of unrivaled grandeur, the Federal Government moves ahead with its most ambitious undertaking in the far Northwest.

The dam at Bonneville is more than half completed. The Grand Coulee enterprise will be finished by 1939. Designed to provide irrigation, power, and navigation for an area larger than New England, the two projects represent the first Federal developments on the great river which, rising in the Canadian Rockies, rolls swiftly over the upland plateau of eastern Washington, turns westward sharply, and, passing through the Cascade Mountains in western Oregon, empties into the Pacific Ocean at Astoria.

Already the first foundations at Bonneville and Grand Coulee obstruct the onrush of the Columbia. On several occasions at both sites, cofferdams have been swept away like matchsticks, but each time replacements have been made successfully, and today the river bites futilely at steel and concrete. Just above the partly completed dam at Bonneville the torrent drops in a mighty crash at Celilo Falls, and it is a watery giant running wild by the time it reaches the project. Taut the girders and solid the masonry which would impede the Columbia's dash to the Pacific. During the recent spring freshets, engineers watched anxiously as the river pounded at the yet unfinished dams.

Few areas on the North American Continent are as promising for development as the basin of the Columbia River—a region extending into Idaho, Washington, Oregon, Nevada, Utah, Wyoming, and Montana, as well as into the Canadian Provinces of British Columbia and Alberta. It is a territory of unbelievable contrasts and sharp changes. From dry and arid plateaus the traveler can see mountain peaks blanketed in eternal snows. Tangled forests merge with carefully tended wheatlands. Unexplored canyons lie within driving distance of transcontinental railroad lines. In the Hood River Valley in Oregon, apple orchards and strawberry patches reach almost to the last ramparts of Mount Hood, towering 2 miles above the lowlands which surround it.

Swift changes in topography are not the only contrasts which characterize the Columbia Basin. From the Pullman car on its way to the great cities of Chicago, Cleveland, and New York, the traveler can see Indians spearing salmon in the rapids of the Columbia. The red men stand motionless on the banks of the stream, fish spears in hand, as did their painted fathers when Captain Lewis was the first white man to break in upon the scene Between the railroad train on its cliff ledge and the Indians on the river front two centuries and more are spanned.

Untrod uplands in the Columbia Basin are measured by horizons instead of acres. Sloping fields—yet untouched by cultivation—march on until they merge with the sky. It was a vista such as

this which impressed President Roosevelt when he visited the Pacific Northwest in the summer of 1934. Standing at Grand Coulee he declared: "You have acreage capable of supporting a much larger population than you now have; and we believe that by proceeding with these great projects it will not only develop * * * the far West and the coast but will also give an opportunity to many individuals and many families back in the older, settled parts of the Nation to come out here and distribute some of the burdens which fall on them more heavily than they fall on the West."

The impression left with the President is the impression left with every traveler who journeys through the valleys of Oregon and Washington and into the uplands of Idaho. Mile after mile, hour after hour, the train clicks between broad fields studded only here and there with farmhouses. As far as the eye can see, stretch lands yet free from the task of supplying the world's tables with apples, wheat, berries, and corn. A region whose area is 13 percent of that of the United States has but 2.8 percent of the Nation's population—not as many people as inhabit the Borough of Brooklyn. One of the principal purposes of the Columbia Basin project is to make this land habitable for thousands of Americans now crowded in the slums and tenements of the East.

Bonneville and Grand Coulee are also planned to bring the benefits of modern technological development to farms and settlements still almost as primitive as in the years when wagon trains were rolling down the sunset slope of the Continental Divide. On the upper reaches of the Columbia, numerous homesteaders light their shacks and cabins with oil lamps and candles. Their pumps, driven by windmills, depend upon the whims of breezes. Virtually all tasks must be accomplished by back-breaking toil, yet a few rods away in the river is latent energy sufficient to turn all the factory wheels in New York City, to light limitless homes and buildings. More than two-fifths of the potential hydroelectric power in the United States is within the basin and more than two-thirds of this amount is in the Columbia River.

The Columbia Basin dams will convert this unharnessed power into kilowatts, which transmission lines will conduct across mountain gorges and up and down the slopes of distant valleys. Passes once traversed only by hunters and trappers will be dotted by latticed steel poles, carrying hydroelectric power to farmers secluded in some mountain dale. The complete Columbia Basin report calls for eight dams to span the river at irregular intervals like the rungs of a giant ladder. Bonneville and Grand Coulee are the principal divisions of the project.

The Northwest is a land of contrasts, but it offers no more different scenes than those at the two dams now under construction. The 300 miles of twisting river which separate the undertakings might well be an ocean dividing two continents. Grand Coulee is surrounded by barren hills and dry tablelands. Bonneville is the center of an area covered with fir and cedar. One is like some portion of the rocky plains of high Tibet; the other a scene from the forests of Germany and Switzerland.

Reclamation Service engineers are building the Grand Coulee Dam in the bottom of a wide wash or arroyo. On all sides naked slopes roll away to the horizon. On the tablelands beyond are large rock formations which tower like fortresses in the desert. The dam itself will be a bulwark of steel and concrete almost a mile long and 500 feet high. The most massive structure ever built by man, Grand Coulee will contain more than three times as much masonry as Boulder Dam on the Colorado River.

At Bonneville workmen and engineers are surrounded by tree-covered bluffs and crags 3,000 feet high. Above the dam on the Oregon shore is the glacier-flanked peak of Mount Hood. The Washington bank is crowned by the flat summit of Old Table Mountain, a land mark for Captain Lewis when he paddled down the stream 130 years ago. Where once gleamed the campfires of the explorers sent westward by President Jefferson, small squares of light now mark the modern cottages of hundreds of men engaged in harnessing the Columbia.

Power will be generated at both Bonneville and Grand Coulee, but the latter will be primarily an irrigation project. Bonneville is listed as a navigation enterprise. Life-giving water will eventually be conveyed to more than 1,200,000 acres from the dam at Grand Coulee. Hillsides and plains now incapable of supporting even sage brush and jack rabbits will be turned into potential orchard and grazing land, needing only the influx of settlers to be put to use. Sponsors of the Columbia Basin development believe the day is not distant when the world's largest lift locks at Bonneville will send freighters into the heart of the Northwest to transport to the world's ports the apples, timber, beef, wheat, and wool made possible by the irrigation of Grand Coulee.

Bonneville and Grand Coulee are now separate projects, the former under the supervision of the War Department and the latter under the direction of the Department of the Interior. But the time has been foreseen when there may be a Columbia Basin Authority similar to the T. V. A. Already Senator POPE, of Idaho, has introduced such a bill in the Senate, although proposals making Bonneville—the dam to be completed first—a separate entity are said to be favored by the President. The latter measures have been introduced by Senator MCNARY, of Oregon, and Senator BONE, of Washington.

Just as the T. V. A. has had its controversies and litigation, so has the Columbia Basin project had extensive verbal overhaulings. Probably the most relentless opponent is Representative FRANCIS CULKIN, of New York, who has described Grand Coulee as a vast area of gloomy tablelands, interspersed with deep gullies, located in northern Washington. The project has been condemned by the National Grange and other agricultural groups. * * * In the region of the Grand Coulee there is no one to sell the power to except coyotes and jack rabbits. Grand Coulee is that colossal imposition upon the American people.

Attacking from another flank, Philip H. Gadsden and other utility executives have charged that Bonneville and Grand Coulee will produce great blocs of electric energy in a region which already has a superabundance of power.

In answer to these complaints—and in reply to the implication that Grand Coulee is a repetition of the Florida canal and Passamaquoddy—advocates of the Columbia Basin enterprise point out that the area drained by the great river is the last frontier. They contend that Bonneville and Grand Coulee look toward the future, when overcrowding in the East will launch a new movement westward.

In the meanwhile spillways and power houses arise in the mountains. Steam shovels bite into slopes of shale and walls of granite. Pneumatic drills hammer a lively staccato against cliffs worn smooth by ages of glacial and water erosion. Men wrestle with the river to set temporary barriers in place before pounding waters undo 2 years of toil and labor.

Advocates of the Columbia Basin project hope that in a decade a transformation will have taken place. Power lines will stretch to prosperous homesteads. The navigation hazard of Cascade Rapids will be buried beneath a smooth lake, and steamers will plow the waters of the Columbia deep into the Cascade Mountains. Lands in eastern Washington now dry and bare will be fields and pastures. Long furrows of corn and potatoes will replace sand slopes and dust patches.

Drive through the Columbia Basin and look up at the lofty crests of Hood, Adams, St. Helens, and the other snow-capped sentinels which for centuries have looked down on every act in the drama of the river. They will still be there as stony watchers when perhaps the people of another day gaze on two banks of masonry and steel that symbolize the civilization of a past era.

REPUBLICAN NATIONAL CONVENTION—ADDRESS OF TEMPORARY CHAIRMAN AND PLATFORM

Mr. HASTINGS. Mr. President, I ask unanimous consent that the address of the temporary chairman before the Republican national convention held at Cleveland and the platform adopted by the convention may be printed in the CONGRESSIONAL RECORD.

The address of the permanent chairman has heretofore been printed in the RECORD, in the proceedings of the House of Representatives, under date of June 15, 1936.

There being no objection, the matter referred to was ordered printed in the RECORD, as follows:

THE TEXT OF THE PLATFORM, CLEVELAND, JUNE 11, 1936

America is in peril. The welfare of American men and women and the future of our youth are at stake. We dedicate ourselves to the preservation of their political liberty, their individual opportunity, and their character as free citizens, which today for the first time are threatened by government itself.

For 3 long years the New Deal administration has dishonored American traditions and flagrantly betrayed the pledges upon which the Democratic Party sought and received public support.

The powers of Congress have been usurped by the President.

The integrity and authority of the Supreme Court have been flaunted.

The rights and liberties of American citizens have been violated.

Regulated monopoly has displaced free enterprise.

The New Deal administration constantly seeks to usurp the rights reserved to the State and to the people.

It has insisted on passage of laws contrary to the Constitution.

It has intimidated witnesses and interfered with the right of petition.

It has dishonored our country by repudiating its most sacred obligations.

It has been guilty of frightful waste and extravagances, using public funds for partisan political purposes.

It has promoted investigations to harass and intimidate American citizens, at the same time denying investigations into its own improper expenditures.

It has created a vast multitude of new offices, filled them with its favorites, set up a centralized bureaucracy, and sent out swarms of inspectors to harass our people.

It has bred fear and hesitation in commerce and industry, thus discouraging new enterprises, preventing employment, and prolonging the depression.

It secretly has made tariff agreements with our foreign competitors, flooding our markets with foreign commodities.

It has coerced and intimidated voters by withholding relief to those opposing its tyrannical policies.

It has destroyed the morale of many of our people and made them dependent upon government.

Appeals to passion and class prejudice have replaced reason and tolerance.

To a free people these actions are insufferable. This campaign cannot be waged on the traditional differences between the Republican and Democratic Parties.

The responsibility of this election transcends all previous political divisions. We invite all Americans, irrespective of party, to join us in defense of American institutions.

CONSTITUTIONAL GOVERNMENT AND FREE ENTERPRISE

We pledge ourselves:

1. To maintain the American system of constitutional and local self-government, and to resist all attempts to impair the authority of the Supreme Court of the United States, the final protector of rights of our citizens against the arbitrary encroachments of the legislative and executive branches of government. There can be no individual liberty without an independent judiciary.

2. To preserve the American system of free enterprise, private competition, and equality of opportunity, and to seek its constant betterment in the interests of all.

REEMPLOYMENT

The only permanent solution of the unemployment problem is the absorption of the unemployed by industry and agriculture. To that end we advocate:

Removal of restrictions on production.

Abandonment of all New Deal policies that raise production costs, increase the cost of living and thereby restrict buying, reduce volume, and prevent reemployment.

Encouragement instead of hindrance to legitimate business.

Withdrawal of Government from competition with private pay rolls.

Elimination of unnecessary and hampering regulations.

Adoption of such other policies as will furnish a chance for individual enterprise, industrial expansion, and the restoration of jobs.

RELIEF

The necessities of life must be provided for the needy and hope must be restored pending recovery. The administration of relief is a major failure of the New Deal. It has been faithless to those who most deserve our sympathy. To end confusion, partisanship, waste, and incompetence we pledge:

1. The return of responsibility for relief administration to nonpolitical local agencies familiar with community problems.

2. Federal grants-in-aid to the States and Territories while the need exists upon compliance with these conditions: (a) A fair proportion of the total relief burden to be provided from the revenues of States and local governments; (b) all engaged in relief administration to be selected on the basis of merit and fitness; (c) adequate provision to be made for the encouragement of those persons who are trying to become self-supporting.

3. Undertaking of Federal public works only on their merits and separate from the administration of relief.

4. A prompt determination of the facts concerning relief and unemployment.

SECURITY

Real security will be possible only when our productive capacity is sufficient to furnish a decent standard of living for all American families and to provide a surplus for future needs and contingencies. For the attainment of that ultimate objective we look to the energy, self-reliance, and character of our people, and to our system of free enterprise.

Society has an obligation to promote the security of the people by affording some measure of protection against involuntary unemployment and dependency in old age. The New Deal policies, while purporting to provide social security, have, in fact, endangered it.

We propose a system of old-age security, based upon the following principles:

1. We approve a pay-as-you-go policy, which requires of each generation the support of the aged and the determination of what is just and adequate.

2. Every American citizen over 65 should receive the supplementary payment necessary to provide a minimum income sufficient to protect him or her from want.

3. Each State and Territory, upon complying with simple and general minimum standards, should receive from the Federal Government a graduated contribution in proportion to its own, up to a fixed maximum.

4. To make this program consistent with sound fiscal policy the Federal revenues for this purpose must be provided from the proceeds of a direct tax widely distributed. All will be benefited and all should contribute.

We propose to encourage adoption by the States and Territories of honest and practical measures for meeting the problems of unemployment insurance.

The unemployment insurance and old-age annuity sections of the present Social Security Act are unworkable and deny benefits to about two-thirds of our adult population, including professional men and women and all those engaged in agriculture and domestic service and the self-employed, while imposing heavy tax burdens upon all. The so-called reserve fund estimated at $47,000,000,000 for old-age insurance is no reserve at all, because the fund will contain nothing but the Government's promise to pay, while the taxes collected in the guise of premiums will be wasted by the Government in reckless and extravagant political schemes.

LABOR

The welfare of labor rests upon increased production and the prevention of exploitation. We pledge ourselves to:

Protect the rights of labor to organize and to bargain collectively through representatives of its own choosing without interference from any source.

Prevent governmental job holders from exercising autocratic powers over labor.

Support the adoption of State laws and interstate compacts to abolish sweatshops and child labor, and to protect women and children with respect to maximum hours, minimum wages, and working conditions. We believe that this can be done within the Constitution as it now stands.

AGRICULTURE

The farm problem is an economic and social, not a partisan problem, and we propose to treat it accordingly. Following the wreck of the restrictive and coercive A. A. A., the New Deal administration has taken to itself the principles of the Republican policy of soil conservation and land retirement. This action opens the way for a nonpolitical and permanent solution. Such a solution cannot be had under a New Deal administration which misuses the program to serve partisan ends, to promote scarcity and to limit by coercive methods the farmer's control over his own farm.

One paramount object is to protect and foster the family type of farm, traditional in American life, and to promote policies which will bring about an adjustment of agriculture, to meet the needs of domestic and foreign markets. As an emergency measure, during the agricultural depression, Federal benefit payments or grants-in-aid when administered within the means of the Federal Government are consistent with a balanced Budget.

We propose—

1. To facilitate economical production and increased consumption on a basis of abundance instead of scarcity.

2. A national land-use program, including the acquisition of abandoned and nonproductive farm land by voluntary sale or lease and subject to the approval of the legislative and executive branches of the States concerned and the devotion of such land to appropriate public use, such as watershed

protection and flood prevention, reforestation, recreation, and conservation of wildlife.

3. That an agricultural policy be pursued for the protection and restoration of the land resources, designed to bring about such a balance between soil-building and soil-depleting crops as will permanently insure productivity, with reasonable benefits to cooperating farmers on family-type farms, but so regulated as to eliminate the New Deal's destructive policy toward the dairy and livestock industries.

4. To extend experimental aid to farmers developing new crops suited to our soil and climate.

5. To promote the industrial use of farm products by applied science.

6. To protect the American farmer against the importation of all livestock, dairy, and agricultural products, substitutes therefor, and derivatives therefrom, which will depress American farm prices.

7. To provide effective quarantine against imported livestock, dairy, and other farm products from countries which do not impose health and sanitary regulations fully equal to those required of our own producers.

8. To provide for ample farm credit at rates as low as those enjoyed by other industries, including commodity and livestock loans, and preference in land loans to the farmer acquiring or refinancing a farm as a home.

9. To provide for decentralized, nonpartisan control of the Farm Credit Administration and the election by national farm loan associations of at least one-half of the board of directors of the Federal land banks, and thereby remove these institutions from politics.

10. To provide in the case of agricultural products of which there are exportable surpluses the payment of reasonable benefits upon the domestically consumed portion of such crops in order to make the tariff effective. These payments are to be limited to the production level of the family-type farm.

11. To encourage and further develop cooperative marketing.

12. To furnish Government assistance in disposing of surpluses in foreign trade by bargaining for foreign markets selectively by countries both as to exports and imports. We strenuously oppose so-called reciprocal treaties which trade off the American farmer.

13. To give every reasonable assistance to producers in areas suffering from temporary disaster, so that they may regain and maintain a self-supporting status.

TARIFF

Nearly 60 percent of all imports into the United States are now free of duty. The other 40 percent of imports compete directly with the product of our industry. We would keep on the free list all products not grown or produced in the United States in commercial quantities.

As to all commodities that commercially compete with our farms, our forests, our mines, our fisheries, our oil wells, our labor, and our industries, sufficient protection should be maintained at all times to defend the American farmer and the American wage earner from the destructive competition emanating from the subsidies of foreign governments and the imports from low-wage and depreciated-currency countries.

We will repeal the present reciprocal-trade-agreement law. It is futile and dangerous. Its effect on agriculture and industry has been destructive. Its continuation would work to the detriment of the wage earner and the farmer.

We will restore the principle of the flexible tariff in order to meet changing economic conditions here and abroad, and broaden, by careful definition, the powers of the Tariff Commission in order to extend this policy along nonpartisan lines.

We will adjust tariffs with a view to promoting international trade, the stabilization of currencies, and the attainment of a proper balance between agriculture and industry.

We condemn the secret negotiation of reciprocal-trade treaties without public hearing or legislative approval.

MONOPOLIES

A private monopoly is indefensible and intolerable. It menaces and, if continued, will utterly destroy constitutional government and liberty of the citizen.

We favor the vigorous enforcement of the criminal laws, as well as the civil laws, against monopolies and trusts and their officials, and we demand the enactment of such additional legislation as is necessary to make it impossible for private monopoly to exist in the United States.

We will employ the full powers of the Government to the end that monopoly shall be eliminated and that free enterprise shall be fully restored and maintained.

REGULATION OF BUSINESS

We recognize the existence of a field within which governmental regulation is desirable and salutary. The authority to regulate should be vested in an independent tribunal acting under clear and specific laws establishing definite standards.

Their determinations on law and facts should be subject to review by the courts. We favor Federal regulation, within the Constitution, of the marketing of securities to protect investors. We favor also Federal regulation of the interstate activities of public utilities.

CIVIL SERVICE

Under the New Deal, official authority has been given to inexperienced and incompetent persons. The civil service has been sacrificed to create a national political machine. As a result the Federal Government has never presented such a picture of confusion and inefficiency.

We pledge ourselves to the merit system, virtually destroyed by New Deal spoilsmen. It should be restored, improved, and extended.

We will provide such conditions as offer an attractive permanent career in Government service to young men and women of ability, irrespective of party affiliations.

GOVERNMENT FINANCE

The New Deal administration has been characterized by shameful waste and general financial irresponsibility. It has piled deficit upon deficit. It threatens national bankruptcy and the destruction through inflation of insurance policies and savings-bank deposits.

We pledge ourselves to—

Stop the folly of uncontrolled spending.

Balance the Budget—not by increasing taxes but by cutting expenditures, drastically and immediately.

Revise the Federal tax system and coordinate it with State and local tax systems.

Use the taxing power for raising revenue and not for punitive or political purposes.

MONEY AND BANKING

We advocate a sound currency to be preserved at all hazard.

The first requisite to a sound and stable currency is a balanced budget.

We oppose further devaluation of the dollar.

We will restore to the Congress the authority lodged with it by the Constitution to coin money and regulate the value thereof by repealing all the laws delegating this authority to the Executive.

We will cooperate with other countries toward stabilization of currencies as soon as we can do so with due regard for our national interests and as soon as other nations have sufficient stability to justify such action.

FOREIGN AFFAIRS

We pledge ourselves to promote and maintain peace by all honorable means not leading to foreign alliances or political commitments.

Obedient to the traditional foreign policy of America and to the repeatedly expressed will of the American people, we pledge that America shall not become a member of the League of Nations nor of the World Court, nor shall America take on any entangling alliances in foreign affairs.

We shall promote, as the best means of securing and maintaining peace by the pacific settlement of disputes, the great cause of international arbitration through the establishment

of free, independent tribunals, which shall determine such disputes in accordance with law, equity, and justice.

NATIONAL DEFENSE

We favor an Army and Navy, including air forces, adequate for our national defense.

We will cooperate with nations in the limitation of armaments and control of traffic in arms.

BILL OF RIGHTS

We pledge ourselves to preserve, protect, and defend, against all intimidation and threat, freedom of religion, speech, press, and radio; and the right of assembly and petition and immunity from unreasonable searches and seizures.

We offer the abiding security of a government of laws as against the autocratic perils of a government of men.

FURTHERMORE

1. We favor the construction by the Federal Government of headwater storage basins to prevent floods, subject to the approval of the legislative and executive branches of the government of the States whose lands are concerned.

2. We favor equal opportunity for our colored citizens. We pledge our protection of their economic status and personal safety. We will do our best to further their employment in the gainfully occupied life of America, particularly in private industry, agriculture, emergency agencies, and the civil service.

We condemn the present New Deal policies which would regiment and ultimately eliminate the colored citizen from the country's productive life and make him solely a ward of the Federal Government.

3. To our Indian population we pledge every effort on the part of the National Government to ameliorate living conditions for them.

4. We pledge continuation of the Republican policy of adequate compensation and care for veterans disabled in the service of our country and for their widows, orphans, and dependents.

5. We shall use every effort to collect the war debt due us from foreign countries, amounting to $12,000,000,000; one-third of our national debt. No effort has been made by the present administration even to reopen negotiations.

6. We are opposed to legislation which discriminates against women in Federal and State employment.

CONCLUSION

We assume the obligations and duties imposed upon government by modern conditions. We affirm our inalterable conviction that, in the future as in the past, the fate of the Nation will depend not so much on the wisdom and power of government as on the character and virtue, self-reliance, industry, and thrift of the people and on their willingness to meet the responsibilities essential to the preservation of a free society.

Finally, as our party affirmed in its first platform in 1856: "Believing that the spirit of our institutions as well as the Constitution of our country guarantees liberty of conscience and equality of rights among our citizens we oppose all legislation tending to impair them", and "we invite the affiliation and cooperation of the men of all parties, however differing from us in other respects, in support of the principles herein declared."

The acceptance of the nomination tendered by this convention carries with it, as a matter of private honor and public faith, an undertaking by each candidate to be true to the principles and program herein set forth.

ADDRESS OF THE TEMPORARY CHAIRMAN

ADDRESS BY UNITED STATES SENATOR FREDERICK STEIWER, OF OREGON, TEMPORARY CHAIRMAN OF THE REPUBLICAN NATIONAL CONVENTION, CLEVELAND, OHIO, TUESDAY EVENING, JUNE 9, 1936

We meet tonight as the convention of a great and honorable political party. We do not meet as partisans, but as patriotic Americans, solemnly determined to proceed in the American way to launch a campaign to restore America to the American people.

Our purpose here is not only to adopt a Republican platform and to nominate a Republican President—a deeper and thoroughly American purpose is to start the drive to put an American deal into the place now usurped by a self-styled New Deal. In this service to our country we invite the aid and counsel of all Americans, regardless of political party. There are no party lines when human liberty is at stake. In this crisis, the issues are above all party differences. The duty of the united patriots of all parties is to restore to the American people their political and economic freedom and to provide them with a competent government founded on conviction and conscience.

It can be done. But it will not be done if we permit ourselves to be deceived by the defeatist talk of our enemies. The Nation knows by this time that the administration is equipped with a monstrous, reckless propaganda machine operated with taxpayers' money to advance its own ends. No matter who the choice of this convention, and no matter what the platform, this machine will be set in operation. In the face of our advances in the campaign, we will hear the false cry that our efforts have fallen flat. These falsehoods will be recognized and rightly resented by the people. The people will make the world know that this Nation cannot be bluffed and cannot be bought.

POLITICAL MORALITY MUST BE RESTORED

For more than 3 long years we have had a government without political morality. I propose to show you that government endowed with conscience will bring us a prosperity not built on promise and pretense, but built with the bricks and mortar of fundamental principles. This prosperity will not be measured with the crooked lines and crooked trick phrases of unconstitutional legislation but by lines that square with the rules of honesty and morality.

When this convention shall have finished its labors, we shall offer the country a candidate with a sense of duty and a platform that binds his conscience to guarantee to America that the Nation shall not be again deceived by political adventurers who have perverted the most sacred fundamentals of our Government.

THE AMERICAN OPPORTUNITY

We propose to carry forward the lamp of American progress; the lamp which has been dimmed by the depression and which the New Deal has tried to extinguish. We propose to show those who have waited for more than 3 long years for a real job how that job is to be obtained. We propose to show further to those who have jobs how those jobs can be protected against the ravages of the collapse which is inevitable under the New Deal. The 10,000,000 unemployed shall at last get the consideration which they deserve—and with it the privilege of honest work. They must be permitted to work again as free men and not languish as vote slaves, nor as slaves of the dole.

We propose to show the 40,000,000 now in gainful employment that economic freedom depends upon adherence to a system under which their pay envelopes will not shrink and under which their life-insurance policies and savings-bank deposits will be protected. If this great group of Americans will assert their heritage as Americans, they need never again fear a debacle such as we had in March 1933, when a President-elect without a conscience refused for 4 months to cooperate with a President who had a conscience, resulting in a bank crisis and a panic of fear and fright. This Nation deserves a government by conscience. In order that its free institutions may be maintained, we have a right to insist upon a President who puts the interests of the people above considerations of personal politics.

OUR ECONOMIC SYSTEM

A primary function of our Government is to keep open the way to employment at wages which will provide an increasingly higher standard of living.

How can we achieve this objective? Not by trick formulas and sharp practices. They have all been tried and found worthless, for they have only made worse the disease they

set out to cure. That could not be otherwise, for this administration has never diagnosed the disease they said they could cure. Like the leeches of old, they have bled a patient who was already suffering from loss of blood.

Let us see how we as a Nation earn our living. In 1930 the percentage of our people engaged in agriculture was about 22 and in industry was about 32. The other 46 percent gainfully employed were in the service occupations and dependent upon the two great pillars, agriculture and industry. If the workers and the owners in agriculture and in industry can mutually exchange man-hours of labor on a proper level, their capacity to consume is boundless. The servicing of their wants brings into profitable employment the great army who do not produce goods but who produce services, and who are as necessary as those who produce goods. Automobiles would not be of much use without gas stations.

The principle of balance to which I have referred extends throughout the American system of economics. The ideals of both the great political parties have always had to do with finding ways and means to make that system work more perfectly. Our parties have differed as to these ways and means, but never until March 1933 has an administration, elected to preserve and develop the American system, tried, by the autocratic abuse of its executive power, to abolish the very system that it had sworn to conserve. And no administration has ever before pretended that destruction was reform.

Our system has not worked perfectly, but it has provided more for the man who works than has any other system the world has ever known, and the chief reason for the present unemployment in this country is the blocking of the progress of the American system by trying out plans and ideas borrowed from the poverty economics of Europe and resorted to by this administration in a frantic effort to catch the applause of the people. We propose to restore the balance that makes jobs.

The American system as administered by the two great political parties between 1910 and 1929 brought the average annual earnings of wage and salaried workers in industry actually employed from $670 to $1,520 a year. The same period saw the average annual gross agricultural income per person actually employed raised from $750 to $1,570 a year. Or, to put it another way, in 1910 it took a year's work to buy an automobile, but in 1929 it took only half a year's work. In consequence, where in 1910 we had less than half a million passenger cars, in 1929 we had more than 23,000,000. That is the period which the New Dealers contemptuously refer to as the era of tooth and claw. There could be no better testimonial to the strength of the American system and to the character of the American people than that it has been able to sustain the orgy of the New Deal. The people have created wealth faster than a profligate government could squander it.

THE NEW DEAL SPECULATORS

What are the principles of the American system which must be put in force if we are to recover from the New Deal? Here is a simple statement of some of them:

(1) Our Government must provide an honest money and banking system which will permit the free and uninterrupted exchange of wealth and will not be subject to the sinister control of any group. Whether the group be politicians in Washington or speculators in Wall Street the consequences to the public are the same. The money system must not be any man's toy.

(2) Our Government is a vast business enterprise. But it is not run as a business. Had the people understood the relation of Government finance to the national wealth and to the income and outgo of the people, there would have been no New Deal.

(3) Foreign trade may create either an asset or a liability. If we import goods which could be made or grown at home, we deprive American workers or farmers of the opportunity to earn livelihoods, and break down the American standards of living and thus compel a dependence upon foreign sources of supply. Such dependence cripples us in peace and renders us helpless in war. In effect there is no difference between receiving goods made by pauper labor and receiving the pauper labor itself.

(4) Agriculture's prosperity is fundamental to the prosperity of the Nation, and farm income must be kept in balance with industrial income.

(5) Ours is an economy of profit and loss. It cannot thrive without both. Law or regulation to guard against the losses inevitable in competition freezes industry and prevents progress.

(6) Government regimentation of business works to destroy business. Business half slave, half free, cannot pay adequate wages or adequate profits and cannot adequately serve the consumer. The direct competition of government in business uses the money of all the people to destroy the property of a part of the people.

(7) A dollar primarily belongs to the man who earns it. Taxation is a seizure of purchasing power from the hands of its owner. Taxation to support a vast bureaucracy billets bureaucrats on every family and curtails the ability of that family to provide for itself.

(8) Under the American system, it is the business of government to govern according to the will of the people as expressed in the laws. No one can excuse the bureaucrats' use of taxpayers' money to write laws and to buy propaganda in order to force these same laws on the people.

(9) Our Nation owes to our people the duty to take advantage of our fortunate geographical position and to avoid all foreign entanglements.

REAL LIBERALISM

Are these views liberal or are they conservative? I must answer by asking what the word "liberal" means. If it means jumping up and down and not getting anywhere, the principles are not liberal. If liberal means pressing forward on the facts and promising only what can be performed, then the principles are liberal. Whether liberal or conservative, these are among the principles by which the spectacular progress of this Nation has been achieved.

Let us review the record of the New Deal in the light of these principles. At the Jackson dinner in Washington a New Deal candidate for President asserted that the basic issue in this campaign is the retention of popular government. We agree. But we do not agree that the people's government is retained under a system headed by a New Deal Caesar. An administration in which substantially all power is concentrated in one branch is not in keeping with the principles of popular government. The contrary is true. The New Deal and its candidate are alike destructive of the basic essentials of popular government. You and I know, and all should know, that the security of our liberties and economic opportunities demands that the constitutional balance of the American Government shall be restored.

THE PRICE OF BUREAUCRACY

Centralization of power is the Siamese twin of bureaucracy. Expensive and arbitrary, its supreme evil is greed for money and power. History shows that centralized autocracy invariably seeks to build itself greater and stronger on the ruins of the people's liberties. It reaches for control of the education of children and the formation of thought, and finally all human rights, including religious freedom, must yield to its tyranny. When a Chief Executive finds unconstitutional concentration of power in himself he should exercise his constitutional power to recommend that Congress take back its authority. This wholesome recommendation will be made in January by an oath-keeping Republican President.

WICKED PRACTICES

The New Deal has driven a wedge between what it calls the "under privileged" and the businessman, the professional man, and the producer. To strengthen its political hold, it has adopted the un-American attitude of setting class against class. It asserts that it has driven the "money changers" from the temple. Where are these money changers? They are still in the temple. For the present

administration, by its tax bills, has tried to abolish thrift in business and to put every concern, big or little, into the hands of money lenders. Indeed, the only business successfully fostered by this administration has been the debt business. That has prospered.

It promised to preserve the merit system in Government service, yet every day brings an accretion of New Deal spoilsmen to the Federal pay roll. Fine public servants have been ruthlessly replaced by favorites, and the Government today is literally the worst, most conscienceless employer in the land.

The New Deal pretends it would protect American interests, yet harbors aliens who are not entitled to remain in America but are permitted to remain, and who compete with the American workingman, increase the cost of our struggle against crime and add to our relief burden. It coddles agitators and encourages the purveyors of unrest at a time when the Nation needs a firm and dignified leadership. Not content to employ professors and theorists as economic advisers, the New Deal has placed the affairs of Government in their hands. It depends on bookworms for practical experience and on hookworms for energy. It renounced the purposes and ideals of the great party whose name it bears and threw away the opportunity for service which that party long had sought.

FALSE HUMANITARIANISM

The New Deal propagandists boast of its humanitarian purpose and support this boast by pointing to Federal aid of those in distress. Such aid was and is an obvious duty of a civilized nation. But the irony of it is that the administration made only one gesture of a permanent character toward fulfilling its pledge to balance the Federal Budget. That was an act to reduce compensation and to withhold hospitalization from the disabled veterans of our wars, while at the same time the New Deal planned lavish spending for other purposes. In order to trap congressional support for its bill it pretended that it would deal justly with the veterans and that it would continue a program of genuine economy. The poor and the maimed who suffered the administration's ingratitude are far from convinced that it was actuated by humanitarian purposes.

THE POLITICIAN AGAINST THE POOR

Their program of aid to the distressed is further condemned for its abuse of great national purpose in order to serve the venal desires of New Deal politicians. This has been characterized as the "poison of politics in the bread of relief." Reform in the methods of relief will result in more relief to the destitute at less cost to the taxpayer.

The Republican Party will not turn its back on those in distress, but it will make sure that public funds voted to feed hungry mouths will be used for that purpose and will not be employed for the enrichment of political straphangers. The money provided for work relief is not the personal gift of any politician but is the money of the people of the United States. Every consideration of decency in politics condemns the politician who would make private or partisan use of the distribution of the people's money. If the Salvation Army had used its good works to build a political organization, as was done by the New Deal army, it could have claimed the whole world—not merely the 48 States claimed by Farley.

BAD BARGAIN

New Deal politicians tell us that prosperity has been returned through their efforts. The improvement that has come has been largely purchased at the expense of the Public Treasury, and we have paid for more prosperity than we have received. Improvement purchased on credit is a dear luxury, uncertain to this generation—unjust to the next. When national resources and credit are exhausted, the Nation will find itself face to face with these unpleasant facts: That purchased business activity is not enduring; that our duty to the 10,000,000 unemployed has not been met; and, furthermore, that the power of the Federal Government to provide for those who are destitute has been frittered away until the Nation itself has become destitute.

We remember that the relief load is greater than it was before Congress provided the President with a blank check for nearly $5,000,000,000 of our people's money. No informed person will credit any permanent improvement to New Deal policy. On its record it stands convicted of the crime of retarding recovery. In many foreign nations, where there is no New Deal, improvement has been more marked than in the United States. Yet America is the most virile nation of the world, and possesses the greatest natural resources and the finest spirit of enterprise. It should have led the world in recovery, instead of lagging in twentieth place. No hypocritical pretense will acquit the New Deal on this count.

The failure of the New Deal cannot be attributed to Republican obstruction. In the beginning of its administration Republicans in Congress forgot politics in their desire to cooperate. The suffering caused by depression affected all in authority regardless of party. In my own case I threw aside partisan considerations and voted for some of the temporary measures to meet the emergency. In varying degrees we subordinated our personal and partisan views to support the national program. At a later time we were forced to conclude that the administration's design was to convert these temporary stop-gap laws into permanent policy and thus remodel the whole life of the Nation. This design was without mandate from the country and is contrary to every American conviction against autocratic Federal authority. We who voted to aid are most surely justified in our efforts to arouse understanding of the fact that the administration has committed the unpardonable sin in seeking to convert its temporary, emergency program into permanent policy, and the further fact that it has proved itself incompetent to administer the authority which it so eagerly acquired.

RECOVERY DELIBERATELY RETARDED

This is the only administration in our history which has deliberately impaired private credit, destroyed confidence, and intimidated capital. The prudent, everywhere, abstain from risk which is aggravated by policies that harass and destroy. No one would advocate reform ahead of recovery except the reformers who can experiment and exploit only when the people are in distress. In the fear that if the country recovers it will not take any more of their reforms, they have manufactured turmoil and disorder. The patient needs a competent physician, not these quacks of confusion. Pointing the finger of promise toward abundance, the New Deal has aimed its policies of performance in exactly the opposite direction. The economic blunders of the New Deal would not have been exceeded if Noah, instead of building the Ark in anticipation of the flood, had installed an irrigation system.

THE PLIGHT OF AGRICULTURE

What has the administration done to agriculture? After 3 long years of complete control of every branch of the Federal Government, they have failed to provide a permanent farm program. Farm income in 1935, including the Government checks, was $3,000,000,000 less than in the twenties.

They made worse the Triple A program by maladministration—by making food costly and scarce. When the law was held invalid they wholly ignored the Supreme Court and shifted hysterically to a stop-gap measure called the Soil Conservation Act. Under this act they continue temporarily the regulation of production which has been held unconstitutional. This makeshift is a manifest effort to deceive the farmer. The fact is the administration has no program, and when this act is also held unconstitutional an impotent New Deal will be floundering helplessly together with the farmer whom they seek to deceive. Our producers, entitled to complete possession of the American market, have seen that market delivered to aliens. The agricultural area removed from production in our country is estimated at 36,000,000 acres, and it is further estimated that the increased importations of agricultural products into our country require for their production about the same number of acres. As our home markets were being invaded by foreign producers, our

farmers were, at the same time, losing a portion of their markets in foreign lands. Our great domestic markets should be restored to the American farmer—in full. The problem of surpluses which glut the domestic market must be solved. We should consider the case of export crops where tariff protection is ineffective. The scientific development of industrial uses for the products of agriculture opens a wide field which has been blocked by the present administration. The greatest help for agriculture would be a national administration which would rebuild the great American market by policies assuring the reemployment of the 10,000,000 unemployed. The farm problem must and will be met, without violation of the Constitution, without regimentation, without burdensome taxes, and without any program of curtailment or ruthless destruction of food needed in a hungry world.

TRADE BARGAINING RAMPANT

One of the fundamentals of established national policy is tariff protection of efficient American production. America does not propose to destroy the opportunity of our citizens by giving up this protection. There is always need for reform. But what has the incumbent administration done in connection with its pledge for such reform? It enacted in 1934 the Reciprocal Trade Agreement Act. This law permits agreements to be made in secret and without consultation with the American interests affected and without fair opportunity to protect those interests. It establishes a dictatorship over our domestic economy. It clothes the New Deal with authority to reward one section of the country at the expense of another. It enables these politicians to determine which community shall be promoted and which shall be destroyed by exposure to foreign competition. Without giving the people or the people's representatives in the Senate opportunity to express any opinion, it permits inexperienced visionaries in the New Deal to destroy opportunity which our people need and should be permitted to enjoy. Of course, such a system fails to accomplish expansions in our foreign trade, which was the declared purpose of this law. It has increased the sale in our markets of goods produced by aliens which our producers should have supplied.

Agreements have been negotiated right and left with shrewd foreign traders who have reduced rates on articles which they desired to import into their countries, whereas the administration's pretended "good neighbor" policy has resulted in American reductions of duty in agricultural, dairy, and forest products of which we already had a surplus. The net result is a downward revision of the tariff which has seriously impaired our American system of protection. For the sake of our people we must realize that the administration's wishful hope to rescue the world at our expense has injured American industries and agriculture and added to unemployment, destitution, and want.

The combined effort of reckless and uninformed trade agreements plus the administration's monetary policies are fast putting our Nation under foreign control. The devaluation of the dollar, combined with the purchase of gold at $35 an ounce, has given to foreigners in gold-standard countries a bargain rate on America. They have sold us gold to the extent of nearly $3,000,000,000. With the proceeds the foreigners have bought our securities, have taken back their own defaulted securities at a discount, and although we were a creditor Nation, we are in fact probably now a debtor Nation. And the New Dealers have not found it out.

THE WAY OUT

To preserve our country we must get into the American stride again. One way to do it is to rid every administrative post of the political opportunists who now distort the policies of our Government. Our basic law was framed by far-seeing patriots who sought improvement by every honorable means. To permit change and expansion, opportunity for amendment was provided in the Constitution itself. But the present administration, not trusting the people in whom alone reposes this power, has attempted to effect changes by devious procedures that amount to nullification. At no time has the New Deal been frank enough to reveal its real purpose by submitting a proposal for constitutional amendment. The administration has shown preference for change by indirect means. In this they are entitled only to the people's condemnation. The menace to our American system lies, not in amendment by due and regular procedure, but in its nullification by indirection. A shocking perversion of democratic principles is reflected in the assumption of New Deal autocracy that it should exercise greater powers and that it, and not the people, should determine the extent of such powers.

Another way to regain our American stride is to reduce forthwith the size of the Federal Government and to stop its wasteful spending. We point to our record of past performance. Fifteen years ago the Republican Party met a fiscal situation not unlike that which confronts the country today. Our Nation was deep in debt and taxes. Government bonds were 10 or 12 points below par. Millions were unemployed. The Budget system was installed and enforced. Taxes were cut, debts were reduced, and Government bonds went to par and stayed there. During the 12 years of Republican administration taxes were reduced five times. What we have done once we will do again.

Above all else is the need for the old-fashioned idea of thrift. No government can borrow itself rich or spend itself prosperous. In private affairs we succeed only by the practice of sensible economy. Those who practice extravagance invite destruction. This Nation for a time forgot the necessity for economy. We have learned it again. The administration has demonstrated that it is unable to obtain even a semblance of prosperity except by buying it, and its purchases are on a basis so vast and so impractical that they ultimately would destroy America. By midsummer the amount of their spending will equal the value of all the farm land and all the farm buildings in the United States, and the real New Deal harvest is yet to come.

REMOVE THE TAX YOKE

By July 1 the present administration will have increased the national debt more than $14,000,000,000, and has announced that before a balanced Budget can be obtained there will be a further increase of several additional billions. I warn you that if America is to survive, debt expansion must be ended. A resolute and uncompromising purpose to secure a balanced Budget and honest assurances of reduction in debt are essential to restoration of public confidence. Then the business world will know there will be no further devaluation of the dollar; that we will no longer stand at the brink of inflation; that there will be no further repudiation of public obligations; and that there will be no additional exactions by the tax collector. These essential assurances will start in motion the wheels of industry.

TAXES THAT DESTROY

An hypocrisy which the New Deal seeks to foist upon the people is the belief that the rich pay the bill. But inasmuch as 62 cents out of every dollar coming into the United States Treasury is derived from concealed or indirect taxes, it is plain that the common people pay the lion's share. The taxes which impoverish are the sales taxes and other exactions which are concealed in the cost of living and which increase the price of food and clothing. When you purchase gasoline, is it possible that the big oil company pays the sales tax, or is it posted over the gas pump and taken out of the pocket of the little man who buys the gas? Behind the barrage of vainglorious boasting by the administration propagandists of their service to the people is the brutal truth that the burden of supporting Federal extravagance is added to the cost of maintaining human life. It becomes a tyrannical exaction upon every man, every woman, and every child, including the average man, the underprivileged and even the forgotten man. Under this administration average wages have increased about 8 percent, while the cost of living has increased approximately 20 percent. Every one of our 40,000,000 toilers are also payers, and they and their sons

and daughters will keep on paying long after we have ousted the spendthrifts. Today the wage earner is working at least 1 day a week solely to pay the cost of government.

YOUTH AND DEBT

The New Deal candidate in his Baltimore speech of April employed the tactics of the Soviet Union when he said that flaming youth had become a flaming question; that the best that had been done for youth before the depression was not good enough then and is not good enough today. This is one way of saying that youth had been fettered and mistreated in a society controlled by adults. He insinuates that fathers and mothers lack pride in their sons and that parents and grandparents are indifferent to the future of those who bear their names. To this insult I answer that no supposed handicap suffered by youth prior to the depression can compare with the loss sustained when youth is compelled by the false economics of the New Deal to exchange their American opportunity, to which they are entitled, for enrollment in a Federal camp at $30 per month. Nor can this supposed handicap compare with the cruel slavery caused by the inheritance of New Deal debt. New Deal extravagance is bending the backs of the people with an unfair burden and has condemned all the babies of the entire Nation to be rocked in cradles decorated by debt.

If I appraise correctly the high character of American women, they will not wait for the leadership of men in rising to the defense of the homes of this Nation. They will accept their responsibility to the children in those homes. They will repudiate the New Deal at the ballot box.

THREE LONG YEARS

In 1933 in a message to Congress, the President used these words:

"For 3 long years the Federal Government has been on the road toward bankruptcy."

And then he said:

"Thus we shall have piled up an accumulated deficit of $5,000,000,000."

That was the accumulation of 4 years. Let us consider the accumulation of the last 3 long years. For the fiscal year ending June 30, 1934, the deficit was approximately $4,000,000,000. For the fiscal year ending June 30, 1935, it was in excess of three and a half billion dollars. For the fiscal year ending June 30, 1936, and eliminating any requirement for the payment of the soldiers' bonus, the deficit is between three and a half and four billion dollars. For 3 long years the deficits have exceeded those which the President denounced. For 3 long years we have continued on the road toward bankruptcy. Instead of an accumulated deficit of $5,000,000,000 in 4 years, we have a deficit of approximately $11,000,000,000 in 3 years—but they are 3 very long years. During the same period the Government spending has gone up. Listen to the astounding totals—for 3 long years: For the fiscal year 1933, approximately $5,000,000,000; for 1934, $7,000,000,000; for 1935, $7,400,000,000; for 1936, $7,600,000,000, and the Treasury estimate for the fiscal year ending June 3, 1937, is in excess of eight and a quarter billion dollars. I ask this question, For how long a period has the Federal deficit exceeded that which the President denounced? For 3 long years! For how long a period has the Federal spending been kept above the $7,000,000,000 line? For 3 long years. For how long a period has the Chief Executive called upon the Congress to pass a new tax bill increasing the tax burden upon a helpless Nation? For 3 long years. For how long have we lived under the evil trinity of increased deficit, increased debt, and increased taxes? For 3 long years. We will end its tyranny when we rid our Government of the New Deal speculators who have speculated for 3 long years. They have speculated with the billions of the people's money just as the gamblers of Wall Street speculated with the millions belonging to those same people.

KEEP THE DOORS OPEN

Without doubt the greatest need in the life of most of us is that the doors of opportunity be held open that we may pay the obligations which we have assumed. It is the plain duty of a just Government to guarantee that those doors shall remain open. If we take stock of our situation, what do we find? First, a people loaded with debt and lacking for essential credit. Second, an administration which has permitted industries to write their own codes into law, has permitted the fixing of prices and has failed to enforce antitrust laws. It advocates high costs of production with the resultant high prices which prevent people from buying. Its theory destroys the purchasing power of the people and results in underconsumption. It is the theory of scarcity. Labor will be employed and private debts will be paid only if the people are permitted and encouraged to produce. The Nation needs new wealth, which will be had only through an economy based on fair prices, free competition, and more efficient and cheaper distribution. Fixing of prices by monopolies and combines picks the pocket of the buying public. Here is a worthy issue against the blundering fantasies of the New Deal. It is the cause of economic justice. I urge this cause upon the ground that protection of the weak is the highest function of Government. It will make it possible for the small-business man to develop his enterprise and for the wage earner to enjoy more of the wealth which he creates.

AN ENDURING AMERICA

This discussion leads to the ultimate issue of this momentous campaign. I have talked of the public debt, but over and above debt is the blighting effect of the burden of tax which the New Deal lays upon the backs of the people. Over and above this burden is the threat of inflation, which comes only to destroy. And over and above this threat there lurks in our path a darker danger, the certainty that this road leads only to collapse, and to the tragic end of democratic institutions. Every consideration of duty and self-interest demands that we protect ourselves against this danger with the mighty shield of American principle, and thus preserve for ourselves and for our children a righteous order of free opportunity.

Is the American achievement only a memory of a great age, to be meditated upon by a decadent Nation? That is the theory of the Old World. It is the viewpoint of those who are in the President's councils. This European theory presupposes that we will create no additional wealth and that we are justified in a fight among ourselves over the division of the wealth already created. There is nothing liberal in such a theory. On the contrary, it is in the most sordid sense reactionary. It shows an utter lack of faith in the people and would cause them to lose faith in themselves. It assumes that the day of magnificent attainment is ended, and everywhere that its baleful clutch lays hand on society it freezes the status of men, women, and children. It is the Old World concept upon which castes are founded. This devastating philosophy restrains every good impulse and slams the door of opportunity in the face of every man who dares to aspire.

Americans can boast that heretofore, following every depression, our people have found the impetus to reorganize for greater attainment. They have declined to regard the country as bankrupt and the Government as a receiver. They have been free to plan the progress which has made America great. We must make known our purpose: That we will renounce this alien viewpoint, and we here and now proclaim the truth that America is yet free to build, to create, and to prosper. We will again force recognition of the one great fact that the most priceless privilege of citizenship under the American flag is the right to seek and obtain merited reward, unhampered, unrestrained, and unafraid.

AMERICA WILL LIVE

And now I ask the simple question—will America live or die? And I answer that America will live, because the people are firmly resolved that our Nation shall not die. When have we ever tested the full measure of the people's strength? Not in 1778, save by the soldiers whose blood-stained tracks were left in the snow at Valley Forge. Not in 1863, except by those who dared to charge and those who dared to stand at Gettys-

burg. Nor was it tested in full in 1918, except by those who dared to die on the fields of France. The full measure and depth of a great people's will is unknown, even to themselves. The secret lies hidden in the omnipotent mind of the Creator of all courage and all resolution. To Him let our prayers be offered that an aroused America, casting out all doubt, will vindicate the faith of the fathers. We shall not falter, but in new found strength will hold high, in the splendor of a bright dawn, the banner of a Nation's liberties.

SENATOR M'KELLAR AND THE COOPERATIVES

Mr. BENSON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Memphis Commercial Appeal of May 7, 1936, entitled "McKELLAR and the Co-ops".

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[Editorial from the Memphis Commercial Appeal, May 7, 1936]

Senator McKELLAR is doing the southern cotton farmer in general and the farmers' cooperatives in particular a distinct injustice by his continued attacks upon the American Cotton Cooperative Association, and his opposition to the fair and proper demand that the Government right the wrong brought about by the old Federal Farm Board. The Senator's injustice becomes all the more conspicuous, if not unfair, when viewed in the light of the report by Senator BANKHEAD, in which the McKellar strictures are clearly and conclusively disposed of greatly to the credit of the cooperatives.

Cooperative marketing is nothing new. In fact, it has long been encouraged by the States and by the Federal Government. For many years the Government refused to deal with the farmer direct, thereby forcing him to organize cooperative societies and associations. The primary purpose was better marketing. Thus the matter stood in 1930 when the Federal Farm Board was created and a plan set up to stabilize marketing operations.

Twice, under the old Farm Board, the Government undertook to stabilize cotton-marketing operations, and on both occasions the cooperatives were used. In 1930 an advance of 16 cents a pound was made on cotton delivered through the cooperatives, and in 1931, 90 percent of the market value of cotton was advanced to growers through the cooperatives. The record shows that producers cooperating in the 1930 loan were penalized $6,500,000 by the Farm Board through the loss of their equities, the difference between the value of their cotton at the time of delivery to the loan as compared with the loan value. Bad enough as this was, they were penalized another $4,500,000 through the appropriation by the Farm Board of the reserves of the producers' associations.

In these operations the cooperatives performed a greatly needed service. The Farm Board virtually forced on the cooperatives the money which the cooperatives are now accused of losing. Much of this money the cooperatives were forced to repay despite the manner of the loss. By all the rules of equity and justice the cotton farmers are entitled to recover the $4,500,000 which the Farm Board took bodily away from the cooperatives, and Senator BANKHEAD will remedy a serious wrong if he succeeds in getting the restoration approved by Congress.

There is no argument, of course, against the demand that the Government should get out of business. Private enterprise is entitled to free play, and this is applicable to indirect interference as well as direct interference.

Senator McKELLAR'S sudden horror over the cotton cooperative competition with private business is not altogether consistent with the Senator's long and continued support of the many governmental activities, especially of the last 3 years. But does the record show that the American Cotton Cooperative Association and its 14 affiliates are in private business?

These cooperatives are farmer owned, farmer controlled. They perform a number of services. Through means of local offices and receiving agents, classing service is provided to the end that farmers who do not know the grade or staple of their cotton may understand its value. They have done much to reduce the spread between the producer and the consumer. They have helped to create satisfactory and easy market conditions. They have served as the channel through which the Government's loans have extended credit possibilities for marketing, a logical and necessary phase of farming operations which begin with the Federal land bank which gives the farmer credit on his land, and the Production Credit Association which gives him credit on his crops.

There is no occasion for either Senator McKELLAR or the private cotton handlers to become excited about the cooperative movement. Mistakes have been made and others will probably be made, but the American Cotton Cooperative Association and all of its affiliates in 1934 handled only 1,200,000 bales of cotton, a fairly small part of the total crop. It neither dominates the market nor does it coerce the farmer. Even its own members are privileged to sell their cotton to a private buyer if they can get a better price than the cooperatives fix.

Private enterprise and private initiative can certainly meet such a situation.

THE ALIEN IN AMERICA—ARTICLE BY ISAAC F. MARCOSSON

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the RECORD a brief article entitled "The Alien in America", by Isaac F. Marcosson, which appeared in the Saturday Evening Post of April 6, 1935.

Without objection, the article was ordered to be printed in the RECORD, as follows:

THE ALIEN IN AMERICA

By Isaac F. Marcosson

When the spotlight first began to play about Bruno Richard Hauptmann, one of the significant disclosures about him was the fact that he had entered the United States illegally as a stowaway in 1923. For 11 years this man, convicted of "the crime of the century", and with a criminal record in his native Germany, was permitted to live unmolested within our confines.

If Hauptmann's illegal entry were an isolated case, it could be dismissed as an accident. It so happens that Hauptmann is one of a horde of aliens who have crashed the gate at seaports or on the borders. Because of their surreptitious arrival, it is impossible to present the exact number. The estimate ranges from the Department of Labor figure of 400,000 to 3,500,000. Congressman MARTIN DIES, of the House Committee on Immigration and Naturalization, puts it as high as the latter figure.

The inevitable question that arises relates not so much to the method of breaking in. It revolves about the reasons why the illegal entrant is able to remain here. The answer, of course, lies in our lack of mandatory alien registration and, what is equally important, a periodical check up on all aliens. If American employers were required to report all aliens in their employ to the local police, acting in conjunction with the Department of Justice, the Hauptmanns would soon be rooted out.

The illegal entrant comprises only one of many problems raised by the alien in our midst. Thousands of foreigners who come here legally foment strikes, seek to overthrow our political system, and aim at the disaffection of the men in the Army and Navy. Within the past 2 years the growth of alien-inspired propaganda in the United States has risen almost to wartime proportions.

The moral menace is matched by the material overhead. Every alien who comes in is a potential job seeker. He helps to increase unemployment and thus to expand the relief roster. The city of Los Angeles has spent more than $200,000 in shipping indigent Mexicans, many of them bootlegged into this country, back to their native land. Furthermore, the alien criminal and insane, through the cost of their upkeep in prisons and asylums, impose an added burden on the already harassed taxpayer. The State of New York's annual bill for the care of alien insane alone is put at $8,000,000.

LEGAL AND SENTIMENTAL LOOPHOLES

The alien, whether legally or illegally here, is permitted to pursue his variously disruptive ways because of sentimentality, political and other pressure of alien blocs, loopholes or laxity in the enforcement of deportation laws, and lack of legislation to curb subversive agitation and propaganda. Here are some high spots disclosing conditions that clamor for remedy:

The number of deportations in 1934 was 8,879, as compared with 19,865 in 1933 and 19,426 in 1932. Voluntary emigration by undesirables who wanted to escape the stigma of forced deportation amounted to 8,610 last year, whereas 10,347 departed in 1933 and 10,775 in 1932.

Some 2,137 aliens under the order for deportation cannot be deported because the Department of Labor is unable to obtain visas or passports for them. This list includes 972 Russians, of whom 314 are criminals, 210 illegal entries, 223 public charges, and 88 radicals. Russians booked for deportation are at large to continue their disruptive activities, notably incitement to strike violence, as the records in the California 1934 outbreaks showed.

The deportation of 1,700 aliens has been suspended for more than a year, awaiting legislation that will give the Department of Labor discretionary power to act on so-called hardship cases resulting from the separation of families. Two illuminating features mark this procedure: One is that the Department is employing discretionary power without the statutory right to do so. Our deportation laws are mandatory. The other is that a large number of aliens involved in hardship cases entered the country illegally and are therefore lawbreakers.

Every year more than 1,500 aliens become immune to deportation because, if deported, they can immediately be eligible for reentry on a nonquota or preference visa issued at the request of their citizen or legally resident relatives. Although they would be required to go through the regular immigration mill on reentry, political or alien-bloc pull would probably get them by in many cases.

On September 25, 1934, there were 2,712 deportation warrants outstanding against aliens serving prison sentences. Under the law, they can only be deported at the expiration of their sentences. Many criminals escape deportation because of a well-nigh incredible loophole in the statutes. If the judge before whom the criminal is tried makes a recommendation against deportation at the time of imposing sentence, or within 30 days, the felon can escape being shipped out.

The Government has been unable to arrest or detain 2,600 aliens guilty of deportable offenses because of delay in obtaining warrants for their arrest. Under the law, the suspected alien cannot

be detained more than 24 hours. Red tape at Washington often precludes the issuance of warrants within this period. In one small Texas border town, out of 82 warrants required, 72 could not be served because the aliens had fled.

More amazing is the fact that thousands of habitual criminals evade deportation because of the statute of limitations. Under one section of the law, an alien, without regard to the period of time he has lived in the United States, can only be deported if he has, since February 5, 1917, been convicted of two or more crimes involving moral turpitude and served a year or more for each offense.

In a 15-day investigation of arrests in New York and Chicago, 235 confirmed alien criminals were uncovered. All had escaped deportation because of the February 5, 1917, statute of limitations. A case—one of many that I could cite—was that of an alien, resident in the United States for 27 years. He had been arrested eight times on felony charges and had served 10 years and 3 months in prison. His post-1917 convictions, however, were set aside, he got by the statute involving moral turpitude, or he became the beneficiary of the parole system. Under the deportation laws, owning or carrying concealed deadly weapons does not constitute moral turpitude. Hence the sway of the alien gangster.

On top of all this is the fact that there are some 5,748,760 aliens in the United States still unnaturalized. The majority are eligible to take out their first papers. Out of 138 alien sluggers arrested in the early days of the bloody San Francisco general strike last year, exactly 22 were naturalized. A striking revelation is that the number of unnaturalized residents, plus the illegal entrants, equals, roughly, the total number of unemployed persons in the United States. Some of the unnaturalized are holding jobs, some are on public relief, and some depend upon the foreign-born wage earner for their sustenance.

MORE TEETH AND LESS SENTIMENTALITY

A second revelation in this connection is that no fingerprints are taken of aliens who become naturalized. Thus it is hard to ascertain if the candidate for citizenship has been guilty of any criminal act since his arrival here. The real fault, however, is at the point of entry. One of the first acts of the Department of Labor, with the advent of the Roosevelt administration, was to abolish the highly desirable system of fingerprinting every immigrant who comes in.

Although millions of aliens refrain from assuming the obligations of citizenship because of indifference or lack of conviction, which makes for divided loyalty, others are glad to do so because of the mirage of easy money. Since the agitation for the Townsend plan, naturalization officers, particularly in California, have done a booming business with 60-year and older aliens eager to get under the utopian umbrella. The prospect of $200 a month for the rest of their lives is obviously a far more potent lure to citizenship than safety and succor under the American flag.

Now you can see why we need more teeth and less sentimentality in the creation and enforcement of our deportation laws; why a stricter check on immigration that will reduce the European quota and establish a quota for the Western Hemisphere is necessary. The alien in our midst provides a sufficient problem. The potential immigrant constitutes another. Competent authorities estimate that not less than 800,000 Europeans are awaiting the opportunity to come into the United States, once economic conditions become more normal.

At the outset, let it be stated that what is set forth here implies no deprecation of the part that the desirable alien has played in the making of America. But conditions have changed, and with them the character of the people seeking sanctuary within our confines. For one thing, post-war European nationalism has dumped terrorists and other undesirables on our shores. An instance of the kind of alien we harbor developed when terrorist refugees from Jugoslavia in the United States publicly applauded the assassination of King Alexander, a crime which shocked the sensibilities of the whole world.

Terrorists and other political refugees create a knotty deportation problem. Cases arise where, for political and other reasons, an alien booked for deportation is afraid to go back to his own country, to which it is lawful to deport him. Sentiment or misplaced kindness often prevents him from being sent where he would get his just dues. Under our law there is no authority to deport him to any other country willing to take him. In other instances, such as is the case today with Russia, Norway, Sweden, Denmark, Czechoslovakia, and some of the Baltic States, countries often withhold passports or visas for their nationals booked for deportation. They regard themselves as well rid of them. Meanwhile the alien is free to practice the kind of subversive acts here that made him a refugee from his own land. This is precisely what is happening with some of the Russians now under deportation order to whom the Soviet Government refuses passports.

HOW HUMAN CONTRABAND GETS IN

Since the Hauptmann case focused interest on the illegally entered alien, let us see how this human contraband gets in. Illegal entries are recruited from border jumpers, deserting seamen, stowaways, people who come in "temporarily on business" and forget to go back, students who overlook the fact that their visas have time limits, and those smuggled in. Between 1921 and 1930 illegal entries probably averaged more than 200,000 a year. Half were Mexican border jumpers.

Border jumping, whether from Mexico or Canada, where many aliens park prior to gaining entry into the United States, could be greatly reduced if sufficient patrol appropriations were available. The 11,016 aliens arrested in 1934 by the immigration border patrol represented only a part of the illegals who got by. The Canadian and Mexican land borders and the Florida coast line total 5,124 miles. For the work of patrolling this distance $1,939,000 and 916 men are available for 1935. Not less than twice the appropriation and double the personnel are required. While the United States Government pours out billions for social uplift and what is in many cases unwarranted relief, adequate funds are not available for relief from a hazard that menaces our moral, social, and economic health.

The instances of deserting seamen provide two commentaries on our laws affecting aliens. One is that when a seaman signs off in an American port he is permitted to remain in the United States for 60 days, thus enabling him to become absorbed easily in the teeming life of New York, Boston, New Orleans, or San Francisco, as the case may be. As many as 35,000 seamen have deserted here in a single year. The other commentary is best indicated by a statement made by Congressman ROBERT L. BACON at the hearing of the House Committee on Appropriations on the Department of Labor appropriation for 1935. He said:

"There are cases where people deliberately smuggle themselves in, many of them coming as seamen, who had paid high prices to foreign steamship lines. They become members of the crew and deliberately disappear in New York or other ports. Then they hustle around and find the first American girl they can find who will marry them. Then they set up the wail that you are dividing the family if you deport them. There are a lot of these cases."

Many of the so-called hardship cases which make a jest of deportation are wrought out of this kind of material.

Not all the undesirables are gate crashers. Of the millions of aliens who legally entered the United States in the past 10 years, more than one-third are estimated to be on relief rolls. Despite the depression, quota admissions in 1934 increased 50 percent. These represented what sociologists call "seed stock." The fact is that the United States no longer needs alien seed stock.

The upkeep of the undesirable alien is seldom appreciated by the average American. What may be termed the biological cost was stated to me by Dr. Harry H. Laughlin, of the department of genetics of Carnegie Institution, in this wise:

"The whole problem revolves around the racial make-up and hereditary stuff of the American people. The cost to the American Government, Federal, State, and local, for the care of aliens who have become social, economic, or moral debits, instead of assets, as all immigrants are supposed to be, has mounted to a tremendous expenditure in dollars. This dollar cost is trifling compared with the damage which low-grade immigrants practically dumped on America have done to the human breeding stock of future Americans. It is not exaggeration to state that the racial and spiritual cost of unemployable aliens is, in the long run, many thousand times greater than the cash outlay for the present care of socially inadequate aliens."

Dollars-and-cents cost of aliens in custodial institutions is difficult to arrive at, because Federal and State surveys of establishments for the criminal and insane seldom give race and citizenship classification. It is estimated that, exclusive of housing, it costs $316.43 a year to maintain each inmate of a Federal or a State prison.

The survey of 246 prisons and reformatories, begun under the auspices of the Chamber of Commerce of the State of New York in 1931 and completed in 1934, showed that out of an inmate population of 183,841, the foreign-born numbered 11,630. Only 3,066 of these had been naturalized. One striking fact is that 2,474 inmates were not deportable because of the statute of limitations. Another is that 2,406 would be legally deportable if released.

WHAT ALIEN GUESTS COST US

The alien insane, criminal and otherwise, constitute a larger institutional proportion than sane criminals. Out of the 10,935 first admissions in New York civil hospitals in 1933, 4,278, or more than 39 percent, were alien born. The per-capita annual cost, exclusive of housing, in these hospitals is $356.01. The proportion of alien criminal insane in New York State institutions has been as high as 48.3 percent of the total. In 1931, out of 771 inmates of the Dannemora State Hospital for the Criminal Insane, 315 were foreign-born. Breaking this total down, it was disclosed that more than one-half were either foreign-born or had both parents foreign-born.

The per-capita maintenance cost at Dannemora is $474.24 a year. Add to this the $200 annual per-capita cost of housing and the $10 per-capita general administrative cost and you find what each alien inmate of the institution costs the State of New York.

So much for the individual institutional cost. It is estimated that the total number of custodial inmates in the 600 State and Federal institutions for the criminal, the insane, the mentally defective, and the paupers not in the dole or relief classes in the United States is 500,000. The general maintenance per inmate—that is, for food, clothing, fuel, and medical care—is $2 per day, while the investment in plant, buildings, and ground per inmate is $2,000.

Of these 500,000 persons, one-tenth are actually foreign-born, while more than four-tenths had one or both parents foreign-born. Hence, less than half of the custodial population in the United States is descended from family stocks which have resided

here for one ancestral generation or more. The actual foreign-born custodial charges cost the Federal and State Governments $100,000 per day for maintenance, and use, rent free, $100,000,000 in plant cost—that is, buildings and grounds.

There is also the alien at large, whose finger is in every relief fund and whose total relief allotment is impossible to estimate because our generous philanthropy treats native and alien alike. Some relief from overworked alien relief is in sight in the bill H. R. 3472, introduced in Congress on January 9 of this year. It provides that, regardless of how long he may have resided in the United States, any alien may be repatriated at Government expense if he proves that he is in distress. This bill, introduced by Congressman DICKSTEIN, specifies that the alien "thus removed shall forever be ineligible for readmission except upon the approval of the Secretary of State and the Secretary of Labor." This discretionary power is obviously undesirable. The act of February 5, 1917, provided for free repatriation only within 3 years after entry. Another bill authorizes the Government to ship destitute Filipinos back to their native islands—a circumstance not entirely unwelcome to California, where more than 15,000 have been objects of public charity. Los Angeles alone has supported 7,000. All this outlay for repatriation—and it will be heavy—could have been avoided if we had exercised adequate control over alien admission.

We pay still another price for the presence of the undesirable alien, greater in some respects than institutional or biological overhead. I refer to incitement to violence and propaganda. Here you have two sources. One is the long-range direction by the Soviet Government through its 16 agencies in the United States which infect many activities and reach every age and color. The other is the Russian in the United States and his convert tool, the native American.

The ingenuity of the Communist Party organization in the United States—it is a member of the Communist International at Moscow—puts the official onus of active operation on Americans. The principal officers spring from 100-percent native stock. More than 70 percent of the party membership of roughly 30,000, and the 750,000 professed Communists not party members, however, are aliens. One striking evidence of this alien domination is that 10 of the 12 daily Communist newspapers published in the United States are in foreign languages. The close relationship between Moscow and the Communist Party in the United States is too well known to require a detailed explanation here.

JOHN BULL AND THE RUSSIAN BEAR

The new and important fact to be emphasized is that Communist membership and activity here have greatly increased since our recognition of Russia. It legalized what had long been illegal entry of men and material for subversive purposes. Since British-recognition history with Russia has begun to repeat itself with us, it may be well to rehearse briefly just what happened to John Bull. Among other helpful things, it provides a precedent for us in breaking the impasse which has been reached in our relations with the Bolsheviks.

On February 1, 1924, Britain recognized the Soviet Government. One condition was that Moscow would refrain from subversive propaganda. Late in September of the same year, the Daily Mail of London scored a sensational beat with the publication of the famous Zinovieff letter. Under date of September 15, 1924—more than 7 months after recognition and the solemn Moscow promise to refrain from propaganda—a letter allegedly written by the then powerful Soviet leader to the central committee of the British Communist Party, urged it to "stir up" the masses of the British proletariat, declaring that "armed and successful uprisings" were essential for "close contact between the British and Russian proletariat." It further urged "agitation propaganda" in the British Army and Navy.

The revelations in this letter brought about the downfall of the first labor government. Ramsay MacDonald had enthusiastically sponsored Soviet recognition and paid the price for his misplaced liberalism. Though Zinovieff disclaimed the letter and Laborites branded it electioneering trickery, Soviet propaganda and penetration continued to such an extent that Britain severed relations with Moscow in 1927. The break followed the sensational raid on Soviet House, which sheltered Arcos, Ltd., the Russian trading company similar to Amtorg, which now operates in the United States. The primary purpose was to find a document outlining Britain's defense plans, alleged to have been stolen from the War Office. The document was not retrieved, but a great mass of evidence was uncovered showing the existence of a vast espionage and subversive organization operating throughout the British Empire, the United States, and Latin America from Soviet House.

Of peculiar interest to us, because of the presence of Amtorg in our midst, was the fact, as pointed out by Stanley Baldwin in the House of Commons, that the political and commercial representatives of Russia in London were alike involved in the propaganda activities. Britain did not resume diplomatic relations with Moscow until 1929. As a result of British governmental firmness, Russian propaganda was reduced to a minimum, and continues so despite the chronic unemployment.

Lured by the myth of the "world's greatest market", buoyed by the prospect of salvaging the debts and claims against Russia, and stirred by the hope of being able to deport Russian agitators and witnessing the end of Soviet propaganda here, we recognized Russia in November 1933. As subsequent events have proved, we fell into the usual Soviet trap of "recognize first and discuss terms afterward." Our trade with Russia has slumped. The debt negotiations have collapsed because Moscow wanted a loan, the proceeds of which to be employed at will, instead of credits, which would have meant purchases of our goods and the gradual wiping out of the debts and claims.

THE MOSCOW MENACE

The collapse of these economic and financial hopes is matched by the breach of faith regarding propaganda and other Communist activities. One condition of American recognition of Moscow was the pledge by Litvinoff, Soviet Commissar of Foreign Affairs, to President Roosevelt, that Soviet Russia was not to permit the formation or residence on its [United States] territory of any organization or group, and to prevent the activity on its [United States] territory of any organization or group, or of representatives or officials of any organization or group, which has as an aim the overthrow, or the preparation for the overthrow of, or the bringing about by force, of a change in the political or social order of the whole or any part of the United States, its Territories, or possessions.

A month after we recognized Russia the executive committee of the Communist International—always referred to as the E. C. C. I.—adopted a program summed up in this wise:

"There is no way out of the general crisis of capitalism, other than the one shown by the October revolution [the Communist revolution in Russia in 1917] via the overthrow of the exploiting classes by the proletariat, the confiscation of the banks, of the factories, the mines, transport, houses, the stocks of goods of the capitalists, the lands of the landlords, the church, and the Crown. The plenum of the E. C. C. I. obliges all sections of the Communist International to be on their guard at every turn of events, and exert every effort without losing a moment for the revolutionary preparation of the proletariat for the impending decisive battles for power."

This declaration, obviously a direct instruction to American as well as all other Communist groups the world over, was approved and adopted in January 1934 by the central committee of the Communist Party in session at New York, and by the national convention of the Communist Party held at Cleveland in 1934. The increased Communist activity throughout the United States in 1934 and since, largely fomented by aliens, was the direct result of the post-recognition decree by the Communist International which I have just quoted. We can now examine two fields in which this enhanced Communist agitation is revealed.

The first is the strike area of 1934, which stretched from coast to coast, involved millions of workers, cost many lives and hundreds of millions of dollars. That now familiar irritant—section 7–A of N. R. A.—is bad enough as an industrial dislocator. To its potentialities for trouble the reinforced Communist agitation has added incitement to turbulence and bloodshed, though, generally speaking, the average American worker is a peaceful and law-abiding citizen.

The agency for Communist labor and industrial penetration is the Trade Union Unity League, which is called T. U. U. L. for short. It is the American branch of the Red International of Labor Unions, has 21 units in American industrial activities, and a total membership of more than 200,000. Each unit operates as a so-called labor union. Its principal purpose, however, is to establish cells—the usual Communist "boring from within"—in American Federation of Labor unions and, if possible, in company unions, and communize the members. In strikes, these T. U. U. L. groups become shock troops.

The policy of the T. U. U. L. is the usual "support of the revolutionary political class struggles led by the Communist Party." The latter means, of course, violent overthrow of all capitalistic governments, ours included.

Half a dozen court decisions have held that membership in the T. U. U. L. comprises sufficient grounds for deportation. In the face of these holdings, the Immigration and Naturalization Service of the Department of Labor issued a circular, under date of March 1934, stating that membership in the T. U. U. L., as well as in the miners', marine workers', metal workers', Tampa tobacco workers', and textile workers' units of the T. U. U. L., and the International Labor Defense "does not in itself constitute grounds for deportation proceedings under the immigration laws." It further declared that "only such members of these organizations which believe in or advocate, or who are members of organizations which believe in or advocate, the overthrow of the Government of the United States by force, are subject to the institution of deportation proceedings."

ALIEN AGITATORS

The joke of this order is that members of the T. U. U. L. and its various units are 100 percent Communists, who day after day on soap boxes, platforms, or with printed word advocate overthrow of the American Government. Thus thousands of destructive aliens eligible for deportation remain in our midst.

One of the most conspicuous examples of the alien-led strike was the monster dislocation which began with the longshoremen's strike at San Francisco on May 9, 1934. Out of it developed the San Francisco general strike, which caused labor disturbance along our whole Pacific coast front. The San Francisco strike lasted 84 days and probably cost not less than $300,000,000.

The ringleader at San Francisco was Harry Bridges, the Australian agitator, who remains unnaturalized. It is another commentary on the inadequacy of our deportation laws that this alien, who precipitated the general strike over the heads of conservative union labor leaders, is permitted to remain in this country to continue

his activities. Still another is the fact that 19 aliens, some of them under deportation order since 1928, were active in fomenting violence in the San Francisco general strike and in the strikes in the Imperial Valley and other California sectors.

The other objective of increased Communist propaganda, again with the alien dominating, is the Army, Navy, National Guard, the Reserve officers, and citizens' military training camps, and the Civilian Conservation Corps. Typical of the thoroughness of the campaign there is a special publication for each branch of the service. Communist workers' schools at San Francisco, Oakland, Los Angeles, and elsewhere train special operatives for propaganda service in the armed forces.

A LESSON FROM BRITAIN

The method of infiltration in the Navy was explained by Commander Kirkman, United States Navy, before the House Committee on Un-American Activities, as follows:

Small groups, consisting of, say, two men and three girls, will come aboard ship with the regular crowd of visitors and sightseers. The men of this group circulate about the decks, stuffing their handbills into boats and behind ventilators where members of the crew eventually find them, read them, and then generally turn them over to the executive or the officer of the deck. Meanwhile the girls of the group, chosen for their good looks, will be picking out promising-appearing enlisted men, engaging them in conversation with the object of making dates with them ashore and working on them there to convert them to the cause and thus gain a recruit within the ship's company. Once gained, a cell is formed through which others may be "talked over" into joining. The same general method is used at shore stations. At boat landings and outside gates of shore stations, men or women pickets distribute to liberty parties their handbills and other radical literature. Handbills are occasionally left at doors of private homes, especially where naval personnel are known to reside.

The principal propaganda organ for the Army is the Soldier's Voice. The copy before me lauds our recognition of Moscow, includes the usual number of fake letters from "discontented soldiers", and shows, among other things, a cartoon of J. P. Morgan manipulating the American Army on a chess board. The leading article—Two Armies—compares the lack of "class distinction" in the Soviet Army with the discipline in the American, and urges the same kind of fraternization in our forces.

All this vicious and subversive propaganda—and I have merely scraped the surface because of space limitation—goes on freely because we have no Federal statute to prevent it. Britain does the job much better. Her incitement to disaffection law makes subversive propaganda in His Majesty's forces, or the attempt to "seduce any member of His Majesty's forces from his duty or allegiance", a crime subject to 2 years' imprisonment or a £200 fine, or both. We should not only copy this British statute but also close the mails to all subversive matter and make it a crime to publish or distribute such literature.

These suggested remedies are merely a patch on the larger protection we need against alien destructiveness. The primary step, of course, is prevention at the source, which can only be achieved through at least 60 percent reduction of the European quota and a quota on Western Hemisphere immigration. These are already embodied in a bill introduced by Congressman DIES.

Since prevention at the source is not possible under existing immigration laws, the next best thing is drastic control, identification, and deportation of alien undesirables who are with us. First comes mandatory registration, which would disclose the illegal entrants. Once more Britain provides a precedent. Under her registration system every alien, regardless of social or financial degree, who remains in the United Kingdom longer than 90 days must register with the police, state the reason and duration of his visit, and obtain an identity book. If he fails to report at the end of his indicated stay, he is run down by the police and deported if he lacks a satisfactory explanation. Employers are required to report all aliens in their employ.

No alien can secure employment in Great Britain without a permit from the Ministry of Labor. Through domiciliary visits by the police a constant check-up on aliens is maintained. In consequence Britain has no kidnapings or assassinations of public men. All aliens residing permanently in Britain must also have identity books and report periodically to the police. Another necessary procedure is the fingerprinting of all immigrants on entry into the United States.

SHARPENING THE EAGLE'S CLAWS

Next is the curb on the alien propagandist and inciter to violence. One move toward this end is in the following recommendation by the House Committee on Un-American Activities:

"That the Congress should enact a statute requiring all publicity, propaganda, or public-relations agents or other agents or agencies, who represent in this country any foreign government or a foreign political party or foreign industrial or commercial organization, to register with the Secretary of State of the United States and to state name and location of such foreign employer, the character of the service to be rendered, and the amount of compensation paid or to be paid therefor."

No agency for drastic alien riddance is more important than adequate and rigidly enforced deportation laws. The bill H. R. 9725, which closed up many existing loopholes in the deportation laws, was defeated at the last session of Congress by the American coalition and allied patriotic societies because it authorized discretionary power. The Department of Labor has framed a kindred bill for introduction into the present Congress. In commenting on this bill, J. H. Patten, of the Immigration Restriction League, made the following statement to me:

"There is not a single hardship case this proposed bill would remedy that is not rooted in the illegal or unlawful act or conduct of some alien whose family it assumes law enforcement would divide, but whose family could go out with him or her and not be divided. The only way to restrict immigration is to restrict immigration, and the only way to deport deportable aliens is to deport them, except possibly in a few difficult cases where the Secretary of Labor or the Commissioner of Immigration and Naturalization, instead of being given autocratic discretion to deport or not to deport, should go to Congress annually with such cases for which they could establish clemency."

Congressman DIES' bill—H. R. 5921—introduced on February 19 last, which has the support of all the agencies that successfully fought H. R. 9725 last year, remedies many omissions in our present deportation laws. It does not provide for discretionary power by the Secretary of Labor.

A NEW BROOM FOR UNCLE SAM

Immunity of alien criminals to deportation under the statute of limitations is removed by the provision that a person, at any time after entry, convicted of an offense involving moral turpitude, punishable by imprisonment for a term of 1 year or more, must be deported upon his release from confinement or when he is placed upon probation or pardoned.

The bill further puts possession or carrying of concealed deadly weapons and conviction for it into the category of moral turpitude, prohibits reentry of deportees under penalty of fine or imprisonment, and makes smugglers of aliens and violators of State narcotic laws liable to deportation. Under present laws, only violators of Federal narcotic laws are deported. Supervising officers in the Immigration and Naturalization Service are authorized to detain aliens and issue warrants for the arrest of deportables, thus providing a short cut to action. Other commendable provisions that mark aliens for deportation are failure of quota immigrants to declare their intention to become citizens within a year after entry and subsequent neglect to follow it up; and membership in, or affiliation with, any organization which advocates the violent overthrow of the United States Government. A previous Dies bill—H. R. 69—transfers all alien-deportation proceedings, particularly the ferreting out of alien criminals and illegal entrants, to a bureau of alien deportation in the Department of Justice. This control would tend to end the intrusion of sentimentality, politics, bloc pressure, and discretionary power into deportation procedure.

One highly necessary detail is lacking so far in the new deportation bills. It is that we refuse visas to the subjects of any country which declines to grant a passport or visa to one of its nationals voluntarily returning to his own country or deportable under the laws of the United States. Such a law would keep out Russian agitators now coming in under the camouflage of business or other missions.

This alien activity has a larger significance than is embodied in crime, financial cost, strike violence, and subversive propaganda. Behind it is a challenge to American tradition and principle.

At the moment we are the victims of two dangerous delusions. One is that the country is so fundamentally sound that administration "squandermania" and "taxomania" cannot impair its inherent stability. The other, more pertinent to the present task, grows out of the belief that our political structure is proof against radical sniping. No intelligent person believes that we are anywhere near revolution. We cannot escape the fact, however, that so long as we tolerate the undesirable alien and permit the infiltration of additional unsound foreign stock we are asking for the kind of agitation and worse, that has overthrown so many European constitutional governments.

RESIGNATION OF RALPH W. MORRISON

Mr. BENSON. Mr. President, I ask unanimous consent to have printed in the RECORD an article published in the Washington Herald of June 18, 1936, under the caption of the Washington Merry-Go-Round, which is edited by Drew Pearson and Robert S. Allen, relative to the resignation of Ralph W. Morrison from the Federal Reserve Board.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WASHINGTON MERRY-GO-ROUND

By Drew Pearson and Robert S. Allen

The sudden and unobtrusive resignation of Ralph W. Morrison from the Federal Reserve Board has attracted no great attention, but around this mysterious Texan has developed one of the most unusual and important inside stories of the New Deal.

It is particularly important now, because this is the day of big campaign contributions to both parties, and the case of Morrison illustrates what campaign funds may do.

During the 1932 campaign Mr. Morrison contributed $50,000 to the Roosevelt war chest, ranking closely after Barney Baruch and Joe Kennedy as one of the top contributors.

Shortly after the successful end of this campaign, Mr. Morrison was appointed an American delegate to the London Economic Conference. This was not a very important position, but one of the

efforts made by that delegation, if not the chief effort, was to increase and stabilize the price of silver.

About 6 months after this conference adjourned, on January 31, 1934, the official list of "hoarders of silver" made public by the Treasury showed that Morrison held 1,774,740.66 ounces of silver. In fact, he was the second largest individual holder in the United States.

Some time after this, Mr. Morrison became interested in Hamilton Dam, a power project on the lower Colorado River near his home in Texas. Started by Insull, it was a valuable property, but was left unfinished when Insull crashed during the depression.

Also, Morrison came out to defeat MAURY MAVERICK, of San Antonio, for reelection to Congress, threatened to put up $25,000 against him. MAVERICK had violently attacked the big utilities, and Morrison, a Texas utility operator, had made a deal with the Insull receivers to take over the Hamilton power project.

To this end Morrison asked the Reconstruction Finance Corporation for a loan to complete the project, but R. F. C. Chairman Jesse Jones, also from Texas, turned him down.

Then Morrison petitioned Harold Ickes for a P. W. A. loan. Again he was turned down. Ickes told him P. W. A. could not lend Government money to develop a private power site.

So Morrison then engineered a bill in the Texas Legislature which would create a lower Colorado River power authority to take over the Hamilton project as a public enterprise. This encountered some opposition, but eventually passed.

Meanwhile Morrison's deal with the Insull receiver was completed and approved by United States District Judge James H. Wilkerson. It was a neat piece of legal legerdemain and requires a word of explanation.

The Hamilton Dam was incorporated under Central Texas Hydroelectric, which was part of Middle West Utilities, the parent Insull concern. Receiver for this was Van Rensselaer Thayer, of Chicago.

And Thayer agreed to give C. G. Mallott, agent for Morrison, all the stock of Central Texas Hydroelectric, in return for which the Morrison organization gave 49 percent of the stock back to the Insull receivership. In other words, the Insull receiver handed 51 percent of a very valuable company over to the Morrison organization for absolutely nothing. No compensation was paid.

All this is a matter of record in Equity 11681, District Court of the United States, Northern District of Illinois.

But what is not a matter of record is what argument Morrison used on Receiver Thayer to induce him to make Morrison a gift of 51 percent of the Hamilton Dam.

However, Morrison's political prestige both in Washington and Texas apparently was worth 51 percent of the power company.

Then the President sent a brief memo over to P. W. A. Administrator Ickes asking him to look over the project again. Ickes had turned it down before. But now that Texas had created a State power authority, Ickes put up the money—$20,000,000, of which $12,500,000 is a loan and $7,500,000 an outright grant.

Under the arrangement Morrison made with the Insull receiver, he was to get a certain specified profit in case the Hamilton Dam was sold.

This now happened. The new Lower Colorado River Power Authority, using P. W. A.'s $20,000,000, bought the uncompleted dam for $1,650,000. And out of this Ralph Morrison got a profit of $800,000—or almost one-half. So far as the records show, Morrison made his profit without putting up any capital.

FARM RELIEF FOR 1937—ADDRESS BY SENATOR POPE

Mr. MCGILL. Mr. President, on the 15th of this month, a very able address was delivered over the radio by the junior Senator from Idaho [Mr. POPE], on the subject "Farm Relief for 1937." I ask unanimous consent to have the address printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For 12 long years following the World War the general level of farm prices was permitted to decline until the burden became unbearable. Since 1933 the Federal Government has been striving to hoist agricultural income back to normal. Although considerable progress has been made, the goal has not as yet been attained. While general agricultural conditions have greatly improved there are still some hard nuts to crack before it can be said that the farm problem is solved.

Industry, on the other hand, has grown and developed; modernizations in procedure and improvement in financial methods have eliminated most of its hazards. Surpluses and reserves came into being as financial shock absorbers. Insurance companies protected the property of the corporation. Special reserves gave protection against depreciation, and quasi-speculative transactions, such as hedging, protected individual transactions. State governments have assisted in the process of making industrial enterprise foolproof by establishing compensation insurance to relieve entrepreneurs from liability for employee disability.

The manufacturer or businessman can fully indemnify himself. He no longer worries over the possibility of a fire in his plant. He is insured. His future no longer can be ruined by a bad year in the market; he has built up reserves. His business ancestor of a century ago would indeed envy him his security.

The modern farmer, however, like the ancient farmer, is forced by an unbalanced economic system to live on the ragged edge of prosperity. Always burdened with mortgage, a single bad year invariably will force him into bankruptcy. If lightning strikes, destroying his crop by fire, he is ruined. He has no reserves; he has no insurance; he has no capital with which to hedge or otherwise protect himself. He is dependent on his crop from year to year, and a consistently high price for farm produce has become essential to a livable income.

The experience of the past 3 years has taught us that although comparatively high prices are paid for agricultural commodities, unforeseen hazards will, each year, leave a group of farmers, somewhere in the United States, virtually destitute by the destruction of all or most of their crops. In 1933, for example, in western Kansas, wheat production sank to zero as the result of drought—a hazard which the farmers could not foresee and against which they were powerless to protect themselves. In 1935 apple growers in the State of Idaho virtually lost their entire crop as the result of an early freeze and most of them became insolvent. The Resettlement Administration advanced $147,000 in the State of Idaho alone to rehabilitate apple growers. Such loans are, in effect, nothing more than insurance, although a very uncertain and unnecessarily costly form of insurance indeed. The farmer receiving such governmental aid must repay it with interest.

If a farmer left destitute by one of Nature's pranks possessed actual insurance on his crops, his loss would be paid when it occurred. A sudden loss of a crop would not mean the assumption of a debt burden which would take years to repay. Likewise there would be no interest to pile up overhead costs. Moreover, he would possess the security of insurance from the time his crop was planted.

On many occasions I have inquired of farmers who had suffered disastrous losses, "Why do you not insure your crop?" The answer has always been the same, "Premiums are too high." Some insurance companies have issued policies insuring against hail, fire, or some other specific hazard. At no time has any insurance company undertaken to supply farmers with a type of insurance carrying complete coverage.

Thus there are two obstacles in the way of obtaining protection and security for individuals engaged in agricultural pursuits, exorbitant premiums and the fact that no adequate form of insurance exists. Data gathered and published by the United States Department of Agriculture showed damages to wheat between 1916 and 1925 which, if measured in terms of a reduction from full yield, would amount to 31 percent. What other business is compelled to withstand an average 31-percent loss in production each year? Twenty-three percent of the loss resulted from adverse weather conditions.

In the case of cotton the average crop loss is 42 percent, of which 22 percent may be attributed to weather conditions. A substantial portion of this reduction in full yield may be attributed to normal crop fluctuation, for which provision is made by the individual farmer. These losses can be withstood. But if conditions are to be improved it is essential that protection be given to those who find themselves facing destitution and starvation as the result of losing an entire year's work.

As a basis for a study of the problem, which I hope will eventually result in positive action, I have introduced Senate bill 4626 to create and establish a Federal Crop Insurance Corporation. The corporation would have the power to sell policies of insurance on any growing crop of an agricultural commodity to the operator or owner of the farm on which the crops are produced. Such policies of insurance would, under the provisions of the bill, insure against unforeseen and extraordinary events not the result of misfeasance or nonfeasance causing losses to the insured. Such hazards as fire, hail, floods, severe drought, early and late freezes, and the like, would be included. Farmers, heretofore helpless in the face of such disasters, would at least have the assurance of regaining the money they had invested in planting the crop. The Federal Government could, if empowered by law to do so, work out an adequate and complete program of protection for American farmers. A deficiency in the American system of ameliorating business risks would have been remedied.

Another question is, Could farmers afford such protection? The bill provides that premiums must be computed on the basis of actual cost. No profits may be retained by the Corporation. All that the farmer would be required to pay would be the actual cost of indemnity against loss; that is to say, the money which the Corporation annually would be required to expend in payment of losses. The basic theory of the insurance business is that it is a device by which a group may share a risk to prevent individual hardship. Private insurance companies have carried out that theory but they have made the business of insurance a source of profit as well. Insurance experts state that approximately 60 cents of every dollar collected as premium on life insurance goes to pay overhead costs of the insurance company. It goes to high salaried officials, to an army of agents, claim adjusters, and lawyers, and to stockholders as dividends.

Since this is the case in the well-established and competitive field of life insurance it is little wonder that premiums on crop

insurance, which has never really been developed beyond the experimental stage are exorbitant. Obviously a Government corporation issuing insurance at cost would, at least, issue policies with premiums 60 percent lower than commercial insurance.

Recent studies of the probable cost of complete crop insurance indicate that the cost per acre to insure yields up to three-fourths of the average yield would be about 1 bushel per acre in the spring-wheat areas in the vicinity of North Dakota. In western Kansas the cost would be approximately 2 bushels per acre, and in other sections it would be much lower. When this study was made it was assumed that the farmer was to be protected against all hazards regardless of character, and the policy would guarantee three-fourths of the average crop. The study was made on the basis of crop losses for the last 6 years, which have been as bad as any 6 years in our history. The cost estimates are, therefore, conservative.

As a matter of fact, a Government insurance corporation assessing the cost of insurance only against the years of surplus would only require from one-half to two-thirds of farm production in excess of normal expectation. Thus it would be possible under a carefully worked out, carefully administered crop-insurance program fully to insure farmers against all hazards without ever charging a premium which would take any part of his normal crop.

I am firmly convinced that a program of crop insurance could be made available to all the farmers of the United States to give them security they have never before known, at a remarkably low cost on completely self-liquidating basis, if the Federal Government would only undertake it. No one knows better than farmers themselves how desirable such a program would be.

The average farmer going to the average banker could obtain loans on insured crops, whereas the same loan on the same crop uninsured would be scoffed at today. The cold shoulder which the farmer proverbially receives in banks would be replaced by cold cash and easy credit. Efficiency in the agricultural industry would be rewarded on the same basis as efficiency in industry.

The Federal crop-insurance bill to which I refer was introduced into the Senate on May 13, 1936. It will not be acted upon by this Congress. It was introduced so that people would think about the proposal. Whether it is acted upon at the next Congress depends upon the support it receives. One of the reasons for calling attention to it now is the following statement in the national platform of the Republican Party for 1936. It states:

"We propose to give every reasonable assistance to producers in areas suffering from temporary disaster, so that they may regain and maintain a self-supporting status."

Farmers, of course, will never gain from weasel-words. If the party espousing that platform were elected, what the farmer would get out of that promise would depend on how the officeholders interpret the words "reasonable assistance", and the amount of starvation required to exist before an area is recognized as suffering from disaster. It seems to me that such promises should be made definite, couched in understandable terms, not subject to a multiplicity of interpretations.

It is the duty of the political forces in the United States to bring about a system which will give farmers an opportunity to protect themselves against natural hazards of their industry. The existing farm program counteracts and equalizes the price risk which farmers heretofore have been forced to bear alone. With the addition of a Federal program of self-liquidating crop insurance to equalize and cushion the blows of natural hazards, America would have, for the first time in history, a stabilized, secure, and prosperous agriculture.

CONCERNING THE WAR RECORD OF SENATOR GORE, OF OKLAHOMA

Mr. HAYDEN. Mr. President, I ask unanimous consent to have printed in the RECORD a poem from the Sequoyah County Times, Sallisaw, Okla., and a statement by Mrs. Gill, a Gold Star Mother, of Shawnee, Okla., concerning the war record of Senator GORE. The poem and article follow:

TRIBUTE TO SENATOR GORE

[From the Sequoyah County Times, Sallisaw, Okla., of June 12, 1936]

We're not so sore on Senator GORE
As we were back there in days of yore,
When he fought old graft and opposed the draft
And stood like a rock when thousands laughed.

But the war came on with its horror and noise
We lost our billions; we lost our boys,
And all we gained was a lesson of woe
That will haunt our lives wherever we go.
And the lesson teaches us more and more
That the safest thing is to vote for GORE.

STATEMENT OF MRS. CATHERINE GILL, A GOLD STAR MOTHER

[Mrs. Catherine Gill is a Gold Star Mother from Shawnee, Okla. The American Legion Post there is the Gill Post, named for her son, who was killed at 10 o'clock in the morning of the day that the armistice was declared, November 11, 1918.]

To the Interested Citizen:

It is from a heart burdened with pain that I speak to you; a pain-ridden heart crying out to a just God a fervent prayer that you, today's mothers and fathers, may never know what it is to have your sons sold into eternity for a few yards of blood-soaked soil.

Twenty years ago I was the proud mother of a rosy-cheeked boy. A proud, ambitious boy, loving life, hating no one; a boy with a wonderful future. And now, instead of having his children on my knee, instead of having him, I have empty arms, an aching heart, and a Gold Star; and he sleeps in the last deep sleep in a grave in France.

Not for myself alone do I speak, but I echo the sincere prayers of hundreds of other Gold Star Mothers—mothers who went down to the very gates of death to bring sons into this world; mothers who toiled and sacrificed that their sons might grow into clean manhood and enjoy their rightful heritage of a God-ruled world of peace and beauty.

Present conditions indicate support of the old saying, "History always repeats itself." The old sage who first uttered these words might also have added "that tears and sorrow and death"—the constant companions of history—likewise repeat themselves.

Must we, a civilized people, again offer the blood of our sons in the false name of patriotism and by this gesture encourage the mighty few in their attempt to bring about this repetition of history? To you, I say, No! And to God I pray for the protection of our sons, and of the hearts of our mothers, even at the cost of capital.

In 1917 America's entry into the World War was not sanctioned by the entire United States Senate. A few brave, far-sighted, peace-loving Members—friends of humanity—were bitterly opposed to robbing the arms of American mothers and sacrificing the lives of their human loot to glut the mad dogs of Europe. One of these few you all know, not by broken promises and false platforms but by his wise decisions and by the faith he has kept with the people he represents. This one of whom I speak is Senator T. P. GORE. Blind? Yes; but never to the truth. Old? Yes; but all the wiser for his years. A wisdom that has been proved so many times.

Knowing his fierce desire for peace, his repeated refusals to bend his knee to capital, will you trade him—a tried and true friend—for an unproved new friend? Will you not support him in his sincere support of you? He is blind—he cannot see his people—but God has given him the ability to feel for them. And so, my friends, may God preserve in you the wisdom you have shown in sending him to the United States Senate, and may that wisdom prove itself once more by your keeping him there. As a mother who has lost her son, I say to you, if you would protect the sons you love, "If it's GORE, it's no war."

CRITICISM VERSUS ACCOMPLISHMENT—ADDRESS BY JAMES CRAIG PEACOCK

Mr. RADCLIFFE. Mr. President, I ask unanimous consent to insert in the RECORD an address made by Mr. James Craig Peacock, Director of the Shipping Board Bureau, Department of Commerce, before the Propeller Club, of Baltimore, Md.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The past several years have been a period of great distress for world shipping. Subnormal cargo offering, low freight rates, and severe competition for such business as still moves in international trade have caused shipowners everywhere to concentrate their efforts on the desperate struggle for survival. Not all of them have succeeded in weathering the economic storm. There have been failures and receiverships, an unprecedented laying up of tonnage, consolidation of services, restricted or staggered sailings, and a general cutting down of overhead. High tariff walls, import quotas, and other trade barriers, coupled with subsidies for domestic production and fluctuations of foreign exchange—all, I take it, manifestations of the post-war trend to economic nationalism—lie at the root of the shipowners' troubles. To add to his perplexities there has been a marked, relentless, and heartbreaking rise in operating costs.

Faced with dwindling revenues and steadily mounting costs, shipowners the world over have appealed more and more to their governments for financial support. That they have not appealed in vain is shown by the fact that government aid to shipping is now the rule rather than the exception. If the Great War accentuated the value of merchant shipping, post-war developments have convinced the maritime nations that their merchant marines must be maintained by whatever means possible—if not by private initiative, then by the taxpayers through the medium of Government aid. Our own Admiral Gleaves, chief of convoy operations during the World War, put the case tersely when he said, "The outstanding lesson which the war has driven home to us is the value both in peace and in war of a prosperous deep-sea merchant marine."

At no time in the world's history has competition on the oceans been more intense than during the past 15 years. In this period all of the countries which are our principal maritime competitors have adopted a strong national shipping policy. They have assisted their private shipping industry to survive the terrific slump in world trade, with its disastrous effect on shipping, by the liberal extension of Government credit or by private credit guaranteed by the Government; the renewal and extension of contract services in their essential trade routes; construction loans at low rates of interest; construction bounties; navigation bounties; and other forms of aid. The adherence to such a policy by these countries has enabled foreign shipowners to scrap millions of tons of obsolete ships and to build new ones. It has not only enabled

our competitors to maintain their relative competitive status in the trade routes of the world but has greatly enhanced and strengthened their position by the introduction of high-speed passenger ships, combination ships, and fast cargo liners. It would have been impossible for private capital to finance, without liberal Government assistance, such ships in the important north Atlantic passenger service as the *Rex,* the *Normandie,* and the *Queen Mary.*

Under these circumstances how can American shipping meet foreign competition successfully without adequate Government assistance when the capital and operating costs of American ships are far greater than those of any of our foreign competitors?

During the depression American shipping has experienced all the vicissitudes which have beset the merchant marine of other nations. In addition it has had to face, continuously for the past 3 years, a heavy barrage of high-powered criticism, originating, strangely enough, not in the countries of its competitors but among our own people. From every direction the pitiless spotlight of publicity has been turned upon its every weakness and shortcoming, leaving its virtues obscured in the shadows.

Such a steady stream of adverse criticism has poured forth from congressional and departmental investigations and hearings and debates, from news and editorial writers and columnists of influential papers, from after-dinner speakers, and even from radio commentators, that the man in the street can scarcely be blamed if he has come to believe that our shipping situation constitutes a veritable public scandal and nothing more.

It would be a waste of your time and mine if I should attempt to analyze in detail the many charges which have been made against the operators of American ships. These charges have been given wide circulation and have gained wide credence. Many of them are one-sided and carry their own refutation as, for example, the sweeping charge in a recent report that instead of an adequate American merchant marine, the Merchant Marine Act of 1928 has produced unconscionable exploiters, intent upon wringing every possible penny from the public purse while giving an absolute minimum of service in return.

Admittedly the act of 1928 has failed to produce an adequate merchant marine, since it has not brought about the building of much-needed cargo liners. But when we say this we should at the same time present the other side of the picture and add that the 33 vessels built under the act's provisions, at a cost of approximately $144,500,000, are, for the size and type, as modern and efficient as any in the world, and represent the finest merchant fleet ever assembled under the American flag since the advent of steam.

Much the same objection may be taken to a reference in the same report to what is called the myth of private ownership, and to the repeated attempts made to show that the Government's mortgage liens and equities are so great that our merchant marine is in effect owned by the Government rather than by private American interests. Here again only a part of the picture is revealed by the floodlight of unfavorable publicity which has been thrown upon the merchant marine. I shall take the opportunity in a moment or so to refer more fully to the status of debtor shipowners.

I hold no brief for the individual American shipowner, but as Director of the Shipping Board Bureau I do hold a brief for the American merchant marine. You will understand that in saying this I in no wise condone the abuses and improper practices which have been indulged in by some members of the industry. I offer neither apologies nor excuses for those who have overstepped the proprieties, or who, for personal or corporate gain, have been guilty of breach of faith, if not of contract, with the American people. The point I wish to make is that there has been enough criticism of the abuses of the past. Surely the American merchant marine finds its natural economic handicaps burdensome enough without this added handicap. What it sorely needs—though in some quarters it is not the fashion to say so—is sympathetic and constructive help. We cannot permit the recent flood of adverse criticism to make us waver in our allegiance to one of the country's most essential industries. We cannot proceed on the false assumption that its greatness has forever vanished; that its former virtues have degenerated into vices; that no hope remains of perpetuating its glorious traditions.

Believing that it is high time that we shifted the spotlight so as also to show other and more favorable parts of the picture, I propose in my remarks tonight to point out that one can find real achievement and substantial progress even in this supposedly dark age of the merchant marine. I shall try to show that the history of the past few years, if rightly interpreted, gives ample assurance that we still have the foundation upon which to build an era of maritime achievement surpassing in glory even the golden era of a century ago.

The outstanding accomplishment which must be placed to the credit of the American merchant marine in recent years is the maintenance, on every one of the country's essential trade routes, of regular and dependable service during this entire period of unparalleled stress in shipping and foreign trade. Here is a record that will bear favorable comparison with the showing made by any other merchant marine in the world, a record which is all the more remarkable when we consider the obsolete types of cargo ships which comprise the greater part of our fleet. Not only have these services been maintained, but the percentage of American water-borne foreign commerce carried in American bottoms have held constant, even during the worst years of the depression. What better testimony could be offered to prove the zeal and enterprise displayed by American operators in the face of conditions which have driven many of their foreign competitors out of business?

Although I am reluctant to bring statistics into a speech of this sort, a few figures are necessary if I am to avoid the charge of dealing only in glittering generalities. Let me state, then, that for the past 14 years American ships have carried an average of approximately 34.3 percent of the total value of our foreign water-borne commerce, ranging between a low of 32.2 percent in 1926 and a high of 36.5 percent in 1933. Now, in analyzing these figures the interesting fact develops that during the past 7 years—the period of the great depression—the yearly average is found to be somewhat higher than for the 7 years preceding the depression.

Does anyone suppose that this just happened by chance or accident? I for one give credit to the business acumen, the ingenuity, and the dogged determination of the American shipowner, who, refusing to take the depression lying down, rolled up his sleeves, improved and intensified his methods of freight solicitation, and more than maintained his relative position, while the rest of the business world was in the doldrums praying for a favorable breeze.

There can be no doubt that the new ships constructed under the much-criticized Merchant Marine Act of 1928 have helped American operators to hold their own during the trying years of the depression, and that conversely, in appraising the results of that legislation, we must remember that its period of operation has been almost altogether one of world-wide depression.

The two splendid passenger vessels built for operation in the North Atlantic have proved so popular that they have revolutionized the entire passenger rate and classification structure in the world's outstanding ocean-passenger route. During the travel season accommodations on these vessels have been taxed to capacity. For some months negotiations have been under way looking to the construction of a third vessel of the same type and size, though with still more modern equipment, with a view to rounding out this service on a weekly basis and securing a still greater share of the rich passenger traffic of the North Atlantic.

Four new vessels built for service from North Atlantic ports to ports on the Mediterranean Sea have also given an excellent account of themselves, as have the five outstanding passenger ships built under the provisions of the 1928 act for service on the Pacific. The all-round efficiency of these vessels, coupled with their excellent service and moderately priced fares accounts for the high place they have won in the estimation of discerning patrons. If the Merchant Marine Act of 1928 had done nothing else it would still deserve our gratitude for the way it has demonstrated that whenever the American shipowner is in a position to offer service comparable with, or superior to, the service furnished by foreign shipowners, the patronage of American shippers and travelers will gravitate to the ship flying the American flag.

The four new combination cargo and passenger vessels built for service to the west coast of Central and South America tell the same story. For their type and size they are as attractive and efficient as any ships ever built, and like other vessels constructed under the provisions of the Merchant Marine Act of 1928 they have won great favor with the shipping and traveling public. In view of recent criticism of American ships from the standpoint of safety, I think it well to point out that all the passenger-carrying ships built with Government aid since 1928 have exceeded the requirements laid down by the London Convention for Safety of Life at Sea, notwithstanding that this important treaty has not yet been ratified by the United States.

All told, as I have pointed out, 33 new and splendid ships, costing approximately $144,500,000, have been built under the 1928 act. The conversion or reconditioning of 42 old vessels, with a view to increasing their speed, installing refrigerator space, or making other betterments, has involved an additional expenditure of $17,700,000, making a total outlay of approximately $162,200,000, for modernizing the fleet during the depression years. The result is that our immediate needs in our principal passenger-carrying trades are, with a few notable exceptions, reasonably well taken care of. Our need for new cargo liners remains, however, a matter of very real concern.

A fair appraisal of the figures I have just quoted will show the unfairness of the highly critical views so frequently expressed as to the progress made in building up American shipping since the passage of the Merchant Marine Act of 1928. When we consider the employment benefits accruing to American labor through the expenditure of $162,200,000 for building or reconditioning these 75 ships, the added millions paid to American seamen employed to run the newly built vessels, and the increased prestige enjoyed by the American-flag services in which the ships have been operated, it is decidedly unfair to imply that the Merchant Marine Act of 1928 was barren of worth-while results. The chief defects of the act were that it disguised the nature of the subsidy; that it did not make mandatory the replacement of obsolete tonnage; and that the method prescribed for determining the amount of Government aid was loose and open to abuses if not properly administered. More than counterbalancing these admittedly serious defects, however, the fact stands out—and I believe that it will be given full recognition when the maritime history of the post-war era is finally written—that but for the subsidy provisions of the act of 1928, few American lines, other than the so-called industrial carriers, would ever have survived the depression.

As pointed out a moment ago, the critics charge that while American shipowners have taken advantage of the liberal provisions of the 1928 act to build or recondition a number of ships, and have also purchased Government tonnage at market prices or less, they have been so slow in meeting their financial obligations to the Government that, in effect if not in law, the ships are owned by the mortgagee—in other words by the Government. Here again the spotlight of adverse criticism reveals only part of the picture. I would like to show you the other part—made up of facts which I think speak for themselves.

On August 9, 1933, when the Presidential order abolishing the Shipping Board and transferring its activities to the Department of Commerce became effective, outstanding ship sales and construction-loan mortgages amounted to $154,742,561.80. Today that total has been reduced to $105,728,539.77. In other words, in less than 3 years $49,014,022.03, or almost one-third of the total, has been paid back to the Government, notwithstanding that by the terms of the loans most of them were to run for 15 or 20 years.

On the same date—August 9, 1933—13 active companies were in arrears on such mortgages. Since then only 2 small companies have been added to the list, while on the other hand 6 of the original 13 have completely paid up all arrearages. A seventh has for more than 2 years been making regular payments on a schedule which has already reduced its arrearages from $853,800 to $169,600, with every indication that it will be completely caught up on its payments by November of this year. Two of the six other companies still in default are in appreciably sounder financial condition than they were a year ago, and only two of them have had occasion to resort to receivership.

I submit that in all fairness to the American shipowner these facts deserve as widespread publicity as that which has been accorded the pessimistic reports of recent years. I do not believe that the American people want Government ownership and operation of industry, even though the industry be one which is so highly specialized, so difficult to manage, and so hazardous from the standpoint of financial returns as the American merchant marine. Our former maritime glory, wrested from our competitors in those far-off days of wooden ships and iron men, was achieved under private American ownership. On the other hand, our post-war experience with Government ownership and operation was marked by so much waste and inefficiency that I for one hope that it will never be repeated.

And, in conclusion, just a word as to the future. The question that is probably uppermost in the minds of most of you is whether we are going to have new subsidy legislation. I cannot answer it. No one can. No one knows. I can say that the chances of just legislation are greater than they were 2 weeks ago.

ADDRESS BY SENATOR REYNOLDS AT ARLINGTON MEMORIAL AMPHITHEATER

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the RECORD the memorial address delivered by the Senator from North Carolina [Mr. REYNOLDS] on Sunday, June 7, 1936, in the Memorial Amphitheater of Arlington Cemetery. The meeting was held under the auspices of the United Confederate Veterans. The address was broadcast over a Nation-wide National Broadcasting Co. hook-up.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies, and gentlemen, and beloved veterans in gray, I am grateful to the Sons and Daughters of the Confederacy and the Confederate Southern Memorial Association, which organizations invited me to be present on this occasion. My heart swells with pride and joy at being able to address you, and in my humble way pay homage to the memory of those men in gray who laid down their lives in that great struggle from 1861 until 1865 and to pay tribute to the thinned ranks of their comrades who have survived, some of whom are here with us at this hour.

As I stand here today on this hallowed ground where sleep some veterans of all our wars, 71 years after Appomattox, to say anything that would tend to reopen the wounds of that sad period in our history would be furthest in my mind. I think, however, I would be remiss in my duty as a southerner and a North Carolinian whose forefathers aided in the settlement and development of our great State and who later fought under the Stars and Bars if I did not refresh your memory, so to speak, of the valiant deeds performed by those brothers, fathers, and sweethearts in gray who so freely gave of their life's blood for a cause which in their hearts was right and just.

Hundreds of historians have recorded the causes and events which brought about the War between the States, and I find that very few of them attribute it to the same basic principles. Some of them state that the great question of slavery was the real underlying reason, while others blame it on uncontrollable economic forces, while still others say it was the antagonism of two majestic ideas—the idea of local self-government and the idea of union.

Regardless of what brought about that great strife, each and every one of us know that in 1861 the so-called Southern States had only a population of approximately 9,000,000 people, and that a large percentage of these were slaves. The South did not possess a navy. For 4 long years 800,000 men, which constituted the entire armed forces of the Confederacy during this period, under Lee, Jackson, Forrest, Stuart, Hill, and Longstreet, withstood the onslaught of the Federal forces, numbering over two and one-half million men, or nearly three times greater than their own. We know that these same men on the far-flung battlefields of Bull Run, Chancellorsville, Fredericksburg, the Wilderness, Gettysburg, Antietam, and Manassas committed acts of valor and bravery which still live and will live on through the ages and will ever be an inspiration to the youth of our Nation when courage, love of homeland, and sacrifice for an ideal are mentioned.

To know the southern soldier or to study him can never fail to attract one's imagination or fail to quicken the pulse. You must glory in his accomplishments when you pause for a moment and remember that he was a farmer, a tiller of the soil, a home lover, and that he was reared on the scene where our country was first settled, and that his very being was steeped in the foundation of his country. Is there any wonder, my friends, why the European countries, as well as the North, were amazed at the individual bravery, privation, and sacrifice of these men? Their leaders taught stratagem and maneuvers which for years after the war were taught in the military schools of Europe. The Confederate veteran is an institution which will survive forever. My own great State, North Carolina, played a most important part in that great period. It is claimed that in addition to placing more troops in the field than any other Southern State that its soldiers were first at Bethel, farthest at Gettysburg, and last at Appomattox.

The War between the States was a brothers' war, and no war in the annals of human history was more sincere. The thought of conquest or glory was never considered. To refer to it as rebellion is to speak ignorantly, and to call it treason is to add viciousness to stupidity. It was a war of ideals, principles, political conceptions, and of loyalty to the ancient ideals of English freedom.

Memorial Day was first observed in Columbus, Miss., about 1 year after the close of the war. On that day the relatives of the fallen Confederate soldiers paid tribute to the memory of their departed loved ones as well as to about 40 Union soldiers who were buried in the same cemetery. From that day on, every year throughout the entire country, our citizenry gather to pay homage to our heroes.

The greatest tribute on this Memorial Day which we could pay to these departed and living heroes of the sixties would be to honor the spirit and purpose for which they fought, bled, and died. The cause for which they made the supreme sacrifice failed, but the spirit will ever remain a cherished heritage for their loved ones. The Confederacy is dead, but the spirit which conceived it and made it glorious in its great achievements is still alive and will never perish. The spirit has carried on and has found expression in the courage and hope that survived it by giving us a new South, far greater and happier than the old.

Visualize for a moment the utter despair and complete hopelessness that prevailed over the entire South after Appomattox. This, indeed, was a dark hour for our beloved Southland, and many were the sad hearts on that morning of April 9, 1865, when the news was flashed that the fate of the Confederacy was sealed. When we pause to picture in our own minds the conditions that existed throughout the entire South and then look about today we cannot but wonder at the fortitude, courage, and determination of our people in those long, dark years which followed the war. The sword had been sheathed forever, and the Confederate soldier returned to his home to commence the great task of rehabilitation. No one can question his loyalty. Shortly after the cessation of hostilities Gen. Robert E. Lee said: "All good citizens must unite in honest efforts to obliterate the effects of the war and to restore the blessings of peace. They must not abandon their country, but go to work and build up its prosperity. True patriotism sometimes requires men to act exactly contrary, at one period, to that which it does at another, and the motive that impels them, the desire to do right, is precisely the same. The circumstances which govern their actions change, and their conduct must conform to the new order of things. History is fully illustrious of this. Washington himself is an example of this. At one time he fought against the French under Braddock; at another time he fought with the French at Yorktown under the orders of the Continental Congress of America against the British. He has not been branded by the world with a reproach for this, but this course has been applauded."

Most people know Robert E. Lee as a great military genius; he was greater as a civilian. He placed a standard by which human conduct may be measured in every age and under every condition when he uttered the sublime sentiment:

"There is a true glory and a true honor; the glory of duty done, the honor of the integrity of principle."

The great task of reconstruction and rehabilitation fell largely upon the shoulders of the men who had worn the gray, and to their everlasting glory it must be said that they carried on with that same devotion, courage, and determination to rebuild their Nation as they had so strongly manifested on the thousand battlefields. As the result of their untiring efforts, there arose a mightier South; a Southland of progress and happiness, until today every man and woman of southern birth or extraction can point with pride to every single State below the Mason and Dixon's line and hold it up to any other section of the entire country as an example of true-blue and unsullied Americanism.

The accomplishments of the South since the shambles of the terrible war have recorded themselves indelibly in the pages of our history, and when the muskets were racked in those long lines at Appomattox the last vestige of a desire of the southern people

to be separated and apart from the rest of our fair country vanished. And, my friends, clearly to emphasize my point that our Southland has since that fateful day in April 1865 been a loyal, indissoluble, and vital part of our great Union, I want to remind you that in 1898, when our martyred President McKinley called for volunteers to defend the flag and to forever break the rule of the Spanish tyrant in Cuba, these same Confederate States furnished some forty-odd thousand men and officers.

In fact, the great State of Georgia furnished more men on a population basis than did any other State in the Union. And a little later, when our beloved war President, Woodrow Wilson, could not keep us any longer out of the great conflagration across the Atlantic and in 1917 found it necessary to again draw our sword to protect our honor as a world power and to save the world for democracy, we find that these same 11 Southern States contributed almost 1,000,000 men and officers to the ranks of that great khaki Army that saved Europe from complete destruction by the German hordes. There can be no question now, and never will be, as to the loyalty of our Southern States and of our southern people.

You need have no worry of communism, atheism, or any other "ism" taking hold in our South. The only "isms" that our people know or will tolerate are patriotism and Americanism. You may rest assured the ideals and the institution for which these men in gray gave their lives will not be destroyed.

The alien question which now confronts America is one of the most vital which our people have been called upon to dispose of within the past several decades. It is truly a grave situation when you consider that there are now within our borders between seven and ten million aliens, one million and a half of whom are on relief rolls being maintained by the American taxpayer and at least another 3,000,000 usurping jobs which rightfully belong to American citizens. By alien I do not refer to those from foreign shores who have come here and have become naturalized citizens. During the oncoming summer months I have accepted several invitations to deliver lectures on this grave problem, and I declare today that I intend to continue my efforts with every ounce of my energy to make America a land for Americans and not for aliens.

The task of the South to rebuild was not an easy one. For a period immediately after the close of the war, due to the selfish desires of some few to enrich themselves at the hands of the impoverished South, there was imminent danger that our southern people would never be able to adjust themselves. Through this dark period of our history, when hope in the South sank to its lowest depth, we find the Confederate veteran always leading the way out of the darkness of despair into the light of hope. Their ranks have been thinned by the grim reaper until now there only remain a few thousand. With profound sadness in our hearts, we realize that the fleeting years are fast taking their toll and in another decade every single one of that valiant Army will have answered the last bugle call and they will be bivouacked with their immortal comrades. But their memory will live on through the years and will be forever cherished. Their sacrifice was not in vain because out of it all they gave to us a greater nation, a united nation, a happier nation, and a real United States of America.

Confederate veterans, dead or alive, I salute you! If you have passed on, may you rest in peace. If still with us, I know you will be true to your ideals and principles till you have fallen on sleep.

DEMOCRATIC NATIONAL CONVENTION

Mr. HAYDEN. Mr. President, under authority granted by the Senate on June 18, 1936, I insert in the CONGRESSIONAL RECORD the address of Hon. ALBEN W. BARKLEY, temporary chairman of the Democratic national convention, held in Philadelphia, Pa., June 23 to 27, 1936; the address of Hon. JOE T. ROBINSON, permanent chairman of the convention; the platform adopted by the convention; and the address of the President of the United States on June 27 in Philadelphia at Franklin Field accepting the nomination of the Democratic Party as its candidate for reelection as President of the United States; the acceptance address of the Vice President; and the address of Chairman Farley.

ADDRESS OF THE TEMPORARY CHAIRMAN, HON. ALBEN W. BARKLEY, OF KENTUCKY

Ladies and Gentlemen of the Convention: We have assembled, as we have done for more than a century, to justify in government a liberalism designed to promote those primal and inalienable rights which outweigh all political formalism and all conceptions of special privilege.

We are assembled here not merely to defend but to proclaim the New Deal as the surest highway to that life, liberty, and the pursuit of happiness to which Thomas Jefferson devoted his life and Franklin D. Roosevelt is consecrating every fiber of his immortal spirit.

We meet in the fullness of national responsibility in all branches of the Government save one, and with a record of performance never equaled in the history of the Republic; and on that record we stand before the American people without apology and without retreat.

We meet to rename, and subsequently to reelect, to the highest office within our gift a man whose build-up is his record.

As we survey the picture which the world presents and contemplate the 4 tragic years just prior to 1933, and the slow but steady progress of our country under this Democratic administration, we are moved by a sense of profound gratitude that the Nation today looks into the future with eyes that see within reach the goal of a happier and more abundant life for all our people.

We come to this convention in the name of a Democracy which is national in its historic background, in its approach to and willingness to deal in a national way with problems that are national in their scope.

We recognize the complexity of modern life. We covet no power that would deprive the States of the right to deal locally with local responsibilities. These are adequate to consume the energies of all who are willing to devote themselves to their solution.

But we recognize the undeniable and self-evident fact that, because of our growth in territory, population, wealth, the means of production, distribution, and consumption, and the facilities of transportation and communication which have knitted the American people into a nation, certain great vital questions affecting the daily lives of the people as a whole have been projected into our economic and social structure.

These vital questions cannot be stubbornly avoided or their solution long delayed by any political party or any administration which has an adequate sense of its responsibility to the people.

Political organizations are neither created nor justified merely as means of obtaining public office. Their justification lies alone in affording a means of expression and desire, as well as a focus of responsibility, in the administration of public affairs.

Thomas Jefferson is often misrepresented by those who pay to him the dubious homage of the lip as having said, "That government is best which governs least."

From all the volumes which Jefferson wrote it is, indeed, unfair to lift and emphasize a single sentence uttered concerning an ideal state of human perfection never yet attained. If that sentence must be taken without context or reservation, it is but a step to the doctrine that that government is best which governs not at all.

In this age of infinite complexity, of mutual dependence of community on community, state on state, and nation on nation, all responsible governments must enlarge their field of activity and supervision to the end that the weak may be protected from the strong and rapacious, and the approximation of justice among all classes may be secured.

Any political group, therefore, who, in the midst of tragic impotence among the people to adjust unaided their lives and fortunes and carve their individual paths through the impenetrable forests of economic density, hides behind the sedentary indolence of some ancient shibboleth is unfit for high station or responsibility in the society of our day.

This is a moving, changing world in which we live. New generations, viewing the discarded shell of ancient theories and impatient with the fatal doctrine of defeatism, are asking why, among all the arts and sciences and achievements of man, only government is a laggard; and make no mistake about it, they are searching for the answer.

It was this impatience with the blighting atmosphere of the political and social antiquarian that made Jefferson the foremost, as well as the most despised, liberal of his generation; that drove Andrew Jackson along a course for which he was denounced as a vulgar ruffian; that inspired Abraham Lincoln toward a goal for which he was described as the earthly incarnation of coarse buffoonery; and that cynically pictured Woodrow Wilson as a dreamy professor bent on political and social experimentation.

Franklin Roosevelt finds himself in glorious companionship with these great spirits who spurned the chariot of futility and negation.

He has not dallied with defeat nor taken counsel with cowardice, lest his feet be found on untraveled ground. He has sought to dedicate the powers of this Government to the service of the people who support it with their substance and their blood. He has restored to them faith in it and control over it.

Why was it essential that the powers of government be exerted in a new way on the daily life of the American people? Why is it impossible to tread the same old paths, no matter where they lead? Why had there been a complete break-down in nearly every branch of public and private endeavor?

Because for 12 years—yea, 12 long years—the ancient doctrinaires of special privilege had stood at the pilot's wheel on our ship of state. Because the powers of government had been exercised to promote the ends of injustice and bring a palsy to the efforts of the people exerted in their own behalf.

Because the streams intended for the unretarded flow of the people's energies were choked, and we found it necessary here and there to cut a new and straighter channel instead of trying to clean out an old and crooked one.

I find no relish in picking or pointing at ancient wounds. But in order to assess the wisdom of the remedies we have administered, let us diagnose the ailments from which we suffered.

They are of such recent existence that it ought not to be necessary to recount them. But my distinguished friend, the Senator from Oregon, who was temporary chairman of the Republican convention, forgot to mention them at Cleveland.

And some of those who suffered and have been cured are now the most arrogant in their antagonism to the process which brought them through the crisis. Some of those who were rescued from drowning in the economic floodwaters let loose by the previous 12 long years now complain because in lifting them out we were forced to pull their hair.

When the present administration assumed office on March 4, 1933, all classes of society bore the marks of such a combination of maladies that it is only possible to mention them in the vaguest outline.

These maladies were not local. They were not set off by metes and bounds. They were not walled in by territorial barriers, nor quarantined by yellow flags nailed to a tree.

They were maladies which took root deeply in the whole body of our social and economic fabric and were therefore chronic.

They have been fostered by enduring neglect, magnified by political folly, aggravated by venality, and perpetuated by the frantic effort to cure them by their causes.

No nation can prosper long or truly which finds no outlet for the surplus products of its genius and labor.

But in 4 years—yea, 4 long years—under the guidance of the man who was applauded but not renominated at Cleveland, we saw our trade with the world decline from $10,000,000,000 to $3,000,000,000 per year, setting the feet of 3,000,000 men upon the streets and turning their faces toward the lengthening bread lines.

For 10 long years the condition of the American farmer had steadily declined, in spite of the hectic flush of prosperity found on other portions of the economic body.

Each recurring season saw him compelled to accept for the products of his toil less than the cost of their production; saw his debts enlarged and his ability reduced; saw one-half the farms of the Nation under mortgage and one-fifth of these on the verge of foreclosure; saw his foreign markets lost and his home markets reduced; saw mounting and unsalable surpluses in all the basic products of the farm.

The farmer was losing not only his home, his toil, the rewards of his life and energy; he was losing faith in the ability or willingness of organized society through its only agency, government, to give him the same kind of break it had for generations given to others.

He was losing faith in political promises which had made him the victim of cynical indifference and devastating greed.

As if to pile Ossa on Pelion, the avenues of public and private credit were closed to him, and the cry of the auctioneer was heard at every courthouse door.

In the realm of finance chaos greater than was ever seen in this or any other nation spread its shadow across the country.

In the 4 years from 1928 to 1932 more banks had closed in failure than had ever closed before, and more than in all the rest of the world in the same length of time.

The impact of the crash was so terrific and convulsive that through terror men cried out in the anguish of their souls at the loss of their life's savings and their economic independence.

Industrial production had declined to 53 percent of normal, while industrial employment declined to 61 percent. The purring wheels of production were silent, and smokeless smokestacks were silhouetted against the heavens like monuments on a deserted battlefield.

Led on by the sirens of speculative excess and by the false signals flashed from the doors of the Treasury and the Executive Mansion, millions of men and women found themselves stunned by the falling debris of worthless securities foisted on them by investment pirates. They saw their substance drawn from their hands as if by some unseen magic force.

Archaic and unethical methods of business competition obtained illegitimate profit regardless of merit and strangled smaller units of production and distribution.

Sweatshops, long hours, low wages, unwholesome working conditions, and the physical and mental degradation of children remained the crowning infamy of portions of American industry.

Unemployment rolls never dreamed of by the accumulated pessimism of the century revealed between 15,000,000 and 16,000,000 laborers in idleness.

Down went every economic index, while the savings of lifetimes ran slowly out like sand in a weary hourglass, and every month new thousands left the security of work until 15,000,000 workers tramped the streets in hopeless agony of effort.

Down we were hurled for 3 long years, while confidence, like a prodigal, went into a far country, and the courage which had braved these barren shores in the days of the Puritan and under the pioneers had extinguished a continental wilderness began to faint on every hearthstone.

Three long years of Republican superiority found local charity and relief everywhere collapsing, and millions of human beings were begging for bread, raiment, and shelter, and uncounted numbers of them found sleep only by the roadside or upon park benches, from which they crawled with the rising sun like dogs from a kennel.

Upon the crowded street corner the soap-box agitator found it not difficult to lash into fury the emotions which were aroused in the disillusioned souls of men, who had lost not only lands and buildings and jobs and scraps of paper, but their faith in government, in society, and justice, and the spiritual foundations which sanctify the use and enjoyment of every earthly possession.

In 1929 the debauch of the Coolidge-Hoover revelry and the 12 long years of Hamiltonian exploitation were over. The dance was ended at last. The gaunt pipers of bankruptcy, starvation, and unemployment had come to claim their fee.

One sudden blast of wrath from outraged truth and decency and honor and prudence and thrift and common sense—and the tinsel tower of false dreams, false pride, false promises, and false hope collapsed in irretrievable ruin and dreary desolation.

Three long years of normalcy and they had wiped out half the values accumulated in this Nation since Christopher

Columbus and half the total income of all the people of these United States.

Three long years and—

We did not dare to breathe a prayer
Or to give our anguish scope,
Something was dead in each of us,
And what was dead was hope.

Then came Franklin Roosevelt and assumed the heaviest burden that ever descended on any man since Washington knelt in the snow and Lincoln watched the Confederate flags across the Potomac. As his first act he also knelt before an altar and prayed. As his second he opened his breast to the raging storm and checked it in a day.

Where were his detractors then? They had sought refuge in the storm cellar. They now cry, "The Republic is in peril; the Republic is lost", and for all of them it might have been.

The president of the United States Chamber of Commerce asked the President to assume the powers of a dictator for 3 long years.

The Capital was flooded with the paper plans of impotent puppets of toryism begging Government to assume responsibility for all.

The President scorned these suggestions. With every word and act he breathed new confidence in American institutions, confidence in the courage of traditional Americanism, and he twitted the Nation for its fear of fear.

There is not an American who does not know what happened then. Faith returned. Confidence revived. National courage rose like the sun at dawn. Faces that for 3 long years had forgotten how to smile brightened and looked up. Americanism returned to America.

Shall I recount the steps by which this task was charted and is moving to fulfillment?

Have the American people forgotten the valley into which they were led, and are they unconscious of the resistless tread of their feet out of that valley and up the long, rough slopes to the heights from which they had descended?

Need I remind you of that stroke of boldness which proclaimed the holiday of banks? Or the passage of the Emergency Banking Act? Or the Banking Act of 1935, which together restored not only banking but public confidence in banks? Which withdrew banks from the feverish speculation of the stock market and made them banks again? Which strengthened their foundations and guaranteed their deposits and enticed from hiding places billions of dollars which had sought security in seclusion?

And need I remind you that the Republicans who manipulated the Cleveland convention nominated a man for President who before the American Bankers' Association denounced the Federal Deposit Insurance Act, which guarantees the deposits of the people throughout the United States, and as Governor of his State exerted every ounce of influence at his command to prevent the banks of Kansas from entering the guaranteed system?

What I now ask, and the people have a right to know, is whether the miscellaneous assembly of heterogeneous elements which met at Cleveland 2 weeks ago, and the ticket which it nominated, approve this great financial program and its results, or whether, if returned to power, they will scuttle it again as they scuttled the great system set up by the administration of Woodrow Wilson.

And what I ask, and the people have a right to know, is whether some of those who journeyed to Washington in the days of their distress with a tin cup, a pair of blue glasses, and a dog, and obtained from the Treasury, through the Reconstruction Finance Corporation, two and a quarter billion dollars of the people's money in order that they might live, now propose to belittle their past predicament and those who rescued them from it and made it possible for the national banks alone to turn an annual loss of $150,000,000 to a net profit of more than $200,000,000.

During the 4 long years just prior to the Roosevelt administration more than 7,000 banks went out of business, and total deposits in all banks decreased by more than $15,000,000,000.

Ask the 8,000,000 depositors in these vanished banks whether they desire to return to those days of ragged individualism. Ask them whether they favor the repeal or crippling of the guaranty of bank deposits and the election of a man as President who struggled to obstruct both its enactment and its administration.

The answer will be an overwhelming "No!"

While under Mr. Hoover more than 7,000 banks closed their doors permanently, only 264 State and national banks have closed since March 16, 1933, the end of the bank holiday, and only 8 of them were national banks. Thus far in the good year 1936 not a single national bank in the United States has closed its doors in the faces of the people.

Need I here recount the efforts of the great Secretary of State, Mr. Cordell Hull, to pry ajar the gates of foreign trade and start again the movement of international commerce and good will?

Through the trade agreements authorized by Congress and consummated under that authority, our commerce with other nations has increased from 27 percent of normal in March 1933 to 56 percent of normal in April 1936, or from $2,933,000,000 in 1932 to $4,330,000,000 in 1935.

But in spite of this we witnessed in the recent Republican convention a bitter denunciation of the power given to and exercised by the President as being wicked and unconstitutional, although from 1798 to 1935 Congress has from time to time conferred such authority on the President in the interest of American trade.

The Republican platform proposes to repeal all trade agreements and the law under which they were negotiated.

The hypocrisy and insincerity of those who framed and now accept that pronouncement are revealed in all their nakedness when we recall, as they have conveniently forgotten, that under no less than two past Republican administrations similar authority was conferred upon Republican Presidents, and no less than 10 such trade agreements were entered into without ratification by the Senate.

Having driven our trade from the seas, locked our ships in the ports, and hauled down the American flag as the symbol of commercial enterprise, the Republican leaders now wail and gnash their teeth because we are restoring the flag, the commerce, and prestige of the American Nation.

What do they offer as a substitute out of the depths of their own political and intellectual bankruptcy? Nothing more nor less than another stroke of commercial apoplexy in the clinic of Smoot and Hawley.

But we are told by the Republican battalion of death and its illegitimate brother, the American Liberty League, that we are laying the hampering hand of Government on the innocent heads of business and finance. These dismal prophets of panic and propaganda will continue to annoy the American people with their lamentations.

What business are we outraging?

For 12 years—yea, for 12 long years—the leaders of the Republican Party dwelt in a fool's paradise and allowed the American people to pour billions of dollars into the sinkhole of fraudulent investment securities.

They saw grow up, if they did not foster, a prodigious system of inflated stocks, and saw them peddled from door to door throughout America; and they saw the market places for them juggled and artificially manipulated beyond the power of the average man to escape or comprehend.

With bland and callous unconcern they sat smugly through the carnival until the mask was torn off and the public saw the putrid pestilence of financial debauchery which had blown into their nostrils an alien odor; and the result was the passage of the Securities and Exchange Acts for the protection of the people.

These measures were denounced en bloc. But the issue of new and honest securities has increased 50 percent; the value of old ones by more than 40 percent.

In their platform the Republicans stammer a pious sentence in behalf of regulation of interstate securities and interstate activities of public utilities. But we have already done it.

They sat in the folds of comfortable and luxurious upholstery while a giant system of holding companies was built one upon another in the public-utility field, wringing exorbitant profits from investors, operating companies, and consumers.

But did the leaders of old or new guards in Republicanism lash their faces into scarlet or their hearts into indignation over the spoliation of innocent people?

Among all the tethered and muzzled spokesmen of the doctrine of laissez faire no warning was uttered or relief proposed. From the lips of none who controlled or were chosen by the Cleveland convention came or has come either movement or utterance indicating either knowledge of the subject or ability or inclination to deal with it.

The administration of Franklin Roosevelt found the spreading cancer and removed it and will administer to the affected parts the healing processes of honesty from which will come a healthier growth and fuller service.

What I ask and the people have a right to know is whether the Republican program contemplates the honest enforcement of the new enactments; whether those who shape that program will divorce themselves from whatever allegiance may have held them to these interests, or whether they propose to undo the work we have accomplished.

The croaking noises which rise from the swamps of old-deal complacency will not suffice. The people call for assurance that the structure of honesty and freedom which we have erected shall not be destroyed. Has that assurance come out of Cleveland? Is it in their platform? Was it couched in their insulting speeches? No!

When we take stock of the Nation's farming interests, how may I adequately portray the new hope, the restored confidence, the economic resurrection of the American farmer?

In 1920, 1924, 1928, and 1932 the hollow and hackneyed promise was made by Republican platforms and candidates to restore agriculture to economic equality with industry. The promise was never fulfilled or intended for fulfillment. It has been repeated again in their platform in 1936, with no more thought of its accomplishment now than in the past.

During the 4 long years of Mr. Hoover the burdens were piled still higher on the farmer's back, while half a billion dollars were taken from the Treasury and poured out into a fantastic exhibition of agricultural pantomimicry.

It is interesting and revealing to revert to the recent past and revive some of the platform and convention utterances of the Republican group which now complains against our successful program of farm rehabilitation.

In 1916, Warren G. Harding, temporary chairman of the Republican convention which nominated Charles E. Hughes for President, said:

> The Democratic Party is always concerned about the American consumer. Our Republican achievement is the making of a nation of prosperous producers. Far better a high cost of living and ability to buy than a lowering cost attended by destruction of purchasing capacity. [Applause.]

In the Republican platform of 1920 we find the following declaration:

> The farmer is the backbone of the Nation. National greatness and economic independence demand a population distributed between industry and the farm, and sharing on equal terms the prosperity which it holds is wholly dependent on the efforts of both. Neither can prosper at the expense of the other without inviting joint disaster.

Their platform in 1924 contained this declaration:

> In dealing with agriculture the Republican Party recognizes that we are faced with a fundamental national problem and that the prosperity and welfare of the Nation as a whole is dependent upon the prosperity and welfare of our agricultural population.
>
> We pledge the party to take whatever steps are necessary to bring back a balanced condition between agriculture, industry, and labor.

In his address to the Republican convention of 1928, as temporary chairman, the Honorable Simeon D. Fess made the following statement on agriculture:

> The purpose of the administration in further aid is to avoid the Government taking over from the farmer his own control of the great industry, but to aid him in that control. This aid is justified because of the inherent nature of an industry of slow turnover, unregulated production, and uncertain consumption. Could agricultural production be held within the limits of consumption the problem would be solved. Or could consumption be indefinitely increased the problem would be solved. The former can be tempered, but not fully controlled, while the latter may be increased, but within limitations. Where the Government can assist in regulating production and increasing consumption it should cooperate with the farmer for such purposes.

In the Republican platform of 1928 we find this plan:

> The agricultural problem is national in scope, and as such is recognized by the Republican Party, which pledges its strength and energy to the solution of the same.
>
> The market promises every assistance in the reorganization of financial lines and, where diversification is needed, governmental assistance during the period of transition.
>
> The Republican Party pledges itself to the enactment of legislation creating a Federal farm board clothed with necessary powers (among other things) to prevent and control surpluses through orderly distribution.
>
> The Republican Party pledges itself to the development and enactment of measures which will place the agricultural interests of America on a basis of economic equality with other industries to secure its prosperity and success.

In 1932 the Republican platform contained this declaration:

> The fundamental problem of American agriculture is in the control of production to such volume as will balance supply with demand. In the solution of this problem the cooperative organization of farmers to plan production and the tariff to hold the home market for American farmers are vital elements. A third element, equally vital, is the control of acreage of land under cultivation as an aid to the efforts of the farmer to balance production.

In 1928 the Democratic platform contained the following declaration on agriculture:

> The Democratic Party recognizes that the problems of production differ as between agriculture and industry. Industrial production is largely under human control, while agricultural production, because of lack of coordination among 6,500,000 individual farm units, and because of the influence of weather, pests, and other causes, is largely beyond human control.
>
> Producers of crops whose total volume exceeds the needs of the domestic market must continue at a disadvantage until the Government shall intervene as seriously and as effectively in behalf of the farmer as it has intervened in behalf of labor and industry. There is a need of supplemental legislation for the control and orderly handling of agricultural surpluses in order that the price of the surplus may not determine the price of the whole crop.

In the Democratic platform of 1932 will be found the following pronouncement:

> We advocate the extension and development of the farm cooperative movement and effective control of crop surpluses, so that our farmers may have the full benefit of the domestic market.

I have recalled these party pledges to remind you that by 1932 both political parties had recognized the agricultural problem not as local but as national. Both parties advocated the control of production in order to prevent unsalable surpluses. The difference was that the Democratic platform meant what it said and was immediately fulfilled when the opportunity came to us.

The Agricultural Adjustment Act was the fulfillment of this pledge to the farmers of the Nation. Under this act, which was voluntary and not compulsory, the prices of farm products were increased, sometimes doubled and trebled, and more than $3,000,000,000 was added to the annual income of agriculture. It was because of this increase in farm income and the opening of the facilities of financial credit to the farmer that he has been able to save more than three-quarters of a million homes, begin the payment of his debts, the repair of his houses, and the purchase of things produced by others.

It was because of this that in every referendum held among farmers on the continuation of the President's program it has been approved by a vote of from 2 to 1 to 20 to 1.

It was because of this that when the Supreme Court intervened to nullify this act, and Republican spokesmen were gleefully exulting over it, the voice of American agriculture appealed for the enactment of the Soil Conservation Act, under which they are working out another plan for the enhancement of the rewards of farm life.

In the light of past Republican fulminations in behalf of controlled agricultural production, their present devotion to uncontrolled abundance seems cheap and hollow.

The businessman and the manufacturer control their production to meet their market. When they shut down because of a slack in demand they plow under their machines for the time and discharge their wage earners.

When business is ready to produce for abundance and not for profit, it will then be logical to ask the farmer to do likewise. But not until then.

They have wept over the slaughter of a few little pigs as if they had been tender human infants nestling at their mothers' breasts. They have shed these tears over the premature death of pigs as if they had been born, educated, and destined for the ministry or for politics.

But their bitterest tears are not shed over the fate of little pigs. Their real grief comes from the slaughter of the fat hogs of privilege and plunder which they have fed on the people's substance.

They are not weeping because we plowed under a few rows of cotton. Mr. Hoover started that. Their real sorrow springs from the fact that we have plowed under the sordid conceptions of old-deal government and its chance ever to be restored to the control of American life.

Having declared for 20 years that the agricultural problem was national, and 4 years ago having declared for controlled acreage and production, the Republican leaders and reactionaries now denounce the Roosevelt administration for the doctrine of scarcity.

Having allowed nearly a million family-type farms to become subject to immediate loss, they now avow their love for agriculture; and they declare that benefit payments, such as we have for 3 years been making, are consistent with a balanced budget.

In 1932 they were for controlled production. We enacted it into law. Now they are for economical production, by which I suppose they mean cheap production. These are weasel words of the first magnitude.

The Roosevelt administration has inaugurated a land-use program. The Republican platform can do nothing but endorse it.

The Roosevelt administration has inaugurated soil conservation under an intelligent program. The Republican platform tardily follows in the rear.

Denouncing experimentation by the Roosevelt administration, the Republican platform for political purposes proposes to extend experimental aid to farmers in developing new crops.

In one breath they propose to assist in selling agricultural surpluses abroad by the bargaining process, and in the next they would embargo all agricultural imports, which would render idle 50,000,000 acres of land in cultivation for export crops; and in still another breath they propose to repeal the law authorizing trade agreements.

With that omnipotence which they claim but never exercise, they propose to increase consumption. But it was their dismal failure for 4 long years that rendered consumption by one-third of our population impossible except for the bounty of the Government.

They reject now controlled production, but offer the mirage of a bounty from the Treasury which would ultimately render impossible the balancing of all budgets and the payment of all debts. The whole scheme is put forth to deceive the American farmer, which is the only consistent policy of the platform writers of the Cleveland convention.

After the years of bitter disappointment and disillusionment suffered by the farmers of this Nation as a result of Republican incapacity and duplicity, it is inconceivable that they will again be taken in by those who have perpetrated the wrongs of the past.

To call this a platform is flattery indeed. It is a revolving eye that looks in all directions and sees nothing.

But the people have been told that the foundations of national credit are sinking because of an unbalanced Budget.

Deficits and debts! Who began the deficits which have covered every year since 1920? Did the last Republican administration balance the Budget? They merely juggled the estimates of revenue and expenditures. Spending little to retrieve disaster, they increased the public debt by more than $4,000,000,000.

In the hymns of hate which emanated from the recent outbursts of Republican oratory in national convention, deficits and debts and taxes are treated as a new development of the Roosevelt administration. The New Deal is portrayed as the father of one, the mother of another, and the godfather of the other.

But these apostles of concealment withheld from their fervid jeremiads the fact that during the 4 long years of Mr. Hoover the accumulated deficit in the Treasury amounted to more than $6,000,000,000, although they increased consumers' taxes from 35 to 60 percent.

They did not tell you and will not tell you that during the creation of these deficits and unbalanced budgets there was no Federal-relief program and no public-works program. That States and counties and cities threw this burden on the Federal doorstep, not under Hoover but under Roosevelt.

It was a task for which the Federal Government was not prepared. But there was no alternative except to assume it.

At first it was thought that funds should be loaned to the States to be at sometime repaid.

This course for various reasons—one being that many of the States could not obligate themselves—had to be abandoned. It was understood and it was theoretically required that the States should make substantial contributions to the relief of their own people.

Some of them undertook in good faith to meet the requirement. Others did nothing. Some States were able to balance their budgets because they made no contribution out of their treasuries to feed or clothe or house the helpless.

Those who seek to play miserable politics with human misery shout that these billions of dollars spent for relief and work have been poured out in reckless waste.

The Works Progress Administration has given employment to 3,500,000 people, 95 percent of whom were taken from the relief rolls in the several States.

With the money and labor thus provided between 25,000 and 30,000 worthy projects of public need and value have been constructed and repaired. These include schoolhouses, water and sewer systems, parks and playgrounds, public buildings, flood-control systems, airports, farm-to-market highways, streets, and other public improvements.

In addition, the Public Works Administration, through grants and loans to local communities, has given employment to more than 3,500,000 workers for a full year.

Who shall assert that these sums have been wasted? Who shall say that these thousands of useful additions to the property of thousands of communities all over the Nation have not brought permanent values not otherwise obtainable? Who shall claim that these two great works administrations have not given a new impetus to the civic standards of the people?

Shall we measure these values against a budget temporarily unbalanced?

But the theme song of our antagonists is the destruction of the Nation's credit and the wrapping of every newborn child in the swaddling clothes of debt.

When we entered the World War in 1917 our public debt was $2,000,000,000.

When we emerged from it in 1918 the public debt was $26,000,000,000.

By 1929 it had been reduced under sinking-fund requirements passed in the Wilson administration to $17,000,000,000.

From March 1929 to March 4, 1933, that debt was increased to $21,000,000,000 without the inauguration of either a relief or public-works program of any consequence whatever.

Hence, during the 4 long years of the Hoover administration the public debt had been increased by $4,000,000,000.

From February 28, 1933, to the present time the public debt has increased from $21,000,000,000 to approximately $31,500,000,000, an increase of $10,500,000,000.

Out of this increase we have devoted $8,000,000,000 to relief and public works; $3,000,000,000 went to state and national banks, a part of which has been repaid. Out of it have been provided the funds for loans to railroads, insurance companies, industries, cities, counties, and States; the refinancing of more than 2,000,000 homes through the Farm Credit Administration and the Home Owners' Loan Corporation; the stimulation of housing under the Housing Administration; the establishment of more than 3,800 Civilian Conservation camps and the enrollment of more than 1,500,000 young men, taken from idleness and taught the lessons of frugality and service in the economy of American manhood; the assistance of more than 600,000 farm families to reestablish their ability for self-support; benefit payments to the hundreds of thousands of farmers who cooperated with the Government and whose contracts were fulfilled notwithstanding the decision of the Supreme Court; and all the other emergency activities made necessary to escape the blight of the last 4 years of the Republican regime.

When we deduct from the net increase in the public debt the more than $5,000,000,000 which will be repaid by those who have borrowed from the Government because of the unwillingness or inability of other lending agencies, we find that the net increase in the public debt is but little more than that of the previous administration, which left little to show for its extravagance.

This great program of rehabilitation has been carried on not by endangering but by enhancing the credit of the Government.

In 1932 the bonds of the United States sold as low as 83 cents on the dollar. Since the advent of the New Deal these bonds have risen until today none sell for less than par, while some sell for as much as 17 points above par.

During the same period, $175,000,000 in annual interest was saved by a reduction in the interest rates.

Not only have the prices of bonds increased while interest rates were being reduced, but each new issue offered by the Treasury has been largely oversubscribed.

None but a blind and arrogant partisan would assert that the credit of the United States has suffered under the impetus given to public confidence by the administration of Franklin D. Roosevelt.

During the world's greatest war we could afford to spend more than $30,000,000,000 in defense of our country.

In this war against depression, against the demoralization and disintegration of our social and economic life, we have spent not a dollar to destroy life or property, but every dollar by which we have increased taxes or deficits or the public debt has been devoted to the saving of life and property and of that which makes both life and property worth while—the unconquerable spirit of a matchless people.

We have increased taxes. So did the last Republican administration. They increased them on consumers. We have adjusted our new taxes according to the ability of the taxpayer to pay. We have increased values and profits out of which taxes are paid; but the increase in taxes has not kept pace with the increase in income and land values which the policies of the Roosevelt administration have produced.

We shall balance the Budget. We shall balance the books in the Treasury. We shall soon ordain that no discrepancy between income and outgo shall exist. But we shall not do it at the expense of human life nor to the degradation of the spirit and morale of our people.

But we are told by the smug and cynical apostles of the status quo that the Supreme Court has nullified some of the acts of this administration. And while anxious farmers ponder their fate and laboring men scan the heavens for a rainbow of hope, and women and children look in vain for the preservation of their lives and health, a voice from the grave at Palo Alto shouts, "Thank God for the Supreme Court."

I make no attack on the Supreme Court. As an institution I respect it, and I would be both unfair and unjust if I were unwilling to accord to judges on the bench the right to their views of law and constitutions which I claim for myself.

But there is nothing new in controversies over the Constitution. They began in the Convention which framed it, and 10 amendments were adopted to it by the first Congress that assembled under it.

If in the future further amendment should become necessary to enable the people to work out their destiny and protect their fundamental rights, or to overcome some archaic interpretation never intended by its framers, I doubt not that the people will face that duty with the same calm intelligence which has guided them in the past.

But from the exultant voices of the tree sitters and the devotees of the hitching post you would imagine that the Supreme Court had never nullified an act of Congress until Franklin D. Roosevelt became President of the United States.

You would imagine, if you listened to the groans which arise from the doleful kneelers at the Republican wailing wall, that we had set out like some blind Samson to pull down the temple of constitutional government and destroy everything within it.

Let us take a look at the record.

During the existence of this Nation more than 25,000 laws have been enacted by Congress. About 67 of them have been nullified by the Supreme Court, and most of them within the past 50 years.

From 1920 to 1930, 21 acts were declared null and void. But did any of these decisions strike terror into the hearts of the old guard and the old dealers? Did anybody don sackcloth and ashes and pray to Heaven to deliver the people from the clutches of an irresponsible government?

But when some three or four outstanding acts, conceived and consummated in behalf of labor or agriculture and the honest conduct of business, and designed to constitute this as a government of equal rights, are cast aside by the rigors of technicality and the application of antiquated economic predilections in the interpretation of the document, as indicated by one of the great dissenters, we are asked to condemn the Legislature and Executive as attempting to inject some alien concept into the fiber of our institutions.

We have sought to serve the American people under the Constitution. We have thought that under its broad and generous outlines we might rescue the people from national disaster. We have sought to treat it as a life-giving charter rather than an object of curiosity on the shelf of a museum.

We shall abide by its decisions and seek to shape our program in accordance with them.

But when 9 eminent men on the highest Court cannot agree on what the Constitution means, is it any wonder that 531 Members of the United States Congress find difficulty in agreeing about it?

And when five of those eminent men say a law violates the Constitution and four of them equally eminent, learned, and sincere, and equally alive to the compulsions of modern life say it does not violate the Constitution, then we are at least relieved of any obligation to underwrite the infallibility of the five whose views prevail.

Is the Court beyond criticism? May it be regarded as too sacred to be disagreed with?

Thomas Jefferson did not think so. He did not hesitate to denounce the decisions of John Marshall and the majority he led.

Andrew Jackson did not think so. In 1832, speaking of a decision of that Court, he said:

> John Marshall has made his decision. Now let him enforce it.

Abraham Lincoln did not think so. In his first inaugural address he said:

> If the policy of the Government on vital questions affecting the whole people is to be irrevocably fixed by the decisions of the Supreme Court the instant they are made in ordinary litigation between parties in personal actions, the people will have ceased to be their own rulers, having to that extent practically resigned their Government into the hands of that eminent tribunal.

Mr. Justice Stone does not think so. In his recent dissent from the unfortunate decision of the majority of the Court, this great lawyer and great American not only said that the legislation involved was constitutional, in which view Chief Justice Hughes and Justices Brandeis and Cardozo concurred, but criticized the opinion of the majority of the Court by saying:

> While unconstitutional exercise of power by the executive and legislative branches of the Government is subject to judicial restraint, the only check upon the exercise of judicial power is our own sense of self-restraint.

"The Constitution," said Chief Justice Hughes during the interval when he was off the bench, "is what the judges say it is."

What judges? The five who in most of these cases happened to be in a majority of one.

Theodore Roosevelt did not think so. Speaking to the Colorado Legislature in 1910, with reference to two recent decisions of the Supreme Court, he said:

> If such decisions as these two indicated the Court's permanent attitude, there would be really a grave cause for alarm, for such decisions, if consistently followed up, would upset the whole system of popular government.

Governor Landon and Colonel Knox fall upon each other's necks with hallowed reunion because they rode the Bull Moose behind Theodore Roosevelt in 1912. In that fight Theodore Roosevelt had so little regard for the Court's decisions that he advocated their recall by the vote of the people.

These judges have decided that under the Constitution the Federal Government cannot lift men, women, and children out of the degradation of unconscionable hours, wages, or working conditions because it invades the rights of the States. They have decided that the States cannot do it because it invades the rights of private property. I presume this progressive and logical course will soon lead us to the conclusion that private property cannot do it because it violates the law of gravitation.

What we need is a new definition and a new interpretation of interstate commerce. Every article that is grown or mined or fabricated in one State and destined for another by whatever means of transportation is an object of interstate commerce. It is in competition with every other similar article originating in or destined for other States. Commerce, like water, seeks its own level. Like the wind, it goeth where it listeth; and you can no more divide this Nation into 48 airtight and watertight economic compartments than you can parcel off the heavens to control the winds or the rains.

Over against the hosannas of Hoover for the tortured interpretation of the Constitution I place the tortured souls and bodies of men who work and pray, of women whose God-given right is not fulfilled in a sweatshop, and of children whom we have sought to restore to the schoolroom and the playground. One day all these will thank God for Franklin Roosevelt.

But we were told at Cleveland, and will be told until November, that we have taken away the liberties of the people; that we have bound them in chains; and that they are fettered in the dungeons of moral and economic slavery.

Oh, for another Lincoln to strike these shackles from our feet!

What is this freedom which we have crucified? This liberty we have slain?

Is it the freedom of workers to free collective bargaining? Is it the freedom of farmers to escape the loathsome peonage imposed on them by land and produce speculators? Is it the freedom of investors to circumvent the secret devices of stock manipulators?

Is it the freedom of bank depositors from the fear of loss of their savings? Is it the freedom of home owners and home lovers to protect and preserve their firesides?

The fight for freedom in the past 3 years has been the same fight that Thomas Jefferson made in 1776 for the freedom of the common man, that Lincoln made for the freedom of a race.

Back of Hoover's cry for freedom at Cleveland stood the immemorial pawnbrokers of the Republican Party who shout with glee that they have experienced a counterfeit conversion. Back of him stood the Republican Party's holding company, the American Liberty League, which, if it had existed in 1776 as now officered and manned, would have been against the Declaration of Independence, the Revolutionary War, and the Constitution of the United States.

Back of him stood every interest which seeks to coin the flesh and blood of human beings into profits, every stock jobber, every monopolist of privilege and power, every propagandist for the discredited and defunct alliance between politics and pelf. Back of him stood the figure of William Randolph Hearst, whose twin discoveries constitute the Republican ticket nominated at Cleveland.

Yes; we have destroyed a certain type of liberty in this country.

We have destroyed the liberty of small groups to pick the pockets of the American people, the liberty of organized greed to pervert the agencies of government to their own enrichment, the liberty of great financial wizards to engulf this Nation in the floodwaters of frenzied speculation, the liberty of smug groups of self-satisfied parasites to pull the strings of puppet satellites in official positions in Washington under the guise of popular government, the liberty of long-pampered interests to use the forms of law to fasten their teeth in the vitals of American economic life, the liberty of power and utility combinations to strangle while they rob alike investors and consumers, the liberty of organized crime to flaunt its black flags in the face of State and Federal statutes, and we have destroyed the liberty of any powerful or selfish group anywhere in this Nation to claim that the Capital of the United States is located anywhere on this continent except in the city of Washington, in the District of Columbia.

Who are those who raise their strident voices against the objectives of the New Deal?

Not the American farmer, whose increased income under it has lifted him out of the economic basement.

Not the American home owner, who still dwells under his own roof and asks a heavenly benediction upon it.

Not the laboring man, whose long hours have been shortened and his rewards increased. Not the worker whom we have rescued from the status of a wandering mendicant.

Not the honest investor for whom we have provided information and protection. Not the workingwoman, whose tender and immortal functions, over the dead body of monstrous greed, we have sought to save and beautify.

Not the child, whose eyes until now beheld the doors of a schoolroom as a mirage which vanishes upon approach.

Not the workless millions left by the Hoover administration as helpless derelicts of an economic and industrial tornado, for whom we have provided work and shelter and attempted security for the future.

The Republican platform denounces the constructive step which we have taken in behalf of the unemployed, the aged, and the infirm.

But during the 12 long years of night in which the Republican Party controlled the Nation no attempt was made even to deal with this problem. All they hold out now is a vague and impossible promise designed to deceive and thwart the hopes of 11,000,000 aged people throughout the Nation and countless millions who will become aged in the years of the future.

Who opposes this new fight for democracy today? Who throws across the pathway of real liberty lighted by Thomas Jefferson and relighted by Jackson and Lincoln and Woodrow Wilson the impediments of falsity and the tangled timbers of deception? Who seeks to divert the masses of men from the trail which leads to real and not a spurious freedom? Who pours into the faces of our people the poison gas of doubt and fear and suspicion?

Not the more than a million and a half young men from every State and town who have been offered a haven from idleness and possible crime.

Not the thousands of towns and cities throughout America whose needs for better living advantages have been gratified.

Not the anxious fathers and mothers of the Nation from whose hearts has been removed the fear of the kidnaper and the gangster.

Not the millions of school children whose facilities for the enjoyment of learning have been increased.

Not the millions of sufferers of torrential and devastating floods whose safety and protection we have authorized.

Not the consumers of electric energy for whom we have provided an honest yardstick.

Not the honest businessman, who asks nothing of Government except the assurance that he shall be permitted to compete with others on a basis of honesty and justice.

Not the great moral leaders and apostles of America, who have seen at last some of the sacred precepts of the Golden Rule applied to the practices, motives, and powers of Government.

"America is in peril", say the platform fabricators of the Republican old guard. It would indeed be true if they should ever again obtain control.

"The powers of Congress have been usurped by the President", say Hearst and Mills and Moses and Bingham and Hoover. The same was said of Washington and Jackson and Lincoln. The American people expect their President to be a leader, not a craven dummy in the lap of some ventriloquist.

"Regulated monopoly has displaced free enterprise," say those who put together Joseph's coat at Cleveland. When under their domination did anybody see or hear of free enterprise? Uncontrolled monopoly was their middle name.

"The New Deal administration constantly seeks to usurp the rights of the States," say these master builders. But for nearly a century and a half they have sought to hamper both State and National authority when directed against their pampered pets in politics and business.

"It has dishonored our country by repudiating its most solemn obligations", and on that platform they nominated a candidate who 3 years ago urged the payment of public and private debts in money of the printing press, redeemable in neither silver nor gold.

"It has created a vast multitude of new offices." So runs the monotonous refrain.

If we had continued the Republican policy of doing nothing about relief, nothing about the farm crisis, nothing for labor or business, nothing for homes and farms burdened with debt, nothing for one-fourth of the distressed population of this Nation, it would have been possible not to create new offices. But you cannot double the tasks of government and not increase the number of employees.

If this is Republican condemnation of doing something as opposed to doing nothing, let them say so and take the consequences. If it is a Republican approval of doing something and a condemnation of using the means to accomplish it, it is rank hypocrisy and unworthy of notice.

Figures are important to register results, but the astonishing figures of American recovery are not the most important thing.

There has been no such volume of recovery in so short a time in the whole history of the world as occurred here in the first 6 months of 1933. It paused momentarily in 1934, but it has gone steadily upward with no sustained recession. It has included every form of human activity.

I do not wish to burden this address with statistics, but for the sake of those who measure life by figures in a table I give you the essential indexes of improvement:

Farm prices, 50 percent.
Farm income, 53 percent.
Farm purchasing power, 40 percent.
Factory pay roll, 59 percent.
Purchasing power of same, 50 percent.
Factory employment, 33 percent.
Industrial earnings, 35 percent.
Stock-market prices, 40 percent.
Bank deposits, 33 percent.
Railroad traffic, 16 percent.
Automobile production, 30 percent.
Construction permits, 50 percent.
Industrial production, 50 percent.
National-bank earnings, 100 percent.
Decline in commercial failures, 66 percent.
Increase in national income, 50 percent.
New securities issued, 50 percent.

Perhaps the most significant of all to industry is the decline of 66 percent in the rate of business failures and the decline of bank failures of 100 percent.

But there are human values far beyond these figures. The important point is not merely that farm prices have increased, but that American agriculture has been rescued from impending ruin. It is not merely that the condition of labor has been improved by the reduction of the number of unemployed from 15,000,000 to 10,000,000 workers, but that labor has been dragged back from the brink of peonage and that, with one-fourth of our population destitute, their health, comfort, and self-respect have been maintained, and there has been no sedition, riot, or bloodshed during the worst human catastrophe in our history.

It is not merely that banking and industry have been saved from bankruptcy, but that faith in banking and industry have been revived.

The answer to that enigma of denunciation by some of those who have been saved and others who may not have needed it is as old as Hamiltonian reaction and Jeffersonian democracy. This has been a balanced recovery. Benefits have been bestowed upon all groups with as even a hand as government can assure.

But there are other gains which have been recorded in the past 3 years of which I am thinking and of which the American people are thinking.

These are the moral and spiritual contributions we have made to the life of our people, which are beyond computation by the standards of the dollar.

We talk of the gold standard, the gold content of the dollar, and men who do not know the history or the significance of money talk about the gold dollar and the so-called return to gold, denying the obvious truth that the American dollar, with a larger reserve of gold behind it today than ever before, is the soundest medium of exchange among all the nations of the world today.

But I am thinking of those immortal reserves of character which partake of the essence of the heart and soul of a nation, which have been strengthened and perpetuated by what we have been trying to do.

I am thinking that, while we have preserved homes and acres and railroads and banks and insurance companies and factories and all the tangible and corporeal symbols of the people's wealth, we have also preserved the intangible and immeasurable values that take form in the realms of pride and service and honor.

We have preserved and stimulated respect for law and the rights of the average man.

We have increased the loyalty of the people to the Government, which should be their servant.

We have restored the faith from which must spring the defenders of the flag and of the Constitution.

We have cultivated a study of the science of government and its truest functions among millions to whom government was something apart and detached and without meaning.

We have renewed and reinforced the belief that after all government and trusted leaders may hear and heed the cry of the humblest worshiper at the shrine of equality.

We have rekindled the vanishing faith in the survival of the best as well as the fittest.

We have revitalized the answer to the question which has rung through all the ages: Am I my brother's keeper?

We have sought to confound the cynics who despise the moral conceptions of the more abundant life for which the Master lived and died.

We have under the leadership of a man of rare and superb courage endeavored not to tear down what others have legitimately constructed, not to destroy the material rewards

of honest toil of mind or body but to establish a fairer, juster order that will give to every man, woman, and child in this Republic the right to stand erect in pride and self-respect, to see the stars on high, and share the glory of the sun.

We meet here within the shadow of Liberty Hall, in this City of Brotherly Love, in this State of William Penn, where eightscore years ago Thomas Jefferson gave to the world an unfamiliar creed of human freedom. It was here that he became the spokesman of the drawers of water and the hewers of wood. It was here that the foundations of our faith were laid.

It is here again, in the midst of these historic scenes, that we invoke the spirits of departed patriots, rekindle our belief in the nobility of their cause, and rededicate ourselves to its complete fulfillment.

It is here, with such a leadership, in such a cause, with such a record, that we accept the challenge and hasten our feet to the field of battle.

May I conclude with this quotation:

> No greater thing could come to our land today than a revival of the spirit of religion—a revival that would sweep through the homes of the Nation and stir the hearts of men and women of all faiths to a realization of their belief in God and their dedication to His will for themselves and for their world. I doubt if there is any problem—social, political, or economic—that would not melt before the fire of such a spiritual awakening.

The American people are not afraid to follow—they will follow—the man who spoke those words. He is the present and the next President of the United States, Franklin Delano Roosevelt.

ADDRESS OF THE PERMANENT CHAIRMAN, HON. JOSEPH T. ROBINSON, OF ARKANSAS

National campaigns heretofore usually have involved sharply defined issues on which political discussions have centered. The principal concern of the recent Republican convention at Cleveland was to reconcile its candidate for the Presidency with the declarations embraced in its platform. It was not the first time in our history that a nominee, in advance of accepting the nomination, has placed his interpretation on the language employed, but it is the first instance in which a candidate by keeping silent on national public questions and after maneuvering himself into a position assuring his selection has indicated a disposition to bolt on five or more subjects on which his party had spoken. It is also the first case in which the platform committee and convention have anticipated the purpose of a prospective nominee to break away in a direction opposite to their movement by declaring that it would constitute a breach of public faith and of private honor should he fail or refuse to conform to the policies laid down for his guidance.

Republican leaders lately have shown tender, if too long delayed, appreciation for the platform on which the Democrats won the election in 1932.

Their speakers enter this campaign declaring that we have betrayed the country by failing to carry out the promises which at first they regarded as repugnant, but which are now dear to the hearts of our opponents.

The Roosevelt administration has faithfully complied with the spirit of the Chicago platform promises. If there has been partial departure as to the letter of the planks in that platform relating to economy and balancing the Budget, that failure is attributable to the constantly changing conditions and necessities and to the guerrilla warfare of the Republican Party.

Because of the policies of three Republican administrations extending over a period of 12 years, a condition existed March 4, 1933, which cannot be adequately described. Break-down was threatened in the government of many States, as well as in that of the Nation. Millions of laborers were out of work. The specter of poverty cast its appalling shadow over the land. Credit sources were dried up; financial institutions were bankrupt; factories were closed down; agriculture was profitless; the savings of cities were being swept away; business was at a standstill; our foreign commerce had almost disappeared; and hoarding was general.

These conditions had resulted in large part from governmental policies, economic isolation, riotous speculation, promotion of monopolies, and the contraction of credits for the private profits of market manipulators.

You have not forgotten—can you ever forget—the gloom, the sorrow, and the distress which clouded the hopes and hampered the activities of all of our people?

President Hoover seemed powerless to suggest any method by which the engulfing tides of adversity might be impeded or turned back. All he could do, apparently, was to boast a refracted vision which he claimed enabled him to see prosperity around corners. Having employed the Army to drive from the Capital thousands of hungry war veterans, he retired to the cloister of the White House and indulged in crystal gazing to predict the quick return of better times which never began to return until after he had been retired to the sun-baked gardens of Palo Alto to give place to the new leader of the Nation, President Roosevelt.

The Democratic leadership recognized that drastic changes in governmental policies were necessary to bring back courage and confidence and to restore financial stability.

Feeble and ordinary processes had been tried and had failed. New and decisive methods and measures were demanded and required. They were necessarily formulated with haste. It is not surprising that difficulties were encountered or that mistakes were made. To have awaited then the slow working out and execution of plans for recovery would have been fatal. No one is wise enough, even with post-vision, to know what would have happened if extraordinary legislation had not been speedily enacted and put into effect.

The banking laws were revised, insurance for bank deposits was provided, runs on banks were stopped, and the national credit was employed to prevent bankruptcy and ruin of banking institutions, of railways, and of key industries.

For 12 years before March 4, 1933, Republican administrations had grappled with the farm problem. The only important measure they enacted, the Farm Marketing Act, had cost the Federal Treasury $500,000,000 and had left agriculture in a worse condition.

The Democratic administration created a system for coordinating production with consumption, and for the payment of benefits to farmers which quickly restored agricultural prices to an approximate level with the prices of industrial products. Indebtedness, under which farm homes were being foreclosed, was refinanced at reduced interest rates. Foreclosures were suspended. Quickly there appeared better conditions with respect to both agriculture and industry.

With the depreciation of values and the unparalleled fall in prices following the collapse of markets in 1929 small businesses were merged into gigantic combinations with monopolistic tendencies or were forced into bankruptcy. As trade and purchasing power diminished unemployment increased, savings were exhausted, and millions of formerly self-supporting citizens were compelled to accept charity.

When the Roosevelt administration began local agencies the States, cities, and counties had well-nigh exhausted their resources, and charitable organizations were unable to meet the constantly growing demands upon them.

Hundreds of thousands of young men, many of them college or high-school graduates, were entering life without prospect. The professions were overcrowded, and the immediate future held little promise for the youth of America.

There was devised the Federal Emergency Relief Administration, the Civilian Conservation Corps organization, and the Civil Works Administration. When the Conservation Corps was first established it was ridiculed as a useless and costly experiment. In spite of the contempt of those who had stood motionless and dumb while the catastrophe was approaching, that organization has demonstrated its effectiveness for keeping deserving young men from becoming hoboes and for giving them useful service in the construction of highways, the improvement of public parks, buildings, and

grounds, the reforestation of denuded areas, and in other helpful spheres of labor. Now the value of the Emergency Conservation Corps is generally, almost unanimously, recognized. Former President Hoover vainly boasts that he was its originator.

The Civil Works Administration required comprehensive planning. It was difficult to find useful employment in the neighborhoods where the unemployed were located. The consensus of opinion is that more than 75 percent of the funds expended through that agency was of substantial and permanent advantage to the communities in which the work was carried on.

When the Civil Works Administration had served its purpose it was found that the ranks of the unemployed were constantly being augmented by those who in the beginning of the depression had been able to live upon their savings, but who as time progressed were compelled to spend their savings.

While many key industries had been restored following recovery measures to an approximately normal State, private agencies continued to pursue economical methods and to substitute machinery for hand labor with the result that a comprehensive program of public works became necessary and was authorized under the act of 1935, contemplating a Nation-wide system of public works, some of them consisting of permanent structures. In order to take from the dole 3,500,000 laborers, the Works Progress Administration was organized, and plans were made for public works in thousands of communities in which the unemployed resided. Manifestly the number on the Federal emergency relief rolls could not be concentrated in the communities where public buildings and similar works could be located, so that it became necessary to plan for the employment of the majority of them in or near the communities where they lived. To accomplish this, undertakings of a less permanent nature than those contemplated by the Public Works Administration program became indispensable. The opposition have described these expenditures as wasteful and foolish.

The theory of the Works Progress Administration is that it is better to give those who are willing to labor the opportunity to do so than to make them dependent on charity or on Government dole.

There is no more pathetic spectacle than that of an honest man, accustomed to earning a livelihood for himself and his dependents, forced to face starvation or to accept private or public charity. If his self-respect is to be maintained, he should be given opportunity to help himself. That is exactly what has been done through the works-progress program. The greater part of the large fund has been and is being advantageously used. The issue is whether public employment shall be abandoned for the dole. No one dares advocate that those who cannot get work shall be permitted to starve.

Certainly where the States and their subdivisions are able to do so they should be expected to contribute a fair share to the very laudable and so far only practicable plan that has been offered for solving the one great problem incident to the depression, namely, unemployment.

The opponents of the present administration advocate the abdication by the National Government of control over the administration of Federal relief funds. They assert that such funds should be expended solely by local agencies of the States. Their contention is that this will eliminate politics and prevent waste and corruption. Experience has not shown that to be true.

To require the Federal Government to provide the funds, and to relinquish all control over their expenditure would be to invite competition among the localities to secure grants from the Government which would result in demands so great that the national credit would be impaired.

With respect to politics, the record shows that there have been less abuses than under any other plan that has been employed. State officers are not exempt from political influence. Indeed, local pressure on State and county officers might prove irresistible and overpowering.

There is no plan conceivable under which no waste will occur and under which all abuses may be prevented. So long as the National Government provides the major portion of the sums necessary for the unemployed, it must, for its own protection, and for the protection of those who are required to pay the bill, retain a liberal measure of supervision both as to the purpose and the manner of the expenditures.

The drain on the National Treasury by reason of extraordinary measures, particularly including those relating to unemployment, has been great. It must be reduced as soon and as rapidly as circumstances permit. Unemployment assistance cannot be abandoned so long as there are large groups of American men and women unable to find an opportunity to earn a livelihood.

Much will be heard of sound money during this campaign.

When world economic conditions were approaching their worst, Great Britain and many other powers went off the gold standard and resorted to what is known as managed currency. The advantage they thus derived in trade and commerce over peoples still dealing under the gold standard became manifest. To prevent our foreign trade from being taken over by competitors and to avoid further contraction of credit which threatened, we reduced the gold content of the dollar. We did not create an unsound currency.

Indeed, United States currency is the soundest and the best in all the world, and we propose to keep it so. Had we remained on the gold standard while competitor nations were resorting to managed currencies, we would have lost not only our foreign commerce and have witnessed our domestic trade reduced to the vanishing point, but the Government would have been compelled to face a demand for monetary inflation that would have been irresistible. Once the printing presses are started turning out money, you can never hope to stop expenditures or to stabilize values until the mania has run its course. That has been the experience of every nation known to history.

The Republican platform adopted at Cleveland declares for sound money in the language of the Democratic platform of 1932. The fiercest issue in the committee on platform at Cleveland was over return to the gold standard. The committee repudiated the proposition, and the convention, without controversy, supported the committee.

At the beginning of his speech nominating Landon, Mr. Hamilton, the boss of the Cleveland convention, announced that the candidate had views of his own on the monetary question. In his telegram the candidate declared that he favored return to the gold standard—currency convertible into gold.

It is true that he hedged the issue by declaring that the proposed change should be made "when it can be accomplished without penalizing our democratic economy and without injury to producers of agricultural products."

For that declaration, made immediately before his nomination, the Republican candidate for President has been proclaimed as bold and defiant.

Almost everyone realizes that there can be no return to the gold standard under present conditions without "penalizing our democratic economy and without injury to producers of agricultural products." Governor Landon did not dare advocate an immediate return to the gold standard. His effort and that of former President Hoover to have a plank incorporated in the Cleveland platform was a failure. Candidate Landon's declaration on the subject evades the issue by the use of language that clearly shows he does not believe it safe and practicable to reestablish at this time a gold-standard currency.

The Cleveland convention did an unusual thing. It impliedly questioned the good faith of its prospective nominee and his willingness to stand upon the platform by the last clause in that document, which is as follows:

> The acceptance of the nomination tendered by this convention carries with it, as a matter of private honor and public faith, an undertaking by every candidate to be true to the principles and program herein set forth.

When that language is considered in connection with the well-known fact that in five important particulars the platform committee rejected the views of Governor Landon it is undeniable that the committee was preparing for a candidate whom it knew to be out of sympathy with the platform.

That there are five particulars in which the candidate was turned down by the platform committee the press reports from the pen of Mr. William Allen White, who constitutes the head of the Landon "brain trust", may be cited.

In a copyrighted article emanating from Cleveland on the 11th of June 1936, Mr. White published these five points raised by the candidate and rejected by the committee and the convention.

What are the five points?

First (quoted from Mr. White's article):

Landon telephoned from Topeka this morning he would like to have a declaration putting all post-office employees, including the Postmaster General, under civil service.

Neither the committee nor the convention would stand for placing Cabinet officers under the civil service.

Second:

He also desired a plank curing the Supreme Court decision denying to States the right to control hours of service, working conditions, and wages. Landon advocates an amendment to the Constitution. His plea was denied.

The committee and the convention not only denied his plea but adopted declarations that the integrity and the authority of the Supreme Court have been flouted, and pledged resistance to all attempts to impair the authority of the Supreme Court. He also advocates the adoption of State laws to abolish sweatshops and child labor and to protect women and children with respect to maximum hours, minimum wages, and decent working conditions—which is exactly what the Supreme Court held in Morehead against Tipaldo the States cannot do.

Third: The third particular in which Mr. William Allen White declares that Candidate Landon was rebuffed by the committee and the convention is with respect to the gold standard and a currency convertible into gold. Mr. White said:

After considerable protest, he ceased firing on the currency.

Fourth: According to Mr. White, the Kansas delegation (for Governor Landon) offered a plank—

Looking directly to lower tariffs but under the protective theory. The plank as it stands represents a compromise.

Fifth: In 1932 the Republicans adopted a declaration favoring the United States joining the World Court, and boasted that Presidents Harding, Coolidge, and Hoover had urged that course. The Cleveland platform pledges that the United States shall not become a member of the World Court. Candidate Landon opposed the declaration. Again quoting Mr. White:

Governor Landon over the telephone this morning asked that the abandonment of the World Court be reconsidered. His request was almost unanimously rejected.

This bit of convention history discloses that the platform committee in the convention doubted whether the candidate would carry out the platform, and that they sought to bind him by the unusual charge made in advance that if he failed to do so his action would constitute a breach of private honor and of faith.

It has been shown that the candidate of the Republican Party proposed a platform declaration in favor of reduced tariff rates, which was rejected.

The Cleveland platform declares for the repeal of the reciprocal tariff law and for an embargo on livestock, dairy and agricultural products.

Under the reciprocal tariff law there have been negotiated various trade agreements which have had the effect of stimulating our foreign commerce without materially interfering with our domestic trade. To repeal this law and impose embargoes will virtually mean the end of our foreign commerce. American ships will rot at their docks and our vessels will disappear from the seas. Under the Republican policy surpluses will continue to pile up in the home market, to the ruin of American producers.

The Republican platform declares for the immediate balancing of the Budget without additional taxes by simply reducing expenditures. This suggestion is intended to attract taxpayers. No one close to the leadership of the Republican Party regards the proposition as practical in the immediate future. The Roosevelt administration has balanced the Budget except as to extraordinary expenditures, and the question is whether unemployment-relief expenditures shall be discontinued in order to accomplish what we all desire to be done as speedily as possible, namely, establish complete balance between revenues and Government expenses.

The last session of the Congress, with the approval of Republican Members, authorized approximately $750,000,000 to be expended for flood control, the expenditure to be spread over a period of years.

In addition, there have been a billion and a half dollars appropriated for work relief during the fiscal year 1937. These and other items keep the Budget out of balance for the present. To balance the Budget promptly would be to terminate at once all relief. Is this desirable? Do the American people wish to deny all assistance from the National Government to workers who are out of employment and who cannot secure engagements from private industry?

A comparison of the income tax, the excess-profits tax, alcoholic liquor, and other miscellaneous internal revenue, exclusive of the agricultural adjustment tax, for the first 6 months of the fiscal year ending June 30, 1932, with the same months of the year ending June 30, 1935, shows an increase of almost 100 percent.

During the 6-month period, July 1 to December 31, 1935, revenue collections were about equal to those for the full fiscal year of 1932. During that year $1,557,000,000 from the sources named were collected. During the fiscal year 1935, $2,730,000,000 came into the Treasury from the same sources.

The Democratic policy contemplates balancing the Budget as promptly as this can be done without permitting citizens who cannot secure private employment to experience suffering from hunger and cold. This policy we believe to be justified from both an economic and a humane standpoint.

By the quick adoption of machines, employment in America has been maladjusted. Added to this has been the loss of purchasing power incident to the depression and unemployment arising because of the reduction of business and enterprise. As these are revived and restored, and as hours of labor are shortened, the necessity for work-relief appropriations will diminish and disappear.

Decisions of the Supreme Court in various cases have had the effect of slowing up national recovery, because they have held invalid the National Recovery Act, the Agricultural Adjustment Act, the Guffey coal law, and some other laws intended to prevent labor controversies, eliminate unfair competition in trade and in industry, and to secure fair prices for agricultural products. In spite of these decisions the American people are going forward. We recognize that the decisions of the Supreme Court, until reversed, are final, and we abide by them. Nevertheless, we do not regard the Court above and beyond those factors and causes which naturally influence the minds of human beings.

The decision in the Guffey Coal Act case held that the Federal Government has no power to prescribe maximum hours and minimum wages for workers in coal mines, because, among other things, it constitutes a transgression of the rights and functions of the States. In the New York maximum hours and minimum wages case, recently handed down, the majority held that the States cannot prescribe maximum hours and minimum wages on the theory that to do so violates the right of contract secured to our citizens by the Federal Constitution.

Notwithstanding this situation the Republican Party advocates legislation by the States and binds its candidate not

to seek an amendment to the Federal Constitution authorizing the Congress or State legislatures to regulate maximum hours and minimum wages for laborers.

Whatever may be the just basis for differences of opinion respecting other decisions, the bar of the United States overwhelmingly repudiates the denial by the Supreme Court of the power to regulate maximum hours and minimum wages. By the decision the right of private contract is not fortified and strengthened. In a practical sense it is weakened and destroyed.

What right of private contract is secured by the majority opinion to the woman who exhausts her physical energies by toiling excessive hours for starvation wages in unsanitary sweatshops to support herself and her dependent children? What power has she, unsupported by law, to protect her rights and to secure fair and adequate compensation for her labor? How does this decision strengthen freedom or glorify justice?

O blind and impartial justice, what blunders are committed in thy name! Liberty, art thou both deaf and dumb! Canst thou not behold the pallid faces, the emaciated forms, the sweating brows, the trembling hands of millions of women and children workers who by the decision are left at the mercy of those who have neither pity nor charity for the oppressed and the poor?

The decision in Morehead against Tipaldo should be reversed under that due process of law clause which has been unjustly invoked as its justification.

That decision itself has answered the charge of pompous plutocrats that Roosevelt and his administration seek to undermine and destroy the Supreme Court. The Republicans in their platform attack the decision and half-heartedly advocate the passage of State laws which by the precedent of Morehead against Tipaldo would be of doubtful constitutionality.

The weight of the argument, in the opinion of lawyers and laymen, it is believed, sustains the minority rather than the majority opinion.

Certainly when such judges as Chief Justice Hughes, Justices Stone, Brandeis, and Cardozo declare a statute consistent with the fundamental law, and criticize the views to the contrary of the judges constituting a majority as unsound and subversive, it cannot be disloyal or revolutionary for citizens who believe that the consequences inevitably will be to deprive women and children laborers of valid legal protection to express their opinion on the subject with firmness and emphasis. Everyone, including those sagacious politicians who until recently sought partisan advantage by praising our highest judicial tribunal for upsetting various features of the national recovery program, now seeks concurrence in a plan to overcome a decision which, they say, if permitted to stand will prove oppressive.

The Cleveland platform denounces the Democratic Party for the policies and measures which have been adopted during the Roosevelt administration for the promotion of national recovery. Many Republican Members in both branches of the Congress, suggesting no substitute, voted for the passage of the legislation because they, as did Democratic Members of the Congress, recognized the extreme and unusual conditions which made extraordinary action imperative. This is true of the most important laws held unconstitutional by the Supreme Court, including the National Recovery Act, the agricultural adjustment law, and the Guffey coal measure. It would be interesting and perhaps surprising to those who have been impressed with the denunciation of the measures and policies of the Roosevelt administration by the Republican convention to hear the names of the prominent Republican leaders in the Senate and in the House of Representatives who supported the measures referred to and who now find themselves denounced by their own convention as intimidators, usurpers, and advocates of tyrannical policies.

National defense is a subject of interest to every citizen loyal to our flag and to the institutions which it symbolizes. The Republican platform on this subject is indefinite. It favors an Army and Navy, including Air Corps, adequate for defense. No standard is raised as to what constitutes adequacy. The platform declares for cooperation with other nations in the control of armaments and the traffic of arms. It is a trite definition without definite meaning. Every administration since the World War, and some of them before that, has offered cooperation with rival powers for the limitation of military and naval arms.

Just now, when international antagonisms are being stimulated, when continents tremble beneath the tread of maddened armies, and when age-long hatreds are prompting nations to strife, it is impossible to accomplish substantial reduction in military force without sacrifice of national security. The Roosevelt administration is building the Navy to full strength contemplated by the Washington and London Treaties. It is maintaining a well-trained and efficient Army. Our platform on national defense is written in the record of achievements.

Another feature of the Cleveland platform which discloses how hard its sponsors were driven to find a popular issue relates to the collection of war debts. The country will not be permitted to forget that it was the Hoover administration which granted that moratorium and that the moratorium was construed by the debtor nations as an encouragement to their repudiation of their obligations to our Government. The blame for this blunder in the conduct of international affairs must rest chiefly where it belongs, namely, on the Sage of Palo Alto.

As a sop to the Senator from Idaho, Mr. Borah, the Cleveland convention declared, in general terms, for the enforcement of criminal laws and for the enactment of additional legislation to prevent private monopoly.

These declarations would be received with more confidence if the Harding, Coolidge, and Hoover administrations had not neglected the enforcement of criminal laws and fostered the organization of trusts and combinations tending to drive all forms of business and industry under the domination of monopoly.

The Democratic administration seeks to protect small businesses against those great combinations which crush them and drive them out of existence.

It has terminated the reign of gangsters by destroying the kidnaper, the national-bank robber, and the outlaw who seeks refuge in flight to other States from the place of his crime.

Our platform is to be read in the record of the best national law enforcement ever recorded in the history of our Nation.

It is, of course, impracticable to make reference in this address to all of the features of the Republican platform which invite consideration.

As an illustration, however, of the attempt to attract support by the announcement of principles which are generally accepted and concerning which there can be no partisan division, your attention is directed to the "bill of rights", which pledges preservation, protection, and defense against all intimidation and threats, freedom of religion, speech, press, and radio. There has been no impairment or threat to impair any of them by the Roosevelt administration, although the misrepresentation has been made that in some mysterious way they have been disregarded and held in contempt.

The principal danger to the liberties, both of the individual and the masses, exists in the power of monopolies and trusts which, under the last three Republican administrations, thrived and prospered with respect to both production and distribution. Nothing of importance was done during any one of the three administrations referred to to check the tendency toward monopoly.

On the contrary, unfair business practices for the suppression of competition were induced by large combinations without the slightest interference or restraint. It is at once amusing and shocking to witness this pretended devotion to sacred causes by the delegates to the convention, while they paraded and danced to the thrilling strains and inspiring

sentiments of the Republican campaign song, Oh, Suzanna, Don't You Cry.

Your chairman is prompted by consideration of propriety to bring this speech to a close.

We do not fear any comparison which the opposition may make. We meet their challenge in the open, face to face. Democrats during the present administration have made a record of great things accomplished. We are not discouraged by the obstacles which have been thrown in the way. Our opponents, paralyzed with fear, did not attempt to overcome the results of their own mistakes and follies when the collapse of 1929 occurred. Keynoter STEIWER complains that Mr. Roosevelt, after his election, did not advise President Hoover and cooperate with him in the hours of the latter's extremity and failure.

Keynoter STEIWER denounces our leader as a President without conscience. President Roosevelt may not possess the kind of conscience with which Republicans are familiar in their conduct of public affairs. He has, however, a conscience which takes note of the distress and helplessness of the feeble and the despairing. A conscience keenly alive to the necessity of maintaining the national honor, of promoting national happiness by repealing laws that have destroyed it, and by advocating measures designed to advance it.

William Allen White, sponsor of the Republican candidate, Governor Landon, characterized his favorite in the article already quoted from as "the dumb, smiling enigma, who has America guessing." That is not my characterization. It is the the statement of the candidate's closest friend, made in an effort to prove that in making demands to the committee on platform at Cleveland for the insertion of certain planks and then in yielding those planks, his candidate had suddenly demonstrated capacity for leadership.

Opponents sometimes denounce President Roosevelt as a dictator. No President has demonstrated a kindlier nature or more generous spirit than President Roosevelt. He has maintained amicable relations with every department of the Government. If he has been given extraordinary authority by law, it is because the Congress trusted him and regarded him as the best agent it could find.

On our record of pledges honestly redeemed, or services faithfully performed, and under as gallant a leadership as ever raised a political banner, we advance to the battle of 1936 confident that the voters of the Nation will not turn back to the defeated and disheartened leadership which abandoned them when the need for service, loyalty, and courage was the greatest ever known.

DEMOCRATIC PLATFORM

We hold this truth to be self-evident—that the test of a representative government is its ability to promote the safety and happiness of the people.

We hold this truth to be self-evident—that 12 years of Republican leadership left our Nation sorely stricken in body, mind, and spirit, and that 3 years of Democratic leadership have put it back on the road to restored health and prosperity.

We hold this truth to be self-evident—that 12 years of Republican surrender to the dictatorship of a privileged few have been supplanted by a Democratic leadership which has returned the people themselves to the places of authority and has revived in them new faith and restored the hope which they had almost lost.

GOVERNMENT HUMANIZED IN FACTORS AFFECTING WELL-BEING

We hold this truth to be self-evident—that this 3-year recovery in all the basic values of life and the reestablishment of the American way of living has been brought about by humanizing the policies of the Federal Government as they affect the personal, financial, industrial, and agricultural well-being of the American people.

We hold this truth to be self-evident—that government in a modern civilization has certain inescapable obligations to its citizens, among which are:

1. Protection of the family and the home.

2. Establishment of a democracy of opportunity for all the people.

3. Aid to those overtaken by disaster.

These obligations, neglected through 12 years of the old leadership, have once more been recognized by American Government. Under the new leadership they will never be neglected.

FAMILY AND HOME

First. We have begun and shall continue the successful drive to rid our land of kidnapers and bandits. We shall continue to use the powers of Government to end the activities of the malefactors of great wealth who defraud and exploit the people.

SAVINGS, INVESTMENT

Second. We have safeguarded the thrift of our citizens by restraining those who would gamble with other people's savings, by requiring truth in the sale of securities, by putting the brakes upon the use of credit for speculation, by outlawing the manipulations of prices in stock and commodity markets, by curbing the overweening power and unholy practices of utility holding companies, by insuring 50,000,000 bank accounts.

SOCIAL SECURITY

Third. We have built foundations for the security of those who are faced with the hazards of unemployment and old age, for the orphaned, the crippled, and the blind. On the foundation of the Social Security Act we are determined to erect a structure of economic security for all our people, making sure that this benefit shall keep step with the ever-increasing capacity of America to provide a high standard of living for all its citizens.

CONSUMER

Fourth. We will act to secure to the consumer fair value, honest sales, and a decreased spread between the price he pays and the price the producer receives.

RURAL ELECTRIFICATION

Fifth. This administration has fostered power-rate yardsticks in the Tennessee Valley and in several other parts of the Nation. As a result, electricity has been made available to the people at a lower rate. We will continue to promote plans for rural electrification and for cheap power by means of the yardstick method.

HOUSING

Sixth. We maintain that our people are entitled to decent, adequate housing at a price which they can afford. In the last 3 years the Federal Government, having saved more than 2,000,000 homes from foreclosure, has taken the first steps in our history to provide decent housing for people of meager incomes. We believe every encouragement should be given to the building of new homes by private enterprise and tnat the Government should steadily extend its housing program toward the goal of adequate housing for those forced through economic necessities to live in unhealthy and slum conditions.

VETERANS

Seventh. We shall continue just treatment of our war veterans and their dependents.

For the establishment of a democracy of opportunity.

AGRICULTURE

We have taken the farmers off the road to ruin.

We have kept our pledge to agriculture to use all available means to raise farm income toward its pre-war purchasing power. The farmer is no longer suffering from 15-cent corn, 3-cent hogs, 2½-cent beef at the farm, 5-cent wool, 30-cent wheat, 5-cent cotton, and 3-cent sugar.

By Federal legislation we have reduced the farmer's indebtedness and doubled his net income. In cooperation with the States and through the farmer's own committees we are restoring the fertility of his land and checking the erosion of his soil. We are bringing electricity and good roads to his home.

We will continue to improve the soil conservation and domestic-allotment program with payments to farmers.

We will continue a fair-minded administration of agricultural laws, quick to recognize and meet new problems and conditions. We recognize the gravity of the evils of farm tenancy, and we pledge the full cooperation of the Government in the refinancing of farm indebtedness at the lowest possible rates of interest and over a long term of years.

We favor the production of all the market will absorb, both at home and abroad, plus a reserve supply sufficient to insure fair prices to consumers; we favor judicious commodity loans on seasonal surpluses; and we favor assistance within Federal authority to enable farmers to adjust and balance production with demand at a fair profit to the farmers.

We favor encouragement of sound, practical farm cooperatives.

By the purchase and retirement of 10,000,000 acres of submarginal land and assistance to those attempting to eke out an existence upon it, we have made a good beginning toward proper land use and rural rehabilitation.

The farmer has been returned to the road to freedom and prosperity. We will keep him on that road.

LABOR

We have given the army of America's industrial workers something more substantial than the Republican's dinner pail full of promises. We have increased the worker's pay and shortened his hours; we have undertaken to put an end to the sweated labor of his wife and children; we have written into the law of the land his right to collective bargaining and self-organization free from the interference of employers; we have provided Federal machinery for the peaceful settlement of labor disputes.

We will continue to protect the worker, and we will guard his rights, both as wage earner and consumer, in the production and consumption of all commodities, including coal and water power and other natural-resource products.

The worker has been returned to the road to freedom and prosperity. We will keep him on that road.

BUSINESS

We have taken the American businessman out of the red. We have saved his bank and given it a sounder foundation; we have extended credit; we have lowered interest rates; we have undertaken to free him from the ravages of cutthroat competition.

The American businessman has been returned to the road to freedom and prosperity. We will keep him on that road.

YOUTH

We have aided youth to stay in school; given them constructive occupation; opened the door to opportunity which 12 years of Republican neglect had closed.

Our youth have been returned to the road to freedom and prosperity. We will keep them on that road.

MONOPOLY

Monopolies and the concentration of economic power, the creation of Republican rule and privilege, continue to be the master of the producer, the exploiter of the consumer, and the enemy of the independent operator. This is a problem challenging the unceasing effort of untrammeled public officials in every branch of the Government. We pledge vigorously and fearlessly to enforce the criminal and civil provisions of the existing antitrust laws and to the extent that their effectiveness has been weakened by new corporate devices or judicial construction, we propose by law to restore their efficacy in stamping out monopolistic practices and the concentration of economic power.

AID IN DISASTER

We have aided and will continue to aid those who have been visited by widespread drought and floods and have adopted a Nation-wide flood-control policy.

UNEMPLOYMENT

We believe that unemployment is a national problem, and that it is an inescapable obligation of our Government to meet it in a national way. Due to our stimulation of private business, more than 5,000,000 people have been reemployed; and we shall continue to maintain that the first objective of a program of economic security is maximum employment in private industry at adequate wages. Where business fails to supply such employment we believe that work at prevailing wages should be provided in cooperation with State and local governments on useful public projects, to the end that the national wealth may be increased, the skill and energy of the worker may be utilized, his morale maintained, and the unemployed assured the opportunity to earn the necessities of life.

THE CONSTITUTION

The Republican platform proposes to meet many pressing national problems solely by action of the separate States. We know that drought, dust storms, floods, minimum wages, maximum hours, child labor, and working conditions in industry, monopolistic and unfair business practices cannot be adequately handled exclusively by 48 separate State legislatures, 48 separate State administrations, and 48 separate State courts. Transactions and activities which inevitably overflow State boundaries call for both State and Federal treatment.

We have sought and will continue to seek to meet these problems through legislation within the Constitution.

If those problems cannot be effectively solved by legislation within the Constitution, we shall seek such clarifying amendment as will assure to the legislatures of the several States and to the Congress of the United States, each within its proper jurisdiction, the power to enact those laws which the State and Federal Legislatures, within their respective spheres, shall find necessary in order adequately to regulate commerce, protect public health and safety, and safeguard economic security. Thus we propose to maintain the letter and spirit of the Constitution.

MERIT SYSTEM

For the protection of Government itself and promotion of its efficiency we pledge the immediate extension of the merit system through the classified civil service—which was first established and fostered under Democratic auspices—to all non-policy-making positions in the Federal service.

We shall subject to the civil-service law all continuing positions which, because of the emergency, have been exempt from its operation.

CIVIL LIBERTIES

We shall continue to guard the freedom of speech, press, radio, religion, and assembly which our Constitution guarantees, with equal rights to all and special privileges to none.

The administration has stopped deflation, restored values, and enabled business to go ahead with confidence.

When national income shrinks, Government income is imperiled. In reviving national income we have fortified Government finance. We have raised the public credit to a position of unsurpassed security. The interest rate on Government bonds has been reduced to the lowest point in 28 years. The same Government bonds which in 1932 sold under 83 are now selling over 104.

We approve the objective of a permanently sound currency, so stabilized as to prevent the former wide fluctuations in value which injured in turn producers, debtors, and property owners on one hand and wage earners and creditors on the other; a currency which will permit full utilization of the country's resources. We assert that today we have the soundest currency in the world.

We are determined to reduce the expenses of government. We are being aided therein by the recession of unemployment. As the requirements of relief decline and national income advances an increasing percentage of Federal expenditures can and will be met from current revenues secured from taxes levied in accordance with ability to pay. Our retrenchment, tax, and recovery programs thus reflect our firm determination to achieve a balanced budget and the reduction of the national debt at the earliest possible moment.

FOREIGN POLICY

In our relationship with other nations this Government will continue to extend the policy of good neighbor. We reaffirm our opposition to war as an instrument of national policy and declare that disputes between nations should be settled by peaceful means. We shall continue to observe a

true neutrality in the disputes of others; to be prepared resolutely to resist aggression against ourselves; to work for peace and to take the profits out of war; to guard against being drawn, by political commitments, international banking, or private trading, into any war which may develop anywhere.

We shall continue to foster the increase of our foreign trade which has been achieved by this administration; to seek by mutual agreement the lowering of those tariff barriers, quotas, and embargoes which have been raised against our exports of agricultural and industrial products; but continue, as in the past, to give adequate protection to our farmers and manufacturers against unfair competition or the dumping on our shores of commodities and goods produced abroad by cheap labor or subsidized by foreign governments.

THE ISSUE

The issue in this election is plain. The American people are called upon to choose between a Republican administration that has and would again regiment them in the service of privileged groups and a Democratic administration dedicated to the establishment of equal economic opportunity for all our people.

We have faith in the destiny of our Nation. We are sufficiently endowed with natural resources and with productive capacity to provide for all a quality of life that meets the standards of real Americanism.

Dedicated to a government of liberal American principles, we are determined to oppose equally the despotism of communism and the menace of concealed fascism.

We hold this final truth to be self-evident—that the interests, the security, and the happiness of the people of the United States of America can be perpetuated only under democratic government as conceived by the founders of our Nation.

ACCEPTANCE ADDRESS BY HON. FRANKLIN D. ROOSEVELT, PRESIDENT OF THE UNITED STATES

Senator ROBINSON, Members of the Democratic Convention, my friends here and in every community, we meet at a time of great moment to the future of the Nation—an occasion to be dedicated to the simple and sincere expression of an attitude toward problems, the determination of which will profoundly affect America.

I come not only as the leader of a party—not only as a candidate for high office, but as one upon whom many critical hours have imposed and still impose a grave responsibility.

For the sympathy, for the help and confidence with which Americans have sustained me in my task I am grateful. For their loyalty I salute the members of our great party, in and out of official life in every part of the Union. I salute, too, those of other parties, especially those in the Congress who on so many occasions put partisanship aside. I thank the Governors of the several States, their legislatures, their State and local officials who participated unselfishly and regardless of party in our efforts to achieve recovery and destroy abuse. Above all I thank the millions of Americans who have borne disaster bravely and have dared to smile through the storm.

America will not forget these recent years—will not forget that the rescue was not a mere party task—it was the concern of all of us. In our strength we rose together, rallied our energies together, applied the old rules of common sense, and together survived.

In those days we feared fear. That was why we fought fear. And today, my friends, we have won against the most dangerous of our foes—we have conquered fear.

But I cannot, with candor, tell you that all is well with the world. Clouds of suspicion, tides of ill will and intolerance gather darkly in many places. In our own land we enjoy indeed a fullness of life greater than that of most nations. But the rush of modern civilization itself has raised for us new difficulties, new problems which must be solved if we are to preserve to the United States the political and economic freedom for which Washington and Jefferson planned and fought.

Philadelphia is a good city in which to write American history. This is fitting ground on which to reaffirm the faith of our fathers; to pledge ourselves to restore to the people a wider freedom—to give to 1936 as the founders gave to 1776—an American way of life.

That very word "freedom", in itself and of necessity, suggests freedom from some restraining power. In 1776 we sought freedom from the tyranny of a political autocracy—from the eighteenth century royalists who held special privileges from the Crown. It was to perpetuate their privilege that they governed without the consent of the governed; that they denied the right of free assembly and free speech; that they restricted the worship of God; that they put the average man's property and the average man's life in pawn to the mercenaries of dynastic power—that they regimented the people.

And so it was to win freedom from the tyranny of political autocracy that the American Revolution was fought. That victory gave the business of governing into the hands of the average man who won the right with his neighbors to make and order his own destiny through his own government. Political tyranny was wiped out at Philadelphia on July 4, 1776.

Since that struggle, however, man's inventive genius released new forces in our land—forces which reordered the lives of our people. The age of machinery, of railroads, of steam and electricity; the telegraph and the radio; mass production, mass distribution—all of these combined to bring forward a new civilization and with it a new problem for those who would remain free.

For out of this modern civilization economic royalists carved new dynasties. New kingdoms were built upon concentration of control over material things. Through new uses of corporations, banks and securities, new machinery of industry and agriculture, of labor and capital—all undreamed of by the fathers—the whole structure of modern life was impressed into this royal service.

There was no place among this royalty for our many thousands of small businessmen and merchants who sought to make a worthy use of the American system of initiative and profit. They were no more free than the worker or the farmer. Even honest and progressive-minded men of wealth, aware of their obligation to their generation, could never know just where they fitted into this dynastic scheme of things.

It was natural and, perhaps, human that the privileged princes of these new economic dynasties, thirsting for power, reached out for control over government itself. They created a new despotism and wrapped it in the robes of legal sanction. In its service new mercenaries sought to regiment the people, their labor and their properties. And as a result, the average man once more confronts the problem that faced the Minuteman.

The hours men and women worked, the wages they received, the conditions of their labor—these had passed beyond the control of the people, and were imposed by this new industrial dictatorship. The savings of the average family, the capital of the small businessman, the investments set aside for old age—other people's money—these were tools which the new economic royalty used to dig itself in.

Those who tilled the soil no longer reaped the rewards which were their right. The small measure of their gains was decreed by men in distant cities.

Throughout the Nation, opportunity was limited by monopoly. Individual initiative was crushed in the cogs of a great machine. The field open for free business was more and more restricted. Private enterprise became too private. It became privileged enterprise, not free enterprise.

An old English judge once said: "Necessitous men are not free men." Liberty requires opportunity to make a living—a living decent according to the standard of the time, a living which gives man not only enough to live by, but something to live for.

For too many of us the political equality we once had won was meaningless in the face of economic inequality. A small

group had concentrated into their own hands an almost complete control over other people's property, other people's money, other people's labor—other people's lives. For too many of us life was no longer free; liberty no longer real; men could no longer follow the pursuit of happiness.

Against economic tyranny such as this, the citizen could only appeal to the organized power of Government. The collapse of 1929 showed up the despotism for what it was. The election of 1932 was the people's mandate to end it. And under that mandate it is being ended.

The royalists of the economic order have conceded that political freedom was the business of the Government, but they have maintained that economic slavery was nobody's business. They granted that the Government could protect the citizen in his right to vote but they denied that the Government could do anything to protect the citizen in his right to work and live.

Today, my friends, we stand committed to the proposition that freedom is no half-and-half affair. If the average citizen is guaranteed equal opportunity in the polling place, he must have equal opportunity in the market place.

These economic royalists complain that we seek to overthrow the institutions of America. What they really complain of is that we seek to take away their power. Our allegiance to American institutions requires the overthrow of this kind of power. In vain they seek to hide behind the flag and the Constitution. In their blindness they forget what the flag and the Constitution stand for. Now, as always, the flag and the Constitution stand for democracy, not tyranny; for freedom, not subjection; and against a dictatorship by mob rule and the overprivileged alike.

The brave and clear platform adopted by this convention, to which I heartily subscribe, sets forth that government in a modern civilization has certain inescapable obligations to its citizens, among which are protection of the family and the home, the establishment of a democracy of opportunity, and aid to those overtaken by disaster.

But the resolute enemy within our gates is ever ready to beat down our words unless in greater courage we will fight for them.

For more than 3 years we have fought for them. This convention in every word and deed has pledged that that fight will go on.

The defeats and the victories of these years have given to us as a people a new understanding of our Government and of ourselves. Never since the early days of the New England town meeting have the affairs of Government been so widely discussed and so clearly appreciated. It has been brought home to us that the only effective guide for the safety of this most worldly of worlds is moral principle.

We do not see faith, hope, and charity as unattainable ideals, but we use them as stout supports of a nation fighting the fight for freedom in a modern civilization.

Faith—in the soundness of democracy in the midst of dictatorships.

Hope—renewed because we know so well the progress we have made.

Charity—in the true spirit of that grand old word. For charity literally translated from the original means love, the love that understands, that does not merely share the wealth of the giver, but in true sympathy and wisdom helps men to help themselves.

We seek not merely to make government a mechanical implement, but to give it the vibrant personal character that is the embodiment of human charity.

We are poor indeed if this Nation cannot afford to lift from every recess of American life the dread fear of the unemployed that they are not needed in the world. We cannot afford to accumulate a deficit in the books of human fortitude.

In the place of the palace of privilege we seek to build a temple out of faith and hope and charity.

It is a sobering thing to be a servant of this great cause. We try in our daily work to remember that the cause belongs not to us but to the people. The standard is not in the hands of you and me alone. It is carried by America. We seek daily to profit from experience, to learn to do better as our task proceeds.

Governments can err—Presidents do make mistakes, but the immortal Dante tells us that divine justice weighs the sins of the cold-blooded and the sins of the warm-hearted in different scales.

Better the occasional faults of a government that lives in a spirit of charity than the consistent omissions of a government frozen in the ice of its own indifference.

There is a mysterious cycle in human events. To some generations, much is given. Of others, much is expected. This generation of Americans has a rendezvous with destiny.

In this world of ours in other lands, there are some people, who, in times past, have lived and fought for freedom, and seem to have grown too weary to carry on the fight. They have sold their heritage of freedom for the illusion of a living. They have yielded their democracy.

I believe in my heart that only our success can stir their ancient hope. They begin to know that here, in America, we are waging a great war. It is not alone a war against want and destitution and economic demoralization. It is more than that. It is a war for the survival of democracy. We are fighting to save a great and precious form of government for ourselves and for the world.

I accept the commission you have tendered me. I join with you. I am enlisted for the duration of the war.

ADDRESS OF HON. JOHN N. GARNER, ACCEPTING THE NOMINATION FOR VICE PRESIDENT

Mr. Chairman, friends, my words shall be as few as they shall be fervent and sincere. I am a soldier, and my duty is to follow where the commander leads. I accept the rules of war as laid down in the platform.

I am not insensible of the high honor which has been conferred upon me. This confidence which my fellow countrymen have reposed in me I accept as a solemn trust; and I am not unmindful of the responsibility which goes with that trust.

I gladly accept the nomination for the Vice-Presidency now tendered to me for the second time. The sense of personal satisfaction in this honor is enhanced and heightened by the thought that I am again to be on the ticket with Franklin Delano Roosevelt.

I shall stand with him in the months ahead as I stood with him before the voters of this country in 1932—as I have stood in sharing with him since March 4, 1933, the obligations and duties and responsibilities which the Constitution imposes.

Franklin Delano Roosevelt is my leader; my Commander in Chief. In this presence, before the multitude, and with the stars of heaven to bear witness to my covenant I renew the pledge of fealty I gave 4 years ago.

In Franklin Delano Roosevelt the hopes of a nation have been reborn. Despair has given place to confidence. Despondency and gloom have made way for happiness. Laughter again is heard in the land.

We are now, as it were, midway in our course. Great as are the things which have been accomplished to bring order out of chaos in which we found the country in March 1933, much remains to be done.

There must be no return to old conceptions denominated as the Old Deal. And what do we mean by the Old Deal? We mean a political system which fosters an economic order giving special privilege to a few favored ones through the sacrifices of the many. By the New Deal we mean simply an adaptation of the laws of the country so that the greatest good will come to the greatest number—the protection of the rights of that vast majority of our populace, men, women, and children—to whom the Old Deal meant want, hardship, despair, and degradation.

Our people have not forgotten the wretchedness to which these sins of omission and commission of 12 years of the Old Deal had plunged the country when the New Deal was ushered in on a March day in 1933. But the dawn of a new day was at hand. The time for a change had come. The country welcomed a new leader. And I cheerfully bear wit-

ness here and now to the loyal support of New Deal measures and principles accorded in Congress by certain of our friends of the opposition. With voice and vote many brethren of Republican persuasion have shown how they could in time of national peril rise above partisanship and heed the call for help of a stricken country.

We still ask for the support of all those who believe as we do that the function of government is to protect the many from the selfishness of the few, to guarantee to all the means of livelihood and participation in the things that make life good and noble and worth the living.

That is our platform. Upon that platform I stand, and I am proud to stand with our leader—a leader who has never faltered in his course and never once lost faith that in the sovereign will of the American people rests true wisdom in government and the way to security, peace, and happiness.

In that faith I put my trust. In that faith I pledge anew my allegiance to Franklin Delano Roosevelt.

ADDRESS OF HON. JAMES A. FARLEY, CHAIRMAN OF THE DEMOCRATIC NATIONAL COMMITTEE, OPENING THE DEMOCRATIC NATIONAL CONVENTION, PHILADELPHIA, PA., TUESDAY, JUNE 23, 1936

In inaugurating this convention I am conscious of a great responsibility. The occasion which brings us together is one of the most momentous in the history of our country.

The continuance of the New Deal is the issue. The question before the Amercan people is clear-cut and cannot be disguised. That question is: Shall we continue the New Deal, which has rescued our country from disaster and despair, or shall the Government be turned back to the Old Dealers, who wrecked it?

There you have the issue stripped of all camouflage.

The gravity of this issue is the measure of our responsibility as we assemble here today. Is the Nation to move forward or is it to turn backward to the Old Dealers of such recent and bitter memory?

Fortunately for us and for the country, we know now that the Old Dealers stand right where they have always stood. The convention at Cleveland, both in manner and method, revealed once more that old habits are not abandoned.

I am not trying to stir the members of the committee, which has served so faithfully, or the delegates to this convention into any frenzy of excitement by stressing the gravity of what lies ahead of us, and which makes this campaign different from the ordinary political struggle inseparable from a Presidential election.

I merely wish to impress on all of you the significance of the task to which we are committing ourselves. I want to point out that while the political skies seem fair for our party and our destined candidates, and all of us believe that the country will echo our desires in unmeasured enthusiasm, and a record majority, confidence in the outcome is not enough. The consequences of the coming election are vital to the future of this Nation. Because of their gravity, no one of us dares do less than his utmost toward swelling the majority that will testify to the national desire that the processes of recovery, initiated and carried on by Franklin D. Roosevelt, shall not be interrupted. That verdict must be so overwhelming, so conclusive, so compelling, that nobody can doubt that the country is united in its determination that there shall be no backward step in our progress.

Our party will remain in power so long as its ideals and purposes do not deviate from the straight path of public service.

We are a fortunate party; first in the high patriotism and caliber of our President; second, in that we are on the right side, both morally and economically. The minority party has, by force of circumstance, been compelled to adopt a platform unsurpassed in the history of party declarations for platitudes and vague promises. Some day they pledge themselves to accomplish what our administration has already accomplished. Some day they will put the farmer in the same economic position that the New Deal has put him, but never do they say how they are going to do it. Some day they are going to establish business on a basis comparable with that upon which our conduct of national affairs has placed it; but first they would go back to the system that brought on the great panic. Some day the great corporations are to be assured of all the favors they enjoyed under Republican rule, and at the same time everybody is to have equal opportunity and unbounded prosperity.

And their some-day candidates, through this platform, will tell the country, as a distracted mother tells her fretful babies, they will have the moon for which they have been futilely reaching and wailing because they cannot reach it.

They are going to relieve poverty without spending money, provide jobs without it costing industry anything, and bring happiness and contentment to everybody—some day.

As chairman of the Democratic National Committee it has become my happy duty to call this convention to order; to present the recommendations of the committee for the convention's consideration of temporary officers to conduct the deliberations of this body until the convention itself shall complete the permanent organization. Then I shall relapse into my status as a delegate from the State of New York.

Before I relinquish this gavel I wish to make a brief report on the work of the national organization since it assumed direction of the party's affairs at the 1932 convention. That convention inaugurated a new era in our country's affairs. Through the masterful work of the candidates of the 1932 convention and the Congresses which were elected in sympathy with them, our country has been lifted out of the worst depression in our history onto a fair highway that leads to permanent prosperity. Ordinarily, as you know, the national committee of our own and of the minority party fall into a deep sleep at the close of a convention and hibernate for 4 years. Following the precedent established by my predecessor, the Democratic National Committee has taken a different course, actuated by the belief that a Presidential campaign, with all that it means to our Nation, is not something to be hurried through in a few hectic weeks.

As a matter of fact, we could not have remained idle, even if we had so desired. As soon as they thought that partisan politics made it necessary, the party we had ousted from control of the Government began sniping at the policies they had applauded and participated in. They were grateful for these policies when our country was undergoing the extreme crisis of the disaster their President and their administration had permitted to come upon us.

As soon as the huge financial interests that have been the backbone of every Republican administration of recent years had been rescued from the depths of loss and again began to make money, they exerted their pressure, furnished the funds, and engaged in a crusade of vituperation and detraction in an effort to destroy the faith of the people in the President. He had brought them out of their desperate state when they were helpless to do it themselves. But he was insisting that fortune for the few and poverty for the many did not spell prosperity, and they, feeling themselves threatened with the deprivation of the unearned and uneconomic favors and privileges they had enjoyed so long, inaugurated the movement for a return to the old system of everything for them and nothing for the plain people. Then it was that the minority party orators and the newspapers controlled by the big interests began telling our people that Franklin D. Roosevelt sought to be a dictator. Then it was that the laws Congress had enacted, and for which many of the Senators and Representatives of their own party had voted, were denounced as being intended to make our country a socialistic and communistic state. Then it was that they proclaimed that the measures undertaken and functioning successfully to bring back a restoration of business, decrease unemployment, and to take care of the jobless until such time as returning prosperity would reabsorb them into normal industry, were all the product of dreamers and visionaries.

Anybody unfamiliar with American politics would have gathered from these outcries that our hard-working, systematic, public-serving President was sitting in the White House with a war helmet on his head, booted and spurred,

and ready to lead a bayonet charge on Congress if they hesitated in carrying out his despotic orders.

Under these conditions we naturally had to get busy. I will not attempt to outline for you the activities of the organizations in the various sections of the country, but I do want to tell you that, without exception, the State Democratic authorities cooperated effectively and enthusiastically, and I want to thank them publicly for their loyalty, which in no small degree is responsible for the state of confidence in which we meet today. You are all familiar, I believe, with the work performed at national headquarters in Washington, and I feel authorized to express in your name our thanks to my colleagues at headquarters for the faithfulness with which they have discharged their task.

Perhaps I ought to mention in this connection another agency that has contributed much to the jubilant feeling we have in regard to the outcome of the election in November. Do I need to say that I refer specifically to the Republican convention in Cleveland? By their platform they would have assured our victory, I believe, even had our national organization remained dormant during the whole preconvention period. Confronted by the impossible task of reconciling the standpat views of the powers behind the minority party with their anguished necessity of making a pretense of liberalism, they turned loose the most extraordinary platform on record in this country.

Our friends, the enemy, had an opportunity to be sincere. If they had any regard for consistency, they would have renamed Herbert Hoover, who represents the classical attitude of their party, and then we would have had a direct and frank contest before the American people of the New Deal and the Old Deal. They passed him up despite his impassioned stampeding speech, which naturally failed. For you cannot stampede an elephant securely chained to the picket posts of evasion and straddling. They could have named Senator Borah, but he was earmarked with the stigma of liberalism. So they had to find a candidate whom they could present as conservative enough to meet the specifications of the Du Pont Liberty Leaguers in the East, while appearing fiercely liberal in the West.

Nobody takes the Cleveland platform seriously—not even our political adversaries. The leading Republican newspaper at the National Capital, in a painful effort to make the document sound like sense, said in its appraisal of the Republican declaration of principles: "On the whole, the platform avoids the mistake of being too specific, properly concentrating on principles." It mentions some of what it terms "not infrequent conflicts between an excellent generality and a stupid particularization." However, it sums up the grand total by assuring the Republican nominee that he has a complete license to forget the platform in this impressive language:

> The Republican Party has thus assured its standard bearer of the freedom of action, within a framework of principle, which a competent leader must be allowed.

There you have it. They were compelled by the same inexorable circumstance to produce a platform aimed to satisfy liberals and conservatives, the bold and the timid among the two conflicting elements of their party's make-up. Even when it came to choosing their Vice-Presidential candidate they had to follow the same hazardous course. The larger men refused the post, so they picked a gentleman, doubtless a good editor, who has never held public office, never strayed into fields other than his own business—even more widely unknown to the public than his chief.

Our governmental system directs the same qualifications for the Vice President as for the President for obvious reasons. Our own beloved Vice President has shown that the office is neither an ornament nor a sinecure. John N. Garner's long experience in the public service has been of inestimable value during the grave period of restoration. The Vice President presides over the United States Senate. He knows what the doings of that body mean and his ripened judgment is available when the Senate divides and his vote determines the final result.

It is no part of my function to suggest to the resolutions committee the platform upon which our candidates will run. But I do not think I am transgressing when I voice my belief that that document will be one to which they can commit themselves without laughing, and can swallow without choking. And, incidentally, it will be the only major party platform adopted this year of the sort.

Apart from everything else we have the advantage in this convention not only of knowing what we are striving for, but on whom we may depend to carry out the program. We are in the happy position of being enlisted on the popular side. It is the popular side because of what our administration has accomplished for the public welfare. Good government is the best politics. That was true when Jefferson founded our party, and the formula has not changed. Circumstances and conditions change. The immortal principles that have made us the freest, most secure people in the world remain changeless. Selfish interests may usurp authority for a time, but always there arises a figure clear-eyed enough to see the peril, wise enough to grasp the people's desires, and brave enough to hew the way through the barriers of influence and illicit power, and set us again on the right path.

For 3 years ours has been a people's government. It is our job to keep it a people's government.

That is what I meant when I spoke of the responsibilities incident to this gathering. We know how millions have been poured out to prepare the ground for an assault aimed to bring back the reeking period that piled up great fortunes for those on the inside, and finally brought the country to the verge of bankruptcy.

No pirate of the olden days chased a galleon that had escaped him more fiercely than will the backers of the Republican Party pursue the enterprise of getting back the prize they held so long.

The pursuing corsairs used whatever flag that served their purpose to close with their quarry. They did not fly the skull and crossbones banner, but raised the pennant under which the prize was sailing to disguise their plundering purpose.

Perhaps that illustrates the new plan of the Republican platform and the uniform of their captain—in the West with the epaulets of liberalism and in the East with the insignia of conservatism.

Behind the Republican ticket is the crew of the du Pont Liberty League and their allies, which have so far financed every undercover agency that has disgraced American politics with their appeals to race prejudice, religious intolerance, and personalities so gross that they had to be repudiated even by the regular Republican organization. They will continue to disown these snaky assaults and to seek to profit by them.

But the leaguers will never gain the prize. The real New Deal, sane and orderly—not the wild, visionary, socialistic, or communistic creation of its enemies' imagination—will sail on serenely to the goal of complete recovery, and at its helm that calm, capable, and courageous commander, Franklin D. Roosevelt.

THE NEGRO AS A CITIZEN

Mr. HAYDEN. Mr. President, under the authority granted by the Senate on June 18, 1936, I insert an address to be delivered by Hon. Harold L. Ickes, Secretary of the Interior and Federal Administrator of Public Works, before an anniversary meeting of the National Association for the Advancement of Colored People, at Baltimore, Md., June 29, 1936, entitled "The Negro as a Citizen", as follows:

> I am happy to be here tonight to address the twenty-seventh anniversary of the National Association for the Advancement of Colored People. In addition to my natural appreciation of the privilege of addressing you, I feel at home here. The things for which you stand and the broad purposes to which your association has been dedicated have been among my lifelong interests. I have always been sensitive about justice and fair play for those who were without a friend at court. More than once I have stood in the line of battle against those who would exploit the weak and persecute the helpless.
>
> For the past 27 years your association has been waging this kind of a battle. As a lifeguard you have patrolled the beach to safe-

guard the civic and personal liberties of members of the Negro race. You have fought disfranchisement, segregation, and lynching. Through mass protests, by appeal to the courts, and by arousing public opinion you have rendered a significant service not alone to Negroes but to the country as a whole. In cultivating a disposition to accord Negroes their full rights as citizens, you have helped all of us to remember the fundamental principles upon which the Nation is founded.

Some years ago it was my privilege for one term to serve as president of the Chicago branch of your association. During that time I had the opportunity of becoming intimately acquainted with your purposes and program. It was also my good fortune to be associated with some of the fine, forward-looking leaders of the Negro race, the friendship of many of whom I still value highly. Although I have not been officially connected with your organization for a number of years, I have watched its activities with great interest and sympathy. I wish to congratulate you upon the progress that you have made. Many of your achievements have not been heralded, but you have steadily pressed forward toward the goal of legal justice and civic rights for the Negro race.

Another reason why I am pleased to participate in this annual meeting in the State of Maryland is because of the similarity between the principles which you and I stand for and those which animated the founders of this great State.

I am sure that it is well known, at least to those of you who are Marylanders, that Lord Baltimore was characterized by great tolerance. It was his conviction that a man should be allowed to have his own convictions and beliefs. At a time when religious prejudice and bigotry were rife, even on the part of many who had migrated to these shores to escape the prejudice and oppression that made England intolerable, Lord Baltimore was a liberal. From this attitude of mind flowed many liberal tendencies in Maryland during its early history. I am sure it is remembered today with pride by many citizens of this State, both Negro and white, that this is the State which, in line with its finest traditions, gave to the world that great orator, statesman, and courageous Negro leader, Frederick Douglass. His life, perhaps more than that of any other single individual, has been the example which has challenged Negroes to press forward and achieve what at first seemed to be impossible. The principles for which he fought are the same as those for which you are struggling today—freedom, justice, and opportunity.

Thanks to Douglass and Lincoln and many others who gave their last full measure of devotion, the Union was saved, and we are rapidly achieving the goal of a united country—united not alone geographically and politically, but united in spirit, in purpose, in aspirations.

As we look backward over the road that has led us to our present position of leadership among world democracies, and then forward to the promised land of the future, we find two contrasting pictures. Until the recent past the spirit of adventure was our outstanding characteristic. We pushed back frontier after frontier while wresting a livelihood from a rich but none-too-friendly nature. And because of the very abundance of our natural resources and our lack of knowledge and technical equipment the process of gaining a livelihood resulted in wasteful exploitation.

Nor was exploitation confined to the natural resources of America; it was practiced also on our human resources. It was during this pioneer period that human slavery became a profitable enterprise. Helpless Negroes were stolen or enticed from their native soil in Africa and transported to these and other shores under conditions which would not be tolerated by the civilized world today. The same spirit of exploitation was manifest in the use of women and children in sweatshops and other fields where at hard tasks they toiled for long hours at inadequate pay.

This was a tooth-and-claw age, during which every man was for himself alone. The masses were sacrificed to swell the profits of the few. It was the ambition of practically every youth to gain material wealth at whatever cost. Some of our greatest fortunes were accumulated during those days, and we were not too particular what methods were used in their accumulation.

Notwithstanding that our frontiers have receded so rapidly, our industrial development has been so immense and so swift in its progress that we have been dazzled by a sort of economic mirage. We thought we were achieving real progress, when it was only an illusion. We have been unable to comprehend the significance of the change from the simplicity and ruggedness of our pioneer life to the complexity, refinements, and intimate interrelationships of our present era.

As our conception of democracy in earlier days was influenced by the characteristics and environment of those times, so must our notion of this era be in harmony with the age in which we live. Our old ideals were materialistic. Individuality and the rights of the few and of the strong were emphasized. According to our new concepts, the social aspects of life, the rights of the many, and our obligation to protect the weak will be given ever greater consideration.

This new conception is being translated into governmental policy and practice. President Roosevelt, in a recent address, laid stress upon the social responsibility of a democratic government when he said:

"Whether it be in the crowded tenements of the great cities, or on many of the farm lands of the Nation, we know that there dwell millions of our fellow human beings who suffer from the kind of poverty that spells undernourishment and underprivilege.

"If local governments, if State governments, after exerting every reasonable effort, are unable to better their conditions, to raise or restore their purchasing power, then surely it would take a foolish and short-sighted man to say that it is no concern of the National Government itself.

"Our country is passing through a period which is urgently in need of ardent protectors of the rights of the common man. Mechanization of industry and mass production have put unparalleled power in the hands of the few. No small part of our program today is to bring the fruits of this mechanization to the whole people."

It has been our habit so long to talk glibly about our outstanding ideals of health, our decent living conditions, our high standards of universal common-school education, our sense of justice for the masses, that we have actually imagined that we were realizing them. But to a large extent our boastings have been mere compensatory phantasies by means of which we have sought to deceive ourselves into believing that we are more righteous and social-minded than in fact we are, or that we are bent upon achieving that which in our hearts we do not even desire. We have talked so much about our sense of justice, about equal opportunity under the law, regardless of race or color or creed, that we have actually blinded our moral perception to the gross exploitation of weaker groups that has been going on under our very eyes.

If we except the Indians, of the many groups that have been exploited, beginning with pioneer days, Negroes perhaps have been the greatest sufferers. They had not had opportunities for an adequite education; they were the most helpless and the most docile. Yet the contributions they have made to the material upbuilding of this country are beyond calculation. Certainly it has been sufficient to justify them in claiming, without apology, the right to earn a decent share of our great wealth.

Under our new conception of democracy, the Negro will be given the chance to which he is entitled—not because he will be singled out for special consideration, but because he preeminently belongs to the class that the new democracy is designed especially to aid. It is to the advantage of Negroes, therefore, that they thoroughly familiarize themselves with the modified social and economic foundation upon which the new democracy is being built. This requires knowledge and understanding of the new forces brought into being by science and technology, and of the various social and political elements which are emerging as a result of greater understanding among men. In order to throw their moral strength and the weight of their influence on the side of the new liberalism and progressivism that is emerging from the welter of our political life, they must have sufficient intelligence and training to make a wise choice among social values. Unfortunately, we know too well that the educational opportunities enjoyed by Negroes are too meager and even in many cases too antiquated for them to develop the type of intelligence required for effective functioning in our keenly competitive democratic society. This makes it all the more important to develop a sound leadership such as this organization can supply.

I have said that the Negro has been probably the greatest sufferer during the period of our development when exploitation was the general rule. I wish to elaborate on this.

In the economic realm, the Negro has lived for generations on the very fringes. He has been required to work at jobs of the lowest grades, for long hours, at small pay. There has been slight opportunity or encouragement for him to break into the higher levels of employment or into new fields. As a rule, organized labor has refused to enroll him in its ranks. This discrimination has frequently resulted in his use as a strikebreaker. The general lack of educational facilities has been most acute in the vocational and economic realms. There has been neither proper vocational training, adapted to occupational needs, nor instruction in those important economic and social principles which should be the stock in trade of every worker. In some cases where, by means of apprenticeship or otherwise, he has become skilled in certain trades he has been refused a license to engage in that trade.

In the exercise of the suffrage that is guaranteed him by the Constitution the Negro has met with many abuses and obstacles. In some localities he is callously disfranchised; in other places, for generations, he has been exploited by corrupt politicians, who have bought his vote or have made him promises which were never expected to be kept. And, finally, he has been the victim of taxation without representation.

Educationally the Negro on the average lags far below the accepted standards in those communities where separate schools for the Negro and white races are maintained. Studies made in the Office of Education of the Department of the Interior show (1) a lack of availability of educational facilities for Negroes; (2) inadequate financial support; (3) poorly prepared, poorly paid, and improperly selected teachers; and (4) ill-adapted educational programs. Here we have a sad commentary on our democratic principle of equal opportunity, especially when we realize the importance of education in our scheme of life and that Negroes are required to meet the same standards as other citizens.

The general social and civil status of Negroes reveals a picture quite as unsatisfactory as those which portray the economic and educational phases of their lives. Their high morbidity, their crime rate, their infant mortality, and their short life span may be attributed very largely to conditions of their environment. Their homes, for which they are charged exorbitant prices, both as buyers and renters, are located in the poorest and most insanitary sections of the community, without adequate streets, pavements, water supply, lighting, sewerage, drainage, or fire and police protection. In addition to malnutrition, due to the submarginal existence that so many of them lead, there is a lack of medical and hospital care, of prenatal and maternal care, as well

as a general absence of counterbalancing influences, such as recreational, welfare, and educational agencies and facilities.

When the extent to which Negroes have been the victims of prejudice, passion, ignorance, and discrimination is realized and the degree to which they have met with frustrations in their legitimate efforts to improve themselves and their race, their achievements merit our admiration. A race possessing less fortitude and faith would have fallen by the wayside.

I congratulate you on your patience, and on the fact that you have worked while you waited. I believe that your cheerful disposition, your faith, your loyalty, and your lack of resentment are some of the qualities that have brought you the success that already is yours. May I admonish you as a sincere friend to keep the faith. In spite of the wrongs that have been committed against you, do not become bitter. Hatred is a venom which poisons the blood and incapacitates the person who generates it. Resist wrong stanchly; fight injustice and discrimination.

I am convinced that the liberal-minded and farseeing among us will eventually realize that, as a people, we can be no happier or stronger than our most miserable and weakest group.

The doctrine of laissez faire in interracial relations has characterized national administrations since the reaction from reconstruction days. Under Franklin D. Roosevelt this attitude has changed. He has realized, as no other President since Lincoln seemed to realize, that the mere existence in the Federal Constitution of the thirteenth, fourteenth, and fifteenth amendments is no guaranty of their enforcement. Among his many humane and farsighted acts has been that of a vigorous policy of justice toward Negroes. His administration of relief, in which Negroes have received the same consideration as whites, has given the members of the Negro race a standing which they have not enjoyed since they became citizens. Of course, the prejudices that have been fostered and built up for 60 years cannot be done away with overnight, but the greatest advance since the Civil War toward assuring the Negro that degree of justice to which he is entitled and that equality of opportunity under the law which is implicit in his American citizenship has been made since Franklin D. Roosevelt was sworn in as President on March 4, 1933.

There is appearing today among Negroes a newer, abler, and more forthright leadership. It is a self-respecting leadership. They come not as suppliants or wards. It is gratifying to observe the approach of these leaders to the problems of the time and the sanity and justice of their demands for their race. It is perfectly proper that they should, as they do, regard themselves as citizens entitled to all the rights and privileges that go with that status. The record of Negroes throughout the history of America is one of which any group might well be proud. In every aspect of the Nation's life they have made significant contributions. And now, properly, the day has arrived when they are asking for a fulfillment to them of the promise of life, liberty, and the pursuit of happiness.

Negroes are demanding that the ideals and principles upon which the Nation was founded shall be translated into action and made to apply to themselves as well as to other citizens. They are not asking the Government to coddle them nor to direct their activities, but they do want the Government to assure them a fair chance and an equal opportunity in their desire to attain a fuller life.

Your Government at the present time is not insensitive to this plea, for it comports with its own conception of its responsibility. It is attempting to build a new social order and to set up higher ideals for all of its citizens. In helping the common man to achieve a life that is more worth while, this administration is seeking the greatest good for the greatest number of the people.

Especially are citizens asking today that human life and personality be accorded the respect that is due them. This is especially in point at this time when intolerance is on the upgrade and mob violence appears to be on the increase. That vile form of collective murder—lynch law * * * has broken out in our midst again. No language is too forceful to characterize these blights on America's honor. No measures of the Government would be too strong that effectively would stamp out such un-American practices. The President of the United States has put the weight of his voice and the prestige of his high office against these evil manifestations. Many organizations and numerous law-abiding citizens everywhere have protested. Mass murders, mob rule, and terrorism are subversive of our most cherished ideals as embodied in the Declaration of Independence and the Constitution. The weak, the helpless, and the unprotected elements in our population have a right to expect protection from their Government. If for no other reason that that of self-preservation, it is imperative that the Nation become aroused to this insidious danger that threatens it.

In addition to the protection of their lives, liberty, and property, citizens have a right to expect their Government to make it possible for them to improve their status along all lines—economic, political, and social. I am happy to tell you that the present administration is conscious of its responsibility in this regard also.

You are probably aware of the fact that no previous administration has provided employment in the various departments and agencies for so many Negroes as has this one. This employment ranges from the ordinary jobs to executive positions. It has been the policy in the emergency agencies to furnish positions without racial or other discrimination. Also, it has been the course of the administration to use its influence to assure a fair deal for the Negro on all Federal projects, including construction work on public buildings, river and harbor improvements, and dams. Insofar as I have been able, and I know this is the attitude of other Government officials, I have insisted and shall continue to insist on widening the occupational base for our Negro citizens, and on increasing the employment opportunities for skilled as well as for unskilled labor and professional work, with equal pay for equal work.

This same principle guides the administration in its relation to agriculture. It is our sincere desire, and many of our remedies have been designed with that in mind, that Negro farmers should have a better opportunity than they have had in the past. Under this administration, through the Farm Credit Administration, they have received credit on the same basis as others. I am informed that the Federal land banks consider Negroes among their best risks. It is the active hope of all of us that the evils of the share-cropper system shall be overcome and that as quickly as possible, through our land-use and rural resettlement programs, Negroes, along with thousands of other citizens, will be established as happy, self-respecting citizens on small, producing farms.

One of the most far-reaching enterprises of the Federal Government, and one from which Negroes will receive large benefits, is the slum-clearance program of the Public Works Administration. Hundreds of families soon will be taken from the slums of our cities and be given a better chance in life through the decent living conditions that will be made available to them.

Mention also should be made of the Social Security Act of the Roosevelt administration which carries provisions for old-age pensions, maternal and child-welfare benefits, unemployment insurance, aid for dependent and physically handicapped children, and aid to the blind. In view of the Negro's out-of-focus relationship to the social order and of his present economic status, these provisions are of particular significance to him.

There is no longer any question about the native ability of the Negro. Abundant proof exists that he is capable of performing all the functions required of a citizen in a democracy. But this capacity must be developed by the training of his intelligence through education. The fullest possible as well as the most modern education that he is able to absorb and use must no longer be denied him.

As the welfare of the people is more and more dependent upon the kind of Government we have and the way it works, it becomes increasingly important for the Government to have in its service the best talent that is available and to insist that that talent make the best possible use of the country's resources, both natural and human. And our resources will not be put to their best use unless it is in the direction of achieving the greatest good for the greatest number of our citizens, regardless of race or creed or color. Nor can this be done unless we remember always that, regardless of diversity of religion, or customs, or origin or race, we are one people under one flag.

EVIDENCES OF RECOVERY

Mr. HAYDEN. Mr. President, I wish to add a memorandum on the Evidences of Recovery which has been prepared at my direction:

EVIDENCES OF RECOVERY

Current fiscal reports of business, finance, and industry, together with various other indexes, reflect impressive gains when compared with similar reports of conditions as they existed in 1933. Recovery, according to the testimony of these figures, has been achieved in a marked degree.

As a point of beginning in the proof of this assertion, let us indulge in a comparison of the national income for 1933, with that of 1936. In 1933 the national income was $41,900,000,000, while it is estimated that the income figures for 1936 will be in excess of $60,000,000,000. This will provide an increase of 43 percent. These data are based upon estimates of the Bureau of Foreign and Domestic Commerce.

Bank deposits, which may be accepted as reliable barometers of conditions, show that on June 30, 1933, deposits in commercial banks, adjusted to eliminate interbank and Government deposits, totaled $27,000,000,000, while on December 31, 1935, such deposits had increased to $37,000,000,000, a gain of 37 percent.

The production of passenger automobiles and trucks, which had dwindled in 1933 to 1,900,000 units, increased 110 percent to 4,000,000 cars in 1935, and consequently produced an appreciable rise in the market value of the principal automotive securities.

Residential construction, which is a key industry and an economic weather vane, had fallen to $249,000,000 in 1933. With the impetus of restored confidence, Governmental financial assistance and insurance of private capital, this increased 90 percent in 1935 to a total construction valued at $479,000,000. Contracts awarded for residential construction during the first quarter of 1936 are 75 percent higher than those of the like period of 1935 and 210 percent greater than for the first three months of 1933.

While these gains were being made in private activities, the Government revenues also rapidly rose. During the last calendar year of the immediately previous administration the Federal revenues declined to $1,880,000,000. In 1935 Federal Government receipts were $3,856,000,000, a net increase of 105 percent.

As an evidence of recovery, take steel, for instance. A dispatch from Buffalo, N. Y., reports: "Buffalo steel works today are operating at 84 percent of their capacity, highest rate on record here. This increase means an output of 8,000 tons of ingots a day, enough to build a 25-story skyscraper." Though these be cold figures they signify a great chain of industrial activity, the employment of thousands of miners to dig the ore, the roar of giant

steam shovels, quarrying the limestone hills of Michigan, bustling activity in the Great Lakes ports, where the lake steamers take on their 12,000-ton cargoes, long lines of men trooping to work again in dozens of industries that depend upon steel; 14,500 men are required in Buffalo alone to handle the raw product; dozens of other plants add to their pay rolls to fill the increasing volume of orders for sheet metal, wire, metal furniture, rails, building girders, auto parts, and hundreds of other articles of manufacture. Railroad tonnage multiplies as this huge commerce moves to its destination. Employment spreads in a thousand industries, in an ever-widening circle as the stricken colossus, Steel, restored to strength by the Roosevelt recovery administration, goes back to work in earnest.

Like evidences of recovery prevail in every important field of business endeavor, but before seeking to learn how the changes have been brought about let us, at this time analyze the conditions prevailing in 1933, and survey the comprehensive program that was inaugurated to remedy these conditions.

THE PROBLEM OF RECOVERY IN 1933

The national income, which has been cited as indicative of recovery, had declined from the peak level of $80,000,000,000 in 1929 to less than $41,900,000,000 in 1933.

This meant that the purchasing power of the Nation had been cut in half, with a proportionate curtailment in demand for goods. Farm products and manufactured goods accumulated and became unsalable surpluses.

The carry-over of cotton, which was less than 3,500,000 bales in 1926, more than doubled in 1933, reaching a total of 8,000,000 bales. The unmarketable wheat carry-over, which in 1926 was 104,000,000 bushels, streaked upward in 1933 to a total of 400,000,000 bushels. The dark days of 6-cent cotton and 34½-cent wheat linger unforgettably in the memory of the American farmer. As a result of the lack of demand for agricultural products, gross farm income had declined from $11,480,000,000 in 1926 to the point where in 1933 it was $6,406,000,000.

Naturally this had its effect on industry. Just how direct an effect it was can be ascertained by a comparison of the value of manufactured products in 1929 of $70,000,000,000 with the 1933 valuation of but $31,358,000,000. Also the index of wholesale commodity prices fell off from 95 in February 1929 to 59 in February 1933, or a decline of 38 percent.

With the slackening of demand and the mounting accumulation of unmarketable surpluses in practically every line of business, commercial failures increased in bounds. In 1932, 31,822 cases of bankruptcy were noted involving liabilities of more than $928,000,000. Acute financial distress resulted.

The wholesale closing of banks, collapse of industries, and the epidemic of foreclosures on farms and homes, the staggering increase in unemployment were all byproducts of such conditions.

The imminence of national financial collapse and ensuing chaos demanded swift, drastic action. That action, it was patent, could come from but one source—the Federal Government.

PRINCIPAL RECOVERY FACTORS—THE ADVENT OF THE ROOSEVELT ADMINISTRATION

First, a bank holiday was proclaimed and these institutions closed, to be reopened only by license issued by the Secretary of the Treasury.

The Reconstruction Finance Corporation came to their assistance by authorizing investments and loans. Since March 4, 1933, including loans for depositors of closed banks, such assistance has amounted to $2,600,000,000.

To further insure stability of banks and restore the confidence of the frightened depositors, the Federal Deposit Insurance Corporation was organized. Depositors in institutions insured by the Corporation are insured against loss up to $5,000. That these steps achieved the intended result is apparent in the gains in deposits enjoyed by financial institutions as a result of the renewal of public confidence in the safety and integrity of banks.

Next in order was an assault on the forces that had paralyzed agriculture and threatened its future. To this end the Agricultural Adjustment Act was passed. Under this act rental and benefit payments in excess of $1,135,000,000 were disbursed to farmers through March 31, 1936.

The Commodity Credit Corporation advanced $550,000,000 on the security of farm products to facilitate the orderly marketing of cotton, corn, and naval stores.

The Farm Credit Administration from May 1, 1933, to March 31, 1936, closed 750,000 farm-mortgage loans for $2,000,000,000 and advanced in short-term credit and loans to cooperatives approximately $1,600,000,000.

Coincident with these helpful operations the F. C. A. reduced interest rates and scaled down mortgages before refinancing, when such a scale-down was advisable and warranted.

Following the receipt of this aid the gross farm income rallied and in 1935 totaled $8,110,000,000, which was an increase of 52 percent over 1932. Farm foreclosures in 1935 were but 44 percent of the 1933 foreclosures. This agricultural recovery has been reflected in many lines of business.

The necessity for alleviating the distressed real-estate market, in which every month many thousands were losing their homes as a result of foreclosure and the complete absence of mortgage money, was the next gigantic problem to be attacked. In 1926 there were 77,854 foreclosures as compared with 276,025 in 1932, or an increase of 254 percent. With such conditions existing it was inevitable that construction, especially residential construction, should be halted. That such was the case is evidenced by the fact that while in 1926 the value of residential construction was $2,671,000,000, the total for 1933 had shrunk to $249,000,000.

To assist in correcting this condition the Home Owners' Loan Corporation was formed. Since its inception through April 2, 1936, the Corporation had refinanced 1,004,206 mortgages, involving $3,041,000,000. These properties were classified strictly as "distressed", and were not acceptable as mortgage risks by other lending institutions. Without the aid of the H. O. L. C. they must have been inevitably lost to their owners.

In order to promote the recovery of the building trades and allied industries, as well as to release the flow of mortgage credit, the Federal Housing Administration was set up. That the F. H. A. is fulfilling its mission in the recovery program plan is apparent. Since its inception to April 30, 1936, this organization insured 1,017,638 loans made by private financial institutions for the purposes of modernizing and repairing real property. The value of these notes totaled $365,000,000. In addition, 65,586 mortgages were accepted for insurance, having a value of $265,000,000. Of these mortgages 34 percent were for new construction.

The uptrend in real estate and construction apparent today may be attributed directly to the influence of the Government upon the mortgage business. That this influence is as pronounced as it is helpful is seen in the total for residential construction for the first quarter of 1936 which is 210 percent higher than it was for the first quarter of 1933.

Direct relief for the destitute prior to 1932 was viewed as being the responsibility of State, local, and private agencies. But with the tremendous growth of unemployment engendered by the curtailment of production, the failure of plants, and the lack of finances for new enterprises from 1929 to 1933 the burden became too great for the resources of these agencies. Again it was a problem that was up to the Government.

In order to provide direct and work relief and for public works, Congress made available $10,849,000,000. This figure is in accordance with the daily statement of the United States Treasury for May 15. Expenditures from these funds, as of the same date, have amounted to $8,459,000,000.

The hopeless outlook confronting the young men in 1933 in their vain search for employment was conducive to crime and demoralization.

Emergency conservation work, popularly known as the Civilian Conservation Corps, was put into immediate operation in April 1933 to relieve such acute conditions of distress and unemployment.

Peak employment provided by the C. C. C. reached 544,000, and through March 31, 1936, it is estimated that 1,475,000 men have been enrolled. The work accomplishments of the Civilian Conservation Corps through March 31, 1936, are valued at approximately $579,000,000.

The popularity and work accomplishments of this agency are sufficient testimony that C. C. C. is thoroughly performing its task and carrying on the work for which it was organized.

The Federal Emergency Administration of Public Works, better known as the P. W. A., has expended approximately $1,000,000,000 for the construction of schools and other public buildings. Other major disbursements from the funds allotted this agency are $620,000,000 for streets and highways; $335,000,000 for sewer projects; $387,000,000 for reclamation, water power, and flood control; $314,000,000 for bridges and other engineering structures.

In addition to providing relief and employment these expenditures have enabled factories engaged in the production of materials to continue in profitable operation and increase production and employment. It is estimated that approximately 60 percent of the P. W. A. funds expended to date have been for material purchases.

The restoration of purchasing power through relief payments, public works, and loans financed by Federal Government borrowings is directly responsible for the favorable trends of business and employment. As a result of these policies, factory employment was 43 percent higher in March 1936 than in March 1933 and factory pay rolls 104 percent higher.

Steel ingot production for March 1936 exceeded that of March 1933 by 273 percent.

The Federal Reserve Board Index of Industrial Production for March 1936 was 62 percent above that of March 1933. Department store sales in March 1936 furnish still another evidence of recovery, being 54 percent greater than sales in March 1933.

RECOVERY

But at what cost has this admitted recovery been achieved?

According to the daily statement of the United States Treasury for May 15, 1936, expenditures for recovery and relief from June 30, 1933, to May 15, 1936, were $11,466,000,000 and were incurred for the following purposes:

Agricultural aid	$1,978,000,000
Relief	5,138,000,000
Public works	3,321,000,000
Aid to home owners	481,000,000
Others	548,000,000

Recovery and relief expenditures of $11,466,000,000 (as classified by the United States Treasury) can be compared with the increase in the national debt of $10,524,000,000. The obvious and correct conclusion is that the increase in the national debt is almost entirely chargeable to the emergency expenditures of the Federal Government.

There are, however, additional factors that must be considered in order to obtain the complete and accurate picture of the costs of recovery.

The first is the Federal Government's contingent liabilities, which were, as of February 29, 1936, $4,658,000,000; but it must be considered that while these liabilities are guaranteed by the Government, they are likewise well secured by mortgages and further by the assets of the Government agencies. It is doubtful and debatable if there will be ultimately any loss on these accounts.

Then, too, there are two important assets which must enter into the analysis of the costs of recovery and the net increase of the national debt brought about by the recovery program. The first of these is the increase in the Treasury cash—that is, as the Secretary of the Treasury has aptly phrased it, "the increase in cash in the Government's cash register from $221,000,000 of March 4, 1932, to $2,866,000,000 on March 31, 1936." More graphically stated, there are now $13 in the Treasury till for every $1 that was there prior to the assumption of control by the present administration.

The second offset is the gain in recoverable assets, accumulated over the same period.

The Government has an interest in certain agencies and corporations, some of which it owns entirely and others in part. From March 4, 1933, to March 31, 1936, the gain in value of such ownership is estimated to be approximately $2,044,000,000.

If these are deducted from the increase in the gross public debt, it will be seen that despite what have been termed "tremendous outlays of Government cash", there has actually been a net increase in the debt of but $5,858,000,000.

A further profit that should enter into the consideration is that which was derived from the reduction of the gold weight of the dollar. This is known as the gold stabilization fund and amounts to $1,800,000,000. Since these funds have been assigned for a specific purpose, no such deduction has been attempted.

While the debt has increased 50 percent, the Government, by sound refinancing, has managed to effect a sizable reduction in interest rates on Government loans so that interest charges have only increased by less than 9 percent from March 4, 1933, to March 31, 1936. This constitutes a charge of approximately one one-thousandth of the current national income. In other words, of every thousand dollars of the present national income, only $1 has to be absorbed to take care of the increase in interest.

In conclusion, the question, Has the cost of relief and recovery impaired the national credit? should be answered.

No better reply can be made than to cite the present status of Government securities. Whereas in 1932 Government bonds reached the low level of $91 and had a yield greatly in excess of today's, nevertheless, as of April 1936, the average price of Government bonds was $107.

You may reach your own conclusions. I have mine—this Government, of the people and by the people, has been restored to the people and will go forwar,d under the leadership of President Franklin D. Roosevelt.

PROSPERITY REGAINED

Mr. HAYDEN. Mr. President, under the authority to print an editorial, I offer one from the National Young Democrat entitled "Prosperity Regained" and the statistics which were printed to accompany the editorial.

[From the National Young Democrat]

PROSPERITY REGAINED

Due appreciation of possession is more fully realized after loss.

Prosperity is essential to all. It means increased dividends to the businessman, better prices to the farmers, higher wages to the laborer, and a job at a living wage to others.

The wealth of a nation is measured by the prosperity of its citizens, provided that prosperity is true. The privileged few may enjoy prosperity at the expense of the great majority. This is false prosperity that bodes disaster for all.

False prosperity during recent Republican administrations lured the Nation to the brink of disaster. The money changers ruled supreme. Businessmen were told by the Republican leaders that a new day had arrived. They were led to believe all would continue well. Like all things built upon a false foundation, that so-called prosperity crashed in 1929.

Business structures crumbled under Hoover's administration. Banks failed, and life savings were lost. The price of farm products slumped. Wages of labor were slashed. Millions stalked the streets in idleness and faced starvation. The Nation refused to listen longer to the siren song of prosperity just around the corner.

A new leader assumed control of the distressed Nation on March 4, 1933. He was Franklin Delano Roosevelt. He promised to chase the money changers from the temple; to seek justice for all and give special privilege to none, and to promote the greatest good for the greatest number. He offered the American people a new deal.

There was sincerity and understanding in the voice of this leader. Confidence and hope were inspired. The people recognized Roosevelt as a great humanitarian; one in whom they could place trust. A new day dawned.

The President faced the difficult task of regaining something that had been lost to the Nation—a true prosperity. He set about to bring order out of chaos. Under his leadership, banks were reopened and currency stabilized. Wheels of business started turning again. Fair wages and shorter hours became a reality for labor. Business showed profits instead of losses. Prices of farm products increased and agriculture was revitalized. Thousands returned to jobs at better wages.

The American people have drawn a winning hand under the New Deal. Business has been rescued from bankruptcy. Homes and farms have been saved for the owners. Youth has been given new hope for the future. The feeble and aged have been assured comfort during their remaining days. Ambition has been revitalized in a once-disillusioned Nation.

The American people will not turn back. After a great battle the victorious general realines his battle front and concentrates his gains. He makes ready for the counterattack and to continue his drive forward. President Roosevelt has been the great general in the war against the depression. He has restored prosperity. The people have retained confidence in his leadership. They stand ready to follow him in the fight for justice, equality, and continued prosperity.

It is beyond conception to think the people will endanger the hard-won gains by placing trust in the false prophets who once betrayed them. The battle cry of the Nation shall be:

Forward with Roosevelt—prosperty regained must be sustained.

PROSPERITY REGAINED—PROOF OF IT

THE NATION'S WEALTH AND INCOME

THE EXECUTIVE IN OUR GOVERNMENT

Mr. HAYDEN. Mr. President, under leave to print, granted me by the Senate under date of June 18, I desire to insert in the RECORD a speech to be delivered by Emil Hurja, of the Democratic National Committee, at Ely, Minn., on June 21, 1936, entitled "The Executive in Our Government."

It has never been my privilege to visit Ely before, and I am happy to come here, especially upon an occasion so reminiscent of my own childhood in the neighboring State of Michigan. Midsummer day is still, as it was then, a high time of the year for me. I have been happy in meeting so many old friends here, friends of my own youth and friends of my father and mother.

My visit here by chance comes at a critical time in our own national picture. The day I left Washington the Republican Party had completed the nomination of its Presidential and Vice-Presidential candidates. Tomorrow in Philadelphia the party of which I am proud to have been a member ever since I was old enough to vote opens its convention to restate its aims and renew its faith in its battle for human freedom under the banner of a great and liberal leader, President Franklin D. Roosevelt.

I wonder often if, in the welter of political claims and counterclaims, of oratory and ballyhoo, of all the manifestations of our recurring political field day that comes upon us every 4 years, we ever stop to think and consider how close really to the average man and woman is the office of President of the United States. To those who live remotely from the seat of government, he seems far, far away. To the lowliest voter in the most remote county, he seems indeed as far away and inaccessible as the moon and stars. But the tie is there, nevertheless. The Presidency is the people's office. It belongs to them. They all vote for him. In fact, there is no other office than that of President for which all the people of every State and every county and every township cast their vote; and if we were to go into the matter a little more thoroughly, we would find that in American history the executive branch of the Government is in truth the most effective representative that the average man and average woman have. If you read your history closely, I am confident it will reveal that to you. It was true of Jefferson; it was true of Lincoln; it was true of Cleveland; and it was true of Theodore Roosevelt, that great exponent of progressive thought whose memory will remain fresh a long, long time in this great Northwest. I was reading the other day of an incident that happened to President Woodrow Wilson at a time when he was president of Princeton University. He was traveling westward in a train, and between Harrisburg and Pittsburgh he entered into conversation in the smoking car with a couple of United States Senators. The Senators began to criticize Theodore Roosevelt, who was President at that time. "Dr. Wilson", one of them remarked to him, "one of the great mistakes ever made was when the founders of our Government placed in the Constitution the provision allowing the President to send messages to Congress. That man Roosevelt proposes things we don't want and then sends in messages so that we hear from our constituents and have to pass the measures because the people want them." Mr. Wilson calmly replied: "Isn't that what you are there for?" Theodore Roosevelt was the medium through which the popular will of his time found expression in government. Woodrow Wilson was the medium through which the popular will of his time found expression, and today President Franklin D. Roosevelt is the medium through which the popular will of today, the conviction and hope of the average man and average woman, has found expression in progressive and liberal legislation.

Today virtually the only means through which the common man can give voice to his aims and aspirations for political purposes in the larger and national sense is through his vote for the President. And when selected by the ballots of a free people, the President owes no responsibility to the Congress—in fact, to no one save the people themselves.

When you stop to consider that the Senators and Congressmen are selected by the votes of their own constituencies, and represent those constituencies, you can realize that often this representation is localized and confined to their own especial needs. For this reason the truly national character of representation is lacking in the Congress, and the people as a mass must look to the national leadership of the President. Independent and thoughtful representation, as a rule, grows less effective as the size of the constituency is reduced. The smaller the constituency, the more selfish the viewpoint has become almost politically axiomatic.

And today, my friends, you will find criticism of the policies of President Roosevelt predicated by many of his hostile opponents on just such a narrow and localized view. They say he is visionary; they say he is violating his constitutional authority; they declare he is breaking down the fabric of the Government by advocating legislation which they deny is for the larger national interest and the well-being of the country's citizens. How utterly idle are such criticisms!

When President Theodore Roosevelt retired from his tenure as President, and wrote down his thoughts into his autobiography, he revealed to the world that the critics of his day put him on the pillory for just exactly the same things that President Franklin D. Roosevelt's critics today are endeavoring to besmirch his administration. I would like to read you an extract or two from this autobiography. "In theory," President Theodore Roosevelt said, "the Executive has nothing to do with legislation. In practice, as things now are, the Executive is, or ought to be, peculiarly representative of the people as a whole. As often as not, the Executive offers the only means by which the people can get legislation they demand and ought to have. Therefore * * * a good Executive must * * * perform his executive duties with an eye single to public welfare." There are his words, written down in his memoirs for all the world to see. What revealing words!

"With an eye single to the public welfare." That is word for word what President Franklin D. Roosevelt might write today to answer the poison pens of his critics, and the defamers of the Roosevelt administration. I shall try to develop this thought a little later on, to show you exactly what has been done in the public welfare during the administration of President Roosevelt in a little more than 3 years, but now I would like to quote you a few more passages from the autobiography of Theodore Roosevelt. Here's what he said: "* * * In the desire to serve the plain people it was my theory that the Executive power was limited only by specific restrictions and prohibitions appearing in the Constitution. My view was," President Roosevelt—Theodore Roosevelt—continued, "that every executive officer in high position was a steward of the people bound actively and affirmatively to do all he could for the people and not to content himself with the negative spirit of keeping his talents undamaged in a napkin. * * * I did not usurp power, but I did greatly broaden the base of Executive power. In other words, I acted for the public welfare. I acted for the common well-being of all our people, whenever and in whatever manner was necessary."

That's what Theodore Roosevelt said, and if we put those very words in the mouth of President Franklin D. Roosevelt they would be as fitting and complete an answer to the critics and baiters of today as they were 30 years ago, when T. R. was being assailed.

Now, public memories are generally said to be short, but I feel certain that there are many among you who can never forget the serious and tragic days of late 1932 and early 1933 when we were experiencing the fruits of 12 long years of rapacious plunder in government, with the very Government itself engaging in the reckless exploitation of the people.

I have only to refer to the banking situation to give you the contrast between then and now. Let's go back to 1927 or thereabouts and take the case of a small bank in northern Michigan, northern Wisconsin, or northern Minnesota. The banks had loaned out their savings deposits in good, sound mortgages on farms or other improved property, and kept their other deposits in what a bank

examiner would call a quick asset, or an investment on which money could be realized quickly. Now a small-town banker likes to have a good New York or Chicago connection. So he makes arrangements with the big-city bank to be their correspondent and speaks proudly to his clients that he is the local representative of the so-and-so bank in New York. By and by, and mind you, he is a good banker in the professional acceptance of the term, he gets a call from the New York bank, not from the bank itself but from its security affiliate.

"You've got $50,000 on deposit with us. Why don't you put some of that into good sound bonds, instead of carrying it all in cash? We've got some bonds that we are interested in; we've investigated them, and the company's all right." The New York banker fails to tell his country-banker cousin that they get 6- to 15-percent commission in selling the bonds, but as the bonds are listed in the stock exchange and the daily papers always carry the prices at which they sold the day before, it is easy for the bank examiners to find out what they are worth. At any rate, the country bank buys $40,000 worth of bonds from his high-toned New York banker. And then when the New York bank has sold its bonds they quit paying any attention to its actions on the stock exchanges. The result is that when the bonds sink to 60 cents on the dollar, the assets of the bank are reduced by $16,000. The next time the examiner comes along, he says to the banker: "Mr. Smith, your assets are slightly impaired, I suggest that you call in your loans to your local businessmen and don't make any more real-estate loans." "No," he says, "don't extend credit to anyone. Pull in your horns, the banks have to stay liquid." And that is the way the vicious circle of the financial wizardry of the Hoover administration got started, growing day by day into a whirlpool that sucked away the savings of hundreds and thousands of people, and brought down upon the thrifty, saving, honest people of this country one of the blackest periods in its history. Banks closed, not because of money that the country banker loaned to Tom, Dick, or Harry in his home town, but because of the depreciation in the bond account, bonds that his city-slicker big banker had sold him. Now, many of the mortgages that the banker had arranged were in turn sold to insurance companies, who had learned by a study of the records that most people were honest and if given credit, would pay it off. So that when the whirlpool set in, it threatened to sweep before it not only the banks, the savings accounts, the building and loan associations but the insurance companies as well.

Another important development of the late days of the Hoover administration which in these days of improved business may pass unnoticed was the collapse of the credit of municipal governments all over this whole land of ours. City after city was on a scrip basis, unable to pay its peace officers, its teachers, or even its sanitary officers. Why? Because they were unable to collect taxes from the home owners. The average man with even a small modest home was so hard pressed he had to pass on the other side of the street when he saw the tax collector coming.

When the Home Owners' Loan Corporation the other day announced that it had finished its job of saving 1,000,000 homes from foreclosure, one of its most important achievements was the releasing of over $225,000,000 for taxes for cities of this country. The average city in the United States—and that goes for the biggest of them—couldn't buy a fire truck on credit in late 1933, so depressed was the status of municipal credit at that time.

And please remember that when a city cannot collect its taxes its credit is gone; and when a city's credit is gone its bonds find few buyers in the world's financial markets. Insurance companies, trust funds, and banks are the biggest buyers of and holders of municipal bonds, and because of the wholesale collapse of municipal credit in the United States the very existence of many institutions of this character was threatened.

Now, that was the story, that was the picture, when Franklin D. Roosevelt became President. No President ever took office under worse conditions. The sky was dark and utter collapse of the country threatened.

President Roosevelt acted quickly. He formulated a program. The patient was in pretty serious condition and something had to be done at once, not next day or next week or next month, but right now. I don't have to tell you how the American people responded to the quick, vigorous program of President Roosevelt; and when the year was up what had been accomplished—accomplished just in the realm of the banking interests—the private bailiwick of the same interests that today are crying to the skies that Roosevelt is undermining the Constitution with his legislative recommendations and Executive acts. That's a fair question: What had been accomplished?

First of all, he broadened the activities of the Home Owners' Loan Board, and instantly the distressed home owner who couldn't get a renewel of his loan anywhere, bank or insurance company, was taken care of. This Home Owners' Loan Corporation then set out to help the banks that had closed—to free money with which to pay the depositors. They set out to give banks much-needed cash, and they gave the insurance companies the same kind of relief. Then the Government widened the powers of the Reconstruction Finance Corporation, so that the frozen assets of the banks could be thawed out and the banks provided with funds with which to go about their business. These two organizations—the Home Owners' Loan Corporation and the Reconstruction Finance Corporation—did a lion's share of the early relief to bank depositors and to building and loan associations. They gave the first impetus to the recovery, not of business alone but recovery of that more important thing—the confidence of the people. Things weren't as black as they had been. President Roosevelt had brought a little light into what surely has been a dark and dismal situation.

Then, under President Roosevelt's personal direction, the legislative branch of the Government set out to correct the evils that existed, so that there wouldn't be a recurrence of the conditions that brought about this black page in the financial history of the country. The first was a securities-exchange bill which provided for regulation of exchanges and also for the registration of all securities that any company, or even country, could issue and market to American investors. This same bill also, if I remember correctly, severed the security affiliates from the banks, so that no longer would the banker's private selling organization be given confidential information. The security affiliate could no longer profit on the country banker by knowing how much money he had in the New York vaults, and in any event the full facts had to be available to all on whatever security or bond was offered.

That was a vital improvement. Then the Democratic Congress passed a bill providing for the guaranty of all deposits below $5,000. That was a needed corrective to the lack of confidence in banks and bankers, and the people responded to it. Other improvements were made in the banking laws and the laws governing the Federal Reserve Board, so that today we have a better banking system and more confidence in it on the part of the mass of people than at any time in our history. And bank deposits today are larger in the United States than at any time in our whole history. What has done it? Recovery of business and recovery of confidence on the part of the people.

And now today, subjected to the villification and abuse of self-centered and selfish groups, what can President Franklin D. Roosevelt say in justification of his program. I would like to supply the words. And I would take these words: "I acted for the common well-being of all our people, whenever and in whatever manner was necessary." They are an adequate answer, and these words, these very words, mind you, come from the pen of Theodore Roosevelt, when his acts as President were being applauded by the masses and when he was under constant attack of the selfish groups that today are leading the attack with the confidence that comes of a full stomach.

You hear today and you will hear more in the coming 4 months of the "crisis" that impends for the big manufacturing companies if President Roosevelt is reelected. "What will become of us", they cry. Let us look at the record of what became of the steel industry, for example, in the period between 1933, when the Republican Party had left us with inheritance of despair, and 1935, when the Democratic Party had had 2 years in which to make a start on its recovery program. Let us look at the record of steel, of several companies in that business, to see what the years brought forth. You in this section are interested in steel, for during the past two to four generations your men have given of their brawn, their spirit, and their very lives to bring forth from the earth the raw material from which steel is made.

In 1933 the United States Steel Corporation was over thirty-six and a half million dollars in the red. In 1935 United States Steel Corporation earned net over a million dollars. What's the difference between 1933 and 1935? Just this—a little over thirty-seven and a half million dollars better business.

For the Bethlehem Steel Corporation the difference between the losses of 1933 and the profits of 1935 was $13,000,000. For the National Steel Corporation the difference between the "prosperity" of Hoover and the "depression" of Roosevelt was $8,000,000 better business. And it's the same story for every company in the steel business and for other lines of business as well.

I am confident that the thinking residents of Minnesota, the liberal-minded citizen who has stood shoulder to shoulder with the policies and program of President Franklin D. Roosevelt during the past 3½ years, will stand by him on November 3. I am confident that, despite mistakes and delays which have occurred, his program will go on, and go on with the full and loyal support of Minnesota's enlightened electorate.

INDUSTRIAL DEMOCRACY IN STEEL

Mr. HAYDEN. Mr. President, under the authority granted by the Senate on June 18, 1936, I insert an address to be delivered by Mr. John L. Lewis, July 6, 1936, entitled "Industrial Democracy in Steel", as follows:

I salute the hosts of labor who listen. I greet my fellow Americans. My voice tonight will be the voice of millions of men and of women employed in America's industries, heretofore unorganized, economically exploited, and inarticulate. I speak for the committee for industrial organization, which has honored me with its chairmanship and with which is associated 12 great national and international unions. These unions have a membership in excess of 1,000,000 persons, who to a greater or lesser degree enjoy the privileges of self-organization and collective bargaining. They reflect adequately the sentiment, hopes, and aspirations of those 30,000,000 additional Americans employed in the complex processes of our domestic economy who heretofore have been denied by industry and finance the privilege of collective organization and collective participation in the arbitrary fixation of their economic status. Let him doubt who will that tonight I portray the ceaseless yearning of their hearts and the ambitions of their minds. Let him who will, be he economic tyrant or sordid mercenary, pit his strength against this mighty upsurge of human sentiment now being crystallized in the hearts of 30,000,000 of workers who clamor for the establishment of industrial democracy

and for participation in its tangible fruits. He is a madman or a fool who believes that this river of human sentiment, flowing as it does from the hearts of these 30,000,000, who with their dependents constitute two-thirds of the population of the United States of America, can be dammed or impounded by the erection of arbitrary barriers of restraint. Such barriers, whether they be instrumentalities of corporate control, financial intrigue, or judicial interdict, will burst asunder and inevitably destroy the pernicious forces which attempt to create them.

I salute the members of my own union as they listen tonight in every mining community on this continent. From the Warrior River in the Southland up through the great Appalachian Range to the island of Cape Breton, they listen. Across our parched midwestern plains to the slopes of the Rockies and the Cascades, and to the far province of Saskatchewan, they are at attention. To them, whose servant I am, I express my pride in their courage and loyalty. They are the household troops of the great movement for industrial democracy, and from their collective sentiment and crystallized power I derive my strength. In their daily calling the mine workers toil with the specter death ever at their side, and the women of the mining camps share their Spartan fortitude. Enduring hardship, inured to danger, contemptuous of death, breathing the air of freedom, is there anyone who believes that the men of the mines will flinch in the face of the battle for industrial democracy which now impends in America?

The American Iron and Steel Institute last week published a full-page advertisement in 375 newspapers, at an estimated cost of one-half million dollars. Its purpose was to justify the outmoded labor policy of the institute and to announce the determination of the steel corporations to oppose the campaign now in progress for the organization of the workers in the iron and steel industry. That statement is sinister in its implications; it is designed to be terrifying to the minds of those who fail to accept the theory that the financial interests behind the steel corporations shall be regarded as the omnipresent overlord of industrial America. That statement amounts to a declaration of industrial and civil war. It contravenes the law! It pledges the vast resources of the industry against the right of its workers to engage in self-organization or modern collective bargaining. The announcement has fallen short of its purpose. The bolt has missed the target. Its impact upon the public is best exemplified by a statement published on July 4 from the facile pen of Mr. Walter Lippmann, famed commentator and interpreter of public events, which appeared in the columns of a New York newspaper friendly to the policies of the steel empire. Mr. Lippmann says, in part, as follows:

"There is a growing conviction that the steel industry is a conspicuous example of how free competition and independent management have been suppressed by private regimentation. Certainly it would be no exaggeration to say that the price structure of the steel industry during the depression has exhibited all the obvious symptoms of some sort of centralized control; that steel prices, as evidenced by their remarkable rigidity and their notable similarity, have not behaved as one would expect them to behave if supply and demand were allowed to operate in a free market. And now, on top of this, we find the American Iron and Steel Institute undertaking to formulate a labor policy for all the allegedly independent and competing steel plants of the country, announcing from a central point how all the managers of all these enterprises will deal with their employees."

The conservative Washington Post, published by Mr. Eugene Meyer, on July 5 editorially said, in part, as follows:

"Before the present tension increases, therefore, it would be well for the steel industry to realize that the public is vitally interested in the apparent intention to dictate exactly what form of organization its employees may be allowed."

The American Iron and Steel Institute boasts that it includes 95 percent of the steel production of the country and represents an associate corporate investment of $5,000,000,000. This gigantic financial and industrial combination announces that its members are ready to employ their resources to the full to prevent the independent organization of their employees. It contravenes the law!

It may be admitted that the corporations associated in this institute speak with one voice. In the so-called competitive bidding of these combinations on Government contracts, it has repeatedly appeared that prices submitted were uniform even to the third decimal. The press has stated that the rejection of bids and readvertising brought the same unanimity on submitted prices. And now the institute has undertaken to voice for its members a common policy in dealing with all the workers in this industry. It is idle to moralize over the abstract relations between an employer and his employee. This is an issue between an industry clearly organized on its management side and the 500,000 men upon whose toil the whole structure depends. The question is whether these men shall have freedom of organization for the purpose of protecting their interest in this colossal economic organism.

The institute says that it favors the right of organization among its employees without coercion from any source. What coercion can the representatives of organized labor exert upon the workers in these plants and what appeal can they make to them except the appeal that they bring themselves within the organized labor movement for their own protection and for the common good of those who toil? The institute does not propose to meet that argument; it does not propose to trust in the independent action of the steel workers; it does not intend to grant them the free liberty of organization. Interference and coercion of employees trying to organize, come from the economic advantages held by the employer. In the steel industry it is manifested in an elaborate system of spies, and in a studied discharge of those who advocate any form of organization displeasing to the management. It is shown by confining all yearning for organization to make-believe company unions, controlled and dominated by the management itself. This coercion is finally shown in the implied threat of a blacklist which attends the announcement of a joint and common policy for all the steel corporations of this country.

Why shouldn't organized labor throw its influence into this unequal situation? What chance have the steel workers to form a free and independent organization without the aid of organized labor? What opportunity will they have to bargain collectively through representatives of their own choosing except by the formation of an organization free from management control?

These company unions are pious pretexts for denying the steel workers the right of organization. Their constitutions and by-laws are drawn by lawyers for the company. No changes can be made without the company approval. The officials are selected under company supervision. No method of independent wage negotiation is provided. No wage contracts have in fact been made between the companies and their employees under the company union plan.

The statement of the institute is an open warning to representatives of recognized and firmly established labor unions that if by any legal and peaceful methods—public meetings, personal solicitations, or otherwise—they are so bold as to attempt to persuade steel workers to become members of recognized, standard labor unions, the brutal and ruthless forces of the steel oligarchy will be unloosed against them. From bitter experience we know what this means. It means that meetings of steel employes will be disrupted by thugs and hoodlums employed by the steel corporations; that the organizers themselves will be brutally beaten; that the police and judicial authorities of steel manufacturing communities, who are designated and dominated by the steel companies, will be used to arrest labor-union organizers, to imprison them on false charges, to maltreat them cruelly while imprisoned, and in many cases forcibly to drive them from the community.

Moreover, it is to be emphasized that when the pronouncement of the Steel Institute states it fears industrial strife and dislocations may develop, it really means that as the organizing campaign of our committee is meeting with success, the steel corporations themselves, through their private legions of armed guards, despicable undercover spies, and agents provocateurs will deliberately provoke strife and bloodshed, and attempt to place the blame for its occurrence upon the representatives of legitimate labor.

In this connection I wish to add with all earnestness at my command that if any strike, violence, or bloodshed occurs as a result of the present effort of our committee to organize the steel workers it will not arise from our organizers or their activities. We shall pursue our purpose relentlessly but legally and peacefully.

I wish also solemnly to warn those who represent the steel industry that their unlawful, ruthless tactics of former years will not be tolerated by our committee. This organization drive in the steel industry will be conducted in full, open gaze of the public; or, in other words, through the radio and the press, the public will be continuously informed.

We have also taken measures to protect our people. We shall also bring to justice anyone in the steel industry who is guilty of lawlessness. This does not mean merely the subordinate officials of the steel corporations, their armed guards, or other hirelings or mercenaries. It means that we shall hold to accountability those who are really responsible—bankers, directors, and officials of the steel corporations—those who really formulate policies and methods—from J. P. Morgan & Co., which controls the United States Steel Corporation, down through other bankers, directors, and officials of less powerful but important steel corporations, to the lowest member of the hierarchy.

The statement of the steel industry calls attention to the fact that under their company-union plans no dues are required from employees. The company pays all of the expenses of these miserable subterfuges. They pay these expenses to secure an advantage over their employees. The cost of maintaining a company union is trifling compared to the savings it affords in pay rolls. These companies assert a determination to see that their employees belong to no labor union which maintains itself by dues. Smug in their own control over all the labor within their plants, they profess to see nothing but a racket in any independent, autonomous, self-supported organization of their workers. The stake involved is not the small contribution that may be made by the employees to the union but in the pay rolls, where, on any basis of fair bargaining, millions would be added to the wage envelopes of the workers. This is the stake—this and the right of labor to have a voice in the fixation of its hours and working conditions, and to enter into a state of economic and civil freedom befitting men who perform the labor in this great industry.

Although the industry has produced thousands of millionaires and hundreds of multimillionaires among bankers, promoters, so-called financiers, and steel executives, it has never throughout the past 35 years paid a bare subsistence wage, not to mention a living wage, to the great mass of its workers.

The industry has constantly sought to give the impression that it pays exceptionally high wages, and so far reaching and efficient are its means of publicity that this idea is widely accepted.

Actually there is no basis for this belief. When comparisons are made between the earnings of workers in the steel industry and the earnings of workers in other industries of a comparable character, the standing of the steel industry is at best no more than mediocre and at worst no less than disgraceful.

Thus, in contrast with hourly earnings of 65.6 cents in the steel industry in March 1936, bituminous coal mining in the same month was paying 79.3 cents; anthracite mining, 83.2 cents; petroleum producing, 77.5 cents; and building construction, 79.8 cents. These are all industries which, as regards severity of labor and working conditions, might be compared with the steel industry.

The wages paid its common unskilled workers is a good test of the liberality of an industry's wage policy. Put to this test, the steel industry makes an extremely bad showing. This is made clear by the fact that the steel industry, with hourly earnings of 47.9 cents in March 1936, ranks no higher than fourteenth, and in the matter of weekly earnings with $16.77, occupies twentieth place out of the possible list of 21 industries for which returns are given by the National Industrial Conference Board.

Still greater proof of the backwardness of the steel industry in its wage policy is shown by the returns of the 21 industries studied by the National Industrial Conference Board as to changes in actual and real weekly wages during the period 1923–36. In this comparison the steel industry ranks last both as to actual money wages and real wages.

On the other hand, the profits of the industry have been relatively as enormous as its wage payments have been small. Greater payments have not been made to wage and salary workers because the large monopoly earnings realized have been used to pay dividends on fictitious capital stock, to add physical values in the way of plant extensions, and to multiply the machines that displace human labor.

Under the wildest flight of imagination, what greater injury could be done to steel workers by labor unions or any other legitimate agency than is evidenced by this financial exploitation by private bankers and promoters?

By way of sharp contrast to the policy of bankers, promoters, and directors, it may be said that the Committee for Industrial Organization in organizing the steel workers is animated by no selfish motives. Its fundamental purpose is to be of service to all those who work either by head or hand in the mines, quarries, railroads, blast furnaces, and mills of the steel industry.

Our committee would bring to the steel workers economic and political freedom; a living wage to those lowest in the scale of occupations, sufficient for the support of the worker and his family in health and modest comfort, and sufficient to enable him to send his children to school; to own a home and accessories; to provide against sickness, death, and the ordinary contingencies of life. In other words, a wage sufficient for him to live as an independent American citizen with hope and assurance in the future for himself and his family. Above this basic wage, our committee believes that differentials should be paid to other workers according to skill, training hazard, and responsibility.

There is but one other fundamental motive which the Committee for Industrial Organization has for unionizing the steel industry.

It is simple and direct. It is to protect the members of our own organizations. We know, although we are now free men and women, that so long as millions of other industrial workers are without economic and political freedom, a condition exists which is a menace to our freedom.

No greater truth of present-day significance was ever stated by a President of the United States than the declaration made by President Roosevelt in his speech at Franklin Field to the effect that America was really ruled by an economic dictatorship which must be eliminated before the democratic and economic welfare of all class of our people can be fully realized.

Along with the evolution and dominance in the economic affairs of the country of large corporate units engaged in the production and distribution of raw materials and manufacturing products on a national scale, such as those corporations of the steel industry today, there has also concurrently developed a highly concentrated control over the money, banking, and credit facilities of the country. Its power, as the result of exhaustive congressional investigations, has been shown to rest in the hands of a small inner group of New York private bankers and the financiers symbolized and dominated by the New York banking house of J. P. Morgan & Co.

By acting as fiscal agents for our large national corporations this group has been able to place its own representatives on their boards of directors and to determine, as in the case of the United States Steel Corporation, their financial and operating policies. Our basic financial, manufacturing, mining, transportation, and utility interests have thus been brought under domination of this financial cabal.

In its earlier manifestations, from the beginning of the century to the World War, this financial dictatorship was named by those who vainly but gallantly fought against it—Congressman Lindbergh, the elder La Follette, President Theodore Roosevelt, Justice Brandeis, President Wilson, Senator Norris, and a score of other crusaders for democracy and humanity—as the Money Trust, or "the invisible government."

Profiteering during the World War greatly augmented the sources and power of this group. Its corporate and political control was also greatly extended by the speculative excesses of the so-called new era of 1923–29.

In his inaugural address of March 4, 1933, President Roosevelt, in reviewing essential reforms, referred to the fundamental significance of this group by the declaration that the money changers must be driven from the temple. The Banking and Currency Committee of the United States Senate, after several years of careful investigation, later reported, during the summer of 1934, that during the post-war decade this financial oligarchy had usurped the wealth stream of the Nation to its very capillaries.

An economic dictatorship has thus become firmly established in America which at the present time is focusing its efforts upon retaining the old system of finance-capitalism which was in operation before the depression and thus preventing the attainment of political and industrial democracy by the people.

Organized labor in America accepts the challenge of the omnipresent overlords of steel to fight for the prize of economic freedom and industrial democrary. The issue involves the security of every man or woman who works for a living by hand or by brain. The issue cuts across every major economic, social, and political problem now pressing with incalculable weight upon the 130,000,000 people of this Nation. It is an issue of whether the working population of this country shall have a voice in determining their destiny or whether they shall serve as indentured servants for a financial and economic dictatorship which would shamelessly exploit our natural resources and debase the soul and destroy the pride of a free people. On such an issue there can be no compromise for labor or for a thoughtful citizenship. I call upon the workers in the iron and steel industry who are listening to me tonight to throw off their shackles of servitude and join the union of their industry. I call upon the workers in the textile, lumber, rubber, automotive, and other unorganized industries to join with their comrades in the steel industry and forge for themselves the modern instruments of labor wherewith to demand and secure participation in the increased wealth and increased productive efficiency of modern industrial America. The more than a million members of the 12 great national and international unions associated with the Committee for Industrial Organization will counsel you and aid you in your individual and collective efforts to establish yourselves as free men and women in every economic, social, and political sense. I unhesitatingly place the values represented by 30,000,000 human beings engaged in industry and their 60,000,000 dependents as being above and superior in every moral consideration to the five billions of inanimate dollars represented by the resources of the American Iron and Steel Institute or to the additional billions of inanimate dollars that perforce may be allied with the empire of steel in the impending struggle which the institute, in the brutality of its arrogance, seeks to make inevitable.

AGRICULTURE AND THE TRADE AGREEMENTS PROGRAM

Mr. HAYDEN. Mr. President, under the authority granted by the Senate on June 18, 1936, I insert an address by Mr. Lynn R. Edminster, Chief Economic Analyst, Trade Agreements Division, before the Twelfth Annual Session of the American Institute of Cooperation, at University of Illinois, Urbana, Ill., June 18, 1936, as follows:

I am grateful to the American Institute of Cooperation for this opportunity to meet with you here in the heart of the great Corn Belt and to discuss the trade-agreements program as it affects the interests of American farmers. It so happens that this meeting is being held within a short radius of the Illinois farm where my own boyhood was spent, in a locality where still reside some of my closest relatives and a host of friends of childhood days. In coming here to speak on a matter that so intimately concerns agriculture, I am sure, therefore, that I am returning to a region where I can feel at home and among friends; and I am likewise confident that those who may not find it possible to agree with all that I shall have to say will nevertheless appreciate that my interest in the problems of agriculture springs from the grass roots and not from the story books.

The phase of the agricultural problem that I am here to discuss is that relating to foreign trade. On this question of international trade in its relation to American agriculture there would appear to be, broadly speaking, three main schools of thought.

First, there are the isolationists, the people who would simply have us abandon international trade. Of these there are several varieties, but the general refrain is the same for all. As applied to agriculture, what they say, in effect, is that we must take steps as rapidly as possible to rid ourselves of all dependence upon foreign countries as sources of supply of agricultural products and as markets for our farm surpluses. They would accordingly have us concentrate our efforts upon development of a home market which would be supplied exclusively from domestic sources and which would constitute practically the sole outlet for our farm output. If any agricultural foreign trade survived, it would be only that which was incidental or unavoidable.

Typical of this point of view is the "buy American" campaign. However patriotic the slogan "Buy American" may sound, it is obvious that those who sponsor it are, wittingly or unwittingly, opposed to foreign trade, since in order to sell to foreign countries it is necessary to buy from them. When these great self-sacrificing patriots ask us to buy American, they mean that we should deliberately refrain from buying products of other countries that we might otherwise buy. Of course, to the extent that we do this, we must expect to sell less to foreigners. Buy American is just

another way of saying: "Don't sell abroad; if you can't sell profitably at home, don't sell at all; just whistle."

Similar in general tenor, but more directly related to agriculture, is the agitation that has developed for abandonment of attempts to restore foreign markets for our exportable farm surpluses and for concentration instead upon an ambitious program looking toward a vast increase in domestic industrial uses of farm products. The assumption back of this agitation is that not only the farmers but the country as a whole can thus be freed from what is claimed to be an intolerable bondage imposed by dependence upon foreign markets and foreign sources of supply. Now, let me say right here, lest I be misunderstood, that I am not suggesting that all those currently engaged in efforts to find increased industrial outlets for farm products belong to this group. On the contrary, I feel certain that most of them do not. Most of them, no doubt, are simply interested in carrying forward experimentation in this field in the interest of scientific advancement for the general improvement of human well-being. And, of course, there can be nothing but praise for that.

What I do challenge, however, is the assumption that such a program offers a real solution of the present farm problem and, on that premise, that the program should therefore be subsidized by maintenance of high tariffs designed to cut off all semblance of foreign competition. The cost of such a tariff program to agriculture during the years immediately ahead, in terms of forfeited export outlets for farm products, would be exceedingly heavy and the ultimate outcome uncertain. For agriculture to exchange the certainty of so heavy a burden for the uncertainty that such a program would so enlarge the home market for farm products as to make our farmers independent of world markets would seem to me to be a very poor bargain. If progress can be made in finding new industrial outlets for farm products, supplementing but not displacing efforts to restore foreign markets, that will be so much to the good. But if the possibilities of science are to be put forward in this connection simply as a means of confusing the issue and of turning us away from a common-sense course with regard to international trade, that is a much more serious matter.

I am in complete accord with Secretary Wallace when he says: "I do not think we should rely exclusively on the possibilities of a sudden industrial discovery opening up a need for the products of thirty or forty million acres as a solution for the farm problem overnight. * * * I do not want to belittle industrial experiments, but I want to be sure the American farmers count no chickens before they are hatched."

The second school of thought with regard to agriculture's interest in international trade is the school which recognizes and stresses the importance of restoring foreign markets, but fails to perceive the distinction between sound and unsound methods of attaining that objective. Though the ideas to be found in this school assume a variety of forms, the characteristic which is common to all is a failure to recognize that there is no synthetic or short-cut method of restoring trade on a sound and lasting basis; that in order to sell more abroad we have got to buy more from abroad; and that the way to insure that result is to reduce our tariff and at the same time induce foreign countries to reduce theirs.

Of course, it is true that we can increase our agricultural exports without reducing our own tariff if we are willing to give them away or do something which approaches that result. We can, for example, begin lending foreigners the money with which to pay for such exports. We have tried that before and because we were unwilling to face the implications of our creditor position we found it exceedingly expensive. Unless we are willing to accept goods and services in repayment of loans and of interest thereon, we had better proceed on this line with great caution.

Another way that we can at least approximate the gift method of export stimulation is by resorting to a comprehensive system of export subsidies. This idea of a two-price system has had, and continues to have, widespread support in the farming regions, from leaders whose sincerity and integrity cannot be called into question. There may be isolated cases where reliance upon the dual-price method can be justified as a temporary measure. But as a major solution of the agricultural problem I am convinced that it would prove grievously disappointing to farmers themselves. I do not rest this conviction on any academic qualm as to the good or evil of the subsidy system but simply upon the question of whether it will get results remotely commensurate with the costs. I am convinced that it will not, especially if it is not accompanied by measures of production control.

One difficulty, and an extremely serious one, in connection with this type of solution lies in its assumption that foreign countries will gladly receive our subsidized exports in whatever quantities we may see fit to offer them, if only they are offered at bargain prices. That, however, is a naive and a false assumption. Doubtless there are some few countries that would be glad to receive a great many of our surplus farm products at bargain prices. Doubtless also there are some agricultural products, notably cotton, produced only in a limited number of countries, which would presumably be welcomed at bargain prices by many countries. But the experience of the past few years has clearly shown that countries which have found it possible to produce at home any substantial proportion of their requirements of any given agricultural product do not welcome, and will not tolerate, dumping of foreign supplies upon their home markets. Most countries have immediately at their disposal the necessary administrative machinery with which to defeat efforts to dump surpluses upon them. Hence the notion that we can, so to speak, jimmy our farm exports into any and every country—to borrow Chester Davis' pungent word for it—is actually founded on a false hope. It is the importing country that holds the whip hand, not we. How far, for example, are we likely to get with such a program for commodities such as wheat, pork and lard, and tobacco?

But that is not the only difficulty. For even if we assume that exports of some farm products would be comparatively free from antidumping restrictions in importing countries, we are confronted with yet another complication. Stimulated by subsidies, the acreage planted would rapidly increase, the rapidly increasing production would result in ever-increasing export surpluses, and these increasing surpluses could be gotten rid of, if at all, only through subsidies mounting from year to year until the whole situation became intolerable. To mine our soil on a gigantic scale for the doubtful privilege of virtually giving away farm products to those foreign countries that would be willing to take them would be the height of human folly.

If a program of that sort contained real promise of promoting a genuine and sustained prosperity for agriculture, few would wish to oppose it. But its chief significance, it seems to me, is that it arouses false hopes and diverts attention from what is the real heart of the problem of restoring foreign markets. The real problem is to increase foreign purchasing power for our exports by buying more goods and services from abroad and, to that end, to bring about a mutual reduction of the barriers that now impede trade. There is no short cut in this matter that will not bring us to grief. We cannot have our cake and eat it. To sell more we must buy more.

Another phase of this same general type of thinking is the notion that by resort to a policy of entering into exclusive tariff bargains with foreign countries and discriminating aggressively against all other countries we can somehow force our way back into international markets while, at the same time, permitting only slight dents to be made in our own protectionist armor.

You have recently been hearing much about this sort of thing. It is a notion held by many of the same persons who attach great faith to a general system of export subsidies. It differs from the export subsidy method chiefly in that it would substitute a blackjack for a jimmy. I shall have more to say about this method in a moment when I come to discuss the principles on which the trade-agreements program has been conducted.

The third school of thought on this question of agriculture and international trade is the school which not only holds to the view that expansion of our foreign trade is vitally important to agriculture but which sees the true implications of the problem involved in restoring trade. This school recognizes the limitations inherent in short-cut and synthetic solutions. It is thoroughly familiar with the manifold difficulties that impede rapid and spectacular progress toward the desired end. For these very reasons it concentrates all the harder on the real essentials of the problem. These essentials are, in a word, to reduce trade barriers both at home and abroad in such manner as to increase the total volume of world trade as a whole, our own included. Those who are working along this line exclude from the start the notion that the real interests of the United States will be promoted if we resort to methods which are likely to precipitate a further decline of world trade. They are more interested in bringing about a positive increase in the volume of our foreign trade than they are in merely procuring for us a larger share of a declining world trade. They reject at the outset the "dog-eat-dog" method of reviving our foreign commerce.

When the administration undertook 2 years ago to deal aggressively with the problem of foreign trade, the situation was about as bad as it could be. World trade had fallen to only about a third of its former value and to only about three-quarters of its former volume. Our own foreign trade had fared even worse, having declined, in terms of gold value, to only about one-fourth its 1929 value and to about 60 percent of its 1929 volume. The result was that even our share of the rapidly declining world trade had fallen from about 14 percent to less than 10 percent. In actual dollars and cents that means a tremendous loss. Under the cumulative impact of nationalistic policies, international trade had collapsed. Nation after nation had sought refuge during the depression in measures of economic exclusion whose inevitable effect was to intensify the malady with which all were afflicted. We had played our part by raising our tariffs higher and higher in complete disregard of our position as a creditor country and one interested also in expanding its export trade. Instead of undertaking to increase the capacity of foreign countries to pay their debts and at the same time to buy our products, we moved in precisely the opposite direction. At the same time we goaded them into adopting severe retaliatory measures against our commerce.

In setting out to reverse this tide of economic disaster we were confronted with two types of barriers abroad: First, severe restrictions maintained on imports generally by countries which have heretofore been important markets for our exports; and, second, discriminatory practices placing our commerce at a disadvantage compared with that of other countries. In short, we had to contend with the twofold problem of mitigating obstructions and of removing discriminations placed in the way of our trade. The methods which we have subsequently followed have been set forth most fully, perhaps, in the recent speech of Secretary Hull before the Twenty-fourth Annual Meeting of the United States

Chamber of Commerce. I can do no better than briefly to reiterate some of the points which he emphasized on that occasion.

First, as to reducing high trade barriers: When we embarked upon the task of scaling down these barriers there were technically two courses open to us. We could make a unilateral reduction of our tariff and hope that other countries, most of whom had recently far outstripped us in the resort to devices utterly paralyzing to international trade, would follow suit. But there was no assurance that they would do this, or do it in a way sufficiently helpful to our own trade. The other course open to us was to negotiate reciprocal agreements providing for mutual reductions of barriers, and that is the course we chose.

In June 1934 Congress enacted the Trade Agreements Act. The act authorized the President, for a period of 3 years, to enter into trade agreements and, for that purpose, to modify within strictly defined limits customs duties and other import restrictions. All of the appropriate divisions of the Government have been called upon to participate in a series of interdepartmental committees set up to carry on the enormously complex and difficult work of preparing for and assisting the negotiations. Moreover, full opportunity is given the business community and the general public to present their views, either orally or in writing, to a special interdepartmental committee established for that specific purpose, namely, the Committee for Reciprocity Information. When intention to negotiate an agreement is publicly announced, notice is given of the dates for hearings and submission of briefs, and any interested person may testify. This testimony is carefully digested, and, together with data supplied by the participating Government agencies, is constantly at the disposal of those who are in charge of the negotiations.

There is no star-chamber procedure in this matter, though there have been charges to the contrary. All interested persons have opportunity to be heard. Of course, it is impossible, in the subsequent course of events, to conduct the actual negotiations in public. The process of higgling and haggling over rates and the gradual shaping of the agreements must necessarily take place behind closed doors. But that is not greatly different from a practice which Congress itself has long found indispensable in working out the details of tariff and other legislation. I refer to the practice of entering into executive sessions. Nor is it dissimilar to procedure followed by quasi-judicial bodies such as the United States Tariff Commission, the Federal Trade Commission, and the Interstate Commerce Commission in discharging the functions entrusted to them by Congress. In this connection it is essential to bear in mind, moreover, that the powers granted in the Trade Agreements Act are strictly circumscribed by the Congress, and, further, that those conducting the negotiations are most zealous in their endeavor to administer the act cautiously, conservatively, and in strict accord with the expressed intent of Congress.

At this point I pause to interject a word concerning the attitude toward agriculture of those in charge of the negotiations. I was myself, until recently, a member of the Foreign Trade Agreements Committee, representing the Agricultural Adjustment Administration, and I am still a regular attendant at the meetings of that committee. I know whereof I speak, therefore, when I say that never, from the inception of the trade-agreements program, have I observed anything but the utmost concern on the part of those in charge to make it serve the real interests of agriculture. Such differences as may have arisen have been in matters of detail. Everyone having a responsible connection with the program has been zealous in his desire to assure that the terms of the agreements entered into with foreign countries shall be genuinely helpful to the farmers of this country. Notwithstanding criticisms of the agreements in some agricultural quarters, I believe the results of the program to date reflect this concern for agriculture.

The second problem with which we have had to deal is that of securing the removal of discriminations against our commerce. To that end the Trade Agreements Act authorizes the President to withhold from countries discriminating against our commerce the benefits of the concessions which we grant to the particular country with which we conclude an agreement. This is one of the least understood phases of the whole program. We are told by some that our concessions should not be generalized but should be made exclusively to the country with which we bargain. Such critics do not seem to realize that we grant equality of treatment only to those countries which grant it to us; that we refuse to extend it to those countries which do not. Neither do they appear to realize that if we withheld the benefit of our tariff reductions from foreign countries which treat us fairly those countries would be impelled to discriminate against our trade. Those who would have us depart from this policy of reciprocal fair treatment and enter upon exclusive bargaining, and hence a resort to a discriminatory policy, are deluding themselves.

Quite apart from the fact that we have no legal authority to proceed in that manner, it cannot be too greatly emphasized that we ought not to do so even if we could. Nothing could be better calculated to bring us to grief. I know of no surer way of expediting the contraction of world trade which has already brought us to the present pass. Every exclusive concession which we granted would be a discrimination against every other nation and an invitation to retaliation and counterdiscrimination. We would be giving countenance to a system which, when applied by other countries in their agreements with third countries, would all too often result in permanent discriminations against our commerce. There is no reason to suppose that we could always be first on the scene to get exclusive concessions for our products. Quite as often we might find our products already subject to handicaps arising from prior concessions granted exclusively to some other country.

There is simply no end of confusion to that process. It means discrimination, counterdiscrimination, instability, chaos. Its method is the predatory one of mutual destruction. It is the way that many other nations, harder pressed than we, have recently been following to their own sorrow. It is the most virulent phase of the disease which has already played havoc with world trade. It is precisely to check this disease and to get us back on the road to expansion of trade that we have instead followed the policy of equality of treatment.

I turn now to the record of what has been accomplished. Agreements have been concluded with 14 countries—Cuba, Belgium, Haiti, Sweden, Brazil, Canada, Netherlands, Switzerland, Colombia, Honduras, Guatemala, Nicaragua, and within the past month, France and Finland. With several other countries negotiations are in progress. It is impossible, in the time at my disposal, to enumerate individually the multitude of concessions that have been obtained for our commerce. They affect literally hundreds of commodities, both industrial and agricultural. To take but a single instance, Canada: Between 1929 and 1934 our exports to Canada, based on our own official figures, had dropped from approximately $900,000,000 to a little over $300,000,000. Under the trade agreement Canada granted us duty reductions on products of which her imports from the United States amounted to $419,000,000 in the Canadian fiscal year ended March 31, 1930, and $106,000,000 in the year ended March 31, 1935. If we recover even a substantial share of this lost trade, think what that will mean.

We are constantly pressed for figures to show the beneficial effects of the program thus far on our export trade. Actually, none of the agreements, except the Cuban, has been in effect long enough to enable us to judge fairly of their ultimate effects. Nevertheless, we do already have gratifying evidences of trade expansion. Our total exports to Cuba were almost two and one-half times in 1935 what they were in 1933. Our agricultural exports to Cuba likewise more than doubled. Our exports to Belgium increased by $12,000,000 during the first 11 months under the Belgian agreement, as compared with the same months of the previous year. Our exports to Sweden increased by over $3,000,000 during the first 8 months. Canadian imports from the United States increased during the first 3 months of the agreement by 9.2 percent, compared with the same months of last year, but the items on which we received concessions increased by 24.1 percent. Large increases are also recorded for Brazil.

In the agricultural group increases are recorded in many directions. Fruits and vegetables, pork products and lard, cereals, and grain products. These and other products show encouraging increases of shipments to the agreement countries. Pork products may be cited by way of detailed illustration. During the first 3 months of 1936 our exports to Canada of hams and shoulders increased over 30 times, of other pork, pickled or salted, about two and one-half times, as compared to the same period of 1935. Lard exports to Canada increased by one-half. In contrast, however, total exports of these various pork products actually declined during the first 3 months of 1936, as compared with the same period of 1935. In the first year of trade under the agreement with Cuba, as compared to the year preceding, our exports of hams and shoulders, bacon, and lard practically doubled, while exports to other countries were declining. Concessions on pork products have likewise been obtained from Belgium, Colombia, Honduras, Guatemala, and Haiti.

Such are a few of the concrete evidences of what has happened to date. Even without definite statistics, however, there are some things of which we can be certain. We know that these agreements, as soon as they go into effect, greatly reduce the tax and other burdens levied upon a large segment of our trade with the signing countries. We know, moreover, that eventually, and insofar as other factors permit, this reduction of barriers cannot but result in an extension of trade, not only between the United States and the contracting countries but among all countries who fall within the scope of most-favored-nation treatment. It should require no last-minute statistics to enable any intelligent person to understand that.

In order to obtain trade concessions we have had to grant concessions in return. In so doing we have exercised the utmost care to insure that no serious damage is inflicted upon established American industries. That, however, has not prevented criticism. Some have accused us of conducting the program largely for the benefit of agriculture and at the expense of deserving American industries dependent upon continuance of high-tariff protection. Others say that we have not done enough for agriculture, or have even sacrificed some branches of it. Actually, of course, we have sought unremittingly to negotiate agreements helpful to both industry and agriculture.

At this point I desire to give particular mention to one phase of the opposition which it is sought to stir up against the program. I refer to the efforts to turn farmers against the program by citing the increases that occurred in agricultural imports in 1935. By a sort of insidious inference, it is sought to create the impression that these imports in 1935 were not only due in large measure to the trade-agreements program but that they will continue, and even expand, to the great peril of agriculture unless the program is abandoned.

The truth is, however, that the whole situation in 1935 was abnormal and that the trade-agreements program had almost nothing to do with the case. There was, to be sure, a large increase in agricultural imports in 1935. From $858,511,000 in 1934 they

increased to $1,105,761,000 in 1935. That is an increase of some $247,000,000. Such figures sound alarming, and they have been bandied about in the farming regions until they are beginning to wear threadbare. When you come to look into them, however, their greatly magnified significance collapses.

What are the facts? In the main they are very simple. In 1934, some of you may recall, we had the most devastating drought in our entire history, one such as we are not likely to have again for another hundred years. The result was a reduction of some 50,000,000 tons, or about half, in our total feed supply. The corn crop alone was reduced by a billion bushels. Thousands of head of livestock were shipped to the slaughterhouses to escape starvation. Prices of feedstuffs rose to the point where imports began entering over the tariff. Though the drought was in 1934, its effects on domestic supplies and imports fell mainly in the calendar year 1935. Hence it is the 1935 import figures which reflect the increases in shipments coming in to eke out domestic shortages. Considering how badly imports of feedstuffs were needed by farmers themselves, it is really astonishing that the quantities brought in amounted finally to only about 7 percent of the drought reduction. The new 1935 crops greatly eased the situation, but they did not become available until nearly the end of the year. Generally speaking, imports of feedstuffs fell abruptly or ceased as soon as the new crops became available. Imports of livestock have declined less because it takes longer to restore livestock numbers.

Now when you come to look at that $247,000,000 increase in imports that we have been hearing so much about, what do you find? You find that some $75,000,000 of this increase was in wholly noncompetitive products entering this country free of duty, such as coffee, rubber, bananas, and so forth. That leaves $172,000,000. Of this $172,000,000, less than $29,000,000 is accounted for by items on which we reduced duties prior to the end of 1935. Moreover, most of this $29,000,000 is accounted for by sugar, imports of which were subject to quota under control legislation adopted in the interest of domestic sugar industry. The remainder of the $172,000,000 is accounted for almost entirely by the drought, and the current import figures indicate that the effects of the drought are rapidly receding except in the case of livestock. In a nutshell, the increased agricultural imports in 1935 were due primarily to the drought, secondarily to economic recovery which led to increased imports of noncompetitive raw materials and foodstuffs, and scarcely at all to trade agreements.

Nor have trade agreements played an important part in the agricultural import situation in 1936. Some few additional tariff reductions on agricultural products have gone into effect since the first of the year, notably in the Canadian agreement, and imports of some items have increased somewhat. But the amounts coming in have not been such as to have any appreciable effect on domestic prices, or to change materially the total picture. The efforts being made to create a public impression to the contrary simply do not square with the facts.

I have recently had occasion, for example, to look very closely into the situation with respect to two items on which considerable agitation has been aroused, namely, cattle and cheese. I find no evidence at all to support the claims that the recession in prices of these commodities in recent months is due to tariff concessions made in trade agreements. While the facts with respect to these two commodities differ in detail, the main burden of the evidence in both cases is the same. What has happened is that supplies greatly in excess of last year's have been coming into the market from domestic sources; and while there have also been increases in imports, they have been trivial by comparison and insufficient by themselves to have any appreciable effect on domestic prices.

With respect to cattle the sharpest recession has been in prices of fed cattle. The major causes of this recession have been two: First, the very large increase over last year in the number of steers in the cattle slaughter supply; and second, the great increase over last year in the pork supply. As to cattle supplies, what happened was that, after a year of short feed supplies resulting from the 1934 drought, during which time prices of steers rose to a high level and those finishers fortunate enough to possess feed made large profit margins, cattle finishers went in for feeding in a big way last fall and planned their 1936 operations with a view to selling their finished animals early rather than holding them for the late summer and fall markets. We have lately been witnessing the results. In February the number of steers in federally inspected slaughter was 36 percent greater than in February 1935; in March, 28 percent greater than a year ago; in April, 42 percent greater—the largest steer slaughter for April since records thereof began to be available in 1921. This has resulted in an exaggeration of the normal seasonal downward trend of steer prices, all of which was forecast by the Department of Agriculture as early as last fall.

As stated, increased pork supplies have also been a factor. In 1935 supplies of pork were the smallest in 25 years, and there was much substitution of low-grade beef for pork in sausage manufacture. But in March and April of this year hog slaughter was far in excess of a year ago. The increase in total meat supplies during the first 4 months of 1936 over a year ago amounted to about 16 percent.

It is these factors, and not the limited and carefully safeguarded reduction of the cattle duty in the Canadian trade agreement, which explain the recent decline of prices from the abnormally high level attained in 1935 following the 1934 drought. Actually the tariff reduction on cattle, applying only to animals weighing over 700 pounds, was limited to a number equivalent to but three-fourths of 1 percent of our average annual slaughter, or about 156,000 head, and even on these the reduced rate remains higher, for most animals, than it was under the highly protective Fordney-McCumber Tariff Act of 1922. To suppose that this slight tariff concession to Canada has had any appreciable effect on cattle prices in the United States requires a great strain on the imagination.

I am not unaware of the contention that has been made that imports at the reduced rates have shown a tendency to be concentrated in the earlier months of this year instead of following a normal seasonal distribution, and that for this reason they have had considerable effect on prices. But again, I find little evidence to support this notion. Even in April, when the number of animals coming in reached the highest point, the total imports of all kinds of cattle, those on which the duty was not reduced, as well as those on which it was, amounted to no more than perhaps 4 or 5 percent of our total slaughter. Since many of these imported animals did not go to slaughter, the number actually entering into slaughter was perhaps no more than 3 percent of total slaughter and the number on which the duty was reduced perhaps no more than 2 percent. If there had been no imports at all, federally inspected slaughter in April would still have been almost 20 percent greater than in April 1935. Moreover, there is good reason to believe that the imports would have been practically as large even if there had been no reduction whatever in the duty.

The story with respect to cheese runs in somewhat the same terms, but time does not permit me to go into it so fully. Between June and December 1935 prices of Cheddar on the Wisconsin Exchange rose from 12 to 17 cents a pound. Thereafter they began a decline which brought them to around 13 cents a pound in April and May of this year. Because the duty on Cheddar was reduced somewhat beginning January 1 of the present year, it has been convenient to attribute the decline in price to the reduction in the duty. But the facts do not bear this out. Imports did, to be sure, increase during the first quarter of 1936. But even so, they were equivalent to but 2.2 percent of domestic cheese production. Meanwhile, there was an increase in domestic production such that stocks on May 1 were running about 20 percent in excess of what they were a year ago and about 27 percent in excess of the 5-year average.

Thus, analysis of the factors influencing price trends in the case of both cattle and cheese shows that the tariff has had practically nothing to do with the case. It is a natural temptation for those who have been opposing these duty reductions to seize upon the coincidence, in time, of duty reductions and declining prices to argue that one caused the other. But when you actually examine the facts, the evidence is overwhelming against any such conclusion. To argue that such slight additions to our total supplies of these particular commodities as have resulted from imports are a matter of serious significance to the industries affected is like straining at a gnat. It makes clear one thing, at least, and that is that not all of the gnat catchers and butterfly chasers in this country are college professors.

Those who do not wish this country to tolerate even the slightest degree of competition from imports of any agricultural product that can be grown at all in the United States should pause to consider the costs of such a policy. What do they expect to accomplish thereby? Do they really wish to return to the state of affairs that prevailed under the Hawley-Smoot tariff regime? If so, perhaps our cheese producers will be content to receive the 8 or 9 cents a pound for Cheddar to which the price fell during the depression, at a time when imports were reduced by our tariff to a driblet too small to be seen with the naked eye. By the same token our cheese producers will, of course, look askance at the 14 cents a pound which they are getting today (quotation for the week beginning June 5, 1936), their spirits completely crushed by contemplation of the fact that a little Canadian Cheddar is getting into the country. Or it may be that the cattlemen will prefer the $4.80 a hundred pounds which they were getting for good grade beef steers in Chicago in February 1933, at a time when imports were almost completely shut out, to the $8 or $9 a hundred which they have been getting during the past 2 months.

If the exclusion of even the smallest trace of imports is so vital to these and other branches of domestic agriculture, why was it that prices sank so low during the heyday of the prohibitive Hawley-Smoot tariff regime?

The answer is plain. The prosperity of such industries does not hinge upon the question of whether imports amounting only to a trivial fraction of our total production are admitted into this country or whether they are excluded. The adverse influence upon domestic prices of such trifling additions to our total supplies arising from imports is as nothing compared with the favorable influence on prices of a return of prosperity and the inevitable rise of domestic purchasing power which will result. It is precisely in order to restore trade and thus to revive industry and employment that we are engaged upon the trade-agreements program. In the Canadian agreement and in every other agreement that has been signed the greatest care has been exercised to assure that no reasonably efficient and well-established American industry shall be injured. Our primary concern is the restoration of trade, economic activity, and employment. As fast as we attain these objectives, industries such as the cattle industry and the dairy industry will be large gainers, irrespective of any tariff cut which

allows a slight addition to our total supplies from increased imports. To fasten attention exclusively on one factor in the situation and lose sight of all the others is to fail to perceive the real interests of these industries themselves.

The unvarnished truth concerning this whole agricultural import matter is that the bulk of the agricultural products which can be produced in this country at less than a prohibitive cost have long since been barred out of our markets by high tariffs. Well over half of our agriculture imports normally is comprised of products like rubber and coffee that cannot by the remotest stretch of the imagination be called competitive. Most of the remainder consists either of products such as sugar and flaxseed, of which we do not produce enough for our needs, notwithstanding the high duties we impose on them, or else of products imported because of special considerations of quality or because of seasonal or other special factors.

The farmers of this country have long had almost complete possession of the domestic market for those agricultural products which could be grown in this country in sufficient quantities and without too great a cost. No one, so far as I know, seriously proposes that it should be otherwise. We could, however, go further and undertake to produce every dollar's worth of imported agricultural products or substitutes for them that can be grown at any cost in this country. That is what some would have us do. But such action would certainly not solve the farm problem. It would instead aggravate it. We would still have a vast farming area—probably 30,000,000 to 40,000,000 acres—geared to producing for export. Either we must find outlets for these surplus acres or produce less. That explains why the trade-agreements program, far from being a threat to agriculture, is so emphatically calculated to promote its real interests. And that is why we are counting on the farmers of this country, for their own sake as well as for the sake of the country as a whole, to stand stanchly behind this trade-agreements program while we tread our way cautiously but resolutely along the difficult road that leads toward a restoration of economic health for the entire country.

HON. BENTON FREMONT

Mr. HAYDEN. Mr. President, under leave to print granted me on June 18, I desire to insert in the RECORD the following interesting correspondence between Judge Francis Carr, of Redding, Calif., and Hon. BENNETT CHAMP CLARK, United States Senator from Missouri, as follows:

REDDING, CALIF., *June 20, 1936.*

Hon. BENNETT CHAMP CLARK,
United States Senate, Washington, D. C.

DEAR SENATOR CLARK: Knowing your interest in matters of general political concern, I am sending you herewith a clipping announcing the candidacy for Congress, in the Second California District, of Benton Fremont, distinguished scion of your own illustrious predecessor in the United States Senate, Thomas Hart Benton.

Mr. Fremont has always indicated a very lively interest in political matters and has won for himself a reputation for integrity and devotion to the public welfare. He is coming to Washington on his way back from the Philadelphia convention, and I should like very much to have you meet him.

With kind regards, believe me,

Sincerely yours,

FRANCIS CARR.

[From the Red Bluff (Calif.) News]

BENTON FREMONT FILES FOR CONGRESS

Benton Fremont, grandson of Gen. John Charles Fremont, "the pathfinder", and one of the California delegates personally selected by President Roosevelt to attend the recent Democratic convention, has filed as the Democratic candidate to Congress from the Second District of California.

The Second District is virtually an empire in itself, nearly 1,000 miles long, covering one-third the area of California, and including in its boundaries vast mining, timber, and water projects and the historic mother lode, source of the great gold saga.

Romantic western history is revived by Fremont's announcement. Service to California has been a trust in the Fremont family since General Fremont first led his ragged, half-starved band of adventurers over the wilderness trails and brought Spanish territory into the United States Union.

This historic venture was backed by the faith in California of another great American, Thomas Hart Benton, for 30 years Democratic Senator from Missouri, intimate friend and adviser of President Jackson. Senator Benton's treatise on senatorial practice is still the accepted guide in the Capitol.

General Fremont married Senator Benton's daughter, Jessie—their grandson, Benton Fremont, bears their joint names. The dominant desire of Senator Benton's life was to see rail transportation established on the wilderness trails which Fremont had blazed. Benton risked his fortune, as Fremont risked his life, that California might become part of America. Their descendant has carried on the tradition they set.

Benton Fremont is a construction engineer by profession, but behind all his commercial work there has been a lifelong training for the office to which he now aspires. During the war he handled munitions contracts in Washington, thus laying the foundation for the strong friendships he now enjoys with national leaders. As a final preparation for a congressional seat, he has ranched for the last 6 years in Sonora, Tuolumne County, familiarizing himself with the Second District's particular problems, giving generously of his private funds and political influence to help his neighbors.

When not in Sonora, Fremont spends his time in Washington, and also keeps in further touch with California affairs through his San Francisco residence, where his young son, John Charles Fremont, IV, is being educated for part of the year.

The home, Fremont Acres, which Mr. and Mrs. Fremont have built 8 miles outside Sonora, is famous for its beauty and hospitality—a typical California home of the good old days.

UNITED STATES SENATE,
Washington, D. C., July 6, 1936.

Hon. FRANCIS CARR,
Redding, Calif.

MY DEAR JUDGE CARR: Thanks, indeed, for your letter of June 20. I appreciate your kindness in writing me, and have had a great deal of pleasure in meeting Mr. Benton Fremont, who will be a candidate for Congress from the Second California District.

I was very happy to meet Mr. Fremont, not only for the sake of his pleasing personality but because both of the names which he bears are rooted very deeply in the history and affections of the people of Missouri. Colonel Thomas Hart Benton was one of the first two Senators from Missouri and is universally established as the greatest of the long line of distinguished men who have followed him, representing Missouri in the Senate. I am personally very proud of the honor of being one of the least of those who followed the great Benton in the public life of Missouri.

It is not too much to say that Senator Benton gave the explicit character to the Jackson administration almost as much as did the immortal Jackson himself.

After serving Missouri faithfully in the Senate for 30 years, Benton courageously went to his political death for the principle of saving Missouri to the Union. After his death his spirit marched on and held the State of his adoption to the side of the Union in the War between the States, which was probably determinative in that struggle. If Missouri had seceded, it is almost certain that Kentucky would have seceded and that Tennessee would have been united in support of the Confederacy. The spirit of Benton marching on after his death saved Missouri to the Union and prevented, in my judgment, the loss of Kentucky and all of Tennessee. While Benton was defeated for reelection to the Senate after 30 years' service, yet years later, when the State of Missouri had the privilege of selecting the two greatest men to be placed in the Hall of Fame in the Capitol of Washington, the Legislature of Missouri, without a dissenting vote, selected Thomas Hart Benton as the first to be placed in that chamber of immortals.

Colonel Benton is enshrined in the hearts of the people of Missouri and of the Nation as one of the very greatest men who ever sat in the Senate of the United States.

I think it is deeply significant to have Mr. Fremont, the grandson of General Fremont, active this year in the cause of the Democratic Party in California. General Fremont, the son-in-law of Senator Benton and the husband of the Senator's favorite child, was a gallant and romantic figure in American history. He was the first nominee of the Republican Party for the Presidency of the United States. I like to think that if General Fremont were alive today that he, like Senator Benton, would be on the firing line for the Democratic Party in this election as they always were in their own lifetime for liberal principles and human rights. It is significant, indeed, that a man who bears in his veins the blood of Benton, who was the father and champion of the opening up of the West, and of General Fremont, the romantic explorer who did so much to open up the westward development and settlement, should in this year be representing California and crusading for the Democratic ticket for the principles of which his great forebears always stood.

I am certain that if Mr. Fremont puts the question of his candidacy properly before the people he will find a measure of acceptance that will be surprising. He will, no doubt, point out the value to his constituency of representation in Congress that is sympathetic to the human aims and purposes of the Roosevelt administration. Let us all remember the words of Benjamin Franklin, which I believe so aptly epitomizes the desire and efforts of President Roosevelt during the past 3 years:

"The man who does things makes many mistakes, but he never makes the biggest mistake of all—doing nothing."

There, I believe, is at once the creed and the justification for another 4 years for President Franklin D. Roosevelt.

Sincerely and cordially yours,

BENNETT CHAMP CLARK.

EDUCATION—WHAT THE NATIONAL ADMINISTRATION HAS DONE FOR SCHOOLS

Mr. HAYDEN. Mr. President, under leave to print granted me on June 18, I desire to insert in the RECORD the following statement on the subject Education—What the National Administration Has Done for Schools, prepared by the Educational Division of the Good Neighbor League:

From the beginning of this Nation it was recognized that one of the most important bases, if not the most important, for the perpetuation of a democratic government is an informed and intelligent electorate. Hence, the original States and every new State that was admitted into the Union made it an early and chief concern to establish a free public-school system.

So vital was education regarded in a scheme of self-government that the little red schoolhouse, as it multiplied throughout the

country, came to be looked upon as a symbol of liberty and enlightened institutions. It was a point about which all political factions could rally, and it became an inevitable ornament of all patriotic oratory. Even after the great migration of population to the cities had diminished its numbers, it persisted as a phrase by which its larger successors and the general idea of education might be fittingly characterized.

But the economic depression which struck the country at the end of the last decade was no respecter of persons or institutions. It hit the just and the unjust, the worthy as well as the worthless, and the school system suffered a blow which but for the intervention of the Federal Government through the Roosevelt administration might have seriously crippled it for years to come. Unable to collect taxes due, States, counties, and municipalities all over the Nation had to retrench even in the case of this valued activity. In most of the States it was the last economy to be put into effect, but, even so, necessity in many situations forced the closing of schools, the discharge of teachers, and default on salaries where teachers were not dismissed.

Paralysis of this keystone of the social structure was thus threatened at the very time when it was most necessary that it should function at its best. Already, before retrenchment became inevitable, school facilities had not been adequate to take care of all the children and youth, and extensions were being planned. In 1925 there had been spent on public elementary and secondary school construction $433,000,000, but because of the business depression this had declined to only about $211,000,000 in 1932.

The response of the Roosevelt administration to the economic crisis as affecting education has been not only to save the public-school system from threatened impairment but to enlarge its facilities and extend its operations; to revive the spirits of the workless by giving them instruction; to comfort discouraged unemployed parents through bringing their small children into clean and wholesome surroundings; to enable young men and women to begin or continue their education instead of being turned back to swell the multitude of idle; and by all these things to preserve the processes for making good citizens and to drive out despair with hope.

Put down a red dot at every spot in the United States where the emergency agencies have repaired or built a school; where they have kept a school from being closed; where they have paid teachers; where classes for adult education have been carried on; where nursery schools have been set up; where college students have been helped to go on with their studies—do this and the map of the United States will have the appearance of a spreading fruit tree in full bloom.

The administration early took hold of the threat of educational chaos and, through the Public Works Administration, the Federal Emergency Relief Administration, the Civil Works Administration, and other agencies, began to supply the assistance required to prevent the impairment and breaking down of the public-school systems in the various States and Territories. The P. W. A. provided funds by loans and grants for the building of schoolhouses; F. E. R. A. provided funds for the continuation of rural schools and through its emergency-education program for adult education, nursery schools, and aid to college students; and C. W. A., during its existence, assisted in the building, repairing, or improvement of school buildings.

Under the C. W. A. and F. E. R. A. one school building in every five in the whole United States was improved in some way. Fifty thousand schools were involved at a total cost of about $50,000,000. The educational programs of F. E. R. A. are now being carried on under the Works Progress Administration.

The contribution of the Public Works Administration to the rescue of the public schools has been in the way of making outright grants, loans and grants, or loans only, for construction of buildings. As of February 29, 1936, assistance of one or another of these three kinds has been given to 2,813 public schools situated in 48 States and 2 Territories. The loans and grants for all educational buildings amounted to $284,000,000, and the total estimated cost of the buildings is $466,000,000, leaving $182,000,000 to be provided by the States. Besides the public schools loans and grants were made to 219 colleges and universities, 35 libraries, and 21 other educational institutions.

Every section of the country was affected by these P. W. A. allotments, which ranged in size from a grant of $600 for a one-story frame building in Edom, Tex., to loan and grant of $8,285,000 to Los Angeles for repairs, replacements, and reconstruction of 130 school plants. A grant of $1,326,000 enabled Chicago, whose school funds had been exhausted, to resume work on five unfinished high-school buildings. Kansas City, Mo., and Kansas City, Kans., have received together $1,057,000 in grants toward the completion of school buildings to cost $2,900,000. What is almost an original little red schoolhouse, a building which has been in use for 150 years at Lyme, Conn., is to be replaced by a new structure as the result of a P. W. A. allotment. Schools are under construction in Alaska and Hawaii.

More than half of the public-school construction being carried on in the United States today is being financed through the P. W. A., the expenditures not only affording employment to thousands of workmen, making a market for building materials but also adding millions of dollars to capital investment. In the end much of the $284,000,000 advanced, that part represented by loans, will come back to the Federal Government.

In addition to aiding in the construction of schools the Federal Government is assisting in financing those already built. By a recent act of Congress the Reconstruction Finance Corporation is authorized to do this to the extent of $10,000,000. Up to the first of March 1935 this had been taken advantage of by six school districts to the extent of approximately $500,000.

The R. F. C. also made a loan to the city of Chicago of $22,300,000 for the payment of teachers' back salaries, but through Chicago businessmen taking up the loan this was paid back within a few weeks.

In the fall of 1933 the situation of many of the rural schools throughout the country was critical. In hundreds of cases school districts had exhausted all available financial resources and all their credit and were faced with the necessity of closing and turning both pupils and teachers out. Cognizance was at once taken of this development by the Federal Relief Administration in its educational program, and separate grants of money were made to 33 States during the spring of 1934 for the purpose of carrying on schools in rural districts and in towns of under 5,000 inhabitants.

Toward the end of 1934 the need for this kind of aid was broadened because of the severe drought in certain States which had put the schools in such a plight that they could not keep going without outside help. Grants made by the Federal Emergency Relief Administration for the purpose of keeping rural schools open amounted to $14,878,385 for the school year 1933–34 and $6,922,537 for the school year 1934–35, or a total of $21,800,922.

Thus, a total of more than $350,000,000 of emergency relief funds were allotted through P. W. A., F. E. R. A., and C. W. A. to assist the public schools to weather the economic storm. But preservation of this traditional foundation of good citizenship and democratic institutions was not the only problem in education which the crisis thrust upon those in authority for solution. Loss of income through unemployment was bad enough in its effect on the health and comfort of millions, but the psychological influence of long-continued idleness was even more baleful. The latter affected not only responsible heads of families whose livelihood had been lost but also millions of youths recently graduated from high school and college whose expectation of finding gainful occupations had been disappointed and other thousands whose intention to go to high school or college had been frustrated.

All these classes, as day after day and week after week went by without their being able to recover their position in life or gain a start in it, were likely to become oppressed with a sense of futility. If utter discouragement seized upon so large a mass of people the social consequences would be incalculably harmful. The young particularly, becoming bored with nothing to do and hopeless of the future, would leave home in search of something better, or at least different, and thus cut loose from a stable anchorage be transformed into vagrants and perhaps criminals. Such a development was indeed pretty well advanced in the early days of the depression.

The administration early set about the correction of this menacing situation. The Civilian Conservation camps were organized to take care of young men who were jobless and likely to become wanderers, and then under the Federal Emergency Relief Administration, later to be the Works Progress Administration, a comprehensive emergency education program was organized to provide for those whose needs were not met by the public schools. This embraced adult education for unemployed and other adults with the purpose of giving them additional practical training and to keep up their morale; literacy classes to teach adults to read and write English with understanding; vocational training for adults; vocational rehabilitation to help those who are crippled or otherwise physically handicapped to become self-supporting; nursery schools to care for under-school-age children of unemployed parents; and funds for part-time jobs for needy students who would otherwise be compelled to give up their studies. The student-aid feature was later transferred to the National Youth Administration.

In the field of adult education 1,650,000 were enrolled in classes and 500,000 have been taught to read and write. Professional teachers selected from those unemployed taught the classes so that a twofold benefit of work relief and education ensued. The operation also revived the spirits and gave new courage to both the teachers and to the pupils who ranged in age from 16 to 82. Thousands of letters of appreciation have been sent by those who received instruction to the F. E. R. A. and many have been addressed to the President himself. One aged woman, who before receiving this instruction had never been able to read and to whom the world of the printed word had been closed, penned a short message, saying simply, "Thank you for curing me of my blindness." One of the greatest joys which came to fathers and mothers among the adults who learned to read and write was that of now being able to communicate with their children who were away from home and to read their letters without having to call in someone from outside.

The need for literacy instruction is strikingly indicated by the census of 1930, which revealed that 4.3 percent of the population of the United States, or 4,283,753 persons over the age of 10 years, are unable to read or write in any language. It is estimated that 8,000,000 more are unable to read or write well enough to understand or make themselves understood clearly.

In nursery schools during 1934 and 1935, 60,000 children between the ages of 2 and 4 years were given healthful surroundings and hygienic attention. The schools were established for the most part in industrial cities, mining districts, subsistence homesteads, and family transient centers. From October 1933 to October 1935 the amount spent on adult education and nursery schools was $32,922,259.

The student-aid program to provide funds for part-time jobs for students working their way through college was begun in February 1934 and has now been spread over 1,602 colleges in 48 States, giving assistance to 104,501 students. During the first year it aided 94,331 students in 1,466 colleges representing every State in the Union. Funds for the program were allotted to each State upon application by the State relief administration, each State being entitled to Federal aid for 12 percent of the total enrollment in its colleges as of a certain date at the rate of $15 per month for each student. The allowance to students is not a gift but is in return for work performed either for the institution they are attending or off the campus in the community where it is situated. Since the total number of institutions of higher learning in the United States is 1,649 the 1,602 colleges where student-aid was being given at the close of 1935 means that there is almost unanimity in acceptance of the program.

In addition to the aid thus given to undergraduates, funds have been provided for graduates taking a postgraduate course for master's or doctor's degrees. At the end of December last year 118,889 students in 1,600 colleges and universities in 48 States were receiving assistance to continue their studies, 4,781 postgraduate students in as many institutions were being aided to study for degrees and 166,347 high-school students were enabled to remain in school. The total of needy students who were thus kept from having to abridge or abandon their education was at that date 290,017. From October 1933 to March 1935 expenditures on student aid have amounted to $11,842,130.

Summarized, here is what the national administration has done for schools and education:

Fifty thousand school buildings, or one in every five in the United States, repaired or improved in some way under Federal Emergency Relief or Civil Works Administrations.

Two thousand eight hundred and thirteen public schools in 48 States built, added to, or repaired with assistance from Public Works Administration to the amount, as of March 21, 1935, of $284,000,000.

Public Works Administration assistance given to 219 colleges and universities, 35 libraries, and 21 other educational institutions.

More than half of the public-school construction in the United States being financed through P. W. A.

Rural schools in 33 States enabled to keep going by grants from Federal Emergency Relief Administration funds.

Five hundred thousand illiterate adults taught to read and write as result of adult educational program.

Sixty thousand needy children under school age cared for in nursery schools.

Two hundred and ninety thousand high-school, college, and graduate students helped to continue their studies.

WHITMAN CENTENNIAL

Mr. HAYDEN. Mr. President, under leave to print granted me on June 18, I desire to insert in the RECORD the following statement by Senator LEWIS B. SCHWELLENBACH relative to the one hundredth anniversary of the arrival of Marcus and Narcissa Whitman in the Walla Walla Valley, Wash., and the founding of the Waiilatpu Mission, together with a letter addressed to Senator SCHWELLENBACH by the President of the United States:

THE WHITE HOUSE,
Washington, July 7, 1936.

Hon. LEWIS B. SCHWELLENBACH,
United States Senate, Washington, D. C.

DEAR SENATOR SCHWELLENBACH: Please accept my thanks for your courtesy in sending me a certificate of membership in the Whitman Centennial, Inc. But for the labors of Marcus Whitman and his associates the history of our great Northwest might have been written in entirely different terms. The work which Whitman did in establishing the mission at Waiilatpu contributed not a little to the permanent development for the United States of the old Oregon Territory.

I send hearty felicitations to all who participate in the centennial celebration.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

Mr. PRESIDENT: The establishment of the Waiilatpu Mission, near what is now Walla Walla, Wash., in 1836, by Dr. Marcus Whitman, brought the first white women from the United States into the Northwest.

In 1836 Marcus Whitman, young physician from Wheeler, N. Y., and the Reverend Samuel Parker were sent by the American Board of Commissioners for Foreign Missions to the Northwest to investigate the number of Indians and the advisability of establishing missions among them. Together they went to Green River, Wyo. Here they attended a gathering of Indians, among which there were many from Oregon, and it was decided that Dr. Whitman should return East to form a missionary party to work among the Indians in the far West.

Dr. Whitman and Rev. S. Parker were not the first missionaries in the Northwest. Catholic teaching had been carried on from Hudson Bay posts long before that time, and the Methodist missionary, Jason Lee, and party, had reached the Oregon country, locating near the present site of Salem, Ore., in 1834.

But Dr. Whitman, in organizing his missionary party looked to the establishment of American homes in the West. On February 18, 1836, Marcus Whitman married Narcissa Prentiss at Angelica, N. Y., and on March 3 they started on their wedding trip across the continent in company with the Reverend and Mrs. H. H. Spalding and William H. Gray. The Spaldings had been married in 1833.

Both Mrs. Whitman and Mrs. Spalding were women of refinement. Mrs. Whitman had studied at Miss Willard's School for Girls at Troy, N. Y., and was a teacher. She was 28 years old. Mrs. Spalding, 29, had studied with her husband at Lane Theological Seminary, where she had won commendation.

Dr. Whitman, first medical missionary to the Northwest, was a graduate of the College of Physicians and Surgeons of the Western District of New York at Fairfield. He was 34 years old, 5 feet 11 inches tall, and of unusually vigorous type, according to descriptions. Rev. H. H. Spalding, 33, was a graduate of Western Reserve College at Hudson, Ohio, and had studied at Lane Seminary in Cincinnati.

Mrs. Whitman and Mrs. Spalding were the first white women to make the trip overland across the continent, to establish homes with their husbands, thus marking a new epoch in western development.

The overland journey required 6 months, mainly on horseback, their food much of the time being buffalo meat, fish, and wild berries, supplemented by milk from the cows which they had brought with them. Details of this journey are vividly described in a diary kept by Mrs. Whitman, which is now carefully preserved in the Whitman college library at Walla Walla, Wash.

As the group approached the Hudson's Bay Co. fort on the Columbia River, Fort Walla Walla, on September 1, 1836, they were delighted with the gardens and appearances of civilization and spontaneously burst into a gallop, according to the diary. They were welcomed at the fort and extended every courtesy during a several days' stay, after which they journeyed on to Vancouver to decide upon permanent locations. After conference with Dr. John McLaughlin, famous factor of the Hudson's Bay Co. at Vancouver, Dr. Spalding determined to go among the Nez Perce Indians and establish a mission along the Clearwater River at Lapwai. Dr. Whitman chose to work among the Cayouse and Walla Walla Indians, establishing the mission Waiilatpu, the place of the rye grass. It was located at the junction of a creek, later named Mill Creek because of the sawmill which Dr. Whitman built in the mountains 18 miles above the mission and the Walla Walla River, 25 miles from Fort Walla Walla. It may be said that the Cayouse Indians were known to be more treacherous than the Nez Perce Indians and Dr. Whitman was warned of this by Dr. McLaughlin before he began his work among them.

Returning to his mission site, Dr. Whitman entered with vigor upon the task of building a crude cabin of cottonwood logs wherein he and Mrs. Whitman began housekeeping on December 12, 1836. About the same time the Spaldings occupied an equally crude log house, but these homes marked the real beginning of American civilization on the Pacific coast.

Dr. Whitman then turned his attention to making his mission self-supporting insofar as possible, and in addition to teaching the Indians, in which Mrs. Whitman assisted, he developed the establishment by construction of the sawmill up Mill Creek, a grist mill, blacksmith, school building, and also developed about 200 acres of land, part of which was planted to orchard.

In the little log home on March 14, 1837, the first American child of white parentage was born to Dr. and Mrs. Whitman, Alice Clarissa. When she was but slightly more than 2 years old she fell into the swift stream flowing close to their cabin and was drowned.

WHITMAN'S RIDE ACROSS THE CONTINENT IN 1842 MADE THE UNITED STATES OREGON CONSCIOUS

In 1837 William Gray returned east for additional workers and brought west with him a bride and three other workers who went into other fields in the Oregon country.

While the Waiilatpu Mission grew and developed, work among the Cayouse Indians was difficult. They were resentful of the coming of the white men. Differences of opinion arose as to the best method of conducting work at the missions, and as a result, in February 1842, the prudential committee of the American board ordered the work at Waiilatpu discontinued, transferring Dr. Whitman to another location. This word was received by Dr. Whitman on September 1, 1842, but before this time action by the committee had been rescinded, a decision having been reached that the mission must be maintained not only because of its work among the Indians but because of its strategic location on the immigration route from the east.

Dr. Whitman, however, not knowing of the later action, determined to go east, and on October 3, 1842, left the mission station for a winter journey across the Rocky Mountains which the bravest would hesitate to undertake.

Historians disagree as to the purposes of his eastern trip, but it is not necessary to side with either group. Some claim that his main purpose was to save the Oregon country to the United States; others maintain that his sole purpose was selfish in that it was merely to save his mission.

The Oregon country at that time was jointly occupied by the United States and Great Britain. The treaty of joint occupancy was adopted by the nations in 1818, renewed in 1828 and again in 1838, with no prospect of immediate determination of ownership. People of both nations were free to do business and settle in the country, with the understanding that when the treaty eventually expired the country should belong to that nation which had the most settlers. The employees of the Hudson's Bay Co., which was doing a big fur business with the Indians, far outnumbered

the Americans in the Oregon country prior to the coming of the missionaries.

Whitman's ride east focused attention on the Oregon country, as everywhere he went he talked of the Northwest. Immigrants, planning to head west, banded together in the spring in 1843 in Missouri for the long journey. Whitman is known to have overtaken them, and inasmuch as he was the only one familiar with the trails, to have piloted them across the mountains. Whether or not he was in the slighest degree responsible for the gathering of that great train which marked a turning point in the destiny of the Oregon country, it cannot be disputed that he rendered exceptional service in piloting them and did as much if not more than any other individual in furthering the settlement of the Oregon country by Americans.

THE MISSION BECAME A REGULAR STOPPING PLACE ON OREGON TRAIL

The controversy of whether or not he conferred with President Tyler and Secretary Webster, convincing them as to the advisability of colonizing the section, and the further controversy as to whether he actually motivated the forming of the wagon train of 1843 need not be engaged in. Known facts on which historians agree are sufficient to prove that Whitman aided materially in the colonization work, whether intentional on his part or not. He drew attention to the Oregon country, he aided the wagon train by leading it after overtaking it, and later on, at his station, he assisted future immigrants. The mission became a regular stopping place and supply point on the Oregon Trail. Payment was required for supplies because of limited finances, but immigrants whose supplies were depleted and who were without funds were not turned away unaided.

Following the wagon train of 1843 there was a steady influx of immigrants over the Oregon Trail so that citizens of the United States far outnumbered the British on June 15, 1846, when the Northwest boundary line was established at the forty-ninth parallel.

Then came the massacre.

Measles broke out at the mission in the fall of 1847, and spread rapidly among both whites and Indians in the valley. Some of the Indians always had resented the coming of the whites, although some were truly loyal to the Whitmans. Those who distrusted them were stirred by the epidemic which was unfamiliar to the tribesmen and they feared that the white man was practicing evil magic among them. Numbers of the Indians died from the disease through failure to carry out explicit instructions, and the more the doctor treated them the more surely were they convinced he was killing them by some evil method. Their distrust of the white people who were coming into their region was aggravated by this new complication and their feeling against the whites centered upon Dr. Whitman.

On November 29, 1847, therefore, while the doctor was at his medicine chest, he was approached by two Indians, well known at the mission. While one spoke to him the other plunged his tomahawk into the doctor. This was followed by general bloodshed. Mrs. Whitman was shot through the chest, dying shortly thereafter. She was the only woman slain. Twelve men besides Dr. Whitman were killed. The 50 survivors, mostly women and children, were taken captive and held until December 29, when they were ransomed. The mission buildings were burned and the orchards ruined.

Whitman Centennial, Inc., organized in 1935, is undertaking to have a celebration at Walla Walla August 13 to 16 that will portray the early history of the West in pageantry and also exerting efforts toward the restoration of the Waiilatpu Mission so that a lasting benefit shall accrue from the activities of the centenary year of the coming of Dr. Marcus Whitman and his party to Waiilatpu.

The corporation consists of 15 trustees, representing the leaders in the community, business, educational, and religious life of Walla Walla. In addition a committee of 50 men and women in all parts of the United States has been appointed, consisting of 20 representatives of the American Medical Association, 10 of the Presbyterian Church, 10 of the Congregational Church, and 10 at large.

SECONDING NOMINATION OF FRANKLIN D. ROOSEVELT

Mr. HAYDEN. Mr. President, under the authority granted by the Senate on June 18, 1936, I insert an address by Hon. MATTHEW M. NEELY, United States Senator from West Virginia, before the Democratic national convention, Philadelphia, June 26, 1936, seconding the nomination of Franklin D. Roosevelt for President of the United States, as follows:

Mr. Chairman and members of the convention, as long as the rights, the aspirations, and the hopes of the common people live, respect, admiration, and love for President Franklin Roosevelt and Mrs. Franklin Roosevelt will never die. All the voluminous history of mankind from the morning of creation to the present hour will be searched in vain for a more valiant, efficient, faithful public servant than the dauntless democratic champion who will be nominated today by acclamation and reelected President next November by a majority so vast that it will stun the mind and stagger the imagination.

Our confidence that the result of this campaign will be favorable to democracy is the corollary of our conviction that the voters will ever remember what the Hoover administration did to them, and never forget what the Roosevelt administration has done for them.

The people at the polls will remember, among many other mournful things, that on the last day of Hooverism every bank in the United States was either closed or under extraordinary restrictions designed to save it from ruin; that industry was prostrate; commerce was paralyzed; business was dead and buried; destitution walked every street; suffering stalked every highway; want waited on every corner and piteously held out its fleshless hands for alms, while the hideous specter of starvation spread its vulturous wings over all the land and appalled the weak, unnerved the strong, chilled the blood of the bravest, and filled the hearts of the masses with unutterable consternation.

Who will ever forget that a stock-market crash under Mr. Hoover in 1929 in 2 days annihilated security values that exceeded by billions of dollars the entire cost of this country's participation in the great World War?

Between June 1929 and March 1933, Hooverism wrecked banks, shut down factories, locked up steel mills, harassed manufacturers, impoverished merchants, overwhelmed coal operators, pauperized coal miners, ruined farmers, and overran the land with armies of unemployed men, destitute women, and hungry children as numerous as the leaves on the trees, as countless as the sands on the shore of the sea.

During the last 3 years of the Hoover administration more than 1,500,000 city dwellers were robbed of their homes; more than 2,000,000 farmers were robbed of their last acre of land; more than 14,000,000 toilers were robbed of their jobs and started over the hill to the poorhouse in torture and tatters and tears.

Mr. Hoover promised the toilers work; he gave them idleness, want, and woe. He promised the people bread; he gave them stones. He promised his countrymen prosperity; he gave them adversity that bit like a serpent and stung like an adder.

And who will venture to covenant, who will dare to guarantee that Mr. Landon's campaign promises will be any better than those which were solemnly made and heedlessly broken by the great engineer?

The Hoover panic stopped the wheels of industry in 10,000 cities; it silenced the noise of activity in a hundred thousand factories; it put out the fires in a million furnaces; it brought idleness, destitution, and despair to millions of American homes; it exiled our optimism and sowed the seeds of pessimism in every State, in every county, and in every community under the flag; it gave us shadows for our sunshine, tears for our smiles, and sorrows for our joys. As a breeder of discontent Hooverism has never had a rival. As an extinguisher of furnace fires it has never had an equal since Noah's flood. As a monumental, miserable, blundering, blighting failure Hooverism is the supreme masterpiece of all the world.

And upon this reeking record of industrial disaster and economic woe; upon the silent ruins of the long-boasted Coolidge prosperity; over a broad and endless highway of unredeemed pledges, broken promises, and forgotten principles, now come the greedy, heartless forces of plutocracy, privilege, and plunder, which neither slumber nor sleep, and insult our intelligence, challenge our sanity, and outrage our sensibility by urging us to choose 4 more years of Hooverism—the personification of disaster, the horror of horrors, the abomination of desolation spoken of by Daniel, the prophet.

But what has the Roosevelt administration done?

In Holy Writ the creation of the universe, including everything from the tiniest grain of sand to the most stupendous star, is described in the sublime and simple language:

"In the beginning God created the heaven and the earth."

The immensity and beneficence of the accomplishments of the Roosevelt regime make their adequate description in existing circumstances a matter of impossibility. Therefore, let us in reverential emulation of the divine example content ourselves with merely mentioning a few of the outstanding facts concerning the brilliant achievements of this administration and leave the duty of unqualifiedly approving them in November to the fair-minded, generous, grateful voters of all political parties.

The value of corporation stocks owned by millions of American men and women has increased $31,000,000,000 since the day of President Roosevelt's inauguration. If this stupendous sum were equally divided among all the people in the United States, every man and woman and child would receive $237. By what kind of arithmetic will the members of the Liberty League and other political bourbons, who never learn and never forget, demonstrate that this amazing increase in the Nation's riches has not been a boundless blessing to the American people?

During this administration the farmer's oats have increased in value more than 64 percent, his cattle more than 66 percent, his wheat more than 100 percent, his land more than 100 percent, his corn more than 115 percent, his hogs more than 145 percent.

During the first Roosevelt year our national income from such sources as wages, salaries, dividends, and rents increased more than $6,000,000,000. The following year an additional increase of $5,000,000,000 was recorded. In 1935 our national income from these sources increased $8,000,000,000 more.

How disheartening these figures must be to the Liberty Leaguers, who constantly stand before the political wailing wall and vainly cry for more Hooverism and uselessly yearn for an issue upon which to obstruct the onward, rhythmic march of humanity under the leadership of President Roosevelt, who has substituted the Golden Rule for the rule of gold.

During this administration the output of the steel industry has increased more than fivefold. The hours of service of skilled workers in the mining industry have been reduced to 7 a day, and the workers' wages have been increased more than 70 percent. The compensation of the coal miners has been increased more than 60 percent.

Do not these facts and figures demonstrate that it would be perilous in the superlative degree for the people to exchange the Roosevelt administration for 4 more years of Hoover horror?

But greater than the Roosevelt administration's service to the farmers in increasing the price of their products; greater than the service of doubling and trebling the value of corporation stocks; greater than the service of promoting the prosperity of all our industries—greater than all of these services combined are the purely humanitarian accomplishments of the President and his Congress during the last 39 months.

For example, the employment of child labor in mines and factories at health-destroying tasks, which has cursed the world for ages, was abolished by the New Deal legislation of this administration.

The fact that the Supreme Court declared the National Recovery Act unconstitutional does not diminish the credit due the President for his bold and praiseworthy effort to abolish the slavery of those of whom the Master said:

"Suffer little children to come unto me and forbid them not, for of such is the kingdom of God."

More than 7,000,000 toilers who suffered enforced idleness under Mr. Hoover have been placed upon pay rolls during this administration.

The Home Owners' Loan Corporation, an agency born in the President's tireless brain, has saved a million dwelling houses from sale under the hammer and made it possible for their owners and their dependent ones to abide in them and continue to sing Home, Sweet Home.

The subsistence-homestead projects, the Civilian Conservation Corps, the Federal insurance of bank deposits, the social-security legislation, and a thousand other creations of the Roosevelt administration—

"That soothe and heal and bless,
Are scattered at the feet of man like flowers."

Today conclusive evidence of the priceless benefits of this administration are as apparent as the noonday sun in a cloudless sky. Returned and still returning prosperity is to be seen in the flame of the furnace and the fire of the forge; in the field of the farmer and the output of the manufacturer; in the smoke of industry that dims the sun by day and hides the stars by night. Roosevelt prosperity is to be heard in the ring of the anvil and the rumble of the locomotive; in the whir of the spindle and the click of the shuttle; in the sound of the hammer and the hum of the saw. From the wheat fields of the North to the cotton fields of the South; from the lumber camps of Washington to the orange groves of Florida; from the great financial empire of the opulent East to the greater agricultural kingdom of the golden West, Roosevelt prosperity, all-pervasive and irresistible, is with lavish hands bestowing its blessings and its bounties upon the children of men. This administration has housed the homeless, employed the idle, enriched the wealthy, fed the hungry, clothed the naked, and blessed the poor.

What Moses was to the children of Israel in their departure from bondage in the land of Egypt, what Joshua was to that favored people upon their entrance into the land of promise; what Charles Martel was to Christianity in the great contest between the Crescent and the Cross, what George Washington was to the American colonists, what Thomas Jefferson was to the cause of liberty, what Woodrow Wilson was to the cause of humanity Franklin D. Roosevelt has been to the American people in the greatest crisis that ever confronted any country since the morning stars sang together.

He has spiritualized our Government and banished much of its crass and baneful materialism forever. He has rekindled the fires of patriotism and righteousness in the hearts of a hundred twenty-five million American people. He is leading the way, as rapidly as humanly possible, to the realization of Pope's dream of the Messiah when—

"All crime shall cease
And ancient fraud shall fail,
Descending Justice lift aloft her scale,
Peace o'er the world her olive wand extend,
And white-robed Innocence from heaven descend."

West Virginia moves that the convention nominate by acclamation and that the people elect by unanimous consent for their next President that illustrious man who, in the time of fiery trial and frightful tribulation, has been—

"A spring of ice-cold water to the parched and burning lips of thirst;
A palm that lifts its coronet of leaves above the desert sand;
An isle of green in some far sea;
The purple light of dawn above the eastern hills;
A cloud of gold beneath the setting sun;
A fragrance wafted from an unseen shore;
A silvery strain of music heard within some palace wrought of dreams"—

Franklin D. Roosevelt, of the State of New York!

BUSINESS HAS REACHED NEW HIGH POINT

Mr. HAYDEN. Mr. President, under the authority granted by the Senate on June 18, 1936, I insert a statement by Hon. Daniel C. Roper, Secretary of Commerce, to the effect that business has reached a new high point:

SECRETARY ROPER SAYS BUSINESS HAS REACHED NEW HIGH POINT

DEPARTMENT OF COMMERCE,
Washington, July 8, 1936.

In a semiannual statement regarding current business conditions as revealed by Department of Commerce figures, Secretary Roper said today that the forward movement of business in June reached the highest point since March 1933. It has been consistently upward during the last 3 years despite occasional recessions.

"I have been encouraged by the continuing factor of broad improvement during the recovery period and particularly during the first 6 months of 1936, a situation that at this time seems to point to sustained momentum throughout the year", the Secretary said.

Among the trends cited by the Secretary were the following:

National income rose to approximately $53,000,000,000 in 1935, a gain of more than one-third over the $39,500,000,000 of income in 1932 with indications pointing to a further rise of perhaps 10 percent in 1936.

The trend of employment has been upward each month of this year since January and now stands at the highest point of recovery period with approximately 6,000,000 more employed than at the depression low of early 1933. Estimates on the net increase in new employables since the depression low range from one to two million.

Production of 2,450,000 automobiles in the first half of 1936 was 79 percent greater than the entire year's production of 1932, amounting to 1,370,678 and compared with 2,218,255 in the first half of 1935.

Steel production reached a 6-year high in June with production for the 6 months' period nearly three times as large as the same period of 1932 and one-third greater than in the first 6 months of 1935.

Electric power production set an all-time record in the first half of the year, due to an increase in both domestic and industrial consumption.

Compared with the first half of 1935, industrial production has advanced 11 percent; retail sales, 10 percent; freight traffic, 9 percent; cash farm income, 11 percent. The pronounced rise in retail sales is based largely on the gradual rise of consumer income and the willingness to spend more freely, the latter situation being evidenced particularly by the volume of sales of products of the type which are generally sold on the basis of deferred payments. The widespread improvement in retail sales indicates that the total volume for the year may reach $35,900,000,000 if the present rate of progress continues, compared with $25,597,000,000 in 1932.

The improvement in farm purchasing power is reflected not only in the marked expansion of farm income, but in the more favorable price situation. The 66-percent rise in prices of commodities sold by the farmer since 1932 has been accompanied by a rise in the cost of the goods he has bought of 17 percent. Thus the index of prices received advanced from 65 in 1932 to 108 in 1935, while the index of prices paid advanced from 108 in 1932 to 125 in 1935.

The downward trend of the wholesale price level which extended from January to the middle of May has been checked, and prices have moved moderately higher during recent weeks. The major factor in this movement has been the reversal of the trend of prices of farm products and foods which previously had been moving steadily lower.

Exports increased 4 percent from April to May, contrary to the usual seasonal trend, while imports receded 6 percent. These shifts resulted in a net merchandise export balance of $9,932,000, the first reported since January. Allowing for normal seasonal influences, exports reached 56 percent of the 1923–25 average in May, the highest level attained since May 1931 with the single exception of last November. Imports, after seasonal allowances, were 58 percent of the 1923–25 average. Increases in exports in May over those of a year ago were chiefly distributed among the nonagricultural products, although agricultural exports were approximately $5,000,000 larger in value. In 1932 exports had dwindled to $1,611,016,000 and by 1935 had risen to $2,282,874,000. Imports rose from $1,322,774,000 in 1932 to $2,047,485,000 in 1935.

Construction contracts awarded in 37 Eastern States increased from $1,351,159,000 in 1932 to $1,844,545,000 in 1935, while in the first 5 months of 1936 the total was $996,523,600, a gain of 81 percent over the comparable 1935 period.

Freight traffic continues to gain slowly with loadings for the first half of the year 9 percent larger than in the 1935 period. In the first 5 months of the year total loadings amounted to 13,803,858, compared with 10,931,027 in the same period of 1933. On June 1, Class I railroads had on order 25,748 freight cars, the largest total as of that date since 1930. Net operating income of railroads gained from $53,876,000 in the first 4 months of 1933 to $146,114,000 in the same period of 1936, a rise of 171 percent.

Foundry equipment orders in May were the largest since 1930, excepting the unusual month of March 1931 and the index stood at 165, or 65 percent higher than a year ago. The index of machine tool orders in May stood at 118.8 compared with 73.3 in the same month of 1935 and 15.3 in May 1933, while the value of the principal classes of farm machinery manufactured rose from $117,000,000 in 1932 to $331,998,066 in 1935, a gain of 184 percent, and there has been a further substantial increase so far this year.

Lumber consumption in 1935 was 18,235,000,000 board feet, a gain of 20 percent over 1933 and at the present rate of consumption, the 1936 figure will reach 20,000,000,000 feet.

Stock prices, based on 421 leading stocks, rose from an index of 48.4 in 1932 to 78.5 in 1935 and to 105.7 in the first quarter of 1936. The bond price index rose from 81.1 in 1932 to 102.3 in 1935 and to 107.6 in the first quarter of 1936. Earnings of 921 corporations, reported by Standard Trade & Securities, rose from $348,301,000 in 1932 to $1,785,532,000 in 1935, an advance of more than 380 percent.

GOVERNMENT FINANCING, 1935–36

Mr. HAYDEN. Mr. President, under the authority granted by the Senate on June 18, 1936, I insert an address by Hon. Henry Morgenthau, Jr., Secretary of the Treasury, giving a report on Government financing during the 1935–36 fiscal year, July 2, 1936, as follows:

Last night the Treasury closed its books for the fiscal year 1936, which includes the 12 months from July 1, 1935, to June 30, 1936. The Government has been operating during this period on a financial program laid down in the early months of 1935.

The stockholders of a business enterprise are interested in having at the close of each business year an accounting made to them by the financial officers of the company. It is customary to furnish them with facts and figures on the year's operations. The Government of the United States is your business. You are its stockholders.

Tonight I am going to report to you on the finances of the Government for the year just ended and give you the results.

The man who is responsible for the conduct of a business enterprise estimates just before the new year begins what the expenses will be and what receipts he can reasonably expect. He then plans the year's activities on the basis of these estimates.

FOUR BILLION DEFICIT EXPECTED

But the Government under the law has to estimate each fall its receipts and expenditures for a fiscal year which will not begin until more than 6 months later. Thus, nearly 2 years ago, in the fall of 1934, estimates were prepared for the fiscal year which began last July and which ended last night.

At that time, nearly 2 years ago, it looked as if our revenues would total just under $4,000,000,000 and our expenditures, excluding debt retirement, would amount to almost $8,000,000,000. On this basis we would have shown a net deficit for the year of almost $4,000,000,000.

You and I cannot always tell when we make our business plans what unforeseen and extraordinary events may increase our expenses or reduce our revenues. The manufacturer whose plant is situated in a flood area may have his calculations upset by a disastrous flood. His income may be reduced. His expenditures may be increased.

The business of the Government also is subject to unforeseen and extraordinary events. Scarcely had the present Congress met last January when two events completely changed the Budget outlook.

REVENUES CUT BY COURT

First, the prospective revenues were cut down as a result of the decision of the Supreme Court that the Agricultural Adjustment Act was unconstitutional. This meant a loss to the Treasury, in 1936, of nearly half a billion dollars.

Second, prospective expenditures were increased by an Act of Congress directing the immediate payment of the veterans' adjusted-service certificates. To provide for the payment of these certificates which, under their original terms, were not due until 1945, the expenditure program for 1936 was increased by $1,700,000,000.

Let us see what the results were.

The actual receipts coming into the Treasury during the year which ended last night aggregated $4,116,000,000. This is $316,000,000 more than came in during the fiscal year 1935, notwithstanding the loss of $444,000,000 through the elimination of processing taxes.

But revenue from other sources increased $760,000,000, a gain of 23 percent, due in large part to improvement in business and agricultural conditions.

Our revenues come mainly from two sources—income taxes and miscellaneous internal revenue. Of the income taxes corporation and individual income taxes amounted to nearly $1,500,000,000 for the year that just closed, an increase over 1935 of 30 percent. The miscellaneous taxes brought in over $2,000,000,000, an increase of 20 percent. Customs receipts rose 12 percent.

EIGHT BILLION FIVE HUNDRED MILLION DOLLARS SPENT IN A YEAR

We spent during the year $8,500,000,000, including debt retirement. Three and a half billion was for ordinary operation of the Government. Approximately $3,300,000,000 was for recovery and relief. The net excess of expenditures over receipts was $4,400,000,000.

But leaving out of consideration the payment to veterans of $1,700,000,000, the excess of expenditures over receipts for the fiscal year just ended is $2,700,000,000.

As we have seen, ordinary operating expenses accounted for $3,500,000,000, of which national defense took $750,000,000; annual continuing payments to veterans nearly $600,000,000; interest on the public debt another $750,000,000; agricultural aid, $500,000,000; and the other ordinary operating expenses of the Government, $900,000,000.

How were the recovery and relief expenditures of $3,300,000,000 divided? We expended for large permanent public works under the emergency program $800,000,000. Direct relief required just under half a billion. In addition we provided about a billion and a quarter for work relief in the form of smaller public works, most of them of permanent value, and nearly half a billion for C. C. C. camps. Aid to home owners and other miscellaneous expenditures took more than $250,000,000.

FEDERAL REVENUE INCREASED

Two important facts stand out. On the one hand is an increase in Federal revenue. On the other is a decrease in Federal expenditures aside from the payment to veterans.

As I have shown you, your Government spent $8,500,000,000 during the year which ended last night. We want you to know where the Treasury got this money. We had $1,800,000,000 cash in our general fund at the beginning of the year. Our revenue receipts were just over $4,000,000,000. The other $2,500,000,000 that we spent had to be borrowed.

As a matter of fact, we borrowed more than $5,000,000,000 net, but we have $2,700,000,000 left in our cash balance to meet the expenditures of coming months, including the redemption of the veterans' bonds.

The businessman takes inventory at the end of his business year. Let us do likewise. We have a gross public debt of $33,750,000,000. What have we in our inventory as offsets against this amount? We do not, as does the businessman, include additions to our plant. Our public buildings, our other public-works projects, and our land acquisitions are treated as outright expenditures; and while they are truly assets of the Government, they are not included in our financial statement.

TWO BILLION SEVEN HUNDRED MILLION DOLLARS NOW ON HAND

This first of our cash assets is the general-fund balance, the money we have in our cash drawer and on deposit in the bank. The general-fund balance yesterday was $2,700,000,000. The Government has another important cash asset. It is the $2,000,000,000 stabilization fund, which will ultimately be used to retire a like amount of public debt.

In addition, we have certain assets representing obligations due us, upon which the Treasury will realize cash and which will ultimately be available for debt retirement. These recoverable assets, loans to home owners, to farmers, to railroads, to banks and insurance companies, to States and cities, now total more than $4,000,000,000.

These three items, cash on hand, stabilization fund, and recoverable loans, provide an offset of $8,750,000,000 to the $33,750,000,000 public debt.

An outstanding development in connection with the Government's financing during the past 3 years is the fact that we have reduced the average rate of interest nearly one-fourth. This reduction means an annual saving of more than $260,000,000.

The Government has led the way in reduction of interest charges. The individual businessman has been able to follow in the footsteps of his Government in reducing his own interest charges and in refunding the debt of his own business.

CORPORATION INTEREST CUT

During the 12 months ended June 30, 1936, business corporations registered with the Securities and Exchange Commission more than $2,500,000,000 of securities for the refunding of indebtedness. The approximate average reduction in the gross rate of interest paid by these private business corporations was 1¼ percent, which would mean a saving to these corporations of more than $30,000,000 a year in interest charges.

All of us have a vital interest in the fiscal affairs of our Government. We may derive real encouragement and satisfaction from these facts: National income is rising; as a result Federal revenue is increasing; Federal expenditures are on the decline, and the Nation's business is continuing to show steady improvement.

LEGISLATIVE ACCOMPLISHMENTS OF THE ROOSEVELT ADMINISTRATION, 1933–36

Mr. ROBINSON. Mr. President, in conformance with the leave to print in the RECORD, page 10488, I submit the attached review of legislation:

(The digests, in part, have been taken from the New York Times.)

AGRICULTURE

SOIL CONSERVATION AND DOMESTIC ALLOTMENT ACT

(Approved Feb. 29, 1936. Public Law No. 461, 74th Cong.)

To the purposes of the original Soil Conservation Act (approved Apr. 27, 1935, Public Law No. 46, 74th Cong.) the following are added: "(1) Preservation and improvement of soil fertility; (2) promotion of the economic use and conservation of land; (3) diminution of exploitation and wasteful and unscientific use of national soil resources; (4) the protection of rivers and harbors against the results of soil erosion in aid of maintaining the navigability of waters and water courses and in aid of flood control; and (5) reestablishment" as rapidly as practicable "the ratio between the purchasing power of the net income per person on farms and that of the income per person not on farms which prevailed

during the 5-year period, August 1909–July 1914." The powers conferred on the Secretary of Agriculture shall be used "to assist voluntary action" to effectuate these purposes, and shall not be used to discourage production sufficient to maintain "normal domestic human consumption" in the period 1920–29, taking into account increased population as well as trends in domestic consumption and the export market. Due regard shall be given to "maintenance of a continuous and stable supply of agricultural commodities adequate to meet consumer demand at prices fair to both producers and consumers."

Secretary shall cooperate with States, in the execution of State plans, by making grants.

A State shall receive payments if its plan is approved by the Secretary. The plans must provide for an administrative agency, approved by the Secretary, which includes participation by county and community committees or associations in the administration, and for reports to insure compliance.

Upon approval of any State plan for any year, the Secretary shall make an allocation, one-fourth of which shall be paid at time of approval and the balance in installments prior to end of the calendar year.

By November 1 of each year the Secretary shall apportion the funds among the States available during the next calendar year, taking into consideration the acreage and value of major soil depleting and major export crops, as well as "acreage and productivity of land."

To provide States adequate opportunity for executing their plans, the Secretary is authorized, until January 1, 1938, to make payments or grants to producers to effectuate the purposes of the act. The amount of the payment is to be determined by (1) the treatment or use of land for soil conservation, (2) changes in use of land, (3) the percentage of a producer's "normal production of any one or more agricultural commodities designated by the Secretary which equals that percentage of the normal national production of such commodity or commodities required for domestic consumption", or (4) any combination of the above.

Secretary is authorized to use county and community committees and agricultural extension service, or other agencies. He shall not enter into contracts with producers or acquire land.

Secretary may conduct surveys, investigations, and research regarding most effective accomplishment of purposes of the act.

Defines "agricultural commodity" as "any such commodity and any regional or market classification, type, or grade thereof."

Secretary is authorized to use part of appropriation for expansion of domestic and foreign markets, new or additional markets, or removal of surpluses.

Secretary shall use the Agricultural Adjustment Administration for the execution of this act when he deems it appropriate.

Authorizes a maximum appropriation of $500,000,000 for any fiscal year.

Amends the export-debenture provision of the A. A. A. Amendments Act of 1935 to permit the use of a portion of receipts from customs duties for making payments in connection with normal production for domestic consumption.

Reappropriates certain unexpended balances.

Appropriates $2,000,000 of Emergency Relief Appropriation Act of 1935 for wind-erosion control.

COMMODITY EXCHANGE ACT

(Approved June 15, 1936. Public Law 675, 74th Cong.)

The act shall be known as the Commodity Exchange Act. This act adds to the former Grain Futures Act the following commodities: Cotton, rice, mill feed, butter, eggs, and Irish potatoes.

The act defines the terms "cooperative association of producers", "member of contract market", "futures commission merchant", "floor broker", and "the Commission." Clarifies section 4 of the Grain Futures Act. The act gives the Commodity Exchange Commission power to eliminate any obstruction on interstate commerce caused by undue speculation in futures. Transactions which are bona-fide hedging transactions are exempt from regulation.

It shall be unlawful for members of contract markets, in connection with orders of any commodity in interstate commerce, to cheat, defraud, or deceive the customer, or to bucket the order. The act makes unlawful any transaction which is known in the trade as a "wash sale", "cross trade", "accommodation trade", or is a fictitious sale, or which is known in trade as a "privilege", "indemnity", "bid", "offer", "put", "call", "advance guaranty", or "decline guaranty", and makes unlawful any transaction which is used to cause any price to be reported, registered, or recorded which is not a bona-fide price. The act shall not impair State law applicable.

Future commission merchants are to be registered with the Secretary of Agriculture. The commission merchant must treat money, securities, and property of the customer as belonging to the customer. Any failure of a commission merchant to abide by the act or rules of the Secretary shall result in cancelation of his registration certificate.

Prohibits operation of a place of business where orders for future contracts are solicited or accepted unless such orders are to be executed by or through a member of a contract market. Makes unlawful the making of a contract for future delivery unless the person reports such transaction; books must be kept on all transactions. A board of trade may be designated as a contract market, and when so designated furnish the Secretary of Agriculture copies of their regulations, allow inspection, and keep records.

Regulations are set up for contracts of sale of commodities for future delivery in contract markets. Certain power and authority formally vested in a commission of three is transferred to the Secretary of Agriculture. Defines relations between contract markets and legitimate cooperative associations.

The degree of punishment for violations of this act or regulations set up by the Secretary of Agriculture is provided by the act.

TOBACCO COMPACTS BETWEEN STATES

(Approved Apr. 25, 1936. Public Law No. 534, 74th Cong.)

Congress gives its consent for States to negotiate a compact or compacts for the purpose of regulating and controlling the production of, or commerce in, tobacco. The State acts must be uniform and in no way conflicting. The act of the General Assembly of Virginia, approved March 13, 1936, is set out as an example for other States to follow in drafting their compact legislation. Congress reserves the right to withdraw its consent for the above-mentioned compacts. The consent of Congress for the use of compacts between States in controlling tobacco production is given to enable growers to receive a fair price for tobacco, and not for the purpose of fixing the price thereof.

For the purpose of administering this act there is authorized $300,000 to be appropriated to the Secretary of Agriculture. The Secretary is authorized to make advances to commissions established by States, these advances to be repaid to the Secretary, who in turn shall revert the money to the general fund of the Treasury.

The Secretary shall, upon request of the commission of any State or States, advise with one or more of the State groups upon the administration of the compacts.

The act requires that if three or more States, or any association whose membership includes two-thirds of the tobacco producers in three or more States, agree to regulate tobacco production by such compacts, then the tobacco production in Puerto Rico shall be regulated by the Secretary of Agriculture in the following manner:

The Secretary shall determine for each crop year the quantity of tobacco produced which is likely to be consumed in all countries over the world during such crop year. From this he shall determine the marketing quota for Puerto Rico; the ratio of tobacco produced in Puerto Rico and the United States shall continue to be the same as that ratio before the compacts were introduced.

The Secretary shall establish the quota for each farm in Puerto Rico for each crop year. The marketing quota established for Puerto Rico shall be subject to uniform adjustment during the crop year not exceeding 10 percent of said quota.

The Secretary shall set up regulations for issuing to each farm marketing certificates equal to its marketing quota. Provision is made for handling excess production of tobacco by any farm. Aid will be given to producers whose tobacco crop is destroyed by weather, disease, or fire.

The Secretary of Agriculture shall prescribe such rules and regulations as he may deem necessary to carry out the provisions of the act.

THE FARM CREDIT ACT OF 1935

(Approved June 3, 1935. Public Law No. 87, 74th Cong.)

Amends the Emergency Farm Mortgage Act of 1933, the Federal Farm Loan Act, the Agricultural Marketing Act, and the Farm Credit Act of 1933.

Permits land-bank commissioners to make loans secured by first or second liens on real property with maturities up to 43 years.

Enlarges the purposes for which land-bank commissioners may make loans to include all those for which the Federal land banks are authorized to make loans.

Makes the definition of the term "farmer" in the Emergency Farm Mortgage Act of 1933 identical with the term "farmer" as defined in the amended Federal Farm Loan Act.

Extends until February 1, 1940, the time within which loans can be made by the land-bank commissioner; removes the present limitation ($600,000,000) on the amount of bonds of the Federal Farm Mortgage Corporation which may be used in making such loans; and permits such loans to be made in consolidated farm-loan bonds, if acceptable to the borrower.

Reduces the interest rate paid by Federal land-bank borrowers whose loans were obtained through national farm-loan associations or were outstanding on May 12, 1933, to a maximum of 3½ percent per annum for all interest payable on installment dates occurring within a period of 1 year, beginning July 1, 1935, and to a maximum of 4 percent per annum for all interest payable on installment dates occurring within a period of 2 years, commencing July 1, 1936.

Authorizes Federal intermediate credit banks to discount paper for banks for cooperatives and to make loans to such banks.

Permits the issuance of consolidated debentures by Federal intermediate credit banks, following substantially the same procedure as that followed by the Federal land banks in the issue of their consolidated bonds.

Provides that the rate of interest on any loan made by the Governor of the Farm Credit Administration or a bank for cooperatives to any cooperative association on the security of commodities shall conform, as nearly as practicable, to the prevailing interest rate of commodity loans charged borrowers from the Federal intermediate credit bank of the district in which the principal office of the association is located.

Extends for an additional period of 2 years the authority of the land-bank commissioner, under section 30 of the Emergency Farm Mortgage Act of 1933, to make loans to joint-stock land banks in order to further their orderly liquidation.

THE SOIL EROSION ACT

(Approved Apr. 27, 1935. Public Law No. 46, 74th Cong.)

Recognizes that unless soil erosion can be controlled on farm, grazing, and forest lands the prosperity of the United States cannot be permanently maintained; declares it to be the policy of Congress to provide permanently for the control and prevention of such erosion and directs the Secretary of Agriculture to coordinate all Federal activities in that direction.

Authorizes him to conduct soil-erosion surveys, investigations, and research; to carry out preventive measures, including engineering operations, methods of cultivation, the growing of vegetation, and changes in use of land; to enter into agreements with, or to furnish financial aid to, any agency, governmental or otherwise, for the purposes of the act; and to acquire lands, or rights or interests therein, by purchase, gift, condemnation, or otherwise wherever necessary to protect land resources against soil erosion.

Authorizes certain conditions to the extending of benefits under the act to lands not owned or controlled by the United States or any of its agencies.

Directs the Secretary of Agriculture to establish an agency to be known as the Soil Conservation Service to exercise the powers conferred by the act and authorizes the utilization of the Soil Erosion Service, making the latter's unexpended funds available until June 30, 1937.

THE LIVESTOCK BANKRUPTCY ACT

(Approved May 15, 1935. Public Law No. 60, 74th Cong.)

Amends the National Bankruptcy Act of July 1, 1898, so as to permit livestock raisers to take advantage of that act.

Enlarges the definition of "farmer", which has been restricted by the courts in some instances to include not only individuals primarily bona fide engaged in producing products of the soil, but also those who are primarily bona fide personally engaged in dairy farming, the production of poultry or livestock, or the production of poultry or livestock products in their unmanufactured state.

THE FARM MORTGAGE ACT

(Approved Aug. 28, 1935. Public Law No. 384, 74th Cong.)

Amends section 75 of the Bankruptcy Act of July 1, 1898, so as to permit farmers threatened with foreclosure, and unable to obtain relief through conciliation methods, to go into bankruptcy.

Provides, in a new subsection (s), written to conform to the Supreme Court's decision of May 27, 1935, holding the original 5-year moratorium law invalid, that any farmer failing to obtain a composition or extension, or if he feels aggrieved by a composition or extension proposal may ask to be adjudged a bankrupt. He may also ask the court that all his property wherever located, be appraised, and that his exemptions, as prescribed by State law, be set aside to him, and that he be allowed to retain possession, under supervision and control of the court, of all the remainder of his property, including his encumbered exemptions under terms and conditions set forth in the new act.

Authorizes courts to stay all proceedings against such a farm debtor for 3 years, during which time the debtor shall be permitted to retain possession of "all or any part of his property, in the custody and under the supervision and control of the court, provided he pays a reasonable rental for that part of the property of which he retains possession." The rental would be paid into court to be used, first, for payment of taxes and upkeep, and the remainder to be distributed among the secured and unsecured creditors and applied on their claims.

Provides that at the end of 3 years, or prior thereto, the property having been appraised, the debtor could regain unencumbered possession of it by paying into court "the amount of the appraisal of the property of which he retains possession, including the amount of encumbrances on his exemptions, up to the amount of the appraisal, less the amount paid on principal."

Directs that upon request in writing by any secured creditor or creditors holding a lien on the property, the court shall order its sale at public auction. The debtor would be allowed 90 days in which to redeem any property sold at such a sale by paying the amount for which the property is sold, with interest at 5 percent, to the court, and he may then apply for his discharge from bankruptcy, as provided for in the act.

THE FARM MORTGAGE REFINANCING ACT

(Approved Jan. 31, 1934. Public Law No. 88, 73d Cong.)

Created the Federal Farm Mortgage Corporation, with a capital of $200,000,000, to aid in the refinancing of farm debts.

Authorized the Corporation, with the approval of the Secretary of the Treasury, to issue and have outstanding at any one time bonds in an aggregate not exceeding $2,000,000,000, guaranteed both as to interest and principal by the United States.

Granted the Corporation permission to exchange such bonds, upon application of any Federal land bank, for consolidated farm-loan bonds of equal face value issued under the amended Federal Farm Loan Act and to exchange such consolidated farm-loan bonds held by it for bonds of the Corporation of equal face value.

Provided that the Corporation might purchase, for cash, such consolidated farm-loan bonds, make loans to Federal land banks on the security of such consolidated bonds, and invest its funds in mortgage loans under section 32 of the Emergency Farm Mortgage Act of 1933.

Granted authority to the Land Bank Commissioner until February 1, 1936, to make loans up to $600,000,000 on behalf of the Federal Farm Mortgage Corporation, either in cash or in bonds of the Corporation.

Made available a revolving fund of $40,000,000 to the Governor of the Farm Credit Administration.

THE CROP LOAN ACT

(Approved Feb. 23, 1934. Public Law No. 97, 73d Cong.)

Authorized the Governor of the Farm Credit Administration to make loans to farmers during 1934 for crop production and harvesting, and, to an extent not exceeding $1,000,000, to make loans for feed and livestock in drought- and storm-stricken areas.

Required as security for such loans a first lien on all crops growing, to be grown or harvested in 1934, or on livestock loans to bear interest at a rate not exceeding 5½ percent.

Appropriated $40,000,000 to carry out the act.

THE CROP LOAN RESOLUTION

(Approved Mar. 10, 1934. Public Resolution No. 16, 73d Cong.)

Appropriated $40,000,000 to carry into effect the Crop Loan Act of February 23, 1934, providing for loans to farmers for crop production and harvesting during 1934.

THE JONES-CONNALLY FARM RELIEF ACT

(Approved Apr. 7, 1934. Public Law No. 142, 73d Cong.)

Amended the Agricultural Adjustment Act so as to include six additional basic commodities—beef and dairy cattle, peanuts, rye, barley, flax, and grain sorghums—within its benefits and appropriated $200,000,000 out of the Treasury to enable the Secretary of Agriculture to finance surplus reduction and production adjustments with respect to these commodities, about three-fourths of this sum to be replaced through processing taxes.

Appropriated $50,000,000 to reimburse farmers for cattle slain in the eradication of tuberculosis, and enable the Secretary of Agriculture to make advances to the Federal Surplus Relief Corporation for the purchase of dairy and beef products for distribution for relief purposes.

THE JONES-COSTIGAN SUGAR ACT

(Approved May 9, 1934. Public Law No. 213, 73d Cong.)

Included sugar beets and sugarcane as basic agricultural commodities under the agricultural act; fixed the domestic production at 1,500,000 tons for beet sugar and 260,000 tons for cane sugar.

Authorized the Secretary of Agriculture to make allotments for importations of sugar from outside the continental United States and provided for processing taxes.

Allowed the Secretary of Agriculture to purchase not in excess of 300,000 tons from the surplus stocks of direct-consumption sugar produced in the United States' beet-sugar area at a price not in excess of the market price for direct-consumption sugar on the date of purchase and at an estimated cost of $25,000,000, and to dispose of this sugar by sale or otherwise, including distribution to any organization for the relief of the unemployed.

THE FARM MORTGAGE FORECLOSURE ACT

(Approved June 11, 1934. Public Law No. 305, 73d Cong.)

Amended section 32 of the Emergency Farm Mortgage Act of 1933 by striking out the words "which has been foreclosed at any time between July 1, 1931, and the date of the enactment of this act, or which is foreclosed after the enactment of this act." This amendment enlarged the lending authority of the Land Bank Commissioner under the act of 1933 to permit him to make loans to farmers for the purpose, among others, of enabling them to redeem and repurchase farm property owned by them prior to foreclosure, irrespective of the time when such foreclosure took place.

THE COTTON-CATTLE-DAIRY RELIEF RESOLUTION

(Approved May 25, 1934. Public Resolution No. 27, 73d Cong.)

Provided funds to enable the Secretary of Agriculture to carry out the purposes of the Jones-Connally Farm Relief Act of April 7, 1934, and also the Bankhead Cotton Control Act of April 21, 1934.

Made available to the Secretary of Agriculture the funds necessary to effect the purposes of the Bankhead Act, including the proceeds of the proposed cotton taxes.

Appropriated $150,000,000 to carry out the Jones-Connally Act, of which $24,000,000 would be used for disease control, $25,000,000 for purchasing of dairy products to be distributed for relief, $50,000,000 for purchasing of 2,000,000 head of cows to be distributed for relief, $44,000,000 for benefit payments to producers cooperating in the program to control production, and $6,000,000 for purchase and distribution of cattle from drought-stricken areas.

HOMESTEADERS' RELIEF ACT

(Approved May 21, 1934. Public Law No. 241, 73d Cong.)

Provided that any settler of homestead lands who, during the calendar years 1932, 1933, or 1934, found it necessary to leave his homestead to seek employment in order to obtain the necessities of life for himself or family or to provide for the education of his children, might be excused from compliance with the requirements of the homestead laws as to residence, cultivation, improvements, expenditures, or payment of purchase money.

THE GRAZING ACT

(Approved June 28, 1934. Public Law No. 482, 73d Cong.)

The passage of this act marks the culmination of years of effort to obtain from Congress express authority for Federal regulation of grazing on the public domain in the interests of national conservation and of the livestock industry.

It authorizes the Secretary of the Interior to provide for the protection, orderly use, and regulation of the public ranges, and to

create grazing districts with an aggregate area of not more than 80,000,000 acres. It confers broad powers on the Secretary of the Interior to do all things necessary for the preservation of these ranges, including amongst other powers, the right to specify from time to time the number of livestock which may graze within such districts and the seasons when they shall be permitted to do so. The authority to exercise these powers is carefully safeguarded against impairment by State or local action. Creation of a grazing district by the Secretary of the Interior and promulgation of rules and regulations respecting it will supersede State regulation of grazing on that part of the public domain included within such district.

Water development, soil-erosion work, and the general improvement of such lands are provided for in the act.

Local residents, settlers, and owners of land and water who have been using the public range in the past are given a preference by the terms of the act to the use of lands within such districts when placed under Federal regulation so long as they comply with the rules and regulations of the Secretary of the Interior. The act permits private persons owning lands within a district to make exchanges for federally owned land outside a grazing district if and when the Secretary of the Interior finds it to be in the best public interest.

THE FARM MORTGAGE AMENDATORY ACT

(Approved June 22, 1936. Public Law No. 752, 74th Cong.)

Amends the Emergency Farm Mortgage Act of 1933, as amended, so as to authorize the Reconstruction Finance Corporation to make loans, in an aggregate not exceeding $125,000,000, to or for the benefit of drainage, levee, irrigation, and similar districts, mutual nonprofit companies and incorporated water users' associations organized under the laws of any State or Territory, and for the benefit of political subdivisions of States or Territories which have or propose to acquire projects devoted chiefly to the improvement of lands for agricultural purposes.

Provides that such loans shall be made for the purpose of enabling any such district, political subdivision, company, or association to reduce and refinance its outstanding indebtedness incurred in connection with any such project, or to purchase, acquire, construct, or complete such a project. Stipulates that the terms of this act shall not permit additional or new land to be brought into production outside of the present boundaries of any established or reorganized irrigation district.

THE TOBACCO INSPECTION ACT

(Approved Aug. 23, 1935. Public Law No. 314, 74th Cong.)

Seeks to establish and promote the use of standards of classification for tobacco and provide and maintain an official tobacco-inspection service.

Authorizes the Secretary of Agriculture to investigate the marketing of tobacco and establish official standards for its grading; to demonstrate the official standards and prepare and distribute samples of these grades at reasonable charges for such service.

Empowers the Secretary of Agriculture to designate those auction markets where tobacco moves in commerce, but provides that before taking such action he shall determine the wishes of tobacco growers, who must approve such action by two-thirds majority of those voting on the question. At markets so designated, after not less than 30 days' public notice, no tobacco may be offered for sale until graded by an authorized representative of the Secretary.

Provides that the Secretary of Agriculture shall order such reinspection, or appeal inspection, of tobacco as he may deem necessary for confirmation or reversal of certificates issued under the act.

Authorizes the Secretary to collect, publish, and distribute, by telegraph, mail, or otherwise, without cost to the grower, timely information on the market supply and demand, location, disposition, quality, condition, and market prices of tobacco.

THE FARM RESEARCH ACT

(Approved June 29, 1935. Public Law No. 182, 74th Cong.)

Directs the Secretary of Agriculture to conduct research into laws and principles underlying basic problems of agriculture in its broadest aspects; research relating to improvement of the quality of and the development of new and improved methods of production, distribution, and new and extended uses and markets for agricultural commodities and byproducts, and also research relating to the conservation, development, and use of land and water resources for agricultural purposes.

Appropriates for this purpose $1,000,000 annually for 5 fiscal years beginning July 1, 1935, and $5,000,000 for each fiscal year after July 1, 1940.

Provides for further development of the cooperative extension system by appropriating $8,000,000 for such extension work in agriculture and home economics for the fiscal year 1936, and for each succeeding fiscal year $1,000,000 additional until the total appropriations shall amount to $12,000,000 annually, the appropriation to continue in the latter amount for each succeeding year.

HOMESTEAD SETTLERS

(Approved May 22, 1935. Public Law No. 64, 74th Cong.)

Provides that any homestead settler during 1935 who is compelled to leave his homestead to seek employment in order to obtain the necessaries of life or to educate his children may be excused from compliance with the law governing residence, cultivation, etc., for that year.

(Approved Apr. 20, 1936. Public Law No. 527, 74th Cong.)

Any homestead settler or entryman who, during the calendar year 1936, should find it necessary, because of economic conditions, to leave his homestead to obtain the necessaries of life for himself or family may be excused from compliance with the requirements of the homestead laws as to residence, cultivation, improvement, expenditure, or payment of purchase money.

Any homesteader who is unable to make payment on purchase price of land on account of economic conditions shall be excused from making any such payment during the calendar year 1936 upon payment of interest in advance at the rate of 4 percent per year on the principal of any unpaid purchase price.

INCREASE CAPITAL STOCK OF COMMODITY CREDIT CORPORATION

(Approved Apr. 10, 1936. Public Law No. 489, 74th Cong.)

The Secretary of Agriculture and the Governor of the Farm Credit Administration are authorized and directed to take all necessary steps to increase the capital stock of the Commodity Credit Corporation by $97,000,000; and the Reconstruction Finance Corporation is authorized and directed to acquire $97,000,000 of the nonassessable capital stock of the Commodity Credit Corporation.

AIR MAIL

THE EMERGENCY AIR MAIL ACT

(Approved Mar. 27, 1934. Public Law No. 140, 73d Cong.)

Conferred on the Postmaster General full authority to conduct the Air Mail Service directly by giving him authority to receive from the War Department the necessary planes, equipment, and air fields, and enabling the War Department to spend postal air-mail funds while the Army Air Corps operated the routes.

Enabled the Army to pay subsistence and other allotments to pilots and mechanics on air-mail duty.

THE AIR MAIL ACT OF 1934

(Approved June 12, 1934. Public Law No. 308, 73d Cong.)

Authorized the Postmaster General to award contracts for transportation of air mail for initial periods not exceeding 1 year to the lowest responsible bidders tendering sufficient guaranty for faithful performance.

Reduced air-mail postage rates from 8 cents to 6 cents an ounce.

Authorized the President to appoint a commission of five to make an immediate survey and report to Congress not later than February 1, 1935, recommendations of a broad policy covering all phases of aviation.

Provided that where the Postmaster General held a low bidder was not responsible or qualified, the latter should have a right of appeal to the Comptroller General, whose decision would be final.

Stipulated that the base rate of pay which might be bid and accepted in awarding such contracts should in no case exceed 33⅓ cents an airplane-mile for transporting a mail load not exceeding 300 pounds, the rate to be increased to a maximum load of 40 cents an airplane-mile for heavier loads.

Prohibited the sale, assignment, or transfer of contracts without approval of the Postmaster General, who may grant extension of routes for a distance not exceeding 100 miles.

Barred the Postmaster General from awarding contracts for air-mail routes or extending such routes in excess of an aggregate of 29,000 miles or from arranging schedules on these lines which would necessitate flying more than 40,000,000 airplane-miles annually.

Empowered and directed the Interstate Commerce Commission after notice and hearing, to fix and determine by order fair and reasonable rates for carrying the air mail, but not in excess of the rates provided for in the act, and at least once a year to review the rates in order to be assured that no unreasonable profit is resulting.

Authorized the Postmaster General to designate certain air-mail routes as primary and secondary and directed him to include at least four transcontinental routes and the eastern and western coastal routes among the primary routes.

Allowed low bidders 30 days in which to qualify for service under their contracts.

Outlawed holding companies, making it unlawful after December 31, 1934, for any person holding an air-mail contract to buy, hold, own, or control, directly or indirectly, an interest in any other aviation properties except landing fields, hangars, and ground facilities necessarily incidental for the performance of the air-mail contract.

Prohibited interlocking directorates and limited to $17,500 annually the salaries of officers, directors, or regular employees of air-mail contractors.

Directed the Secretary of Commerce to prescribe maximum and minimum flying hours for air-mail pilots and to determine the speed, load capacity, and safety features of mail planes.

Prohibited any contractor from holding more than three air-mail contracts after October 1, 1934.

THE AIR MAIL CONTRACT ACT

(Approved Feb. 21, 1935. Public Law No. 12, 74th Cong.)

Postpones from March 1, 1935, to April 1, 1936, the provision of section 15 of the Air Mail Act of June 12, 1934, that no contract for any primary air-mail route should be awarded to or extended for a contractor already holding contract for one primary route.

Makes no other change of any kind in the legislation previously enacted governing the carriage of air mail, but obviates the letting of new contracts for a brief period pending action by Congress on the report of the Commission which was authorized to report recommendations for a national aviation policy.

ANTITRUST

PROHIBITION OF PRICE DISCRIMINATION

(Approved June 19, 1936. Public Law No. 692, 74th Cong.)

This act amends the Clayton Antitrust Act (U. S. C., title 15, sec. 13).

It shall be unlawful to discriminate in price between buyers of commodities of like grade and quality, or to injure or destroy competition; provided that nothing herein contained shall prevent differentials which make due allowance for quantities in which such commodities are sold or delivered. However, the Federal Trade Commission shall have power to set quantity limits, after due hearing, where such quantity buying tends to create a monopoly. The act does not prevent price changes from time to time in response to perishable goods, seasonal goods, etc.

Upon proof being made that there has been discrimination in price, the burden of rebutting the evidence shall be upon the person charged with the violation.

The act forbids the payment or allowance of brokerage, either to the other principal party or to an intermediary acting in fact for or under the control of the other principal party, to the purchase and sale transaction.

Any compensation allowed a customer in connection with processing, handling, sale, or offering for sale of any products must be allowed all other customers on proportionately even terms.

It shall be unlawful to discriminate in favor of one purchaser against another of a commodity bought for resale by furnishing any service connected with processing, handling, and/or sale of commodity.

This act shall in no way affect litigation pending before the courts or orders of the Federal Trade Commission set in motion from the Antitrust Act previous to this amendatory act. If the Federal Trade Commission believes any person is guilty of violating this amendatory act, it may reopen the original proceedings and may restate the charges.

Under this act it shall be unlawful for any person knowingly to grant a discount, rebate, allowance, or advertising-service charge over and above any such similar charge available at the time of such transaction to said competitors in respect to a sale of goods of like grade, quality, and quantity; to sell or contract to sell goods in any part of the United States for the purpose of destroying competition or eliminating a competitor.

Nothing in the act shall prevent a cooperative association from returning to its members, producers, or consumers the whole or any part of the net earnings or surplus resulting from its trading operations in proportion to their purchases or sales from, to, or through the association. Maximum penalty for violation of this act is set at $5,000 fine or imprisonment for 1 year, or both.

APPROPRIATION REFORM

THE PERMANENT APPROPRIATIONS ACT

(Approved June 26, 1934. Public Law No. 473, 73d Cong.)

Provided that a larger number of specified permanent annual appropriations shall be subject to annual consideration and appropriation by Congress.

Effective July 1, 1935, abolished the Army recreation fund and covered its balance into the Treasury.

Required that unclaimed moneys in trust funds be deposited into and disbursed from a special trust fund account authorized to be established by the act, but certain trust-fund accounts, including retirement and insurance funds, are exempted from the operations of this provision.

Prescribed bookkeeping methods to be employed in handling outstanding checks of the Federal Government.

Required the Comptroller General of the United States to make a survey of certain appropriations and funds in the custody of Government officers, in which the Government is financially concerned, and to report to Congress annually his recommendations for changes in existing law.

BANKING

THE EMERGENCY BANKING RELIEF ACT

(Approved Mar. 9, 1933. Public Law No. 1, 73d Cong.)

Confirmed all previous proclamations of President Roosevelt and the late Secretary Woodin issued during the bank crisis that confronted the inauguration of the new Democratic administration.

Vested in the President and made applicable to peacetime emergencies the tremendous World War powers of regulation over transactions in credit, currency, gold and silver, including foreign exchange, fixing maximum penalties of $10,000 fine and 10 years' imprisonment for violators.

Empowered the Secretary of the Treasury to require delivery at the Treasury of all gold and gold certificates held by anybody in the country.

Authorized the President, without invoking the war powers, to fix restrictions on the banking business of Federal Reserve members.

Allowed the Comptroller of the Currency to appoint conservators for any national bank when considered necessary to conserve its assets; enabled a conservator to set aside for withdrawal by depositors on a ratable basis such amount as the Comptroller decided might be safely used; permitted the Comptroller to allow banks under conservators to receive new deposits, which would be segregated and subject to withdrawal without restriction; and permitted the reorganization of national banks upon the approval of the Comptroller, and, as the case might be, either of depositors of 75 percent of total deposits or holders of two-thirds of the outstanding stock, or both.

Provided for the issuance of preferred stock by national banks and for the purchase of preferred stock of national and State banks and for loans upon the security of such stock by the Reconstruction Finance Corporation when necessary to supply funds for organization or reorganization of such banks.

Authorized issuance of Federal Reserve bank notes redeemable in lawful money of the United States, these notes to be issued to the value of 100 percent Government obligations deposited as security and to the value of 90 percent of the notes, drafts, bills of exchange, and bankers' acceptances deposited as security.

Permitted Federal Reserve banks to make bank-note advances to member banks on time or demand notes secured to the satisfaction of the Reserve bank, but not ordinarily eligible, this section having a maximum time limit of March 3, 1935.

Authorized Federal Reserve banks to make 90-day bank-note advances to any individual, partnership, or corporation on promissory notes secured by Federal obligations.

THE BANKING ACT OF 1933

(Approved June 16, 1933. Public Law No. 66, 73d Cong.)

Provided for the coordination of Federal Reserve open-market activities, for the prevention of speculative uses of credit, for regulation of interbank control, for the insurance of deposits in member banks, for regulation of their operations, for separation of security affiliates, and permitted branch banking.

Embraced in its scope national banks, Federal Reserve and member banks, including State, Morris Plan, mutual banks, and postal savings.

Created a Federal Open Market Committee, one member selected by each Reserve bank directorate, to regulate open-market activities, and provided that undue use of bank credit may subject a member bank to suspension.

Created the Federal Bank Deposit Insurance Corporation, and provided for a deposits insurance fund made up of $150,000,000 appropriated by the Federal Government plus stock subscriptions.

Provided for a temporary deposit insurance fund from January 1, 1934, to June 30, 1934, insuring individual deposits to $2,500.

Provided that after July 1, 1934, the Corporation should insure the deposits of all member banks, deposits under $10,000 being fully covered; the next $40,000, 75 percent; over $50,000, 50 percent. Deposits in nonmember State banks holding class A stock are insured until July 1, 1936. Membership in the insurance corporation after July 1, 1936, is limited to national banks and members of the Federal Reserve System.

Forbade member banks to act as agent in security loans to brokers or dealers, to extend credit to purchase securities under repurchase agreement from any affiliate, to invest in affiliate obligations, or to accept obligations of affiliates as collateral on loans exceeding 10 percent of capital or surplus.

Provided that no executive officer should borrow from his member bank and that he must report to his board of directors concerning loans from another member bank.

Permitted investment transactions without recourse for customer's account; permitted purchases on own account under controller regulations, and provided that the securities of a single obligor should not exceed 10 percent of outstanding issues.

Security affiliates not permitted after 1 year; security corporations prohibited from engaging in banking business.

Branch banking within a city permitted with the approval of the controller wherever State banks are expressly so authorized; branch banking within a State permitted wherever statutes specifically permit, but no branches permitted beyond the city unless unimpaired capital is at least $500,000, or minimum of $250,000 in States with population under 1,000,000 and which have cities therein of more than 100,000 population, or a minimum of $100,000 in States under 500,000 population which have no cities exceeding 50,000 population.

TAXATION OF BANK SHARES OWNED BY R. F. C.

(Approved Mar. 20, 1936. Public Law No. 482, 74th Cong.)

Exempts shares of preferred stock of national banking associations and of preferred stock, capital notes, and debentures of State banks and trust companies, acquired by the R. F. C., from taxation by the Federal, State, local, or Territorial governments. Likewise exempts dividends or interest from such shares from taxation.

Effective March 20, 1936, limits interest on loans by R. F. C. to closed banks and trust companies to 3½ percent on condition interest charged debtors of such institutions shall not exceed 4½ percent. No reduction in interest rate on such R. F. C. loans can be retroactive from March 20, 1936.

THE GLASS BANKING ACT OF 1935

(Approved Aug. 23, 1935. Public Law No. 305, 74th Cong.)

Seeks to provide for "sound, effective, and uninterrupted operation of the banking system" through amendment of the Federal Reserve Act, reorganization of the Federal Reserve Board and technical amendments of the banking laws, and by making Federal deposit insurance of bank deposits permanent.

Reorganizes the Federal Reserve Board into a seven-member board, all to be appointed by the President, and each to have the title of "governor" and serve a 14-year term. Changes the name of the Federal Reserve Board to the "Board of Governors of the Federal Reserve System." The Secretary of the Treasury and the

Comptroller of the Currency are eliminated from membership, ex officio, on the Board after February 1, 1936. The entire reorganization of the Board is to be effected by that date.

Creates a Federal open-market committee, effective March 1, 1936, which shall consist of the 7 members of the Board of Governors of the Federal Reserve System and 5 representatives of the 12 regional Federal Reserve banks, to be elected annually by designated regions, the committee to have power to control credit fluctuations by purchasing and selling Government bonds, notes, or other obligations of the United States on the open market through the Reserve banks. The open-market committee is to have charge of open-market operations and the Reserve banks must act in accordance with its instructions.

Amends section 14 of the Federal Reserve Act to make eligible for purchase by Federal Reserve banks, without regard to maturities, direct obligations of the United States or obligations fully guaranteed by the United States, but provides that such direct and guaranteed obligations may be purchased "only in the open market."

Retains existing statutory requirements governing maintenance of reserves against deposits as a further check on the use of bank funds for speculation. Provides that by a vote of not less than 4 of the 7 members of the Board of Governors the present requirements of 7, 10, and 13 percent could be doubled but not lowered.

Allows Reserve banks to continue to propose changes in rediscount rates, subject to Board approval, but requires such rates to be restated "every 14 days, or oftener, if deemed necessary by the Board."

Authorizes the President to designate one of the seven governors of the Federal Reserve System to act as its "chairman" and another to serve as "vice chairman", each for 4 years; and gives the heads of the 12 Federal Reserve banks the new title of "president" instead of "governor", so as not to conflict with the new Reserve Board titles. The presidents of the Federal Reserve banks would be selected for 5-year terms by the boards of directors of the banks, subject to approval by the Board of Governors of the Federal Reserve System.

Permits national banking associations to make real-estate loans secured by first liens upon improved real estate, including improved farm land and improved business and residential properties, up to 50 percent of the appraised value of the real estate offered as security, for a term of not over 5 years, except in cases of amortized loans, when 60 percent may be loaned for a 10-year term. Forbids national banking associations to make such loans in an aggregate sum in excess of the capital and surplus of the bank, or in excess of 60 percent of its time and savings deposits, whichever is the greater.

Broadens the eligibility requirements of paper upon which the Federal Reserve banks may make loans.

Makes permanent the temporary law, expiring August 31, 1935, fully insuring bank deposits up to $5,000 for a depositor. Provides that the annual assessment on banks for insurance-fund membership shall be one-twelfth of 1 percent upon their average deposit liability.

Requires all State banks with deposits of $1,000,000 or more to join the Federal Reserve System by July 1, 1942, if they desire to continue to have their deposits insured.

Permits nonmember banks to terminate their insured status within 30 days of effective date of the Banking Act of 1935 by giving written notice to the Federal Deposit Insurance Corporation.

Provides that the total amount of the securities of one issuer or obligor held by a national banking association for its own account shall not exceed 10 percent of the actually paid-in and unimpaired capital stock and surplus fund, except that this provision shall not apply to lawful holdings as of the effective date of the Banking Act of 1935.

Requires the Secretary of the Treasury, whenever in the judgment of the directors of the Federal Deposit Insurance Corporation additional funds are required for insurance purposes, to purchase obligations of the Corporation in an additional amount not exceeding $250,000,000.

THE COLLATERAL SECURITY ACT

(Approved Mar. 9, 1934. Public Law No. 115, 73d Cong.)

Extended for 1 year, or until March 3, 1935, the time in which Federal Reserve banks may be permitted to use United States bonds as security for the issuance of their notes and credits.

Granted permission to the President to extend it 2 years further.

THE BANK DEPOSIT INSURANCE ACT

(Approved June 16, 1934. Public Law No. 362, 73d Cong.)

Amended section 12B of the Federal Reserve Act so as to extend for 1 year the temporary plan for deposit insurance, or until July 1, 1935.

Provided that beginning July 1, 1934, the amount eligible for insurance should be $5,000 of the deposits of each depositor instead of the present $2,500.

Authorized and empowered, but did not direct, the Reconstruction Finance Corporation to make loans upon or purchase the assets of any bank, savings bank, or trust company closed between December 31, 1929, and January 1, 1934, and the affairs of which have not been fully liquidated or wound up, upon such terms and conditions as the Corporation may prescribe.

In making such purchase of, or loans on, the assets of any closed bank, the Reconstruction Finance Corporation shall appraise the assets in anticipation of an orderly liquidation over a period of years rather than on the basis of forced selling values in a period of business depression.

Directed the Reconstruction Finance Corporation to purchase the obligations of the Federal Deposit Insurance Corporation, on request of the latter, to the extent of $250,000,000.

Postponed the termination of insurance of nonmember banks until July 1, 1937, and permitted nonmember banks to obtain the benefits of the permanent insurance after the fund is terminated (on July 1, 1935) until July 1, 1937.

THE BANK DEPOSIT INSURANCE EXTENSION ACT

(Approved June 28, 1935. Public Resolution No. 38, 74th Cong.)

Extends for 60 days, or until August 31, 1935, the temporary plan for Government insurance of bank deposits up to $5,000.

Provides that the deposits in banks which, on June 30, 1935, were members of the fund should continue to be insured during the extended period to August 31, 1935, without liability on the part of such banks to further calls or assessments.

THE CORPORATE BANKRUPTCY ACT

(Approved June 7, 1934. Public Law No. 296, 73d Cong.)

Permitted corporations to reorganize with the consent of the majority of their creditors, under the guidance of the courts, and allowed financial compromises in many instances where a majority of the creditors had agreed but were balked by minorities.

Provided that a petition for reorganization of a corporation might be filed by any creditor or stockholder if approved by holders of 25 percent in amount of any class of creditors, and not less than 10 percent in amount of all claims against the debtor; also that when corporations were not really insolvent but were unable to meet maturing obligations, agreement to the petition must come from stockholders representing 10 percent of any class of stock and 5 percent of the total.

Stipulated that district courts or any of their judges should apportion appointments as receiver equitably among all eligible persons, firms, or corporations within the district.

Prohibited the appointment as receiver of any person related to any judge of a United States court; also prohibited the appointment as attorney for a receiver any person who was such a relative or a member of a law firm of which any member was a relative of such judge.

THE STATE BANK AID ACT

(Approved Mar. 24, 1933. Public Law No. 4, 73d Cong.)

Provided that during the then-existing emergency in banking any State bank or trust company not a member of the Federal Reserve System for 1 year might borrow directly from Federal Reserve banks by depositing satisfactory collateral, the same as member banks, under the Emergency Banking Act.

Permitted the Reconstruction Finance Corporation to lend to State banks or trust companies on their capital notes or debentures instead of on preferred stock in those States where double liability is imposed on the preferred stock; also gave the Reconstruction Finance Corporation the right to sell the securities in the open market.

CIVIL SERVICE

VACATIONS FOR GOVERNMENT EMPLOYEES

(Approved Mar. 24, 1936. Public Law No. 471, 74th Cong.)

All civilian officers and employees of the United States wherever stationed and of the government of the District of Columbia shall be entitled to 26 days annual leave with pay each calendar year, exclusive of Sundays and holidays. Leave may accumulate for succeeding years until it totals not exceeding 60 days. Temporary employees are entitled to 2½ days leave for each month of service. The act becomes effective January 1, 1936.

Teachers and librarians in the public schools and certain divisions of the Post Office Department are not included in the act.

SICK LEAVE FOR GOVERNMENT EMPLOYEES

(Approved Mar. 14, 1936. Public Law No. 472, 74th Cong.)

On and after January 1, 1936, cumulative sick leave with pay, at the rate of 1¼ days per month, shall be granted to all civilian officers and employees, the total accumulation not to exceed 90 days. Temporary employees, except temporary employees engaged on construction work at hourly rates, shall be entitled to 1¼ days sick leave for each month of service: *Provided*, That all such employees shall furnish certificates satisfactory to the head of the appropriate department or independent establishment.

Teachers and librarians in the public schools and certain divisions of the Post Office Department are not included in the act.

COMMUNICATIONS

THE COMMUNICATIONS ACT OF 1934

(Approved June 19, 1934. Public Law No. 416, 73d Cong.)

Created a Federal Communications Commission of seven members to regulate the Nation's interstate and foreign communications services by telegraph, telephone, cable, and radio.

Abolished the Federal Radio Commission and transferred its functions, as well as regulatory authority over telephones and telegraph now vested in the Interstate Commerce Commission, to the new Communications Commission.

Repealed the Radio Act of 1927, modified the method of allocating broadcasting frequencies along with other changes regarding radio; amplified the Radio Act by providing for the modification of station licenses and construction permits where the Commission considers such action in the public interest; and directed the Commission to study the proposal that Congress, by

statute, allocate fixed percentages of broadcasting facilities to particular types of nonprofit programs.

Granted the Commission wide authority, effective July 1, to regulate interstate communications systems in cooperation with State utility commissions regulating radio, wireless, telephone, telegraph, cables, and television.

Empowered the President in time of war to take over radio and wire offices in the interest of national defense.

Prohibited radio broadcasting of any information concerning any lottery, gift enterprise, or similar scheme offering prizes dependent upon lot or chance.

THE TELEPHONE INQUIRY ACT

(Approved Mar. 15, 1935. Public Resolution No. 8, 74th Cong.)

Directs the Federal Communications Commission to investigate and report to Congress on the following matters with respect to the American Telephone & Telegraph Co. and all other companies engaged directly or indirectly in telephone communication in interstate commerce, including all of their subsidiary, affiliated, associated, and holding companies in which any of them have any direct or indirect financial interest or in which any of their officers or directors hold office or any control:

1. The corporate and financial history and the capital structure and relationship of such company and of its subsidiary, affiliated, associated, and holding companies, including the determination of whether such structure may enable them to evade State or Federal regulation, or taxation, or to conceal, pyramid, or absorb profits, or to do any act contrary to the public interest.

2. The extent and character of intercompany service contracts and all transactions between telephone companies and their subsidiaries and holding companies, etc., and particularly between the A. T. & T. Co. and the Western Electric Co. and other manufacturers of electrical equipment.

3. The reasons for failure generally to reduce telephone rates and charges during years of declining prices.

4. The effect of monopolistic control upon reasonableness of rates.

5. The effect of mergers, consolidations, and acquisitions of control by telephone companies, including write-ups in purchase prices.

6. Methods of competition with other companies or industries.

7. Whether the companies, through propaganda or money expenditure, have sought or control channels of publicity to control public opinion.

Makes $750,000 available for the inquiry.

CRIME

THE FEDERAL MARSHALS ACT

(Approved June 15, 1935. Public Law No. 146, 74th Cong.)

Amends and clarifies existing law by providing that United States marshals may serve process in any Federal judicial district.

Empowers Federal marshals and their deputies to make arrests without warrants for any offense against laws of the United States committed in their presence, also for any felony cognizable under Federal laws where the felony has in fact been or is being committed and they have reasonable grounds to believe that the person to be arrested has committed or is committing it.

Provides Federal statutory authority for Federal marshals and their deputies to carry firearms.

THE POULTRY RACKET ACT

(Approved Aug. 14, 1935. Public Law No. 272, 74th Cong.)

Seeks to break up the poultry racket in New York and New Jersey or elsewhere which is interstate by placing the live-poultry industry under the Packers and Stockyards Act and thereby undertaking to establish correct and reasonable charges for all services rendered at the unloading point in destination of shipment.

Adds a new title V to the Packers and Stockyards Act, approved August 15, 1921, so as to bring the shipment of such poultry within the jurisdiction of the Secretary of Agriculture.

THE CRIME-PREVENTION COMPACT ACT

(Approved June 6, 1934. Public Law No. 293, 73d Cong.)

Granted the consent of Congress to any two or more States to enter into agreements or compacts for cooperative effort and mutual assistance in the prevention of crime and in the enforcement of their respective criminal laws and policies, and to establish such agency, joint or otherwise, as they may deem desirable for making effective such agreements or compacts.

THE ARREST FACILITATION ACT

(Approved June 6, 1934. Public Law No. 295, 73d Cong.)

Appropriated as a reward or rewards for the capture of anyone charged with violation of the criminal laws of the United States or any State or of the District of Columbia the sum of $25,000, to be spent in the discretion of the Attorney General of the United States.

Appropriated an additional $25,000 as a reward or rewards for information leading to the arrest of any such person.

Provided that if any such persons shall be killed in resisting lawful arrest the Attorney General may pay any part of the reward to the persons he shall adjudge entitled to receive them, but no part of the appropriation shall be paid to any employee of the Department of Justice.

THE NATIONAL STOLEN PROPERTY ACT

(Approved May 22, 1934. Public Law No. 246, 73d Cong.)

Extended the provisions of the National Motor Vehicle Theft Act of 1919 to other stolen property.

Provided for $10,000 fine or 10 years' imprisonment, or both, for those who transport or cause to be transported any stolen goods, wares or merchandise, securities, or money valued at $5,000 or over; also the same punishment for receiving, concealing, storing, bartering, selling, or disposing of such goods.

THE SIX FEDERAL CRIME CONTROL ACTS

(Approved May 18, 1934, 73d Cong.)

Provided punishment for killing, assaulting, resisting, opposing, impeding, or interfering with Federal officers while performing their official duties running down crime. (Public Law No. 230.)

Applied the powers of the Federal Government, under the commerce clause of the Constitution, to extortion by means of telephone, telegraph, radio, oral message, or otherwise. (Public Law No. 231.)

Amended the act forbidding the transportation of kidnaped persons in interstate commerce to provide punishment by death if the verdict of the jury so recommends, or by imprisonment for such term as the court shall determine. (Public Law No. 232.)

Made it unlawful for any person to flee from one State to another for the purpose of avoiding prosecution or giving testimony in cases involving murder, kidnaping, burglary, robbery, mayhem, or extortion accompanied by threats of violence. (Public Law No. 233.)

Provided punishment of 10 years' imprisonment for causing or assisting in prison mutiny, riot, or escape. (Public Law No. 234.)

Provided punishment for certain offenses committed against banks organized or operating under laws of the United States or any member of the Federal Reserve System. (Public Law No. 235.)

PENALTY FOR POSSESSING RANSOM MONEY

(Approved Jan. 24, 1936. Public Law No. 424, 74th Cong.)

To amend the act entitled "An act forbidding the transportation of any person in interstate or foreign commerce, kidnaped, or otherwise detained", and making such an act a felony by adding the following section:

"SEC. 4. Whoever receives, possesses, or disposes of any money or other property, or any portion thereof, which has at any time been delivered as ransom or reward in connection with a violation of section 1 of this act, knowing the same to be money or property which has been at any time delivered as such ransom or reward, shall be punished by a fine of not more than $10,000 or imprisonment in the penitentiary for not more than 10 years, or both."

FLOOD CONTROL

FLOOD CONTROL ACT OF 1936

(Approved June 22, 1936. Public Law No. 738, 74th Cong.)

Represents "first comprehensive effort definitely to establish a Federal policy with respect to flood control throughout the United States, and contains the first general legislation having this purpose in view."

Recognizes that destructive floods "constitute a menace to national welfare; that it is the sense of Congress that flood control on navigable waters or their tributaries is a proper activity of the Federal Government in cooperation with States, their political subdivisions, and localities thereof"; that investigations and improvements for flood control "are in the interest of the general welfare; that the Federal Government should improve or participate in the improvement of navigable waters or their tributaries, including watersheds thereof, for flood-control purposes", if the benefits are in excess of estimated costs and "if the lives and social security of the people are otherwise adversely affected."

Provides that Federal investigations and improvements of rivers and other waterways for flood control shall be under direction of Secretary of War and supervision of Chief of Engineers; while "investigations of watersheds and measures for run-off and water-flow retardation and soil-erosion prevention on watersheds" shall be under direction of Secretary of Agriculture.

Provides that money appropriated under authority of this act shall not be expended on construction until States, political subdivisions thereof, or other local agencies have given assurances they will (a) provide without cost to the United States all lands necessary for construction, (b) hold and save the United States free from damages due to construction, (c) maintain and operate all works in accordance with regulations of Secretary of War. Provides also that in case the cost of land and damages to a State exceed the construction costs paid by the Federal Government, the State shall not be required to pay more than 50 percent of the total cost of the project; that the Secretary of War shall determine the proportion of costs of lands each State shall contribute; and that when more than 75 percent of the benefits of a project accrue to lands outside a State, the State shall not be required to pay maintenance costs.

Grants consent of Congress to State compacts to carry out the purposes of the act, provided such compacts permit the Department of War to expend all money pursuant to the compacts except that retained for reserves to collect taxes and maintain necessary State organizations.

Authorizes an appropriaion of $310,000,000 for projects designated and $10,000,000 to be expended in equal amounts by Departments of War and Agriculture for examinations and surveys. Limits expenditures to $50,000,000 in fiscal year 1937. Permits employment of relief workers, who are to be paid from W. P. A. funds.

MISSISSIPPI FLOOD CONTROL ACT

(Approved June 15, 1936. Public Law No. 678, 74th Cong.)

Amends the Mississippi Flood Control Act of May 15, 1928, so as to provide that the project for control of floods on that river and its tributaries shall be modified in accordance with the recommendations submitted by the Chief of Engineers to the chairman of the Committee on Flood Control on February 12, 1935.

Appropriates $272,000,000 for carrying out this modified adopted project and makes available for the purposes of the act all unexpended balances of appropriations heretofore made for the project.

Authorizes the appropriation of $15,000,000 as an emergency fund to be allocated by the Secretary of War on recommendation of the Chief of Engineers in rescue work or in repair or maintenance of any flood-control work on any tributary of the Mississippi River threatened or destroyed by flood.

LOANS FOR REPAIR OF DAMAGES BY FLOODS

(Approved Apr. 16, 1936. Public Law No. 525, 74th Cong.)

This legislation further amends the act of April 13, 1934, so as to permit the Reconstruction Finance Corporation to make loans where damage has been caused by floods, etc., to permit loans to corporations, partnerships, etc., for the purpose of repairing or rehabilitating highways, bridges, power plants, etc., which have been injured as a result of earthquakes, conflagrations, tornadoes, cyclones, hurricanes, floods, or other catastrophes during the years 1935 and 1936; and for the further purpose of facilitating such replacements as are deemed by the Reconstruction Finance Corporation to be useful or necessary.

The act specifies how the obligations shall be secured, the maturities of such obligations, and limits the aggregate of loans to $50,000,000.

Title I of the National Housing Act is amended to permit the Administrator to insure approved financial institutions up to 10 percent of the total of loans made by said institutions for the purpose of aiding in the reconstruction or rehabilitation of property injured or destroyed by the above-mentioned forces. Terms of such loans must be satisfactory to the Administrator, and the National Housing Act is amended so as to permit a total insurance liability in the aggregate of $100,000,000.

HOLDING COMPANIES

PUBLIC-UTILITY HOLDING COMPANIES

(Approved Aug. 26, 1935. Public Law No. 333, 74th Cong.)

Title I of the act provides for the control of public-utility holding companies operating or marketing securities in interstate and foreign commerce and through the mails; while title II is concerned with regulation of the transmission and sale of electric energy in interstate commerce.

HOME FINANCING

THE HOME OWNERS' REFINANCING ACT

(Approved June 13, 1933. Public Law No. 43, 73d Cong.)

Provided for the creation of the Home Owners' Loan Corporation, with $200,000,000 of capital to be provided by the R. F. C. and authorization to issue $2,000,000,000 in bonds to exchange for mortgages.

Stipulated that the maximum aid to be given to a home owner by the Corporation, through exchange of bonds for mortgages, would be the equivalent of 80 percent of the value of the mortgaged property, not exceeding $14,000; the Corporation, in this refinancing, to exchange its bonds up to the permitted maximum for mortgages; the bonds to bear Government-guaranteed interest of 4 percent.

Authorized the Corporation, after making such an arrangement to collect from the home owners interest at 5 percent on the refinanced mortgages, the home owners to amortize these loans within 15 years.

Provided that home owners unable to benefit by this procedure, through the reluctance of mortgage holders, might borrow up to 40 percent of the value of their properties for the purpose of reducing to that extent their indebtedness, these loans in no event to exceed 6 percent annually.

Authorized cash loans up to 50 percent of the value of homes where comparatively small debts were held against such properties.

Provided for limited loans to recover homes for original owners who might have lost them by foreclosure or forced sale in 2 years preceding the act.

THE HOME OWNERS' LOAN ACT OF 1934

(Approved Apr. 27, 1934. Public Law No. 178, 73d Cong.)

Authorized the issuance of $2,000,000,000 of bonds by the Home Owners' Loan Corporation which might be sold or exchanged for mortgages.

Provided that bonds be guaranteed as to principal as well as interest by the United States.

Provided that the Secretary of the Treasury might buy and sell these bonds substantially as other Government bonds.

Stipulated that the Corporation should only have power to refund home mortgages in cases where the home owner was involuntarily in default at the time the Home Owners' Loan Act of 1933 took effect and was now unable to refinance his home-mortgage indebtedness.

Permitted the Corporation to advance cash in an aggregate not exceeding $200,000,000, not only to make necessary repairs, but also for rehabilitation, modernization, rebuilding, and enlargement of homes.

Authorized the Corporation to grant an extension of principal or interest to a home owner where justified, but eliminated the 3-year compulsory moratorium in the act of 1933.

Provided for the redemption of homes lost by the owner subsequent to January 1, 1930, instead of limiting such redemption cases to homes lost within 2 years prior to the refunding by the Corporation.

Authorized the Home Owners' Loan Corporation to buy bonds and debentures of Federal home-loan banks and to make advances to such banks, but provided that not exceeding $50,000,000 be invested or advanced in this manner.

Amended the Federal Farm Mortgage Corporation Act of 1934 to provide that the bonds of such Corporation should not be issued in excess of its assets.

THE HOME MORTGAGE RELIEF ACT

(Approved May 28, 1935. Public Law No. 76, 74th Cong.)

Liberalizes the Federal Home Loan Bank Act so as to facilitate the functioning of the Federal home-loan banks and enable their members to carry home mortgages over longer terms and on an easier basis. Extends the limitation of existing law with respect to the maturity of mortgages which may be accepted as collateral for advances by Federal home-loan banks from 15 to 20 years and makes all home mortgages up to $20,000 in amount—instead of those on properties valued up to $20,000—eligible as such collateral.

Increases the borrowing power of the Home Owners' Loan Corporation from $3,000,000,000 to $4,750,000,000 to provide for applications already filed and for applicants who in good faith sought relief prior to the enactment of the new act or who filed their applications within 30 days thereafter.

Provides that for the purposes of the Home Owners' Loan Act of 1933 assessments levied upon real property by special districts organized in any State for public improvements should be treated as general-tax levies, leaving it to the Home Loan Bank Board to determine the reasonableness of the annual tax burden on property securing loans by the Corporation.

Removes the prohibition against making a deduction from the loanable value of the property where the aggregate amount of the annual taxes, levies, and assessments does not exceed 5 percent of the value of the property as determined by the appraisal.

Permits State-chartered institutions which are converted into Federal savings and loan associations to continue to make loans in the territory in which they made loans while operating under a State charter.

Authorizes the Home Owners' Loan Corporation to purchase: (1) Federal Home Loan Bank bonds, debentures or notes (including consolidated bonds or debentures); (2) full-paid income shares of Federal savings and loan associations on the same terms and conditions and within the same limitations as in the case of purchases of such shares by the Secretary of the Treasury after the funds made available have been exhausted; and (3) shares in any institution which is a member of a Federal home-loan bank and whose accounts are insured under title IV of the National Housing Act, if the institution is eligible for such insurance. The total amount available to the Corporation under this section was fixed at $300,000,000.

Increases by $200,000 the amounts made available to the Federal Home Loan Bank Board for encouraging the promotion, organization, and development of Federal loans and savings associations.

Extends from January 1, 1936, to April 1, 1936, the time within which loans must be made in order to be eligible for insurance under section 2 of the National Housing Act and makes loans up to $50,000 eligible for such insurance if made for the purpose of financing alterations, repairs, and improvements with respect to real property "improved by, or to be converted into apartment or multiple-family houses, hotels, offices, business or other commercial buildings, hospitals, orphanages, colleges, schools, or manufacturing or industrial plants."

THE NATIONAL HOUSING ACT

(Approved June 27, 1934. Public Law No. 479, 73d Cong.)

Provided for a comprehensive program of home financing and mortgage insurance and that financial institutions which make loans for financing alterations, repairs, and improvements upon real property are to be insured up to 20 percent of the total value of such loans, and also that loans may be made upon the security of obligations thus insured.

Established a program of mutual mortgage insurance under which first mortgages on residential property which are amortized may be insured up to $16,000 in any case, and up to 80 percent of the appraised value of the property.

Authorized the establishment of national mortgage associations each with a capital of not less than $5,000,000, with authority to purchase and sell first mortgages and borrow money through the issue of securities up to 10 times their outstanding capital or the current face value of the mortgages which they hold and which are insured under the provisions of the act.

Created a corporation under the supervision of the Federal Home Loan Bank Board which is authorized to insure accounts of building and loan associations and similar institutions, and which is required to insure accounts of Federal savings and loan associations established under authority of the Home Owners' Loan Act

of 1933, such insurance to be for the full withdrawable or repurchasable value of the accounts of the members of such institutions with a $5,000 limitation upon insurance of any such member.

Provided for the appointment by the President, with Senate consent, of a national housing administrator, to serve for 4 years, who would administer the housing renovation and modernization, the mutual mortgage insurance, and the national mortgage association features of the act.

Provided that the aggregate liability of the Federal Government by reason of home-renovation loans should not exceed $200,000,000.

The funds for both the housing-renovation program and the program of mutual mortgage insurance are to be made available to the Administrator by the R. F. C. or from any funds made available to the President for emergency purposes.

Created a Savings and Loan Insurance Corporation, with a capital of $100,000,000, to insure the accounts of Federal savings and loan associations.

Permitted national banks to hold Government-insured mortgages covered by the Housing Act, even though the mortgages do not comply with the present statutory limitation of 5-year maturity and 50 percent of the appraised value.

Increased the Home Owners' Loan Corporation's power to issue bonds to the extent of an additional $1,000,000,000, thereby raising this power to a total of $3,000,000,000.

NATIONAL HOUSING ACT AMENDMENTS

(Approved Apr. 3, 1936. Public Law No. 486, 74th Cong.)

Extends time during which modernization loans may be insured by the Federal Housing Administration until April 1, 1937. Reduces insurance of lending institutions from 20 percent of their total loans to 10 percent and the total liability on the part of the Government for such insurance from $200,000,000 to $100,000,000.

Continues the limit on loans at $2,000, except in the case of "apartment or multiple-family houses, hotels, office, business, or other commercial buildings, hospitals, orphanages, colleges, schools, churches, or manufacturing or industrial plants" wherein the maximum is again set at $50,000. Prohibits loans of $2,000 or less for "purchase and installation of equipment and machinery."

Empowers the Administrator, under regulations prescribed by him and approved by the Secretary of the Treasury, to dispose of security acquired in the payment of insurance and to collect or compromise obligations until referred to the Attorney General for suit or collection.

Authorizes transfer of insurance on loans from one institution to another when the one institution sells insured loans to the other.

LABOR

THE WAGNER LABOR RELATIONS ACT

(Approved July 5, 1935. Public Law No. 198, 74th Cong.)

Creates a permanent National Labor Relations Board of three members, appointed by the President with Senate consent, to promote equality of bargaining powers between employers and employees and to diminish the causes of labor disputes. This permanent Board replaces the old temporary National Labor Relations Board established under Executive orders of President Roosevelt.

Declares collective bargaining to be a national policy.

Provides that employees "shall have the right to self-organization, to form, join, or assist labor organizations, to bargain collectively through representatives of their own choosing, and to engage in concerted activities, for the purpose of collective bargaining or other mutual aid or protection."

Lays down five unfair labor practices by forbidding employers—

1. To interfere with, restrain, or coerce employees in the exercise of the "rights guaranteed" in the collective-bargaining section (sec. 7) of the act.

2. To dominate or interfere with the formation or administration of any labor organization or contribute financial or other support to it.

3. To encourage or discourage membership in any labor organization by discrimination in regard to hire or tenure of employment or any term or condition of employment.

4. To discharge or otherwise discriminate against an employee for filing charges or giving testimony under the act.

5. To refuse to bargain collectively with the representatives of employees subject to the provisions of section 9a of the act, which provides that bargaining representatives be chosen by a majority of such unit exclusively in bargaining on pay, wages, hours, and other conditions. A minority would be allowed to present "grievances."

Empowers the Board to "decide in each case whether, in order to insure to employees the full benefit of their right of self-organization and to collective bargaining, and otherwise effectuate the policies of the act, the unit appropriate for the purposes of collective bargaining shall be the employer unit, plant unit, or any subdivision thereof."

Directs the Board to "prevent any person from engaging" in any of the five enumerated unfair labor practices "affecting commerce", this power to be "exclusive" and not affected by any other means of adjustment or prevention that "has been or may be established by agreement, code, law, or otherwise."

Stipulates that nothing in the act shall be "construed so as to interfere with or impede or diminish in any way the right to strike."

THE WAGNER NATIONAL EMPLOYMENT SYSTEM ACT

(Approved June 6, 1933. Public Law No. 30, 73d Cong.)

Provided for the establishment of a national employment system and for cooperation with the States in the promotion of such a system by creating in the Department of Labor a bureau known as the United States Employment Service, under a director appointed by the President with Senate consent.

Empowered the Federal Government to coordinate the activities of State employment services and, where States do not establish a system of their own, to take the first steps in that direction.

Authorized an appropriation of $1,500,000 for the first year and $4,000,000 annually thereafter, three-fourths of this money to be distributed to the States to assist in maintaining the employment services, on condition that the States appropriate an equal amount, the rest to go for administrative purposes.

THE ROADS EMPLOYMENT ACT

(Approved June 18, 1934. Public Law No. 393, 73d Cong.)

Provided for the increase of employment by authorizing appropriations for emergency construction of public highways and related projects.

Authorized appropriations of $300,000,000 for road work in the fiscal year 1935, and $100,000,000 in the fiscal year 1936, and provided that neither of these grants would have to be matched by the States. In addition there has been provided Federal aid of $125,000,000 for road work in each of the fiscal years 1936 and 1937, which must be matched by the States.

Appropriated $24,000,000 to be spent during each of the next 3 fiscal years on forest highways, main roads through public lands, roads and trails in national parks, and Indian reservation roads.

THE M'KELLAR-MEAD 40 HOUR MAIL ACT

(Approved Aug. 14, 1935. Public Law No. 275, 74th Cong.)

Provides a 40-hour week for 123,000 postal employees, effective October 1, 1935.

Affects supervisors, clerks, special clerks, carriers, rural-delivery men, mail equipment shop workers, laborers in first- and second-class post offices, cleaners, janitors, telephone operators, and elevator conductors.

Extends the benefits of the act to railway postal clerks by providing that the service of such clerks assigned to road duty shall be based on an average not exceeding 6 hours and 40 minutes daily for 306 days annually and that railway postal clerks required to perform over 6 hours' and 40 minutes' service daily shall be paid in cash at the annual rate of pay or granted compensatory time, at their option, for such overtime.

THE EMPLOYMENT SERVICE ACT

(Approved May 10, 1935. Public Law No. 54, 74th Cong.)

Amends the so-called "Wagner-Peyser Act" of June 6, 1933, so as to alter the amount apportioned to certain States for public employment offices affiliated with the United States Employment Service.

Provides for an apportionment of not less than $10,000 to each State for its assistance in the establishment of local employment offices. Under the Wagner-Peyser Act the appropriation of $3,000,000 annually until June 30, 1938, was to be apportioned among the States in the proportion of their population to the total population of the Nation. By strict application of this rule four States—Delaware, Nevada, Vermont, and Wyoming—receive less than $10,000 each.

THE KICK-BACK RACKET ACT

(Approved June 13, 1934. Public Law No. 324, 73d Cong.)

Made it unlawful to prevent anyone from receiving the compensation contracted for in connection with the construction of public works financed by loans or grants from the United States Government. The act was aimed at the so-called "kick-back racket", by which a contractor pays wages at the rate required by the Government but forces employees to give back part of the wages.

Prescribed a maximum penalty of $5,000 fine or imprisonment for 5 year, or both.

THE LABOR-DISPUTES JOINT RESOLUTION

(Approved June 19, 1934. Public Resolution No. 44, 73d Cong.)

Authorized the President to establish a board or boards to investigate issues, facts, practices, and activities of employers or employees in controversies arising under section 7a of the National Industrial Recovery Act or which are burdening or obstructing, or threatening to burden or obstruct, the free flow of interstate commerce.

Empowered any board so established to conduct an election by secret ballot of any of the employees of any employer to determine by what person, persons, or organization they desire to be represented in order to insure the right of employees to organize and to select their representatives for the purposes of collective bargaining as defined in section 7a.

Provided that any such board, with Presidential approval, may prescribe such rules and regulations as it deems necessary to assure freedom from coercion in respect to all elections.

Limited the life of the Board or Boards established under the resolution to 1 year from June 16, 1934, unless the President by proclamation or Congress by joint resolution should before June 15, 1935, declare that the emergency recognized by section 1 of the National Industrial Recovery Act has ended.

THE WALSH-HEALEY GOVERNMENT CONTRACTS ACT

(Approved June 30, 1936. Public Law No. 846, 74th Cong.)

Provides conditions for the purchase of supplies and the making of contracts by the United States Government. Stipulates that public contracts in excess of $10,000 made by any executive department, independent establishment, or other agency or instrumentality of the United States shall include stipulations requiring

the contractor to be a manufacurer or regular dealer in the materials for which he is contracting; that he pay not less than the prevailing wages for persons employed in the industry or similar industries operating in the locality; that he permit no person to work in excess of 8 hours in any one day or 40 hours in any one week; and that he employ no male persons under 16 years of age and no female person under 18 years old, nor any convict labor, and also requiring that the contract is not to be performed in a plant or under working conditions which are insanitary or unduly hazardous.

Provides for violations of stipulations in contracts for Government purchases (a) a penalty of a sum equal to the difference between the amount required to be paid and that actually paid the employee, (b) a penalty in the sum of $10 per day for each person employed in violation of the child-labor and convict-labor provisions, (c) a cancelation of contracts for a breach of the labor provisions and authority to make new purchases or contracts against the account of the offending contractor, (d) authority for withholding penalties in actions to be brought by the Attorney General in the name of the United States, and (e) payments of sums recovered or withheld in this way to the employees aggrieved by such violations.

Provides machinery whereby a contractor found guilty of aggravated offenses against the act may be barred from bidding on Government contracts for 3 years.

Designates the Department of Labor as the administrative agency and confers necessary powers in connection with the enforcement of the act. Makes provisions for public hearings for fact findings and complaints.

Certain exceptions are made to the act, such as when Government business would be seriously impaired and the purchase of products in the open market (farm, dairy, and nursery products).

THE DILL-CROSSER RAILWAY LABOR ACT

(Approved June 21, 1934. Public Law No. 442, 73d Cong.)

Amended the Railway Labor Act of May 20, 1926, by rewriting it and making several far-reaching and important changes in the Mediation Board and in the operation of the adjustment boards to settle grievances.

Created a National Railway Adjustment Board, which will have four divisions, the members to be selected by the rail carriers and labor organizations.

Provided for the establishment of regional or system boards of adjustment, if the railroads and the employees desire to set up such boards voluntarily.

Abolished the present Board of Mediation, consisting of five members, and established a new and smaller board called the "National Mediation Board", with power to select and appoint employees to act as mediators under the instruction of the Board, with the same freedom to delegate its work as the Interstate Commerce Commission now possesses.

Prohibited any carrier from providing financial assistance to any union of employees from funds of the carrier; prohibited the railroads from interfering in any manner whatsoever with employees joining or refusng to join any organization or union, and specifically provided that the choice of representatives of any craft shall be determined by a majority of the employees voting on the question.

AIR TRANSPORT LABOR ACT

(Approved Apr. 10, 1936. Public Law No. 487, 74th Cong.)

Extends the provisions of the Railway Labor Act, with the exception of those concerning the National Railroad Adjustment Board, to common carriers by air engaged in interstate or foreign commerce, carriers by air transporting mail, and the employees of such carriers.

Extends the jurisdiction of the National Mediation Board to disputes in certain cases between carriers by air and their employees.

Provides that disputes between carriers and their employees, including those pending on April 10, 1936, before the National Labor Relations Board, "shall be handled in the usual manner up to and including the chief operating officer of the carrier designated to handle such disputes." Failing to agree, the parties may by petition refer the disputes to an appropriate adjustment board of jurisdiction not exceeding that exercised by system, group, or regional boards of adjustment under the Railway Labor Act. Such boards may be established by agreement between employees and carriers "or pending the establishment of a permanent National Board of Adjustment."

Empowers the National Mediation Board, when it deems necessary the establishment of a permanent National Board of Adjustment, to direct the carriers and labor organizations of their employees, national in scope, to select four representatives to constitute a National Air Transport Adjustment Board. Two members shall be selected by the carriers and two by the labor organizations in the manner prescribed for the selection of members of the National Railroad Adjustment Board. Each member of the Air Board shall be compensated by the party he represents. The powers and duties established with reference to the National Railroad Adjustment Board shall be exercised by the National Air Transport Adjustment Board. If any system, group, or regional board of adjustment proves unsatisfactory, either party, upon 90 days' notice to the other, may elect to come under the Air Board.

LIQUOR

THE BEER-WINE REVENUE ACT

(Approved Mar. 22, 1933. Public Law No. 3, 73d Cong.)

Granted permission to brewers and wine makers to take out immediate manufacturing permits and levied a tax of $5 on every barrel containing not more than 31 gallons.

Reenacted portions of the Webb-Kenyon Act as a protection to States whose laws prohibited liquors of more alcoholic content than 3.2 percent by weight, modified all sections of the Volstead and other acts relating to liquor, and left to States all regulatory and control measures, including method of distribution.

Imposed no restrictions other than protection to dry States on beer and wine of 3.2 percent of alcohol by weight or 4 percent by volume.

Required wholesalers to take out annual permits at $50 each and retailers at $20 each. Allowed advertising of fermented liquor by newspapers, magazines, radio, and other methods.

Made the Hawley-Smoot Act's import duties applicable to importations.

THE LIQUOR TAXING ACT OF 1934

(Approved Jan. 11, 1934. Public Law No. 83, 73d Cong.)

Designed to yield $500,000,000 annually in revenue.

Imposed taxes as follows: Distilled spirits, $2 per gallon; beer, $5 a barrel; wine up to 14 percent alcoholic content, 10 cents a gallon; up to 21 percent, 20 cents; 24 percent, 40 cents; and over 24 percent, the same as spirits, $2; champagne, 5 cents half pint; artificial carbonated wine and liqueurs, cordials, and sweet wine fortified with brandy, 2½ cents half pint; grape brandy and wine spirits used in fortifying wines, 20 cents gallon.

Amended the Reed Law of 1917 to permit publications carrying liquor advertising to circulate in dry States.

DISTRICT OF COLUMBIA ALCOHOLIC BEVERAGE CONTROL ACT

(Approved Jan. 24, 1934. Public Law No. 85, 73d Cong.)

Permitted sale of alcoholic beverages in District of Columbia under a licensing system.

Prohibited delivery outside the District of Columbia in violation of the law of the place of delivery.

Provided for an Alcoholic Beverage Control Board with full power to issue, transfer, and revoke licenses.

Prohibited drinking in public places.

THE FEDERAL ALCOHOL CONTROL ACT

(Approved Aug. 29, 1935. Public Law No. 401, 74th Cong.)

Creates a Federal Alcohol Administration as a division in the Treasury to exercise control over the liquor traffic. This Administration is to be headed by an administrator appointed by the President.

Makes it unlawful, except pursuant to a basic permit issued under this act by the Administrator, to engage in the business of importing liquor, wine, or malt beverages, or to sell or ship liquor so imported. This provision becomes effective 60 days after the Administrator takes office.

Makes it unlawful, except pursuant to a basic permit, to engage in distilling liquor, producing wine, rectifying or blending distilled spirits or wine, or bottling or warehousing of distilled spirits, or to sell or ship the same, also effective 60 days after the Administrator takes office.

Makes it unlawful, effective March 1, 1936, to engage in the business of purchasing for resale at wholesale distilled spirits, wine, or malt beverages, except under a basic permit.

Stipulates that basic permits shall be given (1) to any person who on May 25, 1935, held a basic permit as distiller, rectifier, wine producer, or importer issued by a Federal agency, and (2) any other person, unless the Administrator finds that such person does not fall within definitions in the act.

Directs that all basic permits shall be conditioned upon compliance with the requirements of section 5 (relating to unfair competition and unlawful practices), of section 6 (relating to bulk sales and bottling), of the twenty-first amendment and relating to its enforcement, and of all other Federal laws relating to distilled spirits, wine and malt beverages, including taxes respecting them.

Makes it unlawful for any distiller, brewer, rectifier, blender, or other producer to indulge in various kinds of unfair competition and unlawful practices specifically forbidden by section 5 of the act. These practices relate to "exclusive outlets", commercial bribery, consignment sales, labeling, advertising, and other matters.

Provides that it shall be unlawful for any person to sell or "otherwise dispose of distilled spirits in bulk except under regulations of the Administrator for export, or to import, or to the following: Distilled spirits in bulk, except, under such regulations, for sale or use by the following: A distiller, rectifier of distilled spirits, person operating a bonded warehouse qualified under the internal-revenue laws or a class 8 bonded warehouse qualified under the customs laws, a wine maker for the fortification of wines, a proprietor of an industrial alcohol plant, or an agency of the United States or any State or political subdivision thereof."

Defines the term "in bulk" to mean containers having a capacity in excess of 1 wine-gallon.

Abolishes the temporary Federal Alcohol Control Administration which President Roosevelt established under the provisions of title I of the National Industrial Recovery Act. This becomes effective when the new Administrator takes office.

LIQUOR TAX ADMINISTRATION ACT

(Approved June 26, 1936. Public Law No. 815, 74th Cong.)

Amends the administrative provisions of law relating to collection of taxes upon distilled spirits, wines, and fermented malt beverages.

Broadens present laws in connection with brewing industry to permit manufacture in breweries and bottling houses of products which can be permitted to be manufactured without danger to the revenue. Permits refunds in certain cases for losses on account of leakage, wastage, etc.

Abolishes the old distinction between distillery warehouses, general bonded warehouses, and special bonded warehouses and establishes new type of warehouse known as internal revenue bonded warehouses.

Makes the Federal Alcohol Administration, now a division of the Treasury Department, an independent agency.

Makes technical amendments to existing law of internal-revenue taxation of distilled spirits, wine, and malt beverages. Simplifies enforcement and avoids duplication in the work of tax collection. Eliminates obsolete requirements of statutes which can now be repealed without loss of revenue.

Achieves a step in the direction of codification of the internal-revenue laws relating to liquor.

MONETARY

THE GOLD REPEAL JOINT RESOLUTION

(Approved June 5, 1933. Public Resolution No. 10, 73d Cong.)

Canceled the gold clause in all Federal and private obligations and made them payable in legal tender.

Repealed the final sentence of paragraph 1 of subsection b of the Agricultural Adjustment Act, Farm Relief, and Inflation Act of May 12, 1933, to provide that all coins and currencies of the United States, including Federal Reserve notes of the Federal Reserve banks and national banking associations, should be legal tender for all debts, public and private, public charges, taxes, and duties, except that gold coins, when below the standard weight and limit of tolerance provided by law for the single piece, should be legal tender only at valuation in proportion to their actual weight.

THE GOLD RESERVE ACT OF 1934

(Approved Jan. 30, 1934. Public Law No. 87, 73d Cong.)

Authorized the President to revalue the dollar at 50 to 60 percent of its existing statutory gold equivalent.

Created a $2,000,000,000 stabilization fund out of the increased value of the gold accruing as a result of devaluation of the dollar, placing it in the sole charge of the Secretary of the Treasury and vesting him with authority to expend it in virtually any transactions he might deem necessary for stabilizing the dollar abroad.

Declared the coinage of gold at an end, the metal to be held in bullion form in the Treasury as backing for paper currency.

Vested in the Treasury of the United States the title to all the Nation's monetary gold stocks, including $3,500,000,000 held by the Federal Reserve banks.

Removed several then-existing restrictions upon the issuance of Government securities, provided that any type of Government obligation might be purchased with any other type, and that securities might be sold privately, and authorized the issuance of $2,500,000,000 additional Treasury notes.

Authorized the President (in the Pittman silver amendment), first, to pay for newly mined silver in certificates instead of in silver dollars; second, to issue certificates against the silver bullion which the Treasury would be thus amassing; third, to issue certificates against all free silver held in the vaults of the Treasury; fourth, to reduce the weight of the silver dollar in such amounts as might be necessary to maintain a parity with the gold dollar under the new revaluation policy; and, fifth, to increase the seigniorage, or mint fee, or coinage of foreign silver or silver not produced in the United States or its dependencies.

THE GOLD CLAUSE ACT

(Approved Aug. 24, 1935. Public Resolution No. 63, 74th Cong.)

Provides that lawful holders of coins and currencies of the United States shall be entitled to exchange them, dollar for dollar, for other coins or currencies "which may be lawfully acquired and are legal tender for public and private debts."

Permits the owners of the gold-clause securities of the United States, at their election, to receive "immediate payment of the stated dollar amount thereof with interest to the date of payment or to prior maturity or to prior redemption date, whichever is earlier."

Directs the Secretary of the Treasury to make such exchanges and payments upon presentation in accordance with the act and in the manner provided in regulations prescribed by him.

Stipulates that the period within which the owners of gold-clause securities shall be entitled to receive payment prior to maturity shall expire January 1, 1936, or on such later date, not after July 1, 1936, as may be fixed by the Secretary of the Treasury.

Withdraws any consent which the United States may have given to the assertion against it of any right, privilege, or power, whether by way of suit, counterclaim, set-off recoupment, or other affirmative action or defense in its own name, or in the name of any of its officers or instrumentalities, in any proceeding (1) upon any gold-clause securities of the United States or for interest thereon, or (2) upon any coin or currency of the United States, or (3) upon any claim or demand arising out of any surrender, seizure, or acquisition of any such coin or currency or of any gold or silver and "involving the effect or validity of any change in the metallic content of the dollar or other regulation of the value of money."

THE SILVER PURCHASE ACT

(Approved June 19, 1934. Public Law No. 438, 73d Cong.)

Declared it to be the policy of the United States that the proportion of silver to gold in the monetary stocks of the United States should be increased, with the ultimate objective of having and maintaining one-fourth of the monetary value of such stocks in silver.

Authorized and directed the Secretary of the Treasury, whenever the proportion of silver in the stocks of gold and silver of the United States is less than one-fourth of the monetary value of such stocks, to purchase silver, at home or abroad, for present or future delivery, at such rates and times and upon such terms as he may deem reasonable and most advantageous to the United States; but provided that no purchase of silver should be made at a price in excess of its monetary value, and that no purchase of silver situated in the United States on May 1, 1934, should be made at a price in excess of 50 cents a fine ounce.

Authorized the Secretary of the Treasury, with approval of the President, to sell any silver acquired under the terms of the act, at such rates and times and upon such conditions as he deemed reasonable and advantageous, whenever the market price of silver exceeded its monetary value or the monetary value of the stocks of silver is greater than 25 percent of the monetary value of the stocks of gold and silver.

Authorized and directed the Secretary of the Treasury to issue and place "in actual circulation" silver certificates in such denominations as he might prescribe.

Provided that the Treasury should maintain as security for all silver certificates heretofore and hereafter issued, and at the time outstanding, an amount of silver bullion and standard silver dollars equal to the face value of the silver certificates.

Stipulated that all silver certificates should be legal tender for all debts, public and private, public charges, taxes, duties, and dues, and should be redeemable on demand at the Treasury in standard silver dollars.

Vested in the Secretary of the Treasury, with approval of the President, the power to investigate, regulate, and prohibit, by license or otherwise, the acquisition, importation, exportation, or transportation of silver, "and of contracts and other arrangements made with respect thereto", and to require reports as to the facts involved, whenever necessary to effectuate the policy of the law; violations to be punishable by maximum fine of $10,000 or not over 10 years' imprisonment, or both.

Authorized the President, by Executive order, to require the delivery to the mints of "any or all" silver by whomever owned or possessed, this silver to be coined into silver dollars or otherwise added to the monetary stocks as the President may determine; and, provided that there should be returned therefor in standard silver dollars, or any other coin or currency of the United States, the monetary value of the silver so delivered less deductions for seigniorage, brassage, coinage, or other mint charges.

Provided that silver withheld in violation of this provision be forfeited to the Government and, in addition, persons failing to comply with the provision be subject to a penalty equal to twice the monetary value of the silver withheld.

Amended the stamp-tax provisions of existing law to provide a transfer tax on silver bullion equal to 50 percent of the difference between the price for which any interest in silver is to be transferred and the cost of the bullion, plus allowed expenses.

Authorized the Commissioner of Internal Revenue to rebate the tax on certain transactions in silver which are not of a speculative character.

NATIONAL DEFENSE

THE WAR DEPARTMENT SUPPLY ACT

(Approved Apr. 9, 1935. Public Law No. 29, 74th Cong.)

Appropriates $401,998,170 for all activities under control of the War Department, of which $341,348,204 is for military purposes which are chargeable to the national defense, and $60,649,966 for nonmilitary activities, including the Panama Canal, river and harbor work, and flood-control projects.

Raises the average enlisted strength of the Army from 118,750 to 165,000 men, the increase of 46,250 enlisted men extending to all branches.

Grants the Army Air Corps $45,383,400, an increase of $17,986,947 over the total for the current fiscal year, of which $19,138,000 is immediately available for production or purchase of new airplanes, their equipment and accessories, and $2,500,000 for procurement of spare engines and parts for airplanes and engines; and, in addition, authorizes the making of contracts for $7,686,753 for equipment, spare parts, and accessories for planes. Makes a direct appropriation of $500,000 for increasing the enlisted strength of the National Guard by 5,000 men, and appropriates $4,452,304 for the Reserve Officers' Training Corps; $2,000,000 for training about 30,000 in citizens' military training camps, and $6,372,178 for the Organized Reserves.

THE WILCOX AIR BASE ACT

(Approved Aug. 12, 1935. Public Law No. 263, 74th Cong.)

Authorizes and directs the Secretary of War to determine in all strategic areas of the United States, including Alaska and overseas possessions and holdings, the location of such additional permanent Air Corps stations and depots as he deems essential for the effective peacetime training of the General Headquarters Air Force and the Air Corps components of overseas garrisons.

Directs that, in determining the locations of the new primary air base, consideration be given to the location of bases as follows: (1) The Atlantic Northeast—to provide for training in cold weather and fog; (2) the Atlantic seacoast and Caribbean areas—to permit training in long-range operations, especially those incident to reinforcing the Panama Canal; (3) the Southeastern States—to provide a depot essential to the maintenance of the General Headquarters Air Force; (4) the Pacific Northwest—to establish and maintain air communication with Alaska; (5) Alaska—for training under conditions of extreme cold; (6) the Rocky Mountain area—to provide a depot essential to the maintenance of the General Headquarters Air Force and afford opportunity for training in operations from field at high altitudes; (7) such intermediate stations as will provide for transcontinental movements incident to the concentration of the General Headquarters for maneuvers.

Authorizes the appropriation of such money as may be necessary for the purposes of the act.

THE NATIONAL GUARD OFFICERS ACT

(Approved June 19, 1935. Public Law No. 154, 74th Cong.)

Gives the President the right to order officers of the National Guard of the United States to active duty in an emergency "at any time and for the period thereof", provided that, except in time of a national emergency expressly declared by Congress, no officer of the National Guard shall be employed on active duty for more than 15 days in any calendar year without his consent.

Increases the number of junior officers in order to make it possible that the most capable young men may be retained as commissioned officers.

Creates an inactive Reserve, and enables the National Guard to have some connection with those officers who do not wish to remain as active officers.

THE NAVAL SUPPLY ACT

(Approved June 24, 1935. Public Law No. 163, 74th Cong.)

Carries $458,684,379 in direct appropriations for the Naval Establishment and reappropriates enough money to bring the total to $466,184,379.

Appropriates $126,795,000 for new warships, including those already under construction, including sufficient funds for the initial year's work on 24 vessels in the current year's building program. The latter includes a $27,895,000 aircraft carrier, two $19,150,000 light cruisers, 15 destroyers, and 6 submarines.

Grants an appropriation of $26,515,660 for new airplanes and, in addition, authorizes the Navy Department to enter into contracts for $6,000,000 worth of planes to be appropriated for later.

Provides for an increase of 11,000 enlisted men, bringing the authorized enlisted strength to 93,500 men.

Increases the allowance for the Naval Academy so as to permit the appointment of four midshipmen, instead of three, by each Member of Congress.

Reopens the Great Lakes Naval Training Station and also the Newport, R. I., training station.

THE NAVAL AVIATION CADET ACT

(Approved Apr. 15, 1935. Public Law No. 37, 74th Cong.)

Creates the grade of aviation cadet in the Naval Reserve and Marine Corps Reserve.

Empowers the Secretary of the Navy to appoint aviation cadets from "male citizens of the United States" to serve on active duty for a period of 4 years, unless sooner released. At the completion of their active duty they would be eligible for commission in the Naval or Marine Corps Reserve.

Provides for pay of aviation cadets while on active duty undergoing training at the rate of $75 a month, including extra pay for flying risk, as provided by law, and at $125 a month while on active duty not undergoing training.

THE MARINE CORPS PERSONNEL ACT

(Approved May 29, 1934. Public Law No. 263, 73d Cong.)

Provided for the distribution, promotion, retirement, and discharge of commissioned officers of the Marine Corps.

Applied the Navy system to the Marine Corps by placing the latter's commissioned personnel under the laws governing the line commissioned personnel of the Navy, stipulating that of the authorized number of officers above the grade of colonel, one shall be the major general commandant, two-thirds shall be brigadier generals, and the remainder shall be major generals.

Provided that the heads of staff departments should be brigadier generals while so serving, that promotion to major general of the line shall be by the President from brigadier generals, that no marine officer shall be recommended for advancement unless receiving the recommendation of two-thirds of the members of the selection board, and that selection of an officer for promotion shall not be jeopardized by duty in a staff department, aviation, or other technical specialty.

THE NAVY PROMOTION ACT

(Approved May 29, 1934. Public Law No. 264, 73d Cong.)

Extended to the grades of lieutenant commander and lieutenant the provisions of existing law with reference to promotion by selection in the line of the Navy and the retirement of officers not on the promotion list or found professionally not qualified.

Authorized the President to appoint as ensigns in the line of the Navy all midshipmen thereafter graduating from the Naval Academy, also the appointment as ensigns of midshipmen who were graduated in the class of 1933 and who received a certificate of graduation and an honorable discharge.

Repealed the clauses in the act of May 6, 1932, which provided for the commissioning of not more than 50 percent of each class graduating from the Naval Academy beginning with the class of 1933.

THE FOREIGN STATIONS ACT

(Approved May 29, 1934. Public Law No. 266, 73d Cong.)

Repealed the provision in the act of March 3, 1933, which required assignment of officers of the Army, Navy, and Marine Corps to permanent duty in the Tropics and at certain foreign stations to be for not less than 3 years.

Amended existing law to provide that no officer or enlisted man of the Army should, except upon his own request, be required to serve in a single tour of duty for more than 2 years in the Philippine Islands, on the Asiatic station, or in China, Hawaii, Puerto Rico, or the Panama Canal Zone, except in case of insurrection or of actual or threatened hostilities, and except in the discretion of the Secretary of War for temporary emergencies.

THE NATIONAL GUARD ACT OF 1933

(Approved June 15, 1933. Public Law No. 64, 73d Cong.)

Amended the National Defense Act of June 3, 1916, so as to make the National Guard a part of the Army of the United States subject to order to active duty by the President in time of war or when Congress declares a national emergency to exist.

THE VINSON NAVAL PARITY ACT

(Approved Mar. 27, 1934. Public Law No. 135, 73d Cong.)

Approved building the Navy up to and not beyond the limits in various types of ships authorized, first, by the Washington Naval Limitation Treaty of February 6, 1922, and, secondly, by the London Naval Limitation Treaty of April 22, 1930.

Appropriated no money for such construction.

Authorized the President, subject to the provisions of the London and Washington Treaties, to undertake prior to December 31, 1936, the construction of a 15,000-ton plane carrier, 99,200 tons of destroyers, and 35,530 tons of submarines to replace overage units.

Authorized the President to replace vessels in the Navy in the categories limited by the Washington and London Treaties when their replacement is permitted by these treaties and to procure the necessary aircraft for vessels and other purposes in numbers commensurate with a treaty navy.

Prohibited contracts unless contractors would agree to a 10-percent net-profit limit on vessels and aircraft, their books and records to be constantly open to Federal inspection.

THE AIR CORPS RESERVE ACT

(Approved June 16, 1936. Public Law No. 691, 74th Cong.)

Authorizes the President to call to active duty, with their consent for periods of not over 5 years, such numbers of Army Air Corps Reserve officers as he may deem necessary, not to exceed 1,350.

Provides that upon the termination of such period of active duty of not less than 3 years in duration these Air Corps Reserve officers shall be paid a lump sum of $500 each, in addition to any pay and allowances they may otherwise be entitled to receive. The term "flying officer" is defined.

Authorizes the President to appoint to temporary rank in the grades of colonel, lieutenant colonel, and major, without vacating their permanent commissions, such numbers of officers of the Regular Army Air Corps as the Secretary of War may determine is necessary to meet the administrative, tactical, technical, and training needs of the Air Corps; the then resulting numbers in each grade, permanent and temporary, to be increased by 5 percent to meet the additional needs of the War Department for Air Corps officers.

Authorizes the President to appoint to temporary rank from among the permanent colonels and lieutenant colonels of the Air Corps who are flying officers, as defined in this act, a commanding general of the General Headquarters Air Force with the rank of major general, and such number of wing commanders with the rank of brigadier general as may be determined by the President.

THE ARMY AIR CORPS PLANE ACT

(Approved June 24, 1936. Public Law No. 785, 74th Cong.)

Increases the authorized strength in airplanes, equipment, and accessories of the Army Air Corps established by the act of July 2, 1926, to such numbers as will permit the Secretary of War to complete the equipment and organization and to maintain in the Army Air Corps the special Army air organization know as G. H. Q. Air Force, and our overseas defense, together with a 25-percent reserve for such forces, and to procure such other airplanes and equipment, including spare parts, supplies, and accessories for

such other purposes as are necessary to provide for the mission of the Army Air Corps, provided that the increase thus authorized is not to exceed 2,320 serviceable planes, including equipment and accessories.

NEUTRALITY

NEUTRALITY RESOLUTION

(Approved Aug. 31, 1935. Public Resolution No. 67, 74th Cong.)

Directs that, upon the outbreak or during the progress of war between foreign states, the President shall proclaim the fact and thereafter it shall be unlawful to export arms, ammunition, or implements of war from any place in the United States or its possessions to any port of such belligerent states, or to any neutral port for transshipment to, or for the use of, a belligerent country. Violations of this provision are punishable by $10,000 fine or 5 years' imprisonment, or both. Except with respect to prosecutions committed or forfeitures incurred prior to March 1, 1936, this section and all proclamations issued thereunder shall not be effected after February 29, 1936.

Establishes a National Munitions Control Board, consisting of the Secretaries of State, Treasury, War, Navy, and Commerce, to carry out the act.

Requires all persons engaged in manufacturing, exporting, or importing arms, ammunition, and implements of war to register with the Secretary of State within 90 days after the act takes effect, listing the arms they manufacture, export, or import. The registrants would pay a fee of $500 and, upon receipt of this, the Secretary of State would issue a registration certificate valid for 5 years.

Provides that all persons required to register shall maintain, subject to inspection of the Board, such permanent records of manufacture for export, importation, and exportation of arms, ammunition, and implements of war as the Board shall prescribe.

Forbids any person to export or "attempt to export" from the United States, or to import to the United States, any of the munitions referred to in the act without a license from the Board.

Makes it unlawful, after the President issues a proclamation under the act, to carry munitions to belligerent ports, or to neutral ports for transshipment to belligerent countries named in the proclamation as being at war, under penalties of $10,000 fine or 5 years' imprisonment, or both, and forfeiture of munitions and vessel.

Authorizes the President to lay down conditions barring foreign submarines from American ports, except under such conditions as he may prescribe, during any war in which the United States is a neutral.

Directs that whenever, during any war in which the United States is a neutral, the President finds the "maintenance of peace" between this country and foreign nations, protection of lives of American citizens, protection of the commercial interests of the United States and its citizens, or the "security of the United States" are involved, he "shall so proclaim", and thereafter "no citizen of the United States shall travel on any vessel of any belligerent nation except at his own risk", unless in accordance with rules prescribed by the President.

NEUTRALITY RESOLUTION

(Approved Feb. 29, 1936. Public Resolution No. 74, 74th Cong.)

"Extending and amending the joint resolution (Public Resolution No. 67, 74th Cong.) approved August 31, 1935."

This act amends the neutrality resolution of the Seventy-fourth Congress, first session, by extending the provisions to May 1, 1937. Two new sections are added. The first, whenever the President issues his proclamation as provided for in section 1 of this act, forbids the purchase, sale, or exchange of bonds, securities, or other obligations of the Government of any belligerent country. The second states that the Neutrality Act is not to apply to an American republic engaged in war against a non-American state or states, provided the American republic is not cooperating with a non-American state or states in such war.

THE ARMS SALE RESOLUTION

(Approved May 28, 1934. Public Resolution No. 28, 73d Cong.)

Provided that if the President issued a proclamation to the effect that the prohibition of the sale of arms and munitions of war in the United States to countries engaged in armed conflict in the Chaco might contribute to the reestablishment of peace between the belligerents, it should be unlawful, except under such exceptions as the President might prescribe, to sell any arms or munitions of war in any place in the United States to the countries engaged in the Chaco conflict or to anyone acting in the interest of either of these countries.

Fixed a maximum penalty of $10,000 fine or 2 years' imprisonment, or both.

POWER

THE TENNESSEE VALLEY AUTHORITY ACT

(Approved May 18, 1933. Public Law No. 17, 73d Cong.)

Created the Tennessee Valley Authority to maintain and operate properties owned by the United States near Muscle Shoals, Ala., in the interest of national defense and for the agricultural and industrial development of the Tennessee Valley and to improve navigation in the Tennessee River and control the flood waters of the Mississippi and Tennessee Rivers.

Authorized the Tennessee Valley Authority to acquire real estate and build dams, power houses, reservoirs, transmission lines, and power projects; unite power installations into one or more transmission line systems; contract with commercial producers for fertilizers, manufacture experimental fertilizers, make and sell explosives to the Government at cost; produce, sell, and distribute power; lease nitrate plant no. 2 for private manufacture of fertilizer; sell $50,000,000 of 3½-percent 50-year bonds to finance improvements; and, with Presidential approval, to complete dam no. 2 and the steam plant at the no. 2 nitrate plant at Muscle Shoals.

Ordered the construction of the Cove Creek Dam across the Clinch River in Tennessee, with a power-transmission line from Muscle Shoals.

THE TENNESSEE VALLEY AUTHORITY

(Approved Aug. 31, 1935. Public Law No. 412, 74th Cong.)

Amends the organic T. V. A. Act to give clarifying and remedial legislation to the Tennessee Valley Authority, based upon its 2 years of operation.

Gives the T. V. A. definite sanction to sell surplus power, a right challenged in the courts in rulings on injunctions brought under the original T. V. A. Act of 1933.

Affirms the right of the T. V. A. to sell electricity to States, counties, municipalities, and nonprofit organizations within transmission distance from its dams, and specifically mentions the construction of Norris, Wheeler, and Pickwick Landing Dams, along with the existing Wilson Dam at Muscle Shoals, as being necessary in the unified development of the Tennessee River system for navigation, flood-control, and power purposes.

Authorizes the T. V. A. to utilize its yet unused bond issues of $50,000,000 for loans to States, counties, and municipalities to enable them to acquire electric distribution facilities.

Empowers the T. V. A. to construct such dams and reservoirs in the Tennessee River and its tributaries as, in conjunction with the Wilson, Norris, Wheeler, and Pickwick Landing Dams, would provide a 9-foot channel in the Tennessee River from Knoxville to its mouth.

Permits T. V. A. regulation of power-resale rate schedules.

Grants power to acquire existing electric facilities used in serving farms and small villages.

Directs the Comptroller General to audit T. V. A. transactions at such times as he shall determine, not less frequently than once in each fiscal year, but specifically restrains the Comptroller General from making his report on his periodic audit of T. V. A. accounts until the Corporation shall have reasonable opportunity to "examine the exceptions and criticisms of the Comptroller General or the General Accounting Office" and to "point out errors therein, explain or answer the same." Assesses the General Accounting Office for the cost of such audits with the exception of such part of such expenses as may be allocated to the cost of generating, transmitting, and distributing electric energy.

Affirms the right of the corporation to exercise its own judgment in contract awarding.

THE ELECTRIC-RATE INVESTIGATION RESOLUTION

(Approved Apr. 14, 1934. Public Resolution No. 18, 73d Cong.)

Directed the Federal Power Commission to investigate and compile the rate charged for electric energy and its service to residential, rural, commercial, aad industrial consumers throughout the United States by private and municipal corporations and to report to Congress.

RURAL ELECTRIFICATION ACT

(Approved May 20, 1936. Public Law No. 605, 74th Cong.)

Establishes the Rural Electrification Administration and creates the office of Administrator with a term of 10 years and a salary of $10,000 per year.

Empowers the Administrator "to make loans for rural electrification and the furnishing of electric energy to persons in rural areas" not receiving central station service; to study "the condition and progress of the electrification of rural areas"; and to publish information with respect thereto.

Authorizes the Administrator, over a period of 10 years, to lend $410,000,000 for the purposes of the act. For the fiscal year 1937, $50,000,000 of the authorization may be borrowed by the Administrator from the R. F. C.; for the fiscal year 1938, and for the succeeding 8 years, $40,000,000 is authorized to be appropriated each year.

Allots 50 percent of the annual sums among the States on a proportional basis and 50 percent where it may be effectively employed, provided no State is allotted more than 10 percent of the annual sum.

Empowers the Administrator "to make loans to persons, corporations, States, Territories, and subdivisions and agencies thereof, municipalities, peoples utility districts and cooperative nonprofit, or limited-dividend associations" for financing "construction and operation of generating plants, electric transmission and distribution lines or systems for the furnishing of electric energy to persons in rural areas who are not receiving central station service", provided Administrator gives preference to public bodies and organizations operating on a non-profit basis. Requires that such loans be self-liquidating within 25 years and bear interest at a rate dependent upon that payable by the United States on its long-term obligations. Such interest rate at present is less than 3 percent. Requires consent of State authority to loans for construction, operation, or enlargement of any generating plant.

Empowers the Administrator to make loans also "for the purpose of financing the wiring of premises of persons in rural areas and the acquisition and installation of electrical and plumbing appliances and equipment." Such loans shall be "so secured as reasonably to assure repayment" and at a rate of interest determined in the same manner as previously indicated.

Requires that the act be administered on a nonpartisan basis and forbids political tests or qualifications for employees. Provides that the President remove the Administrator and the Administrator remove employees for violations of the act.

Provides for the extension of payments on interest and principal under certain conditions.

Defines "rural area" as "any area of the United States not included within the boundaries of any city, village, or borough having a population in excess of 1,500 inhabitants, and such term shall be deemed to include both the farm and nonfarm population thereof."

PUBLIC UTILITIES

THE PUBLIC UTILITIES REVIEW ACT

(Approved May 14, 1934. Public Law No. 222, 73d Cong.)

Amended section 24 of the Judicial Code with respect to the jurisdiction of district courts of the United States over suits relating to orders of State administrative boards.

Provided that no district court should have jurisdiction of any suit to enjoin, suspend, or restrain the enforcement, operation, or execution of any order of an administrative board or commission of a State or any rate-making body of any State political subdivision, or to enjoin, suspend, or restrain any action in compliance with any such order, where jurisdiction is based solely upon the ground of diversity of citizenship, or the repugnance of such order to the Constitution of the United States, where such order (1) affects rates chargeable by a public utility, (2) does not interfere with interstate commerce, and (3) has been made after reasonable notice and hearing, and where a plain, speedy, and efficient remedy may be had at law or in equity in the courts of the State.

RELIEF

THE DEFICIENCY RELIEF APPROPRIATION ACT

(Approved June 22, 1936. Public Law No. 739, 74th Cong.)

The act appropriates $2,375,281,000, of which $1,425,000,000 is to be used for relief. The relief appropriation shall be used in the discretion and under the direction of the President. To the $1,425,000,000 there is to be added for relief that amount of unexpended balances left from the relief act of 1935.

Stipulates that the appropriation shall be available for the following classes of public projects, Federal and non-Federal, and that the amounts to be used for each class shall not exceed these amounts.

Highways, roads, and streets, $413,250,000; public buildings, $156,750,000; parks and other recreational facilities, including buildings therein, $156,750,000; public utilities, including sewer systems, water supply and purification, airports, and other transportation facilities, $171,000,000; flood control and other conservation, $128,250,000; assistance for educational, professional, and clerical persons, $85,500,000; women's projects, $85,500,000; miscellaneous work projects, $71,250,000; National Youth Administration, $71,250,000; and loans and relief to farmers and livestock growers, $85,500,000.

Provides, however, that the amount specified for any of the foregoing relief classes may be increased proportionately in accordance with the amount of such unexpended balance of funds as the President may transfer from the funds appropriated and made available by the Emergency Relief Appropriation Act of 1935; and, further, that the amount specified for any of these classes may be increased by not exceeding 15 percent thereof by transfer of an amount or amounts from any other classes in order to effectuate the purposes of the appropriation.

There is to be no employment of aliens illegally within the United States. No Federal project shall be undertaken under this relief appropriation unless and until an amount sufficient for its completion has been allocated and irrevocably set aside for its completion.

Directs that rates of pay for persons engaged on projects under this relief appropriation shall not be less than the prevailing rates of pay for work of similar nature as determined by the Works Progress Administration with the approval of the President.

Empowers the President to make such rules and regulations as may be necessary to carry out the purposes of the act. The fact that a person has received either adjusted-certificate compensation in either bonds or check from the Treasury shall not be considered in determining actual need of such employment.

By authority of the Administrator and under direction of the President, there is available $300,000,000 to aid in financing projects; provided that no part shall be granted for a project that cannot be completed by July 1, 1938, and in no case shall the grant exceed 45 percent of the cost of the project.

THE WORK RELIEF ACT

(Approved Apr. 8, 1935. Public Resolution No. 11, 74th Cong.)

Appropriates $4,000,000,000 in a new sum, together with $880,000,000 in existing balances of the Reconstruction Finance Corporation and Public Works Administration, to be used "in the discretion and under the direction of the President" to "provide relief, work relief, and to increase employment by providing for useful projects."

Earmarks the $4,000,000,000 appropriation in eight general classifications of projects, intended to cover every possible line of public works, as follows:

(a) Highways, roads, streets, and grade-crossing elimination, $800,000,000.

(b) Rural rehabilitation and relief in stricken agricultural areas and water conservation, transmountain water diversion, and irrigation and reclamation, $500,000,000.

(c) Rural electrification, $100,000,000.

(d) Housing, $450,000,000.

(e) Assistance for educational, professional, and clerical persons, $300,000,000.

(f) Civilian Conservation Corps, $600,000,000.

(g) Loans or grants, or both, for projects of States, Territories, possessions, including their subdivisions and agencies, municipalities, and the District of Columbia, and self-liquidating projects of public bodies thereof, $900,000,000.

(h) Sanitation, prevention of soil erosion, reforestation, forestation, flood control, rivers and harbors, and miscellaneous projects, $350,000,000.

Gives to the President full authority to fix wage scales on these works, with the limitation that he shall pay prevailing wages, according to the Davis-Bacon Act, on strictly Federal building projects, and that other wages shall not be lower than existing private scales.

Authorizes the President to make loans to farmers, farm tenants, croppers, or farm laborers for the purchase of farm lands and necessary equipment.

Continues in full force and effect until June 30, 1936, the Federal Emergency Relief Act of 1933.

Authorizes continuation of the Federal Emergency Administration of Public Works until June 30, 1937.

Extends to March 31, 1937, the authority of the President under the act of March 31, 1933, for the relief of employment through the performance of useful public works under which the C. C. C. was established.

THE WAGNER-LEWIS $500,000,000 EMERGENCY RELIEF ACT

(Approved May 12, 1933. Public Law No. 15, 73d Cong.)

Authorized the Reconstruction Finance Corporation to make $500,000,000 available out of its funds for emergency relief purposes to be spent by the Federal Emergency Relief Administration created by the act.

Increased by $500,000,000 the amount of notes, debentures, bonds, or other obligations which the Reconstruction Finance Corporation was authorized by section 9 of the Reconstruction Finance Corporation Act to have outstanding at any one time.

Provided that 10 days after the Federal Emergency Relief Administrator had taken office all unobligated balances of the funds authorized under title I of the Emergency Relief and Construction Act of 1932 should be available for the purposes of the Wagner-Lewis Act and that after that date no application for funds under that title should be approved by the Reconstruction Finance Corporation, but that the Federal Emergency Relief Administrator should consider and certify to the Reconstruction Finance Corporation the payments to be made to States for relief work.

THE CIVILIAN CONSERVATION CORPS REFORESTATION RELIEF ACT

(Approved Mar. 31, 1933. Public Law No. 5, 73d Cong.)

Authorized the President to provide work for unemployed American citizens in the construction of works of a public nature in connection with the reforestation of lands belonging to the United States or to the States, the prevention of forest fires, soil erosion, plant pest and disease control, and the construction and repair of trails and fire lanes in the national and State forests, furnishing these citizens with subsistence, clothing, medical attention, hospitalization, and cash allowances.

Carried no direct appropriation, but authorized the President to use unobligated moneys previously appropriated for public works estimated at $148,956,000.

Waived the limit of relief loans by the Reconstruction Finance Corporation to the States, the limit having been set originally at 15 percent of the $300,000,000 fund established by the Unemployment Relief Act of 1932.

Provided that the President's authority under the Civilian Conservation Corps Act should continue until March 31, 1935.

THE EMERGENCY DEFICIENCY ACT

(Approved June 19, 1934. Public Law No. 412, 73d Cong.)

Appropriated a total of about $1,750,000,000 to provide general, supplemental general, and emergency appropriations, of which $899,000,000 (m) is for the emergency relief and public works, $525,000,000 (m) for drought relief, and $65,000,000 (m) for roads. In addition, authority is granted to the Emergency Relief and Public Works Administrations to draw on the Reconstruction Finance Corporation for another $500,000,000 (m).

PUBLIC WORKS

(Approved June 16, 1933. Title II, Public Law No. 67, 73d Cong.)

Appropriates $3,300,000,000 for public works. Allots $400,000,000 for State highways and $50,000,000 for national-forest, Indian-reservation, and public-land roads; provides $25,000,000 revolving fund for subsistence-homestead loans.

DIRECT LOANS TO INDUSTRY

(Approved June 19, 1934. Public Law No. 417, 73d Cong.)

Federal Reserve Act amended to permit Federal Reserve banks to make direct loans to industry or to purchase obligations of industry, maturing within 5 years, when industry cannot obtain

financial assistance from usual sources. The amount of loans and purchases is limited to the combined surplus of the Federal Reserve banks as of July 1, 1934, plus amounts paid to Federal Reserve banks by the Secretary of the Treasury out of receipts created by reduction of the weight of the gold dollar. Establishes an industrial advisory committee in each district, appointed by Federal Reserve bank of the district and composed of persons engaged in industry.

Reconstruction Finance Corporation Act amended to permit the Reconstruction Finance Corporation to make direct loans to industry and $300,000,000 is set aside for this purpose. Individual loans are limited to $500,000.

Amends Emergency Farm Mortgage Act of 1933 to provide $125,000,000 in place of $50,000,000 for drainage and levee districts.

Provides $75,000,000 for payment of teachers' salaries due prior to June 1, 1934.

THE R. F. C. EXTENSION ACT

(Approved Jan. 20, 1934. Public Law No. 84, 73d Cong.)

Continued the functions of the Reconstruction Finance Corporation as a lending body for 1 year, or until February 1, 1935, after which it would become only a liquidating corporation.

Increased the borrowing power of the Reconstruction Finance Corporation by $850,000,000.

(Approved Jan. 31, 1935. Public Law No. 1, 74th Cong.)

Extends the lending power and other active functions of the Reconstruction Finance Corporation for 2 years, or until February 1, 1937.

Provides that the Corporation may make disbursement at any time prior to January 31, 1936, on account of any commitment heretofore made to make a loan or subscribe to preferred stock or purchase capital notes or debentures.

Provides for loans or advances, or renewals of extension thereof, to mature not later than January 31, 1945, instead of February 1, 1940, as under previously existing law.

Empowers the Corporation to require, as a condition of making, renewing, or extending a loan to a railroad for more than 5 years, that arrangements be made to reduce or amortize its indebtedness according to a plan approved by the Interstate Commerce Commission.

Authorizes the R. F. C. "to assist in the reestablishment of a normal mortgage market" by subscribing for or making loans upon the nonassessable stock of any class of any national mortgage association organized under the National Housing Act and of any mortgage-loan company, trust company, saving and loan association, or other similar financial institution. The borrowing powers of the R. F. C. are increased by an amount sufficient to carry out the provisions of this section.

Continues the Commodity Credit Corporation until April 1, 1937, and the export-import banks to June 16, 1937.

Enlarges aid to industry by authorizing the R. F. C. to lend to "any institution, now or hereafter established, financing principally the sale of electrical, plumbing, or other household appliances, both urban and rural."

Grants power to the R. F. C. to make loans to recognized and established concerns and individuals engaged in mining, milling, or smelting ores.

THE CIVIL WORKS-EMERGENCY RELIEF ACT

(Approved Feb. 15, 1934. Public Law No. 93, 73d Cong.)

Appropriated an additional $950,000,000, available until June 30, 1935, for continuation of the civil-works program and for direct relief purposes under authority of the Federal Emergency Relief Act of 1933.

Authorized the Federal Emergency Relief Administrator to make grants for relief within any State directly to such public agency as he might designate.

THE DISASTER LOAN ACT

(Approved July 26, 1935. Public Law No. 224, 74th Cong.)

Authorizes the Reconstruction Finance Corporation to make loans to nonprofit corporations, with or without capital stock, organized for the purpose of financing the acquisition of home or building sites in replacement of sites formerly occupied by buildings where such sites are declared by public authority to be unsafe by reason of flood, danger of flood, or earthquake; and for the purpose of financing the repair or construction of buildings or structures, or water, irrigation, gas, electric, sewer, drainage, flood control, communication, or transportation systems, damaged or destroyed by earthquake, conflagration, tornado, cyclone, or flood in the years 1934, 1935, and 1936.

REVENUE

THE REVENUE ACT OF 1934

(Approved May 10, 1934. Public Law No. 216, 73d Cong.)

Estimated to yield $167,000,000 additional revenue during the fiscal year 1935 and $417,000,000 during a full year's operation from increased taxes on capital—stock, estates, gifts, income, capital gains and losses, personal holding companies, reorganizations, consolidated returns, partnerships, and miscellaneous.

Removed some of the burden on small-income taxpayers in the earned-income class and shifted it more to those whose incomes come from unearned sources, particularly dividends and tax-exempt securities.

Substituted a flat normal rate of 4 percent on all net income on the first $4,000 of net income and 8 percent on the remainder, and started the surtax at 4 percent on net income above $4,000 instead of 1 percent on incomes in excess of $6,000.

Levied a maximum surtax of 59 percent on income in excess of $1,000,000, as in existing law, but rearranged the brackets so as to give a slight decrease to the average taxpayer whose income is less than $30,000 annually.

Supplanted the existing estate-tax rates, running from 1 to 45 percent, with a new schedule ranging from 1 to 60 percent.

Provided a different treatment of capital gains and losses, so as to yield $30,000,000 additional in a full year; a special tax of 30 and 40 percent on the adjusted net income of personal holding companies; eliminated consolidated returns for all corporations except railroads; tightened up provisions relating to reorganization of corporations and limited partnership losses.

Repealed the bank-check tax as of January 1, 1935; eliminated entirely the tax on soft drinks, candy, and clocks; and exempted from the fur tax all fur articles sold by the manufacturer for less than $75 and from the jewelry excise all articles sold for less than $25.

Provided for publicity on certain facts relating to each income return, including the amount of gross income and credits against net income and the total tax paid.

Plugged up various loopholes in substantive law through which taxes had been legally avoided.

Imposed a processing tax of 3 cents a pound on a list of vegetable and fish oils and fats, and an impost of 5 cents a pound on coconut oil and copra, except on imports from the Philippines, which products would bear the 3-cent tax.

THE REVENUE ACT OF 1935

(Approved Aug. 30, 1935. Public Law No. 407, 74th Cong.)

Amends the existing revenue laws so as to yield an estimated additional revenue of $250,000,000 from the following changes in tax rates:

Estate taxes: Increases the rates of the present estate taxes, beginning the impost at 2 percent on net estates of $10,000 and ranging upward to 67 percent on that part of the estate between $10,000,000 and $20,000,000, 69 percent on that part between $20,000,000 to $50,000,000, and to a maximum of 70 percent on all above $50,000,000. In addition, the specific exemption is lowered from $50,000 (in existing law) to $40,000, thereby providing for a thoroughly upward revision affecting every estate-tax bracket. (This section of the new act is a complete substitute for the inheritance tax as requested by the President and as adopted by the House, but rejected in conference.) Under existing law estate taxes begin at 1 percent on the first $10,000 and range up to 60 percent on that part of the estate over $10,000,000. The new estate-tax provision is effective as to decedents who die after the enactment of the Revenue Act of 1935.

Gift taxes: Revises the existing gift taxes so as to make them three-fourths of the new estate-tax schedule. The new gift-tax rates begin at 1½ percent on the first $10,000 and range up to 50¼ percent on $10,000,000 to $20,000,000, 51¾ percent on $20,000,000 to $50,000,000, and 52½ on gifts of more than $50,000,000. The gift-tax exemption also is reduced from $50,000 to $40,000. The new gift taxes are effective as to gifts in the calendar years 1936 and thereafter. Under the existing law the first bracket rate is three-fourths of 1 percent on the first $10,000, ranging upward to 45 percent upon net gifts in excess of $10,000,000.

Individual income surtaxes: Increases the surtaxes on individual incomes, beginning with a surtax of 31 percent in the bracket of net incomes between $50,000 and $56,000, graduating upward through the brackets to 73 percent on net incomes between $1,000,000 and $2,000,000, 74 percent on $2,000,000 to $5,000,000 and 75 percent on over $5,000,000. The new individual surtaxes are to become effective for the first taxable year ending after December 31, 1935. Under existing law the individual income surtaxes begin with a tax of 30 percent in the bracket for incomes between $50,000 and $56,000 and range upward to 59 percent on incomes in excess of $1,000,000.

Graduated income tax on corporations: Imposes a new graduated income tax on corporations, to be levied as follows: 12½ percent on net corporation incomes up to $2,000, 13 percent on $2,000 to $15,000, 14 percent on $15,000 to $40,000, and 15 percent on net corporation incomes in excess of $40,000. The tax is to become effective for the first taxable year ending after December 31, 1935. Under existing law the corporation income tax is a flat rate of 13¾ percent, and there is no graduation of the rate.

Capital-stock tax: Increases the capital-stock tax, levied under existing law at the rate of $1 per $1,000 on the declared value of corporation stock, to a new rate of $1.40 per $1,000. A new declaration of values is also allowed with respect to the capital-stock tax. The new taxes take effect beginning with the fiscal year ending June 30, 1936.

Excess-profits tax: Levies a graduated tax on excess profits of corporations as follows: 6 percent on profits exceeding 10 percent and not over 15 percent, and 12 percent on profits exceeding 15 percent of the declared value of corporation stock. The new excess-profits tax takes effect with the first income taxable year that ends after June 30, 1936. Under existing law there is a flat rate of 5 percent on profits exceeding 12½ percent.

Intercorporate-dividends tax: Under existing law intercorporate dividends of domestic corporations are deducted entirely from gross income in computing net income subject to tax. Under the new revenue act 90 percent of such dividends are deductible, leaving 10 percent taxable at the new graduated corporation tax

rate. This provision takes effect the first taxable year beginning after December 31, 1935.

Personal holding company tax: Increases the rates of tax on undivided profits of personal holding companies to make them conform to the higher surtaxes. Existing law provided for a surtax on undistributed adjusted net incomes of personal holding companies at the rate of 30 percent of the amount of such income not in excess of $100,000, and 40 percent on incomes in excess of $100,000. Under the Revenue Act of 1935 the tax is to be 20 percent on such incomes not over $2,000, plus 30 percent of the amount thereof over $2,000 and not over $100,000, plus 40 percent of the amount thereof over $100,000 and not over $500,000, plus 50 percent on the amount thereof over $500,000 and not over $1,000,000 plus 60 percent of the amount thereof over $1,000,000. This provision takes effect the first taxable year beginning after December 31, 1935.

THE REVENUE ACT OF 1936

(Approved June 22, 1936. Public Law No. 740, 74th Cong.)

Imposes new Federal taxes and seeks to equalize revenue in a manner to produce an estimated $785,000,000 during the first year of operation.

Continues the normal income-tax rate on individuals. Levies for each taxable year upon the normal-tax net income of every corporation, a normal tax as follows:

Upon normal-tax net incomes not in excess of $2,000, 8 percent; in excess of $2,000 and not in excess of $15,000, 11 percent; in excess of $15,000 and in not in excess of $40,000, 13 percent; in excess of $40,000, 15 percent.

In addition there will be levied upon the net income of every corporation a surtax equal to the following (there are certain exceptions):

Seven percent of the portion of the undistributed net income which is not in excess of 10 percent of the adjusted net income; 12 percent in excess of 10 percent and not in excess of 20 percent; 17 percent of the portion in excess of 20 percent and not in excess of 40 percent; 22 percent of the portion in excess of 40 percent and not in excess of 60 percent; 27 percent of the portion in excess of 60 percent.

If the adjusted net income is less than $50,000, there shall be allowed a specific credit equal to the portion of the undistributed net income which is in excess of 10 percent of the adjusted net income and not in excess of $5,000.

Corporations exempted from the surtax on undistributed profits are banks (as defined in section 104 of the act); domestic corporations which for any portion of the taxable year are in bankruptcy under laws of the United States, or are insolvent or in receivership; insurance companies subject to the tax imposed under sections 201, 204, and 207 of the act; foreign corporations; corporations which, by reason of deriving a large portion of their gross income from sources within a possession of the United States are entitled to the benefits provided in section 251; corporations organized under the China Trade Act, and joint-stock land banks.

Additional levies are made upon the net income of every corporation (other than a personal holding cmpany as defined in section 351 of the act), if such corporation is formed for the purpose of preventing the imposition of the surtax upon its shareholders or the shareholders of any other corporation, through the medium of permitting earnings or profits to accumulate instead of being divided or distributed.

Foreign corporations not doing business in this country would pay a flat tax of 15 percent on any income derived from sources within the United States, except that in the case of dividends the rate would be 10 percent, and except that in the case of corporations organized under the laws of a contiguous country such rate (not less than 5 percent) as may be provided by treaty with such country.

Special rates are set up for the taxation of personal holding companies.

The capital stock tax rate is lowered from $1.40 to $1 per $1,000.

A tax of 80 percent is imposed upon so-called "windfall" of "unjust enrichment" arising from processing taxes refunded by court order.

It is provided that individuals shall now pay both normal taxes and surtaxes on dividends received from corporations, instead of only paying surtaxes as at present.

Banks, trust companies, and insurance companies are exempted from the surtax on undistributed profits and will pay a flat normal tax of 15 percent.

Special treatment is given to common-trust funds operated by banks and also to certain classes of investment trusts.

The act clarifies and broadens the definition of various fish, animal, and seed oils taxed under the revenue act of 1934.

ANTISMUGGLING ACT

(Approved Aug. 5, 1935. Public Law No. 238, 74th Cong.)

Seeks to prevent the loss of millions of dollars of revenue annually, since the repeal of the eighteenth amendment, from the smuggling of intoxicating liquors by providing (1) for the establishment of customs-enforcement areas adjoining the 12-mile limit; (2) for search, seizure, and forfeiture of smuggling vessels; (3) for the enforcement of revenue laws within treaty limits against foreign vessels; (4) for prohibiting smuggling offenses by American nationals and vessels against the revenue laws of other countries; (5) for the general increase of fines and penalties; (6) for effective administrative control over boats of less than 500 net tons; and (7) for a change of the rules of proof in forfeiture cases.

THE EXCISE TAX ACT

(Approved June 28, 1935. Public Resolution No. 36, 74th Cong.)

Continues for another 2 years, or until the summer of 1937, certain excise taxes and also the 3-cent postage rate on nonlocal, first-class mail matter, yielding an estimated revenue of $501,991,000 in the current fiscal year 1936. Under the Revenue Act of 1932 certain of these excise taxes would have become inoperative after June 30, 1935, certain others would have ceased on July 31, 1935, and still others would have continued to operate only at reduced rates or with increased exemptions after June 30, 1935. The extra penny, first-class postage rate would have become inoperative on June 30, 1935.

Defers for 2 years scheduled reductions in taxes on future sales of produce, issue and transfer of stocks and bonds.

Continues until 1937 excise taxes on gasoline, brewers' wort, matches, lubricating oil, electrical energy, toilet preparations, furs, jewelry, radio sets, photographs, mechanical refrigerators, sporting goods, cameras, lenses, firearms, chewing gum, admissions, telephone and telegraph messages, oil by pipe line, automobile trucks, passenger automobiles and motorcycles, parts and accessories, and tires, as well as temporary import duties on crude petroleum, gasoline, lubricating oil, paraffin wax, coal and coke, lumber, and copper.

THE GASOLINE TAX AND POSTAGE RATE ACT

(Approved June 16, 1933. Public Law No. 73, 73d Cong.)

Continued the Federal 1-cent-a-gallon gasoline tax another year beyond July 1, 1933.

Authorized the President until June 30, 1934, to proclaim such modifications of postage rates on mail matter (except that in the case of first-class matter the rate should not be reduced to less than 2 cents an ounce or fraction) as, after a survey, he might deem advisable by reason of increase in business, the interests of the public, or the needs of the Postal Service.

Imposed upon electrical energy, sold for domestic or commercial consumption and not for resale, a tax equal to 3 percent of the price for which so sold, to be paid by the vendor.

INCOME-TAX RETURNS

(Approved Apr. 19, 1935. Public Law No. 40, 74th Cong.)

Repeals the "pink slip" provision of the Revenue Act of 1934, pertaining to the publicity of income-tax returns.

ROADS

THE FEDERAL HIGHWAY ACT

(Approved June 16, 1936. Public Law No. 686, 74th Cong.)

Extends the Hayden-Cartwright Highway Act for 2 years and authorizes the appropriation of $125,000,000, for carrying out the purposes of the extended act during the fiscal year 1938, and a similar amount for the fiscal year ending June 30, 1939, for Federal-aid highways; these amounts to be matched by the States.

Authorizes the Secretary of Agriculture to apportion Federal-aid highway funds without matching in any State where the proceeds of all special taxes on motor-vehicle transportation are applied to highway purposes.

Authorizes $14,000,000 for forest highways, roads, and trails for the fiscal year 1938, and a similar amount for the fiscal year 1939; $10,000,000 for each of the fiscal years 1938 and 1939 for the construction and maintenance of parkways to give access to national parks and national monuments; also $4,000,000 for each of these fiscal years for Indian reservation roads.

Authorizes appropriations of $50,000,000 for each of the fiscal years 1938 and 1939 for the elimination of hazards to life at railroad grade crossings, where safety devices are installed.

Provides that all taxes levied by any State upon sales of gasoline and other motor-vehicle fuels may be levied, in the same manner and to the same extent, upon such fuels when sold by or through post exchanges, ship stores, ship service stores, commissaries, or other similar agencies, when such fuels are used for other than governmental purposes.

SECURITIES

THE SECURITIES ACT OF 1933

(Approved May 27, 1933. Public Law No. 22, 73d Cong.)

Required filing with the Federal Trade Commission and for transmission to prospective investors the fullest possible information concerning new security issues sold in interstate commerce or through the mails.

Provided for the filing with the Commission of sworn statements, including, among other things, all commissions or discounts paid or to be paid, directly or indirectly, by the issuer to the underwriter, a full description of all factors surrounding the physical issuance of the securities, names of directors and officers of the issuing company, names of holders of 10 percent or more of prior securities issued by the company, a detailed description of the business and financial condition of the company, and the salaries of its officers.

Provided for the lapse of 20 days after the filing of the sworn statement before the projected security could be sold or even promoted.

Carried penalties for violation of the act.

THE SECURITIES EXCHANGE ACT OF 1934

(Approved June 6, 1934. Public Law No. 291, 73d Cong.)

Provided for the regulation of securities exchanges and over-the-counter markets operating in interstate and foreign commerce and through the mails and the prevention of inequitable and unfair practices on such exchanges and markets.

Granted far-reaching control over the exchanges to the Federal Government and undertook to curb excessive speculation and unethical practices and protect investors.

Established a bipartisan Securities and Exchange Commission of five members appointed by the President, with Senate consent, to administer the act and also to take over from the Federal Trade Commission the administration of the Securities Act of 1933.

Required the licensing of all stock exchanges and the registration of all listed securities with the new Commission, the registration statement to contain 10 categories of facts, set out in the act, and any further financial statements which the Commission might deem necessary. Corporations with registered securities to be required in addition to file periodical reports certified by independent public accountants.

Defined the functions of dealers, brokers, and specialists; banned manipulative practices to establish artificial prices for securities; and provided penalties of $10,000 or 2 years' imprisonment, or both, for those willfully and knowingly violating its provisions or any rule or regulation made under the act.

The maximum penalty where an exchange is the violator is $500,000.

Provided for the regulation of margins and brokers' credit by the Commission and the Federal Reserve Board, and that the Federal Reserve Board should prescribe rules and regulations with respect to the amount of credit that may be initially extended and subsequently maintained on any security (other than an exempted security) registered on a national securities exchange.

Stipulated that for the initial extension of credit such rules and regulations should be based upon the following standard: An amount not greater than whichever is the higher of (1) 55 percent of the current market price of the security, or (2) 100 percent of the lowest market price of the security during the preceding 36 calendar months, but not more than 75 percent of the current market price.

Empowered the Federal Reserve Board to raise or lower the margin requirements for the initial extension or maintenance of credit when it deemed such action necessary.

Granted to any person aggrieved by an order of the new Commission the right of court review in the Circuit Court of Appeals of the United States.

Carried several modifying amendments to the Securities Act of 1933 to meet severe criticisms of business and industry.

FURTHER REGULATIONS CONCERNING TRADING IN SECURITIES

(Approved May 27, 1936. Public Law No. 621, 74th Cong.)

Amends the Securities Exchange Act of 1934 so as to facilitate trading in unlisted securities, with adequate provisions for the protection of the parties involved in such transactions. Applications for permission to trade in unlisted securities may be made by any national exchange to the Commission, which, if it believes such trading to be necessary or appropriate in the public interest or for the protection of investors, and all requirements have been met by the applicant, may approve the application. Likewise, if the Commission deems it necessary or appropriate in the public interest or for the protection of investors or to prevent evasion of the purposes of the law, the Commission may by rules and regulations suspend unlisted trading privileges in whole or in part for any or all classes of securities for a period not exceeding 12 months.

The Securities Exchange Act of 1934 is further amended to permit only registered brokers or dealers to use, with certain exceptions, an instrumentality of interstate commerce to induce the purchase or sale of any security. The Commission may require any necessary information concerning such brokers or dealers before permitting them to be registered, and applications may be rejected and registrations revoked if it is in the public interest to do so.

All issuers of securities pursuant to the Securities Act of 1933, with certain exceptions, are required to file with the Commission such information as it deems necessary to protect the public, and penalties are imposed for failure to comply with the regulations of the Commission.

Further amendments were enacted so as to coordinate this and prior legislation.

SHIPPING

THE SHIP SUBSIDY ACT

(Approved June 29, 1936. Public Law No. 835, 74th Cong.)

Declares it to be the policy of the United States to foster the development and encourage the maintenance of a merchant marine sufficient to carry its domestic water-borne commerce and a substantial portion of its foreign commerce, capable of serving as a naval and military auxiliary in a national emergency, owned and operated under the American flag by American citizens as far as practicable.

Creates a new Federal agency, to be known as the United States Maritime Commission, composed of five members, appointed by the President, at salaries of $12,000 annually each. This Commission will take the place of the United States Shipping Board, and the functions of the latter will be transferred to the Maritime Commission, also those functions of the Department of Commerce under the Executive order of June 10, 1933.

Prohibits any further construction loans under the Merchant Marine Act of 1920. Directs the Maritime Commission to survey the American merchant marine to determine what additions and replacements are required to carry forward the national policy declared in this act, and also to perfect and adopt a long-range program for replacements and additions for the creation of an adequate and well-balanced fleet.

Authority is given the Maritime Commission to investigate the employment and wage conditions in ocean-going shipping and to incorporate in its subsidy and private charter operation contracts minimum-manning scales, minimum-wage scales, and reasonable working conditions for all officers and crews employed on all types of vessels receiving an operating-differential subsidy.

The Maritime Commission will have authority to make all mail contracts on vessels after June 30, 1937. The Commission is authorized to consider applications from American citizens for construction-differential subsidies, also for operating-differential subsidies, and specifies the conditions upon which such subsidies may be granted.

Authorizes the Commission to arrange for the construction of such new vessels as may be required to carry out the objects of the act and to arrange for their private charter operation.

MARINE INSPECTION AND NAVIGATION ACT

(Approved May 27, 1936. Public Law No. 622, 74th Cong.)

Changes the name of the Bureau of Navigation and Steamboat Inspection to Bureau of Marine Inspection and Navigation.

Reduces the number of supervising inspectors, appointed by the Secretary of Commerce, from 11 to 7. Provides for appointment, by the Secretary, of 10 principal traveling inspectors.

Requires the Secretary to prescribe rules and regulations for investigation of marine casualties, incompetency, and negligence, and to appoint appropriate investigating boards.

Empowers Director of the Bureau of Marine Inspection to revoke the license of any licensed officer or certificate of any holder of a certificate of service who is incompetent or guilty of misbehavior or negligence. Provides for an appeal within 30 days to the Secretary of Commerce from the order of the Director.

Provides that if the Director finds evidence of criminal liability on part of licensed officer or holder of certificate of service, he shall submit findings to Secretary, who, if satisfied criminal liability exists, shall refer such findings to the Attorney General for prosecution.

Penalizes attempts to coerce witnesses, to induce them to testify falsely, or to induce them to leave jurisdiction of United States by a fine of $5,000 or imprisonment for 1 year, or both.

Provides for a technical staff, consisting of the Director and technical members, "who shall pass upon all contract plans and specifications for passenger vessels of the United States" of 100 gross tons and over, propelled by machinery, and upon material alterations of existing vessels. Director shall issue regulations for builders of vessels showing necessary safety characteristics.

Provides that no passenger vessel of 100 tons and over, propelled by machinery, the construction or material alteration of which is begun after May 27, 1936, shall receive a certificate of inspection unless specifications are approved by the Director. Provides that the American Bureau of Shipping shall continue to function in connection with the Government.

Provides a penalty of $500 for material alterations of vessels without approval of the Director and a fine of not more than $5,000 or imprisonment for not more than 5 years or both for defacing or destroying approved plans with intent to deceive or delay an officer of the Government discharging his duties.

Fixes effective date of these provisions for vessels under 500 gross tons at 3 months from May 27, 1936, and for vessels over 500 gross tons at 1 month from May 27, 1936.

Provides extra compensation for "overtime services of local inspectors of steam vessels and their assistants, United States shipping commissioners and their deputies and assistants."

RELATING TO THE CARRIAGE OF GOODS BY SEA

(Approved Apr. 16, 1936. Public Law No. 521, 74th Cong.)

This legislation applies to any shipments of goods by sea which are represented by a bill of lading or a similar document, except as regards live animals and such cargo which by the contract of carriage is stated as being carried on deck and is so carried.

The act defines the responsibilities and liabilities of both carrier and shipper, making each liable for his own negligence, imposes upon each certain regulations which must be maintained, and facilitiates the settlement of disputes between shippers and carriers. The carrier may surrender any part of his rights and immunities or increase his responsibilities under the act, provided such surrender or increase is embodied in the bill of lading issued to the shipper.

Where the character or conditions of the property to be carried is such as to warrant an exception to the provisions of the act, such exceptions may be made, but in such cases no bill of lading shall be issued, and the terms of the agreement shall be embodied in a receipt which shall be nonnegotiable and shall be marked as such.

If these provisions should prejudice the foreign commerce of the United States, the Secretary of Commerce may so certify, whereupon the President may by proclamation suspend any or all provisions of title I for such time as he deems necessary.

THE R. F. C. EXPORTS RESOLUTION

(Approved Mar. 26, 1934. Public Resolution No. 17, 73d Cong.)

Declared it to be the sense of Congress that in any loans made by the Reconstruction Finance Corporation or other Federal instrumentality to foster exports of agricultural or other products provision should be made that such products should be carried exclusively in vessels of the United States, unless the Shipping Board Bureau, after investigation, certified to the Reconstruction Finance Corporation that such vessels were not available in sufficient numbers, or on necessary sailing schedule, or at reasonable rates.

THE COASTWISE TRADE ACT OF 1935

(Approved July 2, 1935. Public Law No. 191)

Amends section 27 of the Merchant Marine Act of 1920 so as to prohibit the following classes of vessels from engaging in the coastwise trade:

1. Vessels built in or documented under the laws of the United States and later sold to foreign owners.

2. Vessels built in the United States for foreign countries or foreign purchasers.

Prevents the repatriation of old ships which originally qualified for the coastwise trade of the United States and have been sold and are trying to return.

SOCIAL SECURITY

THE SOCIAL SECURITY ACT

(Approved Aug. 14, 1935. Public Law No. 271, 74th Cong.)

Provides for the establishment of a system of Federal old-age benefits and undertakes to enable the States to make more adequate provision for aged persons, dependent and crippled children, maternal and child welfare, public health, and the administration of State unemployment compensation laws.

Creates a bipartisan Social Security Board of three members, to administer the program independently of the Department of Labor. They are to be appointed by the President, by consent of the Senate, and serve 6-year terms, except that of the first three members appointed; one would hold office for 2 years, another for 4 years, and the third for 6 years.

Authorizes an appropriation of $49,750,000 for the current fiscal year, and so much as may be needed thereafter, to enable each State to furnish financial assistance "as far as practicable under the conditions in such State" to aged needy persons more than 65 years old. Federal grants are authorized on a 50–50 matching basis with the States, except that the Federal Government's share in no case would exceed $15 a month.

Provides for a long-range contributory old-age pension system, to be financed by an income tax on employees and a pay-roll tax on employers, starting in each case at 1 percent in 1937 and rising each 3 years until 1949, when each contribution is to be 3 percent. Under the operation of the system, each qualified worker who retires at the age of 65, but not prior to January 1, 1942, would receive a monthly pension until his death ranging from $10 to $85, depending upon the total amount of wages earned by the beneficiary after December 31, 1936, and before he reaches retirable age.

Provides for a Federal-State system of unemployment compensation by Federal grants in aid, based on the imposition of a uniform pay-roll excise tax on employers.

Authorizes an appropriation of $24,750,000 for the current fiscal year and such amounts as may be needed in future years to enable each State to furnish financial assistance "as far as practicable under the conditions in such State" to needy dependent children.

Authorizes an appropriation of $3,800,000 a year, beginning with the current fiscal year, to assist the States in promoting the health of mothers and children "especially in rural areas and in areas suffering from severe economic distress."

Authorizes an appropriation of $2,850,000 a year, beginning with the fiscal year 1936, to assist States in providing medical, surgical, and corrective services for crippled children, the Children's Bureau to operate with State public welfare agencies.

Authorizes an appropriation of $1,500,000 to aid State agencies in caring for homeless and neglected children.

Authorizes an appropriation of $841,000 for the fiscal years 1936 and 1937, $1,938,000 a year thereafter to supplement and strengthen State vocational rehabilitation of the physically disabled and $8,000,000 annually for assistance to the States and their political subdivisions in maintaining adequate public health services, as well as $3,000,000 for the fiscal year 1936, and as much as may be needed annually thereafter to assist State plans for aiding the needy blind, the Federal grants for the latter to be made on a 50–50 matching basis to States meeting set standards.

THE RAILROAD RETIREMENT ACT

(Approved Aug. 29, 1935. Public Law No. 399, 74th Cong.)

Establishes a system of retirement annuities for railroad workers who reach the age of 65 years, and for any under that age who have had 30 years' service with the rail carriers and who either make application for retirement or are retired because of physical or mental disability.

Attempts to meet the objections of the Supreme Court in setting aside the original Rail Retirement Act of 1934, by basing it on the taxing power of Congress instead of on its authority to regulate interstate commerce.

Creates as an independent agency of the Government a Railroad Retirement Board of three members to be appointed by the President, one on recommendation of the employees, one on recommendation of the carriers, and the third without recommendation of either interested party, to administer the act and submit a special report within 4 years recommending changes regarded as necessary in the retirement system.

Sets up an Investigation Commission of nine members, including three Senators appointed by the Vice President, three Representatives named by the Speaker, and three others to be selected by the President. Authorizes the Commission to make a thorough investigation of all pertinent facts relative to a retirement annuity system applicable to railroad carriers and report its findings to Congress not later than January 1, 1936.

Provides for the payment of annuities from the Treasury to rail employees, after retirement, who are 65 years of age or more, or who have given 30 years of service, provided they are over 50 years of age.

Stipulates that in the event of death of a person entitled to an annuity the Board shall for 1 year pay to his estate an annuity equal to one-half of the annuity to which he may have been entitled.

The act imposes no excise or income taxes on employers or workers, leaving this to be provided for in supplementary companion act for financing the retirement plan.

Becomes effective March 1, 1936.

TARIEF

THE RECIPROCAL TARIFF ACT

(Approved June 12, 1934. Public Law No. 316, 73d Cong.)

Authorized the President, for a period of 3 years, to negotiate trade agreements with foreign governments without the traditional advice and consent of the Senate.

Empowered the President, by proclamation, to raise or lower tariff rates by not more than 50 percent.

Provided that the President, before entering into reciprocal tariff-trade agreements, must not only determine that trade expansion would be encouraged but that foreign duties or other important restrictions were unduly burdening and restricting American foreign trade.

Stipulated that every foreign-trade agreement concluded under the new act should be subject to termination on notice to the foreign government concerned, at the end of not more than 3 years from the date on which the agreement comes into force, and thereafter upon not more than 6 months' notice.

Any interested person likely to be affected by any proposed foreign-trade agreement must be given an opportunity to be heard before the trade agreement is concluded.

THE FREE TRADE ZONE ACT

(Approved June 18, 1934. Public Law No. 397, 73d Cong.)

Provided for the establishment, operation, and maintenance of foreign-trade zones in ports of entry of the United States and undertook to expedite and encourage foreign commerce.

Vested the administration of the act in a board consisting of the Secretaries of Commerce, Treasury, and War. Authorized this board to grant to corporations the privilege of establishing, operating, and maintaining foreign-trade zones in or adjacent to ports of entry, each port of entry to be entitled to at least one zone.

Provided that, in the case of any State in which harbor facilities of any port of entry are owned and controlled by the State and in which State harbor facilities of any other port of entry are owned and controlled by a municipality, the board should not grant an application by any public corporation for the establishment of any zone in such State unless such application has been authorized by an act of the legislature of the State.

Defined the term "public corporation" to mean a State, political subdivision thereof, a municipality, a public agency of a State, political subdivision thereof, or municipality, or "a corporate municipal instrumentality of one or more States."

TRANSPORTATION

MOTOR CARRIER ACT

(Approved Aug. 9, 1935. Public Law No. 255, 74th Cong.)

The Motor Carrier Act of 1935 provides that the power to regulate transportation of passengers or property by motor carriers engaged in interstate commerce is vested in the Interstate Commerce Commission, provides regulations for the supervision of busses and trucks, and provides penalties for failure to comply.

THE EMERGENCY RAILROAD TRANSPORTATION ACT OF 1933

(Approved June 16, 1933. Public Law No. 68, 73d Cong.)

Established a system of railroad control, headed by a Federal Coordinator of Transportation to work in cooperation with the roads and with labor to effect economies, but not at the expense of wage earners.

Provided that appeals from the decisions of this Coordinator, appointed by the President with Senate consent, might be taken to the Interstate Commerce Commission, his orders, unless revoked by the Commission, to have the force and effect of orders of the Commission.

Authorized the creation of three coordinating committees to operate with the Coordinator, one each for the eastern, southern, and western groups of roads, each committee containing seven members, five representing the major roads, one representing steam roads with operating revenues under $1,000,000 in 1932 and another representing electrical systems not connected with steam railways. The

act provided that the railroads were to be assessed $1.50 a mile to cover the expenses of this set-up.

Required the Coordinator and the committees to encourage, promote, and require action by the carriers to avoid waste and preventable expense; to promote financial reorganization of the carriers, with due regard to legal rights, to reduce fixed charges to the extent required by public interest and improve carrier credit, and also to provide for the immediate study of other means of improving conditions surrounding transportation in all its forms.

Set aside the antitrust laws whenever necessary to carry out the Coordinator's orders.

THE EMERGENCY RAILROAD TRANSPORTATION EXTENSION ACT

(Approved June 14, 1935. Public Resolution No. 27, 74th Cong.)

Extends for 1 year, or until June 17, 1936, the Emergency Railroad Transportation Act of 1933 and the office of Coordinator of Transportation.

Provides that orders of the Coordinator or of the Interstate Commerce Commission made under that act shall continue in effect until vacated by the Commission or set aside by other lawful authority.

Continues the assessment of $2 a mile on railroads for financing the Coordinator's office and makes it the duty of the Secretary of the Treasury to collect such assessments.

THE RAILROAD REORGANIZATION ACT

(Approved Aug. 29, 1935. Public Law No. 381, 74th Cong.)

Designed to simplify and improve the procedure for financial reorganization of railroads (engaged in interstate commerce) under the Bankruptcy Act and to assist the administration's rail coordination plan.

Provides that any railroad corporation which is insolvent or unable to meet its debts as they mature (or creditors of such a company having claims aggregating not less than 5 percent of its indebtedness) can file a petition in a Federal court for relief under section 77 of the Bankruptcy Act, as amended by this new act, upon approving which the court would have exclusive jurisdiction of the property, wherever located, its process extending to any judicial district.

THE RAILROAD ASSESSMENT ACT

(Approved June 13, 1934. Public Law No. 340, 73d Cong.)

Amended the Emergency Transportation Act of 1933 to increase from $1.50 to $2 a mile, for the year beginning June 16, 1934, the assessment on the railroad companies to meet the expenses of the Federal Coordinator of Transportation.

TREATIES RATIFIED

RIO GRANDE TREATY

(Ratified Apr. 25, 1933)

Signed by plenipotentiaries of the United States and Mexico on February 1, 1933, the convention provides for the rectification of the Rio Grande in the El Paso-Juarez Valley by undertaking works to relieve the towns and agricultural lands of the valley from flood dangers and to secure at the same time the stabilization of the international boundary line.

EQUAL RIGHTS NATIONALITY TREATY

(Ratified May 24, 1934)

Adopted at the Pan American Conference at Montevideo on December 26, 1933, and signed by plenipotentiaries of the United States and 19 other countries of the Western Hemisphere, it agreed that there shall be no distinction based on sex as regards nationality in their legislation or in their practice.

CUBAN TREATY

(Ratified May 31, 1934)

Abrogated the Treaty of Relations of May 22, 1903, between the United States and Cuba, which embodied the Platt amendment, which had for years reserved to the United States the right to intervene for the protection of Cuba's independence and financial integrity.

Continued in effect the agreements of 1903 with respect to coaling stations and the Guantanamo naval base, pending further negotiations.

Ratified and held as valid all acts effected in Cuba by the United States during its military occupation of the island up to May 20, 1902, the date on which the Republic of Cuba was established.

TRADE IN ARMS TREATY

(Ratified June 15, 1934)

Signed at Geneva on June 17, 1925, by the United States and other powers and provided for the supervision of the international trade in arms and ammunition with a view to keeping such trade within proper channels, this control to be exercised by each sovereign State within its own territory according to its own laws enacted or to be enacted to make the convention effective. Ratified by the Senate subject to the reservation that the convention shall not come into force so far as the United States is concerned until it shall have come into force in respect to Belgium, the British Empire, Czechoslovakia, France, Germany, Italy, Japan, Sweden, and the Union of Soviet Republics.

ANTIWAR TREATY OF NONAGGRESSION

(Ratified June 15, 1934)

Signed at Rio de Janeiro, October 10, 1934, by Argentina, Brazil, Chile, Mexico, Paraguay, and Uruguay.

Condemned war and advocated the settlement of disputes and controversies through the pacific means established by international law; declared that territorial questions must not be settled by resort to violence and that parties to the treaty would recognize no territorial arrangement not obtained through pacific means: *Provided*, That if any party to a dispute should fail to comply with these obligations the contracting States would make every effort for the maintenance of peace and to that end, as neutrals, should adopt a common and solitary attitude. In adhering to this treaty the Senate declared that the United States did not thereby waive any rights it has under other treaties or international law.

CONVENTION ON RIGHTS AND DUTIES OF STATES

(Ratified June 15, 1934)

Signed at Montevideo on December 26, 1933, by plenipotentiaries of the United States and other countries represented at the Seventh Pan American Conference and defined the rights and duties of States, providing, among other things, that no State has the right to intervene in the internal or external affairs of another; that the primary interest of States is the preservation of peace and their differences should be settled by recognized pacific methods; that the territory of a State is inviolable and may not be the object of military occupation nor of other measures of force imposed by any State directly or indirectly or for any motive whatever, even temporarily; that the fundamental rights of States are not susceptible of being affected in any manner whatsoever; and that the political existence of a State is independent of recognition by the other States. Ratified by the Senate with the express reservation presented to the plenary session of the conference at Montevideo to the effect that the United States Government in all of its international associations, relationships, and conduct will follow scrupulously the doctrines and policies which it has pursued since March 4, which are embodied in the different addresses of President Roosevelt since that time, and in Secretary Hull's peace address of December 15, 1933, before the Seventh Pan American Conference, and in the law of nations as generally recognized and accepted.

VETERANS

IMMEDIATE PAYMENT OF ADJUSTED-SERVICE CERTIFICATES

(Public Law No. 425, 74th Cong.)

"To provide for the immediate payment of World War adjustment-service certificates, for the cancelation of unpaid interest accrued on loans secured by such certificates, and for other purposes."

The World War adjusted-compensation certificates are hereby made immediately payable; the value of each certificate shall be an amount equal to the face value; if the veteran has borrowed against his certificate, that amount, plus any unpaid interest prior to October 1, 1931, shall be deducted from the face value of the certificate before payment is made. If the certificate is held by a bank or trust company, the payment shall be made to the bank or trust company upon proper presentation. If the veteran dies without making valid application under this act, no payment under this act will be made.

The amount certified pursuant to section 1 of this act shall be made to the veteran or his estate on or after June 15, 1936, by the issuance of bonds of the United States, registered in the name of the veteran only, in denominations of $50, having a total face value up to the highest multiple of $50 in the amount due the veteran, and the difference between the amount due the veteran and the face value of the bonds shall be paid in cash. The bonds shall be dated June 15, 1936, and shall mature June 15, 1945, but shall be redeemable at the post offices and such places as the Secretary of the Treasury may designate. Interest shall accrue at the rate of 3-percent per annum to date of maturity.

The Secretary of Treasury is authorized and directed to redeem from the United States Government life-insurance fund all adjusted-service certificates held by that fund.

HOSPITALIZATION

(Approved Aug. 23, 1935. Public Law No. 312, 74th Cong.)

Amends the Economy Act of March 20, 1933, by providing that needy war veterans and former members of the peacetime forces suffering from service-connected disabilities may receive free hospitalization, and extends until January 2, 1940, the time within which World War veterans may make application for adjusted compensation.

SPANISH-AMERICAN WAR PENSIONS

(Approved Aug. 13, 1935. Public Law No. 269, 74th Cong.)

Provides that all laws in effect on March 19, 1933, granting pensions to Spanish-American War veterans which were repealed or amended by the Economy Act of 1933 are reenacted, effective August 13, 1935.

WAR DEBTS

THE JOHNSON DEBT DEFAULT ACT

(Approved Apr. 13, 1934. Public Law No. 151, 73d Cong.)

Prohibited financial transactions with any foreign government in default in the payment of its obligations, or any part thereof, to the Government of the United States. Imposed a fine of not more than $10,000 or imprisonment for not more than 5 years, or both, for violation of this act.

MISCELLANEOUS

THE FEDERAL REGISTER ACT

(Approved July 26, 1935. Public Law No. 220, 74th Cong.)

Provides for the custody in the National Archives Establishment of Federal proclamations, orders, regulations, notices, and other documents and their prompt printing and distribution by the Public Printer in a new Federal serial publication to be known as the Federal Register.

THE CENTRAL STATISTICAL ACT

(Approved July 25, 1935. Public Law No. 219, 74th Cong.)

Provides for the creation of a Central Statistical Board to plan and promote the improvement, development, and coordination of, and the elimination of duplication in, statistical services carried on by or subject to the supervision of the Federal Government, and, "so far as may be practicable, of other statistical services in the United States."

THE "HOT OIL" ACT

(Approved Feb. 22, 1935. Public Law No. 14, 74th Cong.)

Regulates interstate and foreign commerce in petroleum and its products by prohibiting the shipment or transportation of contraband or "hot oil" from any State in which produced.

Calls for Federal confiscation of illegal petroleum taken across a State line.

Authorizes the President to lift the prohibition of interstate movement of contraband petroleum whenever he finds that the amount of petroleum and petroleum products moving in interstate commerce is so limited as to be the cause, in whole or in part, of a "lack of parity between supply and consumptive demand resulting in an undue burden on or restriction of interstate commerce in petroleum and its products."

Stipulates that if the section of the measure giving the President authority to so act is held invalid the prohibition against shipment in interstate commerce shall still be in force.

Makes the legislation effective until June 16, 1937.

THE OIL AND GAS PROSPECTING ACT

(Approved Aug. 21, 1935. Public Law No. 297½, 74th Cong.)

Amends the Oil Leasing Act of 1920 by authorizing and directing the Secretary of the Interior to grant prospecting permits giving the exclusive right, for not exceeding 2 years, to prospect for oil or gas upon not to exceed 2,560 acres of land wherein such deposits belong to the United States and are not within any known geological structure or producing field, subject to specified conditions and requirements that must be met by the applicant.

Stipulates that upon discovery of valuable deposits of oil or gas, the permittee shall be entitled to a lease of one-fourth of the land embraced in the permit.

THE INSURANCE COMPANY LOAN ACT

(Approved June 10, 1933. Public Law No. 35, 73d Cong.)

Authorized the Reconstruction Finance Corporation to subscribe to insurance company preferred stock of any class, exempt from assessment or additional liability, and providing a revolving fund of $50,000,000 for that purpose, the object being to relieve the financial strain on insurance companies due in part to the banking situation; also permitted the Reconstruction Finance Corporation to make loans upon such stock.

Stipulated the condition, with respect to such loan or stock purchases, that the insurance company should have unimpaired capital stock or should furnish new capital equal in amount and subordinate to that bought by the Reconstruction Finance Corporation; that no officer or employee of the insurance company should receive aggregate compensation in excess of $17,500 annually or in excess of what appeared reasonable to the Reconstruction Finance Corporation; and that the insurance company must not increase salaries nor retire stock or other obligations while its obligation to the Reconstruction Finance Corporation continued.

Empowered the Reconstruction Finance Corporation to make loans to State workmen's compensation funds or State funds for insurance of deposits of State or political subdivisions until January 23, 1934, provided dividends or other payments from depositories should be assigned to the Reconstruction Finance Corporation.

Amended the Emergency Relief and Construction Act of 1932 so as to authorize loans for repair or reconstruction of private property; also similar loans to municipalities or public agencies authorized, regardless of constitutional or other legal inhibitions affecting the collateral.

Defined self-liquidating construction as any such project the cost of which should be returned through taxation or other means within 20 years.

Amended the Emergency Financing Act of January 22, 1932, so as to permit the Reconstruction Finance Corporation to make loans to trustees of railroads reorganized under section 77 of the Bankruptcy Act of March 3, 1933.

THE GAME AND WILDLIFE ACT OF 1935

(Approved June 15, 1935. Public Law No. 148, 74th Cong.)

Amends the Migratory Bird Hunting Stamp Act of 1934 by liberalizing and simplifying the issuance of stamps by the Post Office Department.

Amends the Lacey Act of 1900, which in large part was designed to aid the States by prohibiting shipment in interstate commerce of game and other wildlife killed or shipped in violation of their laws, so that it will apply to present-day vehicles and methods of transportation, such as the automobile and airplane.

Extends the operation of the Lacey Act to foreign commerce in game and wildlife and puts "teeth" into that act, which made no provision for its enforcement, by imposing penalties for its violation.

Authorizes payment to the States of 25 percent of any revenue that may be derived from wildlife refuges and reservations administered by the Department of Agriculture.

Empowers the President to allocate out of the $4,880,000,000 appropriation made in the Work Relief Act of April 8, 1935, such sum as he may deem necessary or advisable for the acquisition of areas in carrying on the Government's program of wildlife restoration, rehabilitation, and protection.

THE WILDLIFE CONSERVATION ACT

(Approved Mar. 10, 1934. Public Law No. 121, 73d Cong.)

Provided for the coordination of Federal effort to preserve and increase our natural wildlife resources.

Authorized the Secretaries of Agriculture and Commerce to provide expert assistance to, and to cooperate with, Federal, State, and other agencies in the rearing, stocking, and increasing of game and fur-bearing animals and fish; in combating diseases and in developing a Nation-wide program of wildlife conservation and rehabilitation.

Provided for such investigations as deemed necessary to determine the effects of domestic sewage, trade wastes, and other polluting substances on wildlife, with special reference to birds, animals, fish, and shellfish, and to recommend remedial measures to Congress.

THE FISH AND GAME SANCTUARY ACT

(Approved Mar. 10, 1934. Public Law No. 120, 73d Cong.)

Authorized the President, upon recommendation of the Secretaries of Commerce and Agriculture and with the approval of State legislatures in which national forests are situated, to establish by proclamation within such forests limited areas as sanctuaries to be devoted to the increase of game birds, game animals, and fish.

Prohibited hunting and killing of any wild animals or fish in such sanctuaries.

THE VOCATIONAL EDUCATION ACT OF 1934

(Approved May 21, 1934. Public Law No. 245, 73d Cong.)

Provided for the further development of vocational education as an emergency measure during the depression by appropriating $3,000,000 annually for 3 years, commencing July 1, 1934, one-third to be allotted to agricultural education, one-third to home economics, and the remainder to trade and industrial education.

THE TYDINGS-M'DUFFIE PHILIPPINE INDEPENDENCE ACT

(Approved Mar. 24, 1934. Public Law No. 127, 73d Cong.)

Provided for recognition of complete Philippine independence and withdrawal of American sovereignty on the 4th of July immediately following the expiration of 10 years from the inauguration of the New Philippine government provided for in the act.

Requested the President to negotiate with foreign powers for the perpetual neutralization of the Philippines if and when independence shall have been achieved.

Authorized a constitutional convention to meet not later than October 1, 1934, to frame a constitution for the islands, republican in form, and containing a bill of rights.

Stipulated that prior to withdrawal of American sovereignty and setting up complete independence there must be adopted a constitution of the government of the Commonwealth of the Philippines, this temporary government to be autonomous and subject to reservations designed to safeguard the sovereignty and responsibilities of the United States.

Contemplated the abandonment of United States military reservations when complete independence is recognized and for negotiations concerning our naval bases and fueling stations in the Philippines.

Permitted some Philippine products to be sent into the United States duty free in limited quantities until American sovereignty is withdrawn.

Limited to a maximum annual quota of 50 immigrants from the Philippines to the United States pending complete independence.

THE PHILIPPINE CURRENCY RESERVE ACT

(Approved June 19, 1934. Public Law No. 419, 73d Cong.)

Authorized and directed the Secretary of the Treasury to establish on the books of the Treasury a credit in favor of the treasurer of the Philippine Islands for $23,862,750.78, being an amount equal to the increase in value (resulting from the reduction of the weight of the gold dollar) of the gold equivalent, at the opening of business on January 31, 1934, of the balances maintained at that time in banks in the continental United States by the government of the Philippine Islands for its gold-standard fund and its treasury-certificate fund.

Appropriated out of the receipts covered into the Treasury under section 7 of the Gold Reserve Act of 1934, by virtue of the reduction of the weight of the gold dollar by proclamation of the President on January 31, 1934, the amount necessary to establish the credit of $23,862,750.78.

THE EQUAL NATIONALITY ACT

(Approved May 24, 1934. Public Law No. 250, 73d Cong.)

Amended the Cable Immigration Act of 1922 relative to citizenship and naturalization so as to remove all discrimination against women in the nationality laws.

Granted to mothers the power to transmit American citizenship to children born abroad.

Equalized the law for men and women in the matter of renouncing citizenship upon marrying an alien; transmission of citizenship by naturalized citizens, and the time required for an alien marrying an American citizen to acquire citizenship.

THE NATIONAL FORESTS CONTRACT ACT

(Approved Apr. 17, 1935. Public Law No. 38, 74th Cong.)

Authorizes the Secretary of Agriculture to terminate contracts for the purchase of national-forest timber, made prior to June 30, 1934, without the collection of damages for failure on the part of the purchaser to cut all of the timber, except as the value of the remaining timber may have been reduced by the cutting and removal done by the purchaser.

Provides that all applications for action by the Secretary under authority of the act must be submitted before April 17, 1936.

THE TWENTIETH AMENDMENT ADJUSTMENT ACT

(Approved June 5, 1934. Public Law No. 286, 73d Cong.)

Provided for changing the time of the meeting of Congress, the beginning of the terms of Members of Congress, and the time when the electoral votes shall be counted, and for other changes necessitated by the adoption of the twentieth or "lame duck" amendment to the Constitution.

PRISON-MADE PRODUCTS

(Approved July 24, 1935. Public Law No. 215, 74th Cong.)

Makes unlawful the transportation of prison-made goods from one State into another where such goods are intended to be sold in violation of State law, and provides that packages containing such goods shall be plainly marked.

EXTENDING FACILITIES OF PUBLIC HEALTH SERVICE

(Approved Mar. 21, 1936. Public Law No. 483, 74th Cong.)

Extends facilities of Public Health Service to seamen not enlisted or commissioned in the Military or Naval Establishments while employed on vessels of the Federal Government and State school ships to the same extent as to those employed on registered, enrolled, and licensed vessels. Grants to cadets on State school ships same medical relief as to seamen.

SUSPENSION OF ASSESSMENT WORK ON MINING CLAIMS

(Approved Apr. 24, 1936. Public Law No. 532, 74th Cong.)

Suspends from July 1, 1935, to July 1, 1936, the requirement of at least $100 worth of labor to be performed or improvements of such amount to be made on mining claims each year provided the claimant was exempt from payment of Federal income tax for the taxable year 1935. Restricts the number of claims to which suspension may apply.

FURTHER RELIEF TO WATER USERS IN UNITED STATES

(Approved Apr. 14, 1936. Public Law No. 519. 74th Cong.)

Creates a commission to be composed of three members to be appointed by the Secretary of the Interior, two from the Department of the Interior and one to be a landowner and water user under a United States reclamation project. The commission is directed to investigate the financial and economic conditions of such projects with reference to the water user's ability to make payments without undue difficulty. A report shall be made at the beginning of the next Congress and recommendations made for a permanent plan for carrying on such projects having particularly in mind the ability of water users to meet the water-right charges.

The act extends the provisions of the Reclamation Projects Act of June 13, 1935, for 1 year, so far as concerns 50 percent of the construction charges for the calendar year 1936; provided, that where the construction charge for the calendar year 1936 is payable in two installments, the sum so extended shall be the amount due as the first of such installments. If payable in one installment, the due date for the 50 percent to be paid shall not be changed.

DEMOCRATIC PLATFORM PLEDGES AND THEIR FULFILLMENT

Mr. ROBINSON. Mr. President, under authority granted by the Senate, I insert in the CONGRESSIONAL RECORD the following comprehensive review of legislation of the present administration:

Until the Democratic Party adopted its 1932 platform the voters of the country had never been presented with a definite, clear-cut declaration of political principles. Party platforms had traditionally been wordy documents, more honored in the breach than in the observance. It had indeed been difficult in the past to tell whether the platform framers intended to clarify or obscure their meaning.

The Democratic platform of 1932 was concise and definite. It told more in fewer words than any similar declaration had ever done. It could be read and understood by anyone.

The great majority of the pledges made by the Democratic convention of 1932 have been completely fulfilled. National emergencies have forced temporary deviations, but the principles enunciated at the Chicago convention hold good in their entirety.

The Democratic Party can look with pride upon the platform and what the Roosevelt administration has done to make it an actuality. As a record of what was promised and what has been done, it is interesting to read the Democratic platform of 1932 and the action the Roosevelt administration has taken with respect to every undertaking therein. This record should be read in conjunction with more detailed statements made by Cabinet officials, such as the speech of Secretary Morgenthau on Government finance.

The 1932 platform with its record of fulfillment follows:

PLEDGE

We advocate an immediate and drastic reduction of governmental expenditures by abolishing useless commissions and offices, consolidating departments and bureaus, and eliminating extravagance to accomplish a saving of not less than 25 percent in the cost of Federal Government, and we call upon the Democratic Party in the States to make a zealous effort to achieve a proportionate result.

FULFILLMENT

The President proposed legislation to bring about governmental economy immediately after taking office. His proposals were enacted into law. General expenditures were reduced from $4,385,909,686 in the fiscal year 1932 to $3,100,914,534 in the fiscal year 1934. However, the economic collapse of the Nation—unchecked in the previous administration—had brought about such a paralysis of business, industry, and finance that it became necessary almost at once to place the Nation on a war basis. This struggle against economic chaos required men and money, the creation of emergency agencies, and the utilization of all our national resources. No effort could or has been spared, but it has been repeatedly stated that demobilization would be employed wherever and whenever possible.

LAWS ENACTED

The Economy Act of 1933 (Public, 2, 73d Cong.).

The Central Statistical Act (Public, 219, 74th Cong.).

Appropriation Reform Act (Public, 473, 73d Cong.).

To investigate and coordinate executive departments (S. Res. 217, 74th Cong., 2d sess.).

President's Committee to Coordinate Departments.

PLEDGE

We favor maintenance of the national credit by a Federal Budget annually balanced on the basis of accurate executive estimates within revenues raised by a system of taxation levied on the principle of ability to pay.

We advocate a sound currency to be preserved at all hazards and an international monetary conference called on the invitation of our Government to consider the rehabilitation of silver and related questions.

FULFILLMENT

Although the emergency which it inherited has not enabled the administration to balance the Budget, national credit has been maintained. A $2,050,000,000 Treasury offering in June 1936 was seven times oversubscribed, and the 2.54-percent interest rate which is now the average on all Government borrowings is the lowest in history. Short-term money costs the Government one-eighth of 1 percent at the present time. Government bonds are at a premium. The currency is sound and adequately secured. The American dollar is still the best money in the world. Foreign investors have fled toward, not from, the American dollar as is indicated in their holdings of more than $6,000,000,000 worth of American securities and bank balances. Efforts to bring about monetary agreements have failed but not through lack of effort on the part of this Government.

The principle of ability to pay has been the basis of all tax legislation of the Roosevelt administration.

LAWS ENACTED

The Revenue Act of 1934 (Public, 216, 73d Cong.).

The Revenue Act of 1935 (Public, 407, 74th Cong.).

The Revenue Act of 1936 (Public, 740, 74th Cong.).

The Gasoline Tax and Postage Rate Act (Public, 73, 73d Cong.).

The Excise Tax Act (Public Res. 36, 74th Cong.).

Expansion of Federal Reserve credits (Public, 10, 73d Cong.).

The gold repeal joint resolution (Public Res. 10, 73d Cong.).

The Silver Purchase Act, 1934 (Public, 438, 73d Cong.).

The Gold Clause Act (Public Res. 63, 74th Cong.).

The Gold Reserve Act, 1934 (Public, 87, 73d Cong.).

PLEDGE

We advocate a competitive tariff for revenue, with a fact-finding tariff commission free from executive interference, reciprocal tariff agreements with other nations, and an international economic conference designed to restore international trade and facilitate exchange.

FULFILLMENT

Congress, in 1934, enacted the Reciprocal Tariff Act under which the State Department has already concluded agreements with 14 nations. The benefits of these agreements have been directly reflected in a betterment of our foreign trade. Exports of American products, previously blocked by discriminatory tariffs, have been increased appreciably. In the preparation of the tariff agreements, public hearings are held. Experts, versed in trade and economic conditions, draft the schedules in the interest of the United States as a whole without the interference of lobbyists of special interests, who in the past have gained concessions for favored industries. The United States took part in the London Economic Conference of 1933, but agreement among the participating nations could not be achieved. The work of the Tariff Commission has been carried on as a fact-finding body.

LAWS ENACTED

The Free Trade Zone Act (Public, 397, 73d Cong.).
The Reciprocal Tariff Act (Public, 316, 73d Cong.).

PLEDGE

We advocate the extension of Federal credit to the States to provide unemployment relief wherever the diminishing resources of the States make it impossible for them to provide for the needy; expansion of the Federal program of necessary and useful construction affected with a public interest, such as adequate flood control and waterways.

FULFILLMENT

When the Roosevelt administration took office, the relief of destitution, because of previous neglect, had developed into a national problem. After 2 years, during which relief was administered through State agencies, it became apparent that the necessity for unification and speed was paramount. Through a national organization relief and work have been provided in every community to all classes of citizens without delay or favor. The Federal program of construction has been enlarged; flood control and waterways projects have been undertaken.

LAWS ENACTED

The Deficiency Relief Appropriation Act (Public, 739, 74th Cong.).
R. F. C. loan to construct levee and drainage districts (Public, 10, 73d Cong.).
The Work Relief Act (Public Res. 11, 74th Cong.).
Public Works Act (title II of Public, 67, 73d Cong.).
The Civil Works Emergency Relief Act (Public, 93, 73d Cong.).
Extension of the R. F. C. (Public, 84, 73d Cong.; Public, 1, 74th Cong.).
Wagner-Lewis $500,000,000 Emergency Relief Act (Public, 15, 73d Cong.).
The Civilian Conservation Corps Act (Public, 5, 73d Cong.).
Flood Control Act (Public, 738, 74th Cong.).
Mississippi Flood Control Act (Public, 678, 74th Cong.).
Federal Aid Highways Act (Public, 686, 74th Cong.).

PLEDGE

We advocate the spread of employment by a substantial reduction in the hours of labor, the encouragement of the shorter week by applying that principle in Government service. We advocate advance planning of public works.

FULFILLMENT

The Roosevelt administration has, through such legislation as the National Recovery Act, the Guffey Coal Act, and the National Labor Relations Board, made determined efforts to bring about a regulation of the hours of employment in the industrial life of the Nation. These objectives are still desired. Hours of 123,000 Postal Service employees and the hours of employees of several other Government departments have been reduced to a 40-hour week. The National Resources Board was created for the purpose of evolving a program of planned public works for the future.

LAWS ENACTED

The Wagner National Employment System Act (Public, 30, 73d Cong.).
The Roads Employment Act (Public, 393, 73d Cong.).
The kick-back racket labor law (Public, 324, 73d Cong.).
The labor disputes joint resolution (Public Res. 44, 73d Cong.).
The Wagner Labor Relations Act (Public, 198, 74th Cong.).
The Employment Service Act (Public, 54, 74th Cong.).
Prison-Made Products Act (Public, 215, 74th Cong.).
The McKellar-Mead 40-Hour Mail Act (Public, 275, 74th Cong.).
Vacation and sick leave in civil service (Public, 471 and 472, 74th Cong.).
The Dill-Crosser Railway Labor Act (Public, 442, 73d Cong.).
Air Transport Labor Act (Public, 487, 74th Cong.).
Walsh-Healey Government Contracts Act (Public, 846, 74th Cong.).

PLEDGE

We advocate unemployment and old-age insurance under State laws.

FULFILLMENT

A study of unemployment and old-age insurance was initiated soon after President Roosevelt took office. Legislation to bring about social security was enacted in 1935, and the Social Security Board is now an established fact, cooperating with the States to put both unemployment insurance and old-age pensions into effect.

LAWS ENACTED

Social Security Act (Public, 271, 74th Cong.).
The Railroad Retirement Act (Public, 399, 74th Cong.).

PLEDGE

We favor the restoration of agriculture, the Nation's basic industry; better financing of farm mortgages through recognized farm-bank agencies at low rates of interest on an amortization plan, giving preference to credits for the redemption of farms and homes sold under foreclosures.

Extension and development of farm-cooperative movement and effective control of crop surpluses so that our farmers may have the full benefit of the domestic market.

The enactment of every constitutional measure that will aid the farmers to receive for their basic farm commodities prices in excess of cost.

FULFILLMENT

Under the national agricultural policy of the Roosevelt administration farm income, farm values, and the purchasing power of the farmer have all been greatly increased. Government credit has been supplied to the farmer wherever private sources have dried up, and farm-mortgage refinancing has been carried out through the Farm Credit Administration, reversing the old order of farm tenancy to that of farm ownership. Greater cooperation now exists among farmers than ever before. More than 3,000,000 farmers have voluntarily joined in the administration's crop-adjustment program.

The administration has continued its efforts so that farmers are today receiving for their basic farm commodities prices in excess of cost of production.

LAWS ENACTED

Soil Erosion and Domestic Allotment Act (Public, 461, 74th Cong.).
The Grazing Act (Public, 482, 73d Cong.).
Farm Mortgage Refinancing Act (Public, 88, 73d Cong.).
Crop Loan Act (Public, 97, 73d Cong.).
Jones-Connally Farm Relief Act (Public, 142, 73d Cong.).
Jones-Costigan Sugar Act (Public, 213, 73d Cong.).
Cotton, cattle, dairy relief resolution (Public Res. 27, 73d Cong.).
Farm Mortgage Foreclosure Act (Public, 305, 73d Cong.).
The Livestock Bankruptcy Act (Public, 60, 74th Cong.).
The Farm Mortgage Act (Public, 384, 74th Cong.).
Homestead Settlers Act (Public, 64, 74th Cong.).
Farm Credit Act, 1933 (Public, 75, 73d Cong.).
Farm Credit Act, 1935 (Public, 87, 74th Cong.).
The Tobacco Inspection Act (Public, 314, 74th Cong.).
The Farm Research Act (Public, 182, 74th Cong.).
The Soil Erosion Act, 1935 (Public, 46, 74th Cong.).
Export debenture (section of A. A. A. Amendment Act) (Public, 320, 74th Cong.).
Homesteaders Relief Act (Public, 241, 73d Cong.).

PLEDGE

We advocate a Navy and an Army adequate for national defense, based on a survey of all facts affecting the existing establishments, that the people in time of peace may not be burdened by an expenditure fast approaching a billion dollars annually.

FULFILLMENT

The national defense has been adequately maintained. Army and Navy expenditures have been increased, in part, in providing emergency employment on construction work necessary to both services. The failure of world-wide agreements on disarmament has made necessary the policy of preparedness which has been followed.

LAWS ENACTED

The National Guard Act, 1933 (Public, 64, 73d Cong.).
Vinson Naval Parity Act (Public, 135, 73d Cong.).
The Marine Corps Personnel Act (Public, 263, 73d Cong.).
The Navy Promotion Act (Public, 264, 73d Cong.).
The Foreign Station Act (Public, 266, 73d Cong.).
The War Department Supply Act (Public, 29, 74th Cong.).
The Wilcox Air Base Act (Public, 263, 74th Cong.).
The National Guard Officers Act (Public, 154, 74th Cong.).
The Naval Supply Act (Public, 163, 74th Cong.).
The Naval Aviation Cadet Act (Public, 37, 74th Cong.).
Honor student appointments for the Naval Academy (Public, 456, 74th Cong.).
Preservation of domestic source of tin (Public, 448, 74th Cong.).

PLEDGE

We advocate strengthening and impartial enforcement of the antitrust laws, to prevent monopoly and unfair trade practices, and revision thereof for the better protection of labor and the small producer and distributor.

FULFILLMENT

The Department of Justice has, since March 4, 1933, handled 1,322 cases under the antitrust laws, an increase of more than 1,100 over the previous administration. The Federal Trade Commission has issued 391 orders to cease and desist from unfair trade practices, while the Department of Agriculture has proceeded similarly against 40 packing houses. The evil of price discrimination has been met by the Robinson-Patman Act.

LAWS ENACTED

The Petroleum "Hot Oil" Act (Public, 14, 74th Cong.).
Robinson-Patman Price Discrimination Act (Public, 692, 74th Cong.).

PLEDGE

The conservation, development, and use of the Nation's water power in the public interest.

FULFILLMENT

The projects being carried to completion in the Tennessee Valley, at Grand Coulee, and Casper-Alcove testify to the fulfillment of this pledge. The power generated is being made generally available in the public interest.

LAWS ENACTED

The Tennessee Valley Authority Act (Public, 17, 73d Cong.).
The Tennessee Valley Act (Public, 412, 74th Cong.).
The Work Relief Act (Public Res. 11, 74th Cong.).
Columbia River project (P. W. A. Act, Public, 67, 73d Cong.).
Rural Electrification Act (Public, 605, 74th Cong.).

PLEDGE

The removal of Government from all fields of private enterprise except where necessary to develop public works and natural resources in the common interest.

FULFILLMENT

The demoralization and break-down of private enterprise during the period between 1929 and 1933 forced the administration to provide credit relief in many forms. Government loans to private enterprise exceed in amount funds made available to any class, and were urgently solicited by the borrowers. The Government stands ready and willing in every instance to withdraw from any field in which private enterprise is prepared to take over its normal functions.

PLEDGE

We advocate protection of the investing public by requiring to be filed with the Government and carried in advertisements of all offerings of foreign and domestic stocks and bonds true information as to bonuses, commissions, principal invested, and interests of the sellers.

Regulation to the full extent of Federal power of—
(a) Holding companies which sell securities in interstate commerce;
(b) Rates of utility companies operating across State lines;
(c) Exchanges in securities and commodities.

FULFILLMENT

The administration through enactment of the Securities Act of 1933 and the Securities Exchange Act of 1934 has brought about the regulation of stock-market transactions set forth in this pledge. The Public Utility Act of 1935 provides for the regulation of utilities. Commodity-exchange legislation has been enacted.

LAWS ENACTED

The Securities Act, 1933 (Public, 22, 73d Cong.).
The Securities Exchange Act, 1934 (Public, 291, 73d Cong.).
Unlisted Securities Trading Act (Public, 621, 74th Cong.).
The electric rate investigation (Public Res. 18, 73d Cong.).
The Telephone Inquiry Act (Public Res. 8, 74th Cong.).
Holding Company Act (Public, 333, 74th Cong.).
The Communications Act, 1934 (Public, 416, 73d Cong.).
The Emergency Railroad Transportation Act (Public, 68, 73d Cong.).
The Motor Carrier Act (Public, 255, 74th Cong.).
The Railroad Reorganization Act (Public, 381, 74th Cong.).
The Commodity Exchange Act (Public, 675, 74th Cong.).

PLEDGE

We advocate quicker methods of realizing on assets for the relief of depositors of suspended banks, and a more rigid supervision of national banks for the protection of depositors and the prevention of the use of their moneys in speculation to the detriment of local credits; the severance of affiliated security companies from, and the divorce of the investment banking business from, commercial banks, and further restriction of Federal Reserve banks in permitting the use of Federal Reserve facilities for speculative purposes.

FULFILLMENT

The administration through broadening of the powers of the Reconstruction Finance Corporation, proposed by the President, has authorized loans of more than $1,000,000,000 for distribution to depositors in closed banks. Changes in the Banking Act and creation of the Federal Deposit Insurance Corporation have made all of our banks safe and sound. Limitations imposed by the Federal Reserve Board, under new authority, have curbed the use of depositors' funds to support stock-market speculation.

The administration under the provisions of the Securities Exchange Act and by means of increased powers granted the Governors of the Federal Reserve Board divorced commercial and investment banking and sharply limited the use of bank funds to support speculation.

LAWS ENACTED

The Emergency Banking Relief Act (Public, 1, 73d Cong.).
The Bank Deposit Insurance Act (Public, 362, 73d Cong.).
The Banking Act of 1933 (Public, 66, 73d Cong.).
The State Bank Aid Act (Public, 4, 73d Cong.).
The Collateral Security Act (Public, 115, 73d Cong.).
The Glass Banking Act, 1935 (Public, 305, 74th Cong.).
Extension of the Deposit Insurance Act (Public, 38, 74th Cong.).

PLEDGE

We advocate the full measure of justice and generosity for all war veterans who have suffered disability or disease caused by, or resulting from actual service in time of war and for their dependents.

FULFILLMENT

The service and care provided for veterans and their dependents through the facilities of the Veterans' Administration have been maintained and improved. Payment of the soldiers' bonus, June 15, 1936, necessitated efficient coordination of the Treasury Department, Post Office Department, and Veterans' Administration for the accomplishment of this vast task in record time.

LAWS ENACTED

Free hospitalization (Public, 312, 74th Cong.).

Extend time for naturalization of alien World War veterans (Public, 160, 74th Cong.).

Clarify section 19 of the Veterans' Act of 1924 (Public Res. 1, 74th Cong.).

Payment of adjusted-service certificates (Public, 425, 74th Cong.).

PLEDGE

We advocate a firm foreign policy, including peace with all the world and the settlement of international dispute by arbitration; no interference in the internal affairs of other nations; the sanctity of treaties and the maintenance of good faith and of good will in financial obligations; adherence to the World Court with appending reservations; the pact of Paris abolishing war as an instrument of national policy, to be made effective by provisions for consultation and conference in case of threatened violations of treaties.

FULFILLMENT

The administration has maintained peace and made the good-neighbor policy paramount in its foreign relations. It has expressed itself definitely against interference in the internal affairs of other nations, withdrawn our armed forces from Haiti, and eliminated the Platt amendment from our relations with Cuba. There has been no deviation with respect to the platform's declaration dealing with the sanctity of treaties and the maintenance of good faith and good will in financial obligations. Adherence to the World Court was recommended to the Congress. The Pact of Paris remains an instrument of national policy. During the present European crisis the administration has adhered strictly to a policy of neutrality.

LAWS ENACTED

Prohibitions on sale of arms (Public Res. 28, 73d Cong.).

The Neutrality Act (Public Res. 67, 74th Cong.).

The Neutrality Act of 1936 (Public Res. 74, 74th Cong.).

Naval Treaty of 1935.

PLEDGE

International agreements for reduction of armaments and cooperation with nations of the Western Hemisphere to maintain the spirit of the Monroe Doctrine.

FULFILLMENT

The administration has suggested and joined in proposals for the reduction of armaments. In an effort to avert a naval armament race the administration recently concluded at London a naval treaty with England and France. The Montevideo Conference and the more recently called Pan American Conference were initiated in furtherance of increased good will among nations of the Western Hemisphere.

LAWS ENACTED

Rio Grande Treaty (ratified Apr. 25, 1933).

Equal Rights Nationality Treaty (ratified May 31, 1934).

Cuban Treaty (ratified May 31, 1934).

Trade in Arms Treaty (June 15, 1934).

Anti-War Treaty of Nonagression (June 15, 1934).

PLEDGE

We oppose cancelation of the debts owing to the United States by foreign nations.

FULFILLMENT

Consistent and repeated efforts looking to the collection of the war debts have been made by this administration.

LAW ENACTED

The Johnson Debt Defaulting Act (Public, 151, 73d Cong.).

PLEDGE

Independence for the Philippines; ultimate statehood for Puerto Rico.

FULFILLMENT

Philippine independence has been brought about under this administration. Legislation looking to a change in the status of Puerto Rican relations is pending in Congress.

LAWS ENACTED

The Tydings-McDuffie Philippine Independence Act (Public, 127, 73d Cong.).

The Philippine Currency Reserve Act (Public, 419, 73d Cong.).

PLEDGE

The employment of American citizens in the operation of the Panama Canal.

FULFILLMENT

Efficient operation of the Panama Canal, with Americans employed in all but the lowest unskilled grades, has been maintained.

PLEDGE

Simplification of legal procedure and reorganization of the judicial system to make the attainment of justice speedy, certain, and at less cost.

FULFILLMENT

The Department of Justice, in cooperation with the Chief Justice of the Supreme Court of the United States, has conceived and put into effect many reforms in judicial procedure which have promoted the attainment of justice.

LAWS ENACTED

The Public Utilities Reviewing Act (Public, 222, 73d Cong.).

Additional clerk to courts (Public, 449, 74th Cong.).

The Six Federal Crime Control Acts (Public, 230, 73d Cong.).

The Crime Prevention Compact Act (Public, 293, 73d Cong.).

The Arrest Facilitation Act (Public, 295, 73d Cong.).

The National Stolen Property Act (Public, 246, 73d Cong.).

The Federal Marshals Act (Public, 146, 74th Cong.).

The Poultry Racket Act (Public, 272, 74th Cong.).

Act penalizing holder of ransom money (Public, 424, 74th Cong.).

PLEDGE

Continuous publicity of political contributions and expenditures; strengthening of the Corrupt Practices Act and severe penalties for misappropriation of campaign funds.

FULFILLMENT

Full publicity has been demanded of all organizations already in or which have entered the field of politics. Violations of the Corrupt Practices Act have been vigorously prosecuted.

LAWS ENACTED

Investigation of campaign expenditures (S. Res. 225, 74th Cong.).

PLEDGE

We advocate the repeal of the eighteenth amendment. To effect such repeal we demand that the Congress immediately propose a constitutional amendment to truly representative conventions in the States called to act solely on that proposal. We urge the enactment of such measures by the several States as will actually promote temperance, effectively prevent the return of the saloon, and bring the liquor traffic into the open under complete supervision and control by the States.

We demand that the Federal Government effectively exercise its power to enable the States to protect themselves against importation of intoxicating liquors in violation of their laws.

Pending repeal, we favor immediate modification of the Volstead Act to legalize the manufacture and sale of beer and other beverages of such alcoholic content as is permissible under the Constitution and to provide therefrom a proper and needed revenue.

FULFILLMENT

A constitutional amendment repealing the eighteenth amendment was proposed by Congress after President Roosevelt was elected, and ratified by the required number of States before the end of 1933. For the protection of dry States existing statutes to that effect were left intact. Legislation legalizing the sale of 3.2 beer was enacted in March 1933 and became effective April 7, 1933.

LAWS ENACTED

Twenty-first amendment (proclamation issued by the Secretary of State on Dec. 5, 1933).

The Liquor Taxing Act, 1934 (Public, 83, 73d Cong.).

The Federal Alcohol Control Act (Public, 401, 74th Cong.).

Antismuggling Act (Public, 238, 74th Cong.).

The Beer-Wine Revenue Act (Public, 3, 73d Cong.).

PLEDGE

We advocate continuous responsibility of Government for human welfare, especially for the protection of children.

FULFILLMENT

Through the Home Owners' Loan Corporation more than a million families were aided in keeping the title to their homes. The Resettlement Administration has placed 14,310 destitute persons in better homes with an opportunity to make a living; while the Public Works Administration has provided sanitary low-cost housing for 2,850 low-income

families. Child labor was eliminated by N. R. A. and is today far less prevalent than prior to the Roosevelt administration.

LAWS ENACTED

The Insurance Company Loan Act (Public, 35, 73d Cong.).
The Corporate Bankruptcy Act (Public, 296, 73d Cong.).
The Home Owners' Refinancing Act (Public, 43, 73d Cong.).
The Home Owners' Loan Act (Public, 178, 73d Cong.).
The National Housing Act (Public, 479, 73d Cong.).
Direct loans to industry (Public, 417, 73d Cong.).
The Home Mortgage Relief Act (Public, 76, 74th Cong.).
The Disaster Loan Act (Public, 224, 74th Cong.).
Vocational aid (Public, 245, 73d Cong.).

PLEDGE

We condemn the improper and excessive use of money in political activities.

FULFILLMENT

The Democratic Party organization has functioned without the use of large sums of money, repaid the debts which it inherited, and obtained the majority of its funds in small amounts.

PLEDGE

We condemn paid lobbies of special interests to influence Members of Congress and other public servants by personal contact.

FULFILLMENT

Investigations of the activities of lobbyists have been conducted by Congress, and legislation to curb the abuses was submitted to both Houses.

LAWS ENACTED

Investigation of lobby activities on holding company bill (S. Res. 165, 74th Cong., H. Res. 288, 74th Cong.).

PLEDGE

We condemn action and utterances of high public officials designed to influence stock-exchange prices.

FULFILLMENT

Administration officials have refrained from making such utterances as were common during the Coolidge and Hoover administrations, designed to stimulate or protect unnatural and unsound stock-market values.

PLEDGE

We condemn the open and covert resistance of administration officials to every effort by congressional committees to curtail the extravagant expenditures of the Government and to revoke improvident subsidies granted to favorite interests.

FULFILLMENT

Administration officials have cooperated with congressional committees on expenditures of the Government in every possible way consistent with the emergencies which had to be faced. Air- and ocean-mail subsidies have been either curtailed or eliminated.

LAWS ENACTED

The Emergency Air Mail Act (Public, 140, 73d Cong.).
Air Mail Act of 1934 (Public, 308, 73d Cong.).
Air Mail Contract Act (Public, 12, 74th Cong.).
Investigation of air- and ocean-mail contracts (Senate Res. 349, 72d Cong.).
Ship Subsidy Act (Public, 835, 74th Cong.).

PLEDGE

We condemn the extravagance of the Farm Board, its disastrous action which made the Government a speculator of farm products and the unsound policy of restricting agricultural products to the demands of domestic markets.

FULFILLMENT

The existence of the Farm Board ended almost immediately after President Roosevelt took office. Crop restriction has been undertaken only to prevent the depression of farm prices below the cost of production, to restore soil fertility, and to eliminate the tremendous surpluses which destroyed the farmers' purchasing power.

LAWS ENACTED

Farm Credit Act (Public, 75, 73d Cong.).
Executive Order 6084.
Emergency Farm Mortgage Act of 1933 (title II, Public, 10, 73d Cong.).

PLEDGE

We condemn the usurpation of power by the State Department in assuming to pass upon foreign securities offered by international bankers as a result of which billions of dollars in questionable bonds have been sold to the public upon the implied approval of the Federal Government.

FULFILLMENT

The State Department has scrupulously refrained from any action of this character.

PLEDGE

We condemn the Hawley-Smoot tariff law, the prohibitive rates of which have resulted in retaliatory action by more than 40 countries, created international economic hostilities, destroyed international trade, driven our factories into foreign countries, robbed the American farmer of his foreign markets, and increased the cost of production.

FULFILLMENT

The administration has approached the tariff question through the Reciprocal Trade Agreement Act which has done much to restore American foreign markets destroyed by the Hawley-Smoot tariff law.

LAWS ENACTED

Reciprocal Trade Agreement Act. (See tariff provision.)
R. F. C. exports resolution (Public Res. 17, 73d Cong.).

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its reading clerks, announced that the House had passed without amendment the bill (S. 4719) for the relief of the Bridgeport Irrigation District.

The message also announced that the House had agreed to the amendments of the Senate to the bill (H. R. 11555) to authorize the striking of an appropriate medal in commemoration of the one hundredth anniversary of the arrival of Marcus and Narcissa Whitman in the Walla Walla Valley, Wash., and the founding of the Waiilatpu Mission.

The message further announced that the House had agreed to the amendments of the Senate to the bill (H. R. 12220) to authorize the adjustment of the boundary of the Fort Marion National Monument, Florida, in the vicinity of Fort Marion Circle, and for other purposes.

The message also announced that the House had severally agreed to the amendment of the Senate to the following bills of the House:

H. R. 4364. An act for the relief of Andrew Johnson;

H. R. 5078. An act for the relief of Mrs. Charles F. Eikenberg;

H. R. 7642. An act for the relief of the estate of Frank W. Trick; and

H. R. 10439. An act for the relief of John B. Ricketts.

The message further announced that the House had passed the following bills and joint resolution of the Senate, severally with an amendment, in which it requested the concurrence of the Senate:

S. 1793. An act to amend the act entitled "An act authorizing the attorney general of the State of California to bring suit in the Court of Claims on behalf of the Indians of California", approved May 18, 1928 (43 Stat. L. 602);

S. 2460. An act to amend the act of June 6, 1924, entitled "An act to amend in certain particulars the National Defense Act of June 3, 1916, as amended, and for other purposes";

S. 3843. An act to provide for the entry under bond of exhibits of arts, sciences, and industries, and products of the soil, mine, and sea, and all other exhibits for exposition purposes;

S. 4727. An act to quiet title and possession with respect to certain lands in Lawrence County, Ala.,; and

S. J. Res. 255. Joint resolution to provide for the participation of the United States in the commemoration of the seventy-fifth anniversary of the Battle of Antietam.

The message also announced that the House had passed the bill (S. 1567) to amend section 5 of the act of March 2, 1919, generally known as the War Minerals Relief Act, with amendments, in which it requested the concurrence of the Senate.

The message further announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 12458. An act authorizing a preliminary examination of the intracoastal waterway throughout Broward County, Fla.; and

H. R. 12796. An act to amend the act entitled "An act to provide for the times and places for holding court for the eastern district of North Carolina", approved May 10, 1928, as amended (U. S. C., 1934 edition, title 28, sec. 179; U. S. C., Supp. I, title 28, sec. 179).

INTERNAL-REVENUE TAXATION—CONFERENCE REPORT

The VICE PRESIDENT. The Chair will state his understanding of the parliamentary situation. Senators will give attention; and if he is not correct, he may be corrected. He was not in the chair at the time the proceedings took place. The conference report on the tax bill is before the Senate; the Senator from West Virginia [Mr. NEELY] had made a motion to take up a bill. The Chair does not see the Senator from West Virginia present; so the Chair will lay before the Senate the conference report. The Chair is just stating what he understands the parliamentary situation to be, as informed by the parliamentary clerk.

Mr. ROBINSON. Mr. President, that is an error. There was a unanimous-consent agreement that the Senate should proceed this morning with the conference report on the tax bill, should vote on it at 2:30 o'clock, and then, at not later than 3 o'clock, a vote should be taken on the motion to proceed to the consideration of the coal-conservation bill. That is the arrangement, and that appears in the RECORD.

The VICE PRESIDENT. The Chair was informed that the Senator from West Virginia had made a motion, and that he had not withdrawn the motion.

Mr. ROBINSON. That motion was superseded by the unanimous-consent agreement, which was entered into at my instance last night, and which appears on the calendar.

The VICE PRESIDENT. The unanimous-consent agreement set aside the motion of the Senator from West Virginia.

Mr. ROBINSON. Yes; it superseded it.

The Senate resumed the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 12395) to provide revenue, equalize taxation, and for other purposes.

The VICE PRESIDENT. The question is on agreeing to the conference report.

Mr. BYRD. Mr. President, during the 3 years it has been my privilege to be a Member of the Senate I think that no more important legislation has ever come before this body than the pending bill, the conference report on which the Senate is now considering. I say without fear of successful contradiction that no important measure is so little understood as is this bill, which we must vote on at 2:30 o'clock this afternoon. Even the distinguished Senator from Utah [Mr. KING] has not accorded the Senate the courtesy of explaining the details of this hybrid combination and compromise which has been made by the conferees between the Senate and House bills. I hope before the Senate is forced to vote on this measure that, at least, the chairman of the conference committee on the part of the Senate will tell us what the conferees have done.

Mr. President, it was only this morning that the report of the conferees was available for study by the Members of the Senate, and I venture the assertion that only eight Members of the Senate, those who are so fortunate as to be members of the conference committee, understand, even in the remotest degree, the far-reaching consequences of the legislation upon which we will soon be required to vote.

Mr. President, I am going to take a very short time to express my opposition to the conference report because the report neither carries out the principle of the bill as it passed the House nor the principle of the bill as it passed the Senate. It is a mongrel and hybrid compromise between the two.

I speak as a Democrat when I say that the Democratic leadership in the Senate and the House of Representatives must take responsibility for the passage of a bill which I believe will do great damage to many and be an important issue in the coming campaign. I propose to present, as best I can, the issues that are contained in the conference report.

Mr. President, we all know that for 4 months the Ways and Means Committee of the House of Representatives considered proposed tax legislation and the House passed a bill which, after those 4 months of consideration it was discovered, exempted from taxation 136 of the wealthiest and most prosperous corporations in the country. In other words, if the bill passed by the House of Representatives had been in operation in 1934, 136 of the most prosperous corporations in the country, each earning more than $1,000,000 a year, would have been completely exempted from the payment of any income tax whatsoever and, in addition, would have been exempted from the payment of any capital-stock tax and excess-profits tax, while other corporations, unable to declare their earnings in dividends, would have been penalized by having excessive and exorbitant taxes placed upon them.

Then the bill came to the Senate and was referred to the Finance Committee. An inquiry was made of the distinguished Secretary of the Treasury as to whether or not certain named rich corporations would be exempt from taxation. There is in the record of the hearings before the Senate Finance Committee—and I have the list here for the information of the Senate—a list of the 136 companies which would have paid no taxes under the provisions of the bill as it passed the House if that bill had been in operation in 1934, and then follow the names of 140 more corporations which would have obtained a tax reduction of 50 to 90 percent if such legislation had been in effect in 1934 on the basis of the distribution of the earnings of those companies.

Mr. President, I state upon my responsibility as a Senator that, in my judgment, the purpose of the proposed legislation is not so much to raise revenue as it is to effect a social purpose. It is that feature I wish to discuss today. I say the question of raising revenue under the bill is secondary to a social purpose the effect of which will be entirely different from that which the sponsors of the legislation believe it will be. I shall attempt to show that to the Senate.

Mr. President, we all know that as a consequence of the vast spending program which is going on at Washington, when the public funds are being appropriated for every conceivable purpose, we must increase taxes, not only increase them under the pending bill but increase them throughout the years to come. I want Senators to know that when they support this bill they are voting for an aggregate increase of 50 percent in the tax on the earnings of corporations. In other words, it is proposed under the terms of this bill to raise approximately $500,000,000 from taxation of the earnings of corporations, while the total income from that source now is about $1,000,000,000. So, we propose now in this bill to put an increased taxation of 50 percent at one time upon the earnings of corporations.

The total income derived under the provisions of the bill will be $800,000,000, but only $400,000,000 of this amount will be available for the next fiscal year, because all of it will not come into the Treasury in the next fiscal year.

The question of raising revenue is secondary to the social purpose of the bill. How easy it would be to reduce, to the extent of $400,000,000, the gigantic appropriations Congress has made and then let a well-informed commission study this difficult and intricate question and bring in a report next January on a bill which could be considered and enacted after calm and mature deliberation by the Senate and House of Representatives, instead of passing a bill of this importance in the dying hours of the Congress, doing great injury and damage to thousands of the smaller and weaker corporations throughout the land.

Mr. President, I wish each Member of the Senate had the time to study the admirable and splendid minority report submitted by the Senator from Georgia [Mr. GEORGE], and

the Senator from Massachusetts [Mr. WALSH]. I cannot conceive how any man familiar with business conditions could vote for this bill if he had studied the report of those two Senators and listened to the splendid and able explanation made last night by the Senator from Massachusetts.

I desire to discuss very frankly the philosophy of the measure as applying to our taxation policy. It completely revolutionizes the system of taxation of corporations in the country. The philosophy of it, and no one can deny it, is to prevent, by the coercion of excessive taxation, a corporation from having a surplus. What would have happened in the depression we have just gone through if the great corporations and little corporations of the country had been without surpluses? There would have been wholesale bankruptcy throughout the land.

The statistics show that during the period of the depression there was paid out in dividends more than the corporations earned. The statistics show that from 1921 to 1933 the corporations of the country paid in dividends $50,700,000,000 and earned $41,000,000,000, paying out $9,000,000,000 in that period more than they earned. How did they do it? It was because they had accumulated surpluses in the more prosperous years. When the time comes in this country that an individual or a corporation cannot lay by a nest egg for a rainy day, so that when adverse conditions come he or it may not be without resources, existing untoward conditions will be greatly aggravated, and we will, indeed, be in a sad fix.

The statistics further show that during the depression the corporations in the country dipped into their surpluses to pay their labor. If they had had no surpluses, then thousands of workmen would have had to be dismissed, and conditions, bad as they were during the depression, would have been much worse.

What do the proponents of the measure say about that? They say a corporation that wants a surplus must sell stock in order to obtain it. With all due deference to those gentlemen, I say that, to my knowledge, no more absurd proposal has been made than that when a corporation desires to obtain a surplus for use in time of adversity it shall go forth and sell stock to the public in order to obtain the surplus.

Mr. President, in the depression we have just gone through no one could sell any stock to anyone else because everyone was trying to sell stock. It would have been an impossibility to sell stock under those conditions. The proponents of the plan overlook entirely the fact that 48 States have laws regulating the sale of stock. In Virginia, for example, there is a very stringent law providing that no corporation may sell additional stock unless it has a surplus or unless it has a value back of the additional stock. Yet the advocates of this bill says, "If you have a debt to pay, then sell stock to get the money to pay that debt, and declare all your earnings out in dividends, and thereby avoid these supertaxes."

Mr. President, under the terms of the bill corporations which have existing surpluses—and I am going into detail because after all matters of this kind must finally come back to the taxpayer—the rich and prosperous and monopolistic corporations of the country that already have great cash surpluses will be tremendously benefited, while those without surpluses can never accumulate a surplus to compete with the rich corporations.

Let us take, for example, the International Harvester Co. I am a farmer. We farmers think the International Harvester Co. controls the price of farm machinery in this country. It makes good farm machinery; but I desire to say that during the depression the price of this farm machinery was not reduced; and it takes more bushels of wheat, more bushels of corn, and more bushels of barley to buy a binder than at any time, perhaps, in our previous history. The International Harvester Co. has a surplus today of $74,000,000, $27,000,000 of which is in cash, and $34,000,000 of which is in Government bonds—a liquid surplus of $61,000,000. This corporation in 1934 earned $4,000,000, and paid out $8,000,000 in dividends. Therefore, the International Harvester Co. will pay only the normal tax. It will pay no surtax, because it will declare all its earnings in dividends, and therefore will not pay a surtax.

Suppose the case of a competitor of the International Harvester Co. that has a large surplus, that must use a part of its earnings to build up a surplus: That company must pay a high supertax in addition to the normal tax.

Let us take, then, the General Motors Co. The General Motors Co. has $292,000,000 of surplus—$183,000,000 in cold cash, and $19,000,000 in bonds. That is all the surplus that General Motors needs to operate its business. It will pay only the normal tax; yet another company that owes a debt, and that must use its money to pay a debt, must pay a surtax running up to 27 percent in order to pay that debt.

Let me remind the Members of the Senate, also, that there is virtually no cushion in this bill. The only cushion in the bill is for corporations which have made legal contracts not to pay dividends prior to May 1 of this year. There is no cushion as to debts. There is no cushion for the construction of new plants or for expanding business. I think it is a very obvious thing that as long as the bill does not affect existing cash and liquid surpluses, it is to the advantage of companies which have such surpluses, and greatly to the disadvantage of growing companies which must use a part of their earnings in order to establish a surplus. I think that proposition cannot be contradicted.

But let us go further with some of the rich companies; and remember that not one dollar of the present surpluses is disturbed by the bill. The Standard Oil Co. will have just as much surplus next year as this year, and will avoid all supertaxes by paying out its current earnings in dividends.

Let us go to the three Standard Oil companies and see what their surpluses are.

Mr. BORAH. Mr. President, will the Senator yield?

The VICE PRESIDENT. Does the Senator from Virginia yield to the Senator from Idaho?

Mr. BYRD. I do.

Mr. BORAH. I did not understand the last statement of the Senator with reference to the surplus of the Standard Oil Co., now and in the immediate future, so far as it is affected by the pending bill.

Mr. BYRD. What I said, Mr. President, was that the Standard Oil Co. has adequate surplus today and has no reason to add to that surplus; that it will pay out its earnings in dividends, and avoid any supertax, and retain the surplus it now has.

Mr. BARKLEY. Mr. President, will the Senator yield?

Mr. BYRD. I yield to the Senator from Kentucky.

Mr. BARKLEY. How can that situation be avoided in any tax based upon income? There never has been an effort on the part of Congress to levy a tax upon existing surpluses or physical property. The only way by which that surplus could be reached by taxation would be by a property tax, which the United States Government never has levied. This whole bill, and all of our Federal tax bills based on the income theory, must be based on the current income and not on existing surpluses or physical property.

Mr. BYRD. I am glad the Senator asked me that question, because he has touched the vital part of the pending measure. This bill is not based upon income. This bill is based partially upon income and partially upon undistributed earnings.

Mr. BARKLEY. Undistributed earnings are income.

Mr. BYRD. But they are taxed only in proportion to the extent that they are undistributed.

Mr. BARKLEY. If a corporation has no income, it pays no taxes. If it has a net income and does not distribute that income to its stockholders, it pays a higher tax than if it does distribute the income. That is all this bill does.

Mr. BYRD. Does the Senator contend that that principle has ever before been embodied in any legislation?

Mr. BARKLEY. No; I do not. We never have done it before.

Mr. BYRD. What I am calling attention to is the difference between the rich corporation and the weak corporation. I contend that any tax measure which imposes a

supertax on undistributed earnings is very much to the advantage of corporations that have surpluses and to the disadvantage of corporations that must establish surpluses.

Mr. BARKLEY. Mr. President, will the Senator yield there?

Mr. BYRD. I yield.

Mr. BARKLEY. Would not the same advantage accrue to an individual who has a surplus of a million dollars which may be taxed as property by a local taxing unit but is not taxed by the United States Government, as against the man who has no surplus, who has no property, but who makes an income?

An income tax is based, presumably, upon capacity to pay. The man with a million dollars' worth of property presumably would have a very large income, but it is possible that he would not have any income, and if so he would pay no income tax; while a man who had no surplus and no property at all, but made $10,000 income, would pay a tax.

Mr. BYRD. If the Senator will let me proceed, I will show him that his bill puts the taxes on those least able to pay and relieves those who are best able to pay.

Mr. BORAH. Mr. President, if it will not interrupt the Senator, I should like to ask him another question.

Mr. BYRD. I yield to the Senator from Idaho.

Mr. BORAH. It has been stated repeatedly by the Senator from Virginia that the measure as it is now before us is distinctly in favor of the large corporations which are able to pay out their earnings in dividends, and is distinctly adverse to the small corporations which must keep certain amounts on hand in order to do business. I should like to have the Senator, with some degree of detail, discuss that feature of the subject, because that is the point in the measure which interests me. I do not desire to interpose objection here to the administration having whatever taxes are necessary in order to keep the Government running; but I should like to know just what I am voting for in the way of favoring those who are already the recipients of too great favors under our laws.

Mr. BYRD. I thank the Senator. I was coming to that very point.

Mr. President, unquestionably this bill is to the advantage of the big and the little corporations which are in a strong financial position—the corporation need not necessarily be a big one, because the same thing applies to a little corporation under this bill—and the bill is very much to the disadvantage of the corporation which is unable to distribute all of its earnings in dividends.

Let us take a $1,000 corporation. Under the present law a $1,000 corporation pays $125 of tax. If the corporation is unable to pay out the $1,000 in dividends, under the proposed law it will pay $144, an increase of 15 percent.

A $2,000 corporation now pays $250. If it is unable to declare its earnings in dividends, it will pay $288, an increase of 15 percent.

A $5,000 corporation now pays $640. It will pay $805 if it is unable to declare its earnings in dividends, an increase of 25 percent.

A $10,000 corporation now pays $1,290. Under this bill, if it is unable to pay out its earnings in dividends, it will pay $2,082, an increase of 61 percent.

Now, let us take a $20,000 corporation. That certainly is not a large corporation. A $20,000 corporation that must pay a debt, or must accumulate a cash surplus for bank purposes, or must construct a new plant, now pays $2,640. Under this bill if it declares no dividends it will pay $5,236, an increase of 98 percent on a $20,000 corporation.

Let us take a $50,000 corporation. It now pays $6,940. It will pay $15,163 under this bill, an increase of $8,223, or 116 percent. A $50,000 corporation must pay an increased tax of 116 percent because it must pay debts it has already contracted, or must use the money to expand its business, or for whatever purpose it may be necessary.

Take two $1,000,000 corporations. One has a cash surplus and may declare all of its earnings in dividends. That corporation pays $149,440. If the other $1,000,000 corporation has debt obligations or something else, and cannot declare its earnings in dividends, it pays $323,000, an increase of $173,000 for the weak corporation, or 116 percent.

Mr. President, in response to the Senator from Kentucky, I say that in this bill he is not putting the burden on those best able to pay, but the burden is being placed on those least able to pay, because the wealthy corporation will pay none of this increased tax. It will declare out its earnings in dividends. The little corporation and the weak corporation, whether big or little, will pay these supertaxes; and it is from that source that the proponents of this bill expect to get approximately $500,000,000 so as to make up the revenue estimates of the bill—not to increase the tax on the wealthy corporation, big or little, but to increase it on the corporation which is unable to pay out its earnings in dividends by reason of debts or for other reasons.

Let me call to the attention of the Senate the fact that these earnings are not always in cash. When a company shows on its income-tax report a net income of $10,000 or $20,000 that does not mean that it has $20,000 in the bank, because those earnings may be invested in the inventory; they may be invested in book accounts which are not yet collected; and in order to avoid these supertaxes it may be necessary for the corporation to go to the bank and borrow money in order to distribute its income in the form of dividends and avoid this supertax.

The figures I have read are those for corporations which distribute nothing as compared to those which distribute everything. Now, let me read some figures with reference to corporations which distribute 50 percent of their earnings and show the increase which also occurs on these corporations.

A $10,000 corporation which distributes 50 percent of its earnings in dividends will have a tax increase of 5 percent.

A $20,000 corporation which distributes one-half of its earnings—and many corporations cannot do more than that—will have an increase of 19 percent in taxation under this bill.

A $50,000 corporation will have an increase of 37 percent in taxation.

A $100,000 corporation will have an increase of 40 percent in taxation.

A $1,000,000 corporation which distributes one-half of its earnings will have an increase of 42 percent in taxation.

Mr. President, there is another matter which I think deserves the full consideration of the Senate in connection with the bill, and that is as effecting competition between corporations. There are corporations in the oil business which compete with each other; there are corporations in the copper business which compete with each other; yet we are now asked to fix a basis of taxation whereby a solvent and strong corporation may pay one-half the taxes paid by a corporation which is in debt and cannot declare its earnings in dividends. But those corporations must compete one with the other in the markets of the country.

Mr. BORAH. Mr. President, will the Senator yield?

Mr. BYRD. I yield.

Mr. BORAH. Did I correctly understand the Senator to say that there are oil companies competing with one another?

Mr. BYRD. I merely used that as an example; but I hope it is true.

Take two corporations which sell to the public some very cheap article, where even a fraction of a cent would make a difference. Under the bill before us one corporation would be permitted to pay one-half the taxes paid by the other corporation, and I do not know anything more unsound, anything that will do more injury to the future prosperity and development of this country, than such a system.

To continue regarding some of the corporation surpluses: The three Standard Oil companies today have $948,000,000 in surplus. The bill before us does not in any way disturb that surplus. Is it not a matter of common sense that the three Standard Oil companies will, as they have been doing in the past, declare their earnings in dividends, and avoid the supertax, and pay only the normal tax? By doing so they will save greatly on their taxes.

Let us take a few more of the large corporations. There is the American Tobacco Co., which has a surplus of $108,000,000, already paying its earnings out in dividends. They will continue to do so, and pay only the normal tax, and pay no supertax.

There is the Reynolds Tobacco Co., with a surplus of $57,000,000. They need no greater surplus than that. To the contrary, they have been drawing on their surplus for the payment of dividends in the last few years. They will pay no supertax. But some other tobacco company, some struggling company which has to pay the debts it has created, and cannot pay its earnings in dividends, will pay the supertax, and the Reynolds Co. will get the advantage.

There is the Du Pont Co., with a surplus of $180,000,000, a large part of which is in cash. They do not need any more surplus. They will pay their earnings in dividends, and pay only the normal tax. But the company which undertakes to compete with the Du Pont Co. must pay the super tax. The same argument would apply to the Eastman Kodak Co., with a surplus of $105,000,000.

In other words, what this bill does is to entrench the great monopolies of the country, and protect them from competition. I make that statement without fear of successful contradiction, because the bill would leave the surpluses as they now are, and prevent any other company from establishing a surplus except by the sale of stock.

How can a new company sell stock to any advantage until it establishes its business and establishes its earnings? The bill will cause the large corporations to continue to be large and the little corporations to remain little. Yet the Democratic Party, which has always stood against monopolies, proposes to enact legislation which will entrench the monopolies, in my judgment, forevermore, because the power of taxation is the power to destroy. We cannot give one company a lower tax and put a higher tax on another company, with the competition which exists in business, without destroying the company on which we put the higher tax.

Let us see just for a moment what is the reason, the underlying principle, which induced the advocates of this proposed legislation to bring forth the House bill to begin with, that discredited bill which was abandoned even by its advocates after it was ascertained that a number of large companies would be exempted from taxation. The underlying principle is to reach a few millionaires who, it is said, control certain corporations, and prevent them from declaring dividends; and thereby avoid the payment of individual surtaxes. Let us see to what extent tax avoidance can occur.

Mr. President, if a corporation does not declare its earnings in dividends, then those earnings remain in the treasury of the corporation, and to that extent the stock of the corporation is enhanced. If a rich man or a poor man owns the stock, then he has something more valuable than he had before the earnings were made.

Let us see how the tax avoidance can ultimately be prevented. I contend that the payment of those taxes cannot ultimately be avoided, although I do not at any time defend any tax avoidance. Three things can be done with property. It can be sold, and if it is sold, then the earnings which are plowed into the corporation enhance the value of the stock, and an individual stockholder must pay a capital gain tax on the additional value of the stock at the time of sale. Certainly he cannot avoid taxation in that way.

Secondly, he can give it away. If he gives it away, under the law that stock is appraised at the enhanced value attained by the stock by reason of keeping the dividends in the corporation, and the person who gives it away must pay a gift tax.

If he dies owning it, then the stock is appraised at the enhanced value, and if he is a rich man, his estate pays the highest inheritance tax levied by any nation in the world.

While, as I have said, I do not at any time defend those who are trying to avoid the payment of taxes, I believe in this instance the question of tax avoidance has been greatly exaggerated, because ultimately the taxes must be paid.

Mr. President, I have not had an opportunity to examine the conference report, but the Senate bill strengthened section 102 of the existing law, and that section now provides that no corporation may establish an improper and unnecessary surplus. That was strengthened by the Senate bill, and whether or not the conference adopted that, I do not know, because I have not had a chance to carefully examine the conference report.

The Senate bill provided that any corporation that retained more than 40 percent of its earnings would have to give a reason, and that reason would be filed with the Commissioner of Internal Revenue, and proceedings could be started against the corporation to compel distribution or to submit to additional taxation. I believe that provision, in large measure, would have corrected the situation. The experts who appeared before the Senate Committee on Finance stated that only 300 corporations were under suspicion of retaining improperly their earnings, 300 out of 258,000, one-tenth of one percent. Yet we are asked to pass a bill that would greatly penalize the little and growing corporation in order to reach these 300 corporations, and compel the distribution of their earnings.

Mr. President, since I have been a Member of the Senate I have never taken up much time in debate, and I shall conclude in a moment.

I desire to say, with all the earnestness of which I am capable, that if this bill shall be enacted it will do more to entrench the monopolies of this country than anything we have ever done before. I challenge anyone to deny from the figures themselves that a corporation which has a surplus would not be benefited under the bill, and that a corporation which has a debt, or which spends its money for a new plant, or for some other similar purpose, would not be injured. In the rush of the dying hours of this session we should not pass a bill which will do great injury to the weak corporations that happen to be in debt, in debt frequently for the purpose of constructing new plants and aiding in the employment of men, which the President of the United States so properly desires to have them do. Yet, under this bill, if a corporation earning $20,000 takes the money and erects a new plant, and does not declare the earnings in dividends, it is penalized 98 percent for doing exactly what the President has asked the businessmen of this country to do, namely, to put up new plants, and to give employment to the people of the country.

Mr. President, I have little expectation that my wish will come true, but in a matter of this serious consequence, affecting 258,000 corporations, when every member of the Finance Committee will state that no adequate information could be obtained as to the effect of this proposed legislation—legislation such as has never been proposed in any other country in the world, legislation so revolutionary as completely to change our system of corporate taxes—I hope that this conference report may be defeated and provision may be made for the appointment of a commission to study this intricate and difficult question, so that when Congress shall reassemble next January, we may do what is necessary to raise the additional taxes essential to pay for the great expenditures we are making.

Mr. POPE. Mr. President, will the Senator yield?

Mr. BYRD. I yield.

Mr. POPE. I take it the Senator is opposed to any taxes upon undistributed profits, because the argument he has made would apply to any sort of a tax or any rate of tax which might be levied on undistributed profits. It would apply to the Senate bill which was passed some time ago. His opposition goes to the principle or idea of levying any tax upon undistributed profits. It that correct?

Mr. BYRD. Mr. President, in response to the Senator from Idaho, I will say that I would favor a tax on undistributed earnings to the extent of 4 percent, because when we repeal the exemption of 4 percent to the individual which now exists, there will then be an incentive to the corporation to retain earnings in its treasury.

I am unalterably opposed to a graduated tax. That is what is proposed in the bill. It starts at 7 percent and it

goes to 27 percent. I voted for the 7-percent flat tax as a compromise. I did so because, after consultation and conference with the chairman of the Finance Committee, it was my understanding that a bill containing that provision would be presented as the Finance Committee bill. I should favor a 4-percent tax. I agreed to the 7-percent tax as a compromise. However, there is a vast difference between a flat 7-percent tax, which treats equally all corporations which retain their earnings, and a graduated tax which starts at 7 percent, as under this bill, and ends at 27 percent.

Mr. President, I ask unanimous consent to have printed in the RECORD, as a part of my remarks, tables which I send to the desk.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Net income	Total tax		Increase	
	Present law	1936 revenue bill [1]	Amount	Percent
$1,000	$125	$144.40	$19.40	15.52
$2,000	250	288.80	38.80	15.52
$3,000	380	461.10	81.10	21.34
$4,000	510	633.40	123.40	24.20

Mr. HASTINGS. Mr. President, I do not propose to discuss the tax bill. I have no sympathy with the recommendation of the President for a tax bill at this session. His only excuse for it was to make certain that he had money enough to meet what he calls permanent expenses. His failure to have enough money to meet permanent expenses is due solely to the fact that he placed the payments due the farmers and a portion of the expenses of the C. C. C. camps in the category of permanent expenses. If he had left these where they were last year, he would have had no excuse for the tax bill.

I have no sympathy with the kind of tax recommended by the President and adopted by the House. It is wrong in principle and destroys business progress in America.

I have no sympathy with the bill passed by the Senate. Both the House and the Senate, in my judgment, are wholly unfair in the conclusion reached that the money raised must be raised from corporations. In my judgment, the conference report, which consists of a combination of the action taken by the House and Senate, is worse than the bill passed by the House and much worse than the bill passed by the Senate. The conference report is a cross between New Deal experiments and New Deal exigency.

In my judgment, when the millions of stockholders all over the country fully realize what the Congress has done in this tax bill, and when the workers of the country, who are dependent upon the success of their corporation employer for their jobs, find that it has placed their jobs in jeopardy, both stockholder and worker will rebel and will show their displeasure in a very effective way.

Mr. GERRY. Mr. President, the conference report came to the Senate this morning. None of us have had time to study it carefully and to know exactly—even those of the committee, who have followed the bill closely—what is in the bill. That, of course, is likely to happen when a conference report comes in at the end of the session. However, it is very clear to those of us who were on the committee that the theory of taxation which is now to be tried out has had very little consideration in connection with a measure of this size, a measure involving new theories of taxation, new theories which must necessarily guess at the amount of revenue which will be raised, and new theories that must be studied very carefully by business unless many people are to suffer and much harm is to be done to the financial and business structure of the country.

It was very clear to those of us who were on the committee that the Treasury Department did not go into this question as thoroughly as we would have liked it to have gone, because there was information which would have been very important to have which we were unable to obtain. I am not blaming the Treasury Department entirely for that. The task was a terrific one. As the Senator from Virginia [Mr. BYRD] has said, a commission should have been appointed to study the whole question very carefully. That has been done in England when it has been desired to adopt any new system of taxation. They have taken their treasury officials, they have taken businessmen, they have taken actuaries, and have gone thoroughly into every question involved and obtained very general advice on the subject; and they have usually taken, I think, from 1 to 2 years to do it.

It is not exactly fair to criticize the Treasury for not being able to get all the information on a subject of this size when apparently they have been studying it for but a few months. I know that all the men in the Department, the experts with whom I have come into contact, have been working very hard.

I think it may also be fair to say on the other side that they have determined upon a theory, and having adopted a theory as to what they wanted to do, a new theory of taxation—why they wanted to adopt it I do not know—but, having adopted a new theory of taxation which appealed to the Treasury, then they proceeded to try to prove their case. Very likely that is natural, but it does not give one the same confidence in their estimates that it would if it were absolutely an unbiased working out of a principle with the pros and cons considered in a more judicial manner.

Mr. BORAH. Mr. President, what are the reliable figures with reference to the amount which it is supposed the bill will raise in the way of taxes?

Mr. GERRY. Mr. President, I am not speaking from my own desk, where I have data, but I think it would be very difficult to say exactly what are the reliable figures. I think it can be estimated very closely with respect to the tax on corporations, but not as to tax on surpluses. What I am really referring to is the tax on surpluses, and the Treasury has nothing to go on with reference to that. With respect to a corporation tax which is now in existence, concerning

which they have past figures, I think the Treasury estimates should be thoroughly accurate, but when they get into the question of the surplus tax then they are going into a new field, and I doubt very much whether their estimates on that are correct. As a matter of fact, in the hearings, Mr. May, one of the best-known actuaries in this country, differed very strongly with the Treasury in what the results would be in the raising of the revenue.

Mr. KING. Mr. President, the amount that would be collected from corporations under the bill now under consideration and from all sources covered by the bill will approximate nearly $800,000,000. Of that amount $100,000,000 will come from the tax upon corporation stock. Six or seven million dollars will come from excess profits. Over $500,000,000, in all, will come from corporations. From about $72,000,000 to $100,000,000 will be derived from the windfall taxes. Thirty million dollars will be received from liquidations. From $5,000,000 to $10,000,000 will be received from excise taxes—perhaps a little more—$15,000,000, as appears in the bill. So that the aggregate will be between $775,000,000 and $800,000,000.

Mr. GERRY. Mr. President, I should like to ask the Senator from Utah a question in order to bring the matter out clearly. Of course, one of the troubles with the conference report is that we cannot know upon what basis the Treasury officials have estimated this new surplus tax, because different rates have been fixed from those discussed in the committee. How much does the Senator estimate that the new surplus tax which has been put into the conference report, with the new rate, is going to bring in?

Mr. KING. That is a little difficult to segregate. First there is the normal tax, which is graduated.

Mr. GERRY. But in the committee there was a segregation. The Treasury, as I recollect its figures, had put down so much for the surplus tax. What figures do they place in the conference report?

Mr. KING. I do not know whether they have segregated that and indicated a certain amount of surplus tax, but the aggregate amount from corporations under this bill will be within the limits which I have just indicated.

Mr. BORAH. Mr. President——

Mr. GERRY. I yield to the Senator from Idaho.

Mr. BORAH. Before the Senator from Utah takes his seat, let me invite attention to this statement which was made by the able Senator from Massachusetts [Mr. WALSH] on behalf of himself and the Senator from Georgia [Mr. GEORGE].

> The plan penalizes the small corporation and the corporation with insufficient reserves and is of decided advantage to the large corporation and the corporation with excessive surpluses.

I should like to have that criticism answered or discussed because, so far as my vote is concerned, the entire matter turns upon that point. I am willing to speculate as to how much revenue may be secured by the imposition of taxes, but I should like that suggestion to be discussed. Those of us who are not on the committee are dealing with this matter at a great disadvantage.

Mr. BARKLEY. Mr. President, will the Senator from Rhode Island yield?

Mr. GERRY. I yield.

Mr. BARKLEY. I wish to say that some of us hope to be able to explain that matter to the satisfaction of the Senator from Idaho before the vote shall be taken.

Mr. BORAH. Very well.

Mr. GERRY. Mr. President, I think the Senator from Virginia [Mr. BYRD] has gone very thoroughly into that question and has set forth the figures; but I should like first to cover the point I have been discussing with reference to taxes on surpluses and how the Treasury has arrived at its figures. Then I will take up the question of the Senator from Idaho.

I do not know how much the Treasury Department estimates will be raised by the taxes on the surpluses of corporations. Perhaps Mr. Parker, whom I see sitting next to the chairman of the committee, might tell me.

Mr. BARKLEY. Mr. President, the total amount of new revenue which will be derived from the corporation taxes is estimated to be $634,000,000. That includes the tax on undistributed adjusted income and the subjection of dividends from corporations to the normal tax when in the hands of stockholders. The entire amount to be derived from corporation taxes not now derived will amount to about $634,000,000.

Mr. GERRY. Very well. I thank the Senator.

Mr. BARKLEY. That does not include the additional amount from liquidation or the amount expected to be received from foreign corporations and other miscellaneous items.

Mr. GERRY. With all due respect to him, the explanation of the Senator from Kentucky is as clear as mud, because it does not, as I understand, segregate the amounts and show how much the surplus tax is going to bring in. I do not believe it has been possible to arrive at reliable estimates in the short time available since the conferees agreed to the conference report.

I said before I was interrupted that I thought the Treasury Department was trying to make a guess. For example, in the case of the tax on surpluses the Treasury experts before the committee said that a 7-percent tax on corporation surpluses would not force the distribution of surpluses. To my mind, that is absolutely an absurd statement to start with, because there are hundreds of corporations that are very much affected by a 7-percent tax, and naturally the directors of such corporations are going to be influenced by a tax that is as high as 7 percent on their undistributed surpluses.

I do not know whether the Treasury Department in estimating the amount of revenue that will be raised from the tax on surpluses from the low brackets—I think the lowest bracket under the report of the conference committee is 7 percent—say, "Well, this will not cause corporations to distribute anything"; so they disregard it and then proceed to estimate further on the other brackets and base their estimates on the brackets above the 7-percent one, but I doubt it. I have pretty serious doubts as to whether the Treasury estimates as to the graduated surplus tax are anything more than guesses.

Mr. KING. Mr. President, will the Senator yield?

Mr. GERRY. I yield.

Mr. KING. Does the Senator differentiate between undistributed profits and surpluses? He has used the word "surpluses", and I was wondering if he included profits.

Mr. GERRY. I had reference to the amount the tax on undistributed profits would force out.

Mr. KING. The Senator knows that many corporations have profits above their expenditures, but also have obligations which would very quickly dissipate those profits, while there are other corporations that have large surpluses and no obligations; so that the surpluses ought to be differentiated from the profits.

Mr. GERRY. Oh, yes. Of course in the committee we have been so used to discussing and talking about the tax on surpluses that I have probably not made myself entirely clear.

Mr. HASTINGS. Mr. President, will the Senator yield?

Mr. GERRY. I yield.

Mr. HASTINGS. I wish to say frankly to the Senator from Rhode Island—and when I say this, I intend no reflection upon the Treasury—that we had trouble for nearly 2 weeks during which the conference was meeting in obtaining estimates. When this proposal was made, it looked to the Treasury as though it might be acceptable if it would raise sufficient revenue. As I say, without any reflection upon the Treasury, I received the distinct impression that the Treasury experts were trying to make their guess agreeable to the conference, and that is just about as much as one can get out of it. The Treasury Department was anxious for the bill to be passed; the members of the conference believe it was necessary to reach some agreement; and when the Treasury found a proposal which was likely to be agreeable

to the conference they made such a statement, in my judgment, as they thought would be satisfactory to the conference. That is just about all we have.

Mr. BARKLEY. Mr. President, will the Senator from Rhode Island yield there?

Mr. GERRY. I yield.

Mr. BARKLEY. The statement of the Senator from Delaware is nothing more nor less than a reflection upon the tax experts of the Treasury Department of the United States. I dare say the Senator from Delaware did not see or talk with a single expert in the Treasury Department from the time when the committee on conference asked for an estimate according to the schedule which we had prepared and the submission of the estimate to the conferees the next day or the following day.

Mr. HASTINGS. But did the Senator from Kentucky do so?

Mr. BARKLEY. I did not. I did not go to the Treasury Department and peer over the shoulders of the tax experts to see if I could discover some error in their calculations. We sent these schedules to the Treasury Department after we had agreed upon them, and we did not agree upon them, except tentatively, until we found they would raise the revenue which was desired. No member of the conference committee was in the Treasury Department; nobody sought to influence any official of the Treasury. All we asked was a report from the recognized statisticians of the Treasury as to how much money these schedules would raise.

Mr. HASTINGS. But does not the Senator from Kentucky agree, with every other member of the committee, that these estimates of the Treasury were nothing more than guesses?

Mr. BARKLEY. No; I do not.

Mr. HASTINGS. They are perhaps a little better guesses than the committee itself could make, but I do not believe any member of the committee was at all satisfied that the estimates furnished by the Treasury Department afforded any information that the conference committee could do anything more than gamble with.

Mr. BARKLEY. Of course, no one in the Treasury Department or anywhere else can be exact as to how much money any schedule of rates will raise. The only criticism that we heard in the conference committee or any faultfinding among the conferees was that the Treasury experts had underestimated the amount of the revenue that might be raised by these schedules.

Mr. HASTINGS. I agree with that.

Mr. BARKLEY. But even assuming all of them to be guesses, assuming that they are nothing more nor less than guesses, they certainly cannot be as wide of the mark as was the Secretary of the Treasury in a former administration when he missed the estimate by $900,000,000 a year.

Mr. GERRY. Mr. President, I have not been criticizing the Treasury experts unduly on the basis of their estimates. I do not think they have had sufficient time to estimate on this conference report exactly how much revenue will be brought in. I feel that in a question of this sort, involving a new tax, it is very difficult to estimate how much the revenue will be, because they have no basis on which to calculate. I think, therefore, in view of the circumstances, there is very grave question as to whether the estimates are accurate or whether they can be used as a sound basis of calculation.

The tax proposed by the bill on the undistributed profits of corporations, to my mind, brings out a situation which shows the theory of the bill and the tax to be absolutely in disagreement. Under the theory of the bill, the profits of corporations are to be taxed on a graded scale unless they are distributed, and the greater the distribution the less the tax is to be.

Of course, that means that the corporation which has a surplus, as the Senator from Virginia [Mr. BYRD] has already shown, has a great advantage over the corporation which has no surplus. The corporation with a surplus can well distribute and carry on its development without anything like the difficulty of the small corporation or the corporation with no surplus. The corporation which has absolutely disregarded the principle of the bill and has accumulated a surplus, which has been thrifty and used sound business judgment, is recognized in the bill and is given an advantage, while the corporation which has carried out the theory of the bill and paid out all its profits in dividends and has no surplus, is penalized. In other words, this new theory of taxation will work greater hardships on the corporations which have lived up to the theory of thrift in the past.

A corporation struggling along, trying to get ahead, building up a new business, necessarily needs all the surplus it can obtain. The corporation which is established, which has a surplus, has a great advantage. When we undertake to prevent the struggling corporation from building up we are tending toward the aiding of monopoly, and that is what this bill will do.

The Senator from Virginia submitted statistics in support of his position. I have the tables before me showing exactly how much the small corporation will be penalized under the terms of the bill. I shall not go into those figures because the Senate has already heard them.

Another thing that has been overlooked and which is very often overlooked in consideration of a tax bill is that the stock of a large corporation may be held by a very large number of small stockholders. What we are really interested in is not to penalize the little fellow, but to try to put the burden on those best able to pay. If we put the very heavy tax burden on the corporation which has many small stockholders, we will be penalizing them because the corporation is only the medium for their investment.

The individual or the partnership has certain advantages. When the members of a partnership pay their tax they pay it once; but if the corporation pays its tax on its retained profits and then it eventually has to pay them out, a tax is paid twice. The partnership or individual has the advantage there.

Of course, fundamentally, corporations are formed so that individuals may accumulate capital, develop industry, and business. If we are going to tax surpluses because we do not believe the corporations should be allowed to exist, that is another question. The Senator from Georgia [Mr. GEORGE] brought that out very thoroughly and clearly when the bill was before the Senate for consideration. However, we cannot inaugurate such a drastic change in the financial structure of the country without doing endless harm to thousands of people and to industry large and small. It would increase unemployment to an enormous extent. Nothing, in my opinion, would be more unsound.

Therefore, Mr. President, under the circumstances and after very serious and careful study of the bill during and since the hearings, I cannot but feel that the bill is based fundamentally on a reversal of a principle which has prevailed through the ages. In other words, it is proposed to tax and discourage thrift. The bill goes absolutely against the parable of the 10 virgins, half of whom, the wise ones, saved their oil and were prepared when the crisis came. If this bill had been a law previous to the panic and its provisions had been in effect, the condition in this country would have been chaotic. Thousands of investors would have been in much greater distress and unemployment would have been immeasurably greater. The thing that saved many people, the thing that prevented unemployment in many businesses, was the surplus that had been accumulated during the good years. Neither a corporation nor an individual nor any sound business can go forward and accomplish results unless based on thrift and saving. This bill is advocating the directly opposite principle.

Mr. BARKLEY obtained the floor.

Mr. BORAH. Mr. President, I should like to ask the Senator to keep in mind a matter which I understand has had much to do with the formulation of the bill, and that is the legal proposition that we may not tax accumulated surpluses.

Mr. BARKLEY. Yes; I am going to discuss that feature.

Mr. BORAH. I should like to know upon what legal principle that rests. It is property. Why could we not tax it?

Mr. BARKLEY. What I said a while ago was that we could not tax it as income. We could tax it as property. I did not say it could not be taxed. I said it could not be taxed as income, but only as property, and that the Federal Government up to this time has not attempted to tax capital as such.

Mr. WALSH. Mr. President, will the Senator yield?

Mr. BARKLEY. Certainly.

Mr. WALSH. I do not want to delay the Senator but give him full opportunity to present his argument. I should like to request that at the conclusion of the Senator's remarks there may be read at the desk a telegram which I have received from the New England Council of Industries in reference to the bill.

Mr. BARKLEY. I have no objection to having it read now.

Mr. WALSH. I thank the Senator.

The PRESIDING OFFICER. Without objection, the clerk will read as requested.

The legislative clerk read as follows:

BOSTON, MASS., *June 19, 1936.*

Hon. DAVID I. WALSH,
United States Senator,
Senate Office Building, Washington, D. C.:

I wish again to call to your attention the economic unsoundness of the proposed undistributed earnings tax bill H. R. 12395. This is a matter of vital seriousness to the 16,000 small- and medium-size enterprises of New England industry. The success of these companies for years past has been founded on their ability to develop and expand by plowing back a portion of their earnings each year. Under the proposed tax bill these concerns face the alternative of either paying no dividends in order to retain the cash essential to the operation of their companies or face an actual deficit in cash requirements after paying the nominal dividend and the proposed undistributed-earnings tax. The size of these New England concerns prevents permanent capital financing at any reasonable cost. The complete utilization of earnings makes temporary bank loans impossible. This bill will force widespread shut-downs and unemployment throughout the New England area. We most earnestly ask your opposition to or drastic modification of the proposed bill.

WINTHROP L. CARTER,
President, New England Council.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its reading clerks, announced that the House had agreed to the amendment of the Senate to the bill (H. R. 8555) to develop a strong American merchant marine, to promote the commerce of the United States, to aid national defense, and for other purposes, with an amendment, in which it requested the concurrence of the Senate, and that the House had agreed to the amendment of the Senate to the title of the bill.

The message also announced that the House had agreed to the amendments of the Senate to the bill (H. R. 8316) to exempt the Indian Service from the requirements of section 4 of the Executive Order No. 6166, dated June 10, 1933.

ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

The message further announced that the Speaker had affixed his signature to the following enrolled bills and joint resolutions, and they were signed by the Vice President:

H. R. 255. An act to provide for the commemoration of the Battle of Eutaw Springs, in the State of South Carolina;

H. R. 1362. An act conferring jurisdiction upon the United States District Court for the Western District of Texas to hear, determine, and render judgment upon the claim of R. A. Ramey, doing business as Ramey Bros.;

H. R. 1397. An act to withdraw certain public lands from settlement and entry;

H. R. 2155. An act for the relief of Francisco M. Acayan;

H. R. 2932. An act to confer jurisdiction on the Court of Claims to hear, determine, and render judgment upon the claim of the International-Great Northern Railroad Co. against the United States;

H. R. 3952. An act for the relief of Mr. and Mrs. Bruce Lee;

H. R. 4059. An act for the relief of Ella B. Kimball, daughter and only heir of Jeremiah Simonson;

H. R. 4364. An act for the relief of Andrew Johnson;

H. R. 4641. An act authorizing the President to present a gold medal to George M. Cohan;

H. R. 4707. An act validating certain applications for and entries of public lands, and for other purposes;

H. R. 5078. An act for the relief of Mrs. Charles F. Eikenberg;

H. R. 5754. An act for the relief of Emma M. Pearson;

H. R. 5829. An act for the relief of Daniel J. Hagerty;

H. R. 6668. An act for the relief of S. John Hegstad;

H. R. 6951. An act for the relief of Thomas J. English;

H. R. 7256. An act for the relief of Perry H. Callahan and Malcolm W. Callahan;

H. R. 7463. An act for the relief of Lawrence R. Lennon;

H. R. 7642. An act for the relief of the estate of Frank W. Trick;

H. R. 7727. An act to confer jurisdiction on the Court of Claims to hear and determine the claim of George B. Marx, Inc.;

H. R. 7818. An act for the relief of Caroline M. Hyde;

H. R. 7839. An act for the relief of C. E. Rightor;

H. R. 7864. An act for the relief of Edward P. Oldham, Jr.;

H. R. 8321. An act for the relief of Julia Long;

H. R. 8322. An act for the relief of Merwin A. Kiel;

H. R. 8373. An act for the relief of James Fitzgerald;

H. R. 8502. An act for the relief of Theresa Link, Wencel Link, Edward Block, and John Meyers;

H. R. 8521. An act for the relief of Elsie O'Brine;

H. R. 8597. An act to amend section 13 of the act of March 4, 1915, entitled "An act to promote the welfare of American seamen in the merchant marine of the United States; to abolish arrest and imprisonment as a penalty for desertion and to secure the abrogation of treaty provisions in relation thereto; and to promote safety at sea"; to maintain discipline on shipboard; and for other purposes;

H. R. 8643. An act for the relief of Mr. and Mrs. Frank Daley;

H. R. 8688. An act for the relief of Grace Schultz;

H. R. 8720. An act for the relief of Louis Manzumin;

H. R. 8799. An act for the relief of John N. Hunter, Edmund M. Cook, Fred C. Putnam, Merchants National Bank of South Bend, Ind., and St. Joseph Loan & Trust Co., of South Bend, Ind.;

H. R. 8841. An act for the relief of Estelle Mary MacDonald and Marilyn MacDonald;

H. R. 9078. An act for the relief of Bertha W. Lamphear;

H. R. 9111. An act for the relief of Evanell Durrance;

H. R. 9313. An act for the relief of the estate of Hans Ditmanson, deceased;

H. R. 9314. An act for the relief of the estate of Henry Copple, deceased;

H. R. 9315. An act for the relief of the estate of Fred Wilkins, deceased;

H. R. 10044. An act for the relief of Lt. Col. Fernand H. Gouaux;

H. R. 10168. An act for the relief of Arch A. Gary;

H. R. 10279. An act for the relief of the Pocahontas Fuel Co., Inc.;

H. R. 10439. An act for the relief of John B. Ricketts;

H. R. 10591. An act to authorize the Secretary of Agriculture to investigate and report on traffic conditions, with recommendations for corrective legislation;

H. R. 11022. An act for the relief of Ethel Armes;

H. R. 11123. An act for the relief of Edward A. Foote, Jr., and others;

H. R. 11176. An act increasing the penalty for making false oaths for the purpose of bathing at the Government free bathhouse at Hot Springs, Ark.;

H. R. 11180. An act to extend the boundaries of the Fort Pulaski National Monument, Georgia, and for other purposes;

H. R. 11379. An act for the relief of William H. Milton;

H. R. 11538. An act for the relief of the Orland reclamation project, California;

H. R. 11555. An act to authorize the striking of an appropriate medal in commemoration of the one hundredth anniversary of the arrival of Marcus and Narcissa Whitman in

the Walla Walla Valley, Wash., and the founding of the Waiilatpu Mission;

H. R. 11581. An act making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of such District for the fiscal year ending June 30, 1937, and for other purposes;

H. R. 11597. An act for the relief of L. A. Peveler;

H. R. 11615. An act limiting the operation of sections 109 and 113 of the Criminal Code and section 190 of the Revised Statutes of the United States with respect to counsel in certain cases;

H. R. 11926. An act to provide for a term of court at Durham, N. C.;

H. R. 12002. An act to authorize a preliminary examination of the Lackawanna River with a view to the control of its floods;

H. R. 12007. An act to authorize a preliminary examination of the Penobscot River, Maine, and its tributaries, with a view to the control of their floods;

H. R. 12008. An act to authorize a preliminary examination of the Androscoggin River, in Maine and New Hampshire, and its tributaries, with a view to the control of their floods;

H. R. 12062. An act to authorize the Secretary of the Interior to accept unsurveyed lands in numbered school sections in the State of Arizona in exchange for certain other lands, and for other purposes;

H. R. 12144. An act for the relief of the Federal Enameling & Stamping Co.;

H. R. 12220. An act to authorize the adjustment of the boundary of the Fort Marion National Monument, Florida, in the vicinity of Fort Marion Circle, and for other purposes;

H. R. 12353. An act to amend an act entitled "An act to create a Library of Congress Trust Fund Board, and for other purposes", approved March 3, 1925;

H. R. 12494. An act to provide for the establishment of a Coast Guard station on Lake St. Clair, Mich.;

H. R. 12624. An act making appropriations to supply deficiencies in certain appropriations for the fiscal year ending June 30, 1936, and prior fiscal years, to provide supplemental appropriations for the fiscal years ending June 30, 1936, and June 30, 1937, and for other purposes;

H. R. 12758. An act to increase the pension to certain veterans of the Regular Establishment on the rolls March 19, 1933;

H. R. 13001. An act to eliminate unnecessary expense in the administration of estates of deceased and incompetent veterans, and for other purposes;

H. J. Res. 366. Joint resolution providing for the establishment of a game-management supply depot and laboratory, and for other purposes;

H. J. Res. 532. Joint resolution for the establishment of a commission in commemoration of the seventy-fifth anniversary of the Battle of Gettysburg in 1938;

H. J. Res. 606. Joint resolution amending section 5 of Public Resolution No. 6, Seventy-fourth Congress, approved March 4, 1935; and

H. J. Res. 639. Joint resolution to provide certain administrative expenses for the Division of Territories and Island Possessions, Department of the Interior, and for other purposes.

INTERNAL-REVENUE TAXATION—CONFERENCE REPORT

The Senate resumed the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 12395) to provide revenue, equalize taxation, and for other purposes.

Mr. BARKLEY. Mr. President, I fully appreciate the difficulty which confronts any man who is not a tax expert, who has not spent his whole life in writing and interpreting tax bills, in attempting to explain or understand a complicated tax bill the results of which are based upon contingencies that nobody can foresee, either in business or in politics.

I think I speak the truth when I say that all of us regret that it was necessary to consider a tax bill at all at this session of Congress. I, myself, in private conversation and in one or two public statements at the beginning of this session, said I did not believe any new tax law would be required at this session of Congress in order to meet the requirements of the Government. We were unable, however, to foresee what either the Congress of the United States or the Supreme Court of the United States would do. This bill is here because of the action of the Supreme Court of the United States in a certain case with which we are all familiar, and the action of the Congress of the United States in the passage of the Adjusted Compensation Act, the two together requiring about $620,000,000 of permanent revenue and about $570,000,000 of temporary revenue.

Those who heard or read the message of the President will recall that in that message he set out in detail the needs of the Treasury for both permanent and temporary increase in the revenues of the Government. Neither the House bill nor the Senate bill attempted to raise or would raise as much money as the President requested in his message of March 3, or indicated as needed by the Treasury. The House bill did provide as much permanent revenue, and provided the temporary revenue for 1 year, whereas the President had suggested that this five-hundred-and-odd million dollars of temporary revenue be spread out over a period of 3 years at the rate of about $173,000,000 per year. The House bill provided the permanent revenue and 1 year's installment of the temporary revenue over and above the amount of money now being collected or estimated for this year as the income of the Treasury.

It will be recalled that in the President's message he called attention to the fact that a large number of corporations in the United States—whether by design or otherwise I need not indicate—were as a matter of fact escaping taxation except on the normal rates of 12½ to 15½ percent, by reason of their failure to distribute any of their earnings or any large proportion of their earnings, and that by the refusal of these corporations to make distribution of their income to their stockholders, the United States Government was losing a large amount of revenue, because the income was not taxed in the possession of the stockholder, by reason of its failure to be distributed. What the President was seeking in his suggestion, and what the House of Representatives was seeking in its bill, was to provide a tax system by which the total aggregate net earnings of all corporations, whether distributed or undistributed, would pay into the Treasury the same amount of money that the Treasury would collect if their earnings were all distributed and each individual stockholder paid upon the earnings according to his bracket as an individual taxpayer.

I grant that the proposal in a sense was a new one, although in 1924 the Senate of the United States adopted a similar tax provision in the revenue act of that year. It was debated here for days, as I recall—though I was not then a Member of the Senate, but was a Member of the other body—and was adopted by the Senate, went to the House, and there was eliminated. So it was not a new suggestion. It was not one originated by the President of the United States or by any officer or other person in the Treasury, legal or otherwise. It was before the Senate and was discussed more than a decade ago.

The President in his message suggested, but only as a suggestion—because he emphasized the fact that, after all, it was within the discretion and power of both Houses of Congress to determine from what source this additional revenue would be obtained, the means by which the deficiency might be made up, by which the loss of money to the Treasury might be made up, by which all corporations and those holding stock in corporations might be required to pay into the Treasury of the United States as much money as would be collected if all corporations distributed all their net income to the holders of their stock. In order to accomplish that, it was suggested that all present corporation taxes be repealed and that the tax system be thereby simplified.

That repeal would have included the present normal income tax on corporations of 12½ to 15½ percent. It would have included the repeal of the excess-profits tax on corporations. It would have included the repeal of the present capital-stock tax on corporations. In trying to work out that suggestion and that theory in the other body, which required long hearings and most serious consideration, the House of Representatives finally worked out the bill which they sent to us about 2 months ago.

When the bill reached the Senate, because of the complicated tables and the involved language contained in the bill, it was frankly difficult to understand all of its provisions, or to work out at a table with pen and ink, or pencil and tablet, the tax that would be derived from corporations under it. The bill provided that corporations which distributed all of their net income should pay no tax whatever; and that meant, of course, as pointed out by the distinguished Senator from Virginia [Mr. BYRD], that certain large corporations like the American Telegraph & Telephone Co., the R. J. Reynolds Tobacco Co., and some others named by the Senator from Virginia, would not pay any tax at all, because they have already been distributing all their income, and thereby have been making it possible for the Treasury to collect part of that money from the individual stockholders in whatever brackets they occupy in the income-tax set-up. Of course, it was true—nobody attempted to deny—that the House bill would have relieved from any corporation tax the great corporations which had been distributing all their earnings, because it proposed to repeal the present tax of 12½ to 15 percent; but that was a mere incident of the change in the taxing system.

If the system itself was correct, if it was sound and scientific, if it was the proper form of corporate taxation, then it was a mere inconsequential incident, so far as the justice of the tax was concerned, that a few large corporations which up to this day have been distributing all their income, but which tomorrow might change their policy if they saw fit to do so, would be allowed to escape taxation as corporations under the provisions of the House bill. Of course, however, that was compensated for by the fact that many corporations which are not now distributing their net adjusted income, or what stockholders are primarily interested in and entitled to, dividends upon their stock, would have more than offset by their payments the loss to the Treasury occasioned by the failure to receive payments from large corporations, perhaps a dozen or two dozen or even 100 or even 150 out of a total of 500,000 corporations in the United States, 257,000 of which this year will make reports to the Treasury as having net income upon which taxes will be paid under the provisions of this bill and even under the provisions of the present law.

Of course, it sounded well to have it said that a few corporations, large and popular, would escape corporate taxes under the bill, no matter if by reason of that millions of dollars would be brought into the Treasury by compelling corporations which refuse to distribute their earnings, in order that their stockholders may escape taxation on their income tax, to pay.

Mr. BYRD. Mr. President, will the Senator yield?

Mr. BARKLEY. I yield.

Mr. BYRD. Does the Senator from Kentucky mean to indicate that he favors the original House bill?

Mr. BARKLEY. No; I do not. I did not favor it in the committee, and that is why I voted for the Senate committee bill.

Mr. BYRD. The Senator was defending it.

Mr. BARKLEY. No; I am not defending it. I am talking about the Senator's objection to the House bill, because a few large corporations escape the corporate tax under it.

Mr. BYRD. I understood the Senator to say that that objection was of little consequence.

Mr. BARKLEY. I think it was, in the wide stretches of a tax system. But, in order to meet that objection with whatever force it may have impressed members of the committee and of the Senate, the Senate committee brought in a bill which not only did not relieve these corporations from taxation but increased the taxes they pay upon the net income of the year, and provided a 7-percent flat rate upon the undistributed portion of their annual income.

The Senator from Virginia was opposed to that, and now that we have provided an increase above the House rates in order to meet the Senator's objection, now that we have provided a maximum corporate tax of 15 percent upon the net income of the American Telephone & Telegraph Co., of R. J. Reynolds & Co., and of the others named by the Senator, who would escape under the House bill, he objects to the bill because we do not step back into the past and undertake to tax reserves already built up by these corporations.

I have no doubt that if we had done that the Senator from Virginia would be as vigorously opposed to the bill as he is to it in its present form or in the form in which the House sent it to us, and the form in which the Senate committee reported it and it thenceforth went to the House. It is always easy to find some reason why one is against a tax bill if he does not want to vote for it. Nobody likes to vote for a tax bill. I do not like to vote for a tax bill. I get no peculiar pleasure in voting to tax anyone.

It has been suggested that all the men who came before the Finance Committee in the 2 weeks of hearings which were conducted by the committee were opposed to the bill which passed the House; and that is true. We did not expect anyone to pay his expenses to Washington and to advocate that bill, or to advocate any other bill which would raise his taxes. Nobody ever comes to Washington from outside of Washington in behalf of a tax bill, unless it is a tariff bill which will put money into his pockets. Then we have hordes of them coming here and asking that the Government use the taxing power in order that they may reap where they do not sow. Nobody ever comes here to advocate an increase in his taxes, either income, corporate, or other taxes.

There was serious difficulty in the Committee on Finance growing out of the novelty of this tax system, the difficulty to understand it, and the uncertainty which a good many members honestly have felt with respect to the revenue which it might produce.

Mr. SHIPSTEAD. Mr. President, is the Senator a member of the Committee on Appropriations?

Mr. BARKLEY. I am not.

Mr. SHIPSTEAD. I was wondering whether anyone could give us some information as to the proportion of people who come here asking for appropriations as compared with the number of people who come here to ask how they can avoid assisting in paying them.

Mr. BARKLEY. Yes; it is a hundred to nothing in favor of the appropriations as against taxes. That is the proportion.

Mr. GLASS. And the difficulty is that we always make the appropriations. [Laughter.]

Mr. BARKLEY. Mr. President, I was attempting to show the difficulties which confronted the Committee on Finance in trying to rewrite the tax bill. Although many members started into the hearing favorable to the bill as it passed the House, it soon became apparent that the Senate committee could not agree to the House bill as a whole. For one thing, it proposed to wipe out $1,100,000,000 of assured revenue, and, by a rearrangement of the form of corporate taxes, not only to absorb that loss but to raise nearly $800,000,000 in addition.

The result was that the Senate committee, after long deliberation and much travail, in which all members were seeking honestly to arrive at a wise decision, reported a bill retaining all present corporate taxes and putting a flat rate of 7 percent upon undistributed net income. The bill would raise less money than the bill which passed the House, but it would raise a sufficiently large sum to make it adequate for the purposes of the Treasury.

The bill was sent to conference. It has been stated here today that this is a mongrel bill, because of its mixed breed, I suppose, because it is a mixture of normal corporate taxes and a tax upon undistributed profits. All tax bills which contain more than one kind of taxes are mongrel tax bills.

I do not remember a tax bill which has been brought into the Senate since I have been a Member of it which has not been a mongrel tax bill, according to that standard. We have brought in bills levying excise taxes upon automobiles, upon candy, upon furs, upon watches and clocks, and jewelry, in the same bill providing for an increase in the rates on income-tax payers. Such a bill was just as much a mongrel product as is the bill we have before us, and more so. A bill which levies one rate of tax upon one amount and another upon another is a mongrel bill, because it at least is a mixture of rates. I do not think that argument is entitled to any consideration.

I desire to call attention now to the difference between the House and Senate bills and the bill now before us under the conference report.

If any Senator desires to have a break-down of the amount of money which the Treasury Department estimated would be raised under the tax bill, I am prepared to give it, as furnished by the Treasury authorities. In addition to reducing the normal rate on corporations from 12½ percent to 15 percent, to 8 percent to 15 percent, making the minimum 8 percent and the maximum 15 percent, we have repealed the exemption of the 4-percent normal tax on dividends received by stockholders, which up to this time have been exempt from taxation, and the repeal of that exemption will bring $127,000,000 into the Treasury of the United States.

The increase in revenue brought about by the graduated rate on undistributed corporate incomes is estimated to be $295,000,000.

The increase in revenue derived from individual taxpayers brought about by the distribution of income of corporations not now being distributed, because of these graduated rates upon undistributed income, will amount to $279,000,000.

An increase of $6,000,000 due to intercorporate dividends which are taxed brings the total increase in the revenue up to $707,000,000.

Thirty-three million dollars represents the loss due to the reduction in minimum rate on corporations from 12½ percent to 8 percent. That reduces the total amount of revenue to $674,000,000, which was the estimate of the Treasury Department upon the figures submitted to them by the conference committee based on these rates, ranging from 8 percent to 15 percent for the corporate tax and from 7 percent to 27 percent on undistributed profits.

The loss of revenue income brought about by the reduction of the capital-stock tax from $1.40 to $1 is $40,000,000, leaving a net of $634,000,000 revenue to the Treasury under this conference report over and above the present revenue under existing law.

Mr. GERRY. Mr. President, can the Senator tell me whether that 7-percent tax, the first tax on the undistributed profits, was taken into account in the Treasury estimates as to raising revenue?

Mr. BARKLEY. The 7 percent, the minimum rate on the first 10 percent of undistributed income, was taken into consideration, subject to a $5,000 exemption.

Mr. GERRY. That is not what I mean. What I have in mind is this: I wondered if the Treasury decided that the 7-percent rate would raise revenue, because, when the Treasury officials made the estimate for us in the committee, they said that a 7-percent tax on undistributed profits would not cause any distribution, and therefore there would be no revenue derived.

Mr. BARKLEY. There were those who contended that a flat rate of 7 percent on undistributed profits would not force any distribution, but whether it would have forced it or not, under the flat rate provided by the Senate bill they estimated $217,000,000 or $215,000,000—it does not matter which—$215,000,000, I will say, as the revenue which will be brought in by the 7-percent flat tax on undistributed income. They did express the opinion that a flat rate of 7 percent would not bring about any distribution.

Mr. GERRY. What I am trying to find out is what revenue is expected to be raised by the 7-percent tax. I do not wish unduly to interrupt the Senator.

Mr. BARKLEY. I do not object to being interrupted. The Treasury took the position, as any sensible man must take it, that a flat rate of 7 percent on all undistributed income of a corporation will not force out as much distribution as a minimum rate of 7 percent and a maximum of 27 percent. I do not think that is open to dispute. So, Mr. President, the total amount of new revenue derived by this bill over and above the amount now being received from corporation taxes will be $634,000,000.

In addition to that we are proposing by the so-called "windfall" tax to raise about $82,000,000.

There are other miscellaneous items which are provided for, which I need not go into, which raise the total to about $807,000,000 additional revenue.

It has been contended here by the Senator from Virginia [Mr. BYRD], for whom I have, as he knows, an affectionate regard, that the bill will be unjust to the small corporations; that it will put a penalty upon thrift; that it will make impossible in the future the laying aside of reserves by corporations.

I desire to call attention to the difference between the House and Senate bills and the conference report which is now before us. I wish to say that about 90 percent of all the corporations in the United States are what may be termed small corporations—not necessarily weak corporations, for if a corporation is capitalized at $100,000 and makes a $10,000 net income that is 10 percent on its capital stock. It is 5 percent on a capital of $200,000; it is 1 percent on a capitalization of $1,000,000. We have not, however, in our discussion divided these corporations according to the size of their capital, but the size of their income, because if a million-dollar corporation has only $10,000 income it pays the same taxes that will be paid by a $100,000 corporation which makes $10,000 income—because this tax is based upon income and not on capitalization, just as the tax I pay is based on my income and not on what I own. If I had a million dollars and made $10,000 a year I would pay the same income tax that you would pay if you did not have a dime but made $10,000, because the income tax is a tax on income and not on property, not on accumulations, and not on reserves.

Let us take first a $10,000 corporation. Of course, obviously we cannot raise $650,000,000 additional taxes from corporations without increasing the tax on most of them, and the table put into the RECORD by the Senator from Virginia compares what they pay now under the 12½ to 15 percent with what they will pay under the conference report figures. Of course, most of them will pay more.

Mr. BYRD. The purpose of the table was to show the difference between the weak corporation and the strong corporation. It was to show that the corporation which was in a strong position would pay less tax than a weaker corporation which could not declare all of its earnings in dividends.

Mr. BARKLEY. There has been no adequate definition of "weak" or "strong" corporation that I know of. We have undertaken to figure, I think, according to income, and if they receive no income they pay no tax. If they have no net income, they pay no tax under this bill, except the normal rate from 8 to 15 percent, which they have been paying right along.

Under the House bill the corporation that paid out no dividends at all would have paid $2,967 in taxes. Under the Senate bill it would have paid out $2,778. Under the conference report it will pay out $2,082.

If we are to say that a small corporation is a corporation that makes $10,000 net, regardless of its capital, and pays out none of it in dividends, then the conference report will result in a smaller tax than either the House or the Senate bill. If a $10,000 corporation pays out $1,000, the tax under the House bill would have been $2,612. Under the Senate bill it would have been $2,108. Under the conference report it will be $1,862.

So while that $1,862 is a larger sum than the corporation now pays at the rate of 12½ to 15½ percent it is smaller

than the amount paid either under the House or the Senate bills.

If the corporation with $10,000 income pays $2,000 in dividends, under the House bill the tax would have been $2,258, under the Senate bill $2,038, and under the conference report it will be $1,678.

The same thing is true all the way down the line, with a $3,000 distribution, $4,000 distribution, $5,000 distribution, $6,000 distribution, except when we get up to a distribution of $6,000, under the House bill the tax would have been $638, under the Senate bill $1,758, and under the conference report $1,247.

Mr. BYRD. Mr. President, is the Senator referring to a complete distribution or a partial distribution, or what?

Mr. BARKLEY. No; I am referring to a $10,000 corporation. First it makes no distribution, and then I am going all the way down the line until it distributes the whole $10,000.

Mr. BYRD. I fear the Senator did not correctly catch my remarks this morning. I was comparing in the conference measure the difference between a $10,000 corporation which declared all of its earnings and a $10,000 corporation which declared none whatever. Under the conference measure there is a 100-percent difference between those two corporations. That is not true under the Senate bill.

Mr. BARKLEY. Under the conference report bill a corporation that earned $10,000 and paid out all of it, of course, would be relieved of any tax on undistributed income, and, therefore, under the conference report bill would pay $1,040; whereas under the conference report bill, if it paid out nothing at all, it would be taxed $2,080.

Mr. BYRD. In other words, there is a hundred-percent increase as between the corporation that pays everything out and the corporation that pays nothing out? That would not be the result under the Senate bill.

Mr. BARKLEY. Of course, the same thing applies even to a greater extent to a hundred-thousand-dollar corporation, the figures for which I will give in just a moment.

Now, let us take a corporation that makes a hundred thousand dollars net income; that is 10 percent on a million-dollar capitalization and 5 percent of a $2,000,000 capitalization. I presume nobody will contend that that is a small or weak corporation.

Mr. BYRD. Mr. President, when we speak of small and weak corporations it appears to me that we are discussing a $10,000 corporation as a weak corporation and a million-dollar corporation as a strong corporation. There may be a small corporation that is weak and there may be a small corporation that is strong.

Mr. BARKLEY. Yes; and there may be a small corporation that is strong and there may be a large one that is not. Strength cannot be determined by the amount of capital stock.

Mr. BYRD. I understand that.

Mr. BARKLEY. It is necessary to take into consideration many things; this bill is based on income, and we are talking now about a small corporation as a corporation with a small income and a large corporation as a corporation with a large income.

Mr. BYRD. I think, in all fairness, the Senator should compare the small corporation that pays its earnings out in dividends and the small corporation that cannot pay its earnings out in dividends and explain that in respect to a $10,000 corporation there is a hundred-percent difference between the tax on a corporation that pays out all its earnings and the corporation that pays out nothing. In other words, the corporation with a $10,000 income that owes a debt and cannot pay out its earnings has got to pay a hundred percent more than a corporation that pays out all its earnings.

Mr. BARKLEY. Yes; and a human being incorporated under the laws of any State because of a desire to do business as a corporation, that has a $10,000 debt or a hundred-thousand-dollar debt gets no credit whatever for being in debt. All the credit he gets is for the interest he pays on his debt.

Mr. BYRD. The Senator does not contend that an individual is not penalized by reason of having a debt and paying it off, does he?

Mr. BARKLEY. Oh, no; and we are not proposing to penalize a corporation that is in debt any more than we are proposing to penalize an individual who is in debt. I cannot, for the life of me, understand why it is that if a corporation has gone in debt in the past, however improvident that indebtedness may be, it ought to be allowed to deduct from its net income in any year the amount of its debt when it pays a tax, anymore than if I am in debt, as most of us are, I ought to be allowed to deduct my debts from the amount of my income before I am required to pay my taxes.

Mr. BYRD. I think the tax should be deducted from the corporation's income.

Mr. BARKLEY. The Senator believes that there ought to be what he calls a "cushion" for debt-ridden corporations?

Mr. BYRD. Otherwise corporations have to pay a supertax.

Mr. BARKLEY. That is what I am talking about.

Mr. BYRD. The Senator is confusing the two. I think the Senator and I should agree, that under the conference bill a corporation that owes $10,000 and that is compelled to pay that amount on its debt has to pay a penalty of a hundred percent, as compared to a corporation that can pay its earnings out in dividends.

Mr. BARKLEY. If the Senator means that we have made no allowance for debts accumulated in the past, the Senator is correct. The Senator knows that every expert in the Treasury and every member of the Senate and House committees dealing with this subject recognize the impossibility of providing for the exemption of debts, because of past mismanagement or any other reason, without creating loopholes through which all corporations that happen to owe debts might escape any tax whatever.

Now let us take the $100,000 corporation. A corporation that earns $100,000 a year net and makes no distribution whatever would have paid under the House bill $42,500 in taxes; under the Senate bill $23,219; under the conference committee bill $31,502; and the amount of the tax declines in proportion to the amount the corporation distributes to its stockholders.

Whenever we reach a bracket where a $100,000 corporation pays out all of its earnings, instead of paying $31,500, it will pay only $13,840, and the difference will be made up by the payment of the income tax by the stockholders of that corporation, who will receive the $100,000 by distribution and will pay their individual income tax upon it when they make out their returns each year.

What have we done for the little corporation? I am not contending that the small corporation, by which I mean corporations with a net income of $10,000 or less, will not pay more tax than they are now paying. Some of them will; some of them will pay very little more, because the minimum rate under the undistributed-tax provision is 7 percent and the minimum rate under the normal-tax provision is 8 percent. So 8 and 7 make 15, and the highest tax that any of the small corporations on the first 10 percent of their income or upon their whole income will be a combination of 15 percent on the total, or 8 percent on the whole and 7 percent on the first 10 percent.

If their earnings are $10,000, the rate will be 7 percent on $1,000, and so on up to 27 percent. So in order to avoid the impossibility of writing into this bill what are called "cushions" for debt-ridden corporations or corporations with deficits, which will pay no tax, anyway, unless they have a net income for the year, we thought it wise to reduce the normal tax from 12½ percent to 8 percent and to put upon the little corporations a minimum of 7 percent, the combined rate being only 15 percent, whereas on the larger corporations there is imposed not only a maximum of 15 percent normal tax but a maximum of 27 percent undistributed-income tax, which makes a maximum of 42 percent on the large corporations in the high brackets that distribute no money whatever to their stockholders. The lowest tax that will be paid by such a corporation that distributes all its income will be 15 percent, because if it pays out all its earnings it pays no tax on undistributed profits. The lowest

tax that will be paid by a small corporation making $10,000 and paying it all out will be 7 percent, or $700.

Mr. President, I do not desire to consume any more of the time of the Senate, except to say that no tax bill has ever been before this body that has received more earnest and sincere and laborious consideration than the tax bill we are now considering. The House Committee on Ways and Means held hearings for weeks upon the bill, and then they were in secret session for weeks writing the bill. When it came to the Senate we held hearings for 2 weeks on the bill, and we did not deny any interest in the United States representation before the committee. We undertook for the next month to write the bill which we brought into the Senate. We have had this bill under consideration ever since the 3d of March, when the President sent his message here. Aside from a tariff bill, I dare say no revenue bill ever received more sincere, more earnest, more faithful, or laborious consideration than the bill which is presented by the conference committee. While, as I said at the beginning, none of us relish the necessity for levying these taxes, and all of us would prefer to adjourn without increasing the burden of taxes on the American people, we all know that we cannot do that.

We must pass a tax bill. I believe that this is the fairest and most sincere and the most just that we have been able to bring out in the confusion brought about in the beginning by the tax bill presented by the House and the difficulty in the Senate committee to work out the theory upon which the House bill was predicated and to work out the difference between the House and the Senate in nearly 2 weeks of hard work in conference.

It has been suggested that we ought to reduce our expenditures; that we ought to balance our Budget. We all are in favor of balancing the Budget; I should like to balance mine if I could, and I think every other Senator here would like to balance his if he is unable to balance it; we all desire to balance the Budget; but, Mr. President, nobody who has demanded a balanced Budget, no Senator on this floor who has demanded a reduction of the expenditures of our Government, has as yet pointed out where that reduction ought to be made.

Mr. BYRD. Mr. President, I can point out where the reduction can be made.

Mr. BARKLEY. Very well.

Mr. BYRD. I offered an amendment to the deficiency appropriation to reduce the relief appropriation 20 percent. That amendment was defeated; and now I want to ask the Senator at this point whether he thinks the National Government should spend $1,000,000,000 more in the fiscal year 1937 than it will spend in the fiscal year 1936 in view of the improvement in conditions throughout the country?

Mr. BARKLEY. I say the Government ought to spend $1,000,000,000 or any other amount that is necessary to keep American men, women, and children from starving to death or freezing in the winter from the cold.

Mr. BYRD. Does the Senator think that more money will be needed in 1937 to keep them from starving and freezing than is needed in 1936?

Mr. BARKLEY. We are not appropriating more money; we are appropriating $1,425,000,000 this year, whereas we appropriated $4,800,000,000 last year and over $3,000,000,000 the year before that.

Mr. BYRD. But the Budget Director, who is the responsible financial agent of the Government, says that a billion dollars more will be spent in 1937 than in 1936 if the appropriation bills which have been passed by this Congress are all carried into effect.

Mr. BARKLEY. Which includes the payment of over two and one-half billion dollars for the soldiers' bonus, which was not contemplated when the Congress first met in session in January last.

Mr. BYRD. The Senator is entirely mistaken about that. The bonus was included in the 1936 Budget.

Mr. BARKLEY. Not all of it was included. But notwithstanding the desire of the Senator to reduce expenditures Congress has appropriated the money. Congress has gone on record. The Senator moved to reduce the amount by 20 percent, but by an overwhelming vote the Senate declined to do it. We have got to meet the expenditures of the Government, whether the Senator is right or wrong or whether we are right or wrong.

Mr. BYRD. The Senator made the statement that no Member of this body had stated where appropriations could be reduced, and I merely wanted to correct the Senator in that respect.

Mr. BARKLEY. The Senator from Virginia did make a motion to reduce the lump sum by 20 percent. Of course it was easy, as it is always easy, to make a blanket motion to reduce expenditures by 20 percent, but what I meant to say was and what I still say is that no Senator has pointed out in detail where any man, woman, or child in the United States is getting more money than he or she ought to get or where we are spending more than we ought to expend.

Mr. BYRD. Does not the Senator understand the relief appropriation was a lump-sum appropriation and could only be reduced in a lump way by a 20-percent reduction?

Mr. BARKLEY. Yes; and if that theory should be carried out, the man or woman who was drawing $4 a week for relief could only draw $3.60. If that is the way the Senator desires to bring about economy, I cannot join in that effort.

Mr. President, I have no desire to take any more time of the Senate. I wish I might be able to say to my constituents and to myself and to my friend from Virginia that this money is not needed; but it is needed. The necessity confronts us. Whether Congress has been improvident or wasteful only history will determine, but I voted for these appropriations, and I am not going to vote to deny the Federal Treasury the right to balance its Budget so long as it is necessary to incur these expenses and raise this additional amount.

Mr. BYRD. Does the Senator from Kentucky favor spending $1,000,000,000 more in the fiscal year 1937 than was spent in the fiscal year 1936?

Mr. BARKLEY. I favor what I have voted for, and I have voted for all these appropriations.

Mr. BYRD. I wanted to get that clear.

Mr. BARKLEY. That is a perfectly frank answer. If I had been opposed to the expenditure of money, I would have joined the Senator from Virginia and voted against all these appropriations, but I did not conceive that to be my duty though I accord to him full good faith as he has seen his duty and its performance as a Member of this body.

Mr. President, I ask unanimous consent that the two tables which I send to the desk and to which I have referred may be embodied in my remarks.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Break-down of $674,000,000

Increase from normal tax (4 percent) on dividends	$127,000,000
Increase from corporate undistributed profits tax	295,000,000
Increase from individual surtaxes due to increased dividend distribution	279,000,000
Increase due to intercompany dividend tax	6,000,000
Total	707,000,000
Loss from normal tax decrease to corporations	33,000,000
Net	674,000,000
Deduct for reduction in capital-stock tax	40,000,000
Net	634,000,000

Corporations with net incomes of—

$10,000				$100,000			
Dividends paid	House bill	Senate bill	Conference report	Dividends paid	House bill	Senate bill	Conference report
0	$2,967	$2,178	$2,082	0	$42,500	$23,219	$31,502
$1,000	2,612	2,108	1,862	$10,000	37,500	22,519	28,802
$2,000	2,258	2,038	1,678	$20,000	32,500	21,819	26,102
$3,000	1,903	1,968	1,508	$30,000	27,500	21,119	23,402
$4,000	1,548	1,898	1,387	$40,000	22,500	20,419	20,979
$5,000	1,193	1,828	1,317	$50,000	17,500	19,719	18,779
$6,000	838	1,758	1,247	$60,000	13,125	19,019	16,994

FUNERAL EXPENSES OF THE LATE SENATOR FLETCHER

Mr. LOFTIN. Mr. President, I ask unanimous consent for the immediate consideration of Senate Resolution 324, relating to the funeral expenses of the late Senator Fletcher.

The PRESIDING OFFICER (Mr. TRUMAN in the chair). Is there objection?

There being no objection, the resolution (S. Res. 324) submitted by Mr. LOFTIN, on the 18th instant, was considered and unanimously agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay from the contingent fund of the Senate the actual and necessary expenses incurred by the committee appointed by the Vice President in arranging for and attending the funeral of Hon. Duncan U. Fletcher, late a Senator from the State of Florida, upon vouchers to be approved by the Committee to Audit and Control the Contingent Expenses of the Senate.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Latta, one of his secretaries.

CITIZENS STATE BANK OF MARIANNA, FLA.

Mr. BAILEY. From the Committee on Claims, I report back favorably, without amendment, the bill (H. R. 2435) for the relief of the Citizens State Bank of Marianna, Fla., and I submit a report (No. 2452) thereon.

Mr. LOFTIN. Mr. President, I ask unanimous consent for the immediate consideration of House bill 2435, just reported by the Senator from North Carolina.

The PRESIDING OFFICER. The clerk will state the title of the bill.

Is there objection to the request of the Senator from Florida?

Mr. HALE. I object.

The PRESIDING OFFICER. Objection is heard.

Mr. LOFTIN subsequently said: Mr. President, I ask unanimous consent for the present consideration of House bill 2435, reported today from the Committee on Claims.

There being no objection, the bill (H. R. 2435) for the relief of the Citizens State Bank, of Marianna, Fla., was considered, ordered to a third reading, read the third time, and passed.

INTERNAL-REVENUE TAXATION

The Senate resumed the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 12395) to provide revenue, equalize taxation, and for other purposes.

Mr. LA FOLLETTE. Mr. President, it is not my purpose to detain the Senate to discuss the conference report at length. I assume, however, that when the Senate passed its bill and asked for a conference with the House and appointed conferees they were under instruction to reach, if possible, a fair and equitable compromise between the position taken by the Senate and the position taken by the House. So far as I was individually concerned as a member of the conference I was guided by that principle in our deliberations.

Obviously there was a wide divergence of principle between the bill as it passed the House and the bill as it passed the Senate. The conferees on the part of the Senate have been under severe criticism because they reached a compromise with the conferees on the part of the House. Personally I think that was the object of the conference. I wish to say not only for my colleagues, but also for myself, that up to the point where the conference was on the verge of breaking up and in reporting a disagreement we stood unitedly for the position taken by the Senate when it passed its bill. If my recollection serves me correctly, for five consecutive days the House and Senate representatives in conference debated the principles underlying their respective bills.

Mr. President, the fact is, as any unbiased mind will admit, that the conferees on the part of the Senate forced the conferees on the part of the House to abandon their bill, as the basis of compromise. The Senate conferees unitedly took the position that unless the conferees on the part of the House were ready to accept a normal tax upon corporations it would be necessary for the conferees to report a disagreement. Confronted with the responsibility of deliberations upon a measure upon which hinged the adjournment of the present session of Congress, we succeeded in persuading the Representatives of the House in the conference to accept this proposal.

Then the Senate conferees insisted that the complications and intricacies of the House bill made necessary by their classification of corporations must be dropped from the measure which was to be taken as the basis of discussion in an effort to reach a compromise. Finally, as Senators can see from studying the conference report, the House of Representatives through its conferees abandoned their position.

Then all that was left in conference was the question of compromising the rates of taxes between those imposed by the bill as it passed the House and the rates of tax imposed by the bill as it passed the Senate. It seems to me that the conferees on the part of the Senate would have been derelict in their duty and in their responsibility to this body if they had not been willing to sit down at the table as reasonable men and attempt to arrive at a compromise upon the question of rates of taxes as between the bill as it passed the House and the bill as it passed the Senate.

I do not wish to burden the RECORD by further reference to the tables from which the Senator from Kentucky [Mr. BARKLEY] has quoted, but I contend that they demonstrate that the Senate and House conferees reached an honest and an equitable compromise upon the divergence of the rates contained in the respective bills. For instance, a corporation with $100,000 of net income which paid no dividends, under the terms of the bill as it passed the House would have paid a tax of $42,500; under the provisions of the bill as it passed the Senate that same corporation under the same conditions would have paid $23,219; and under the conference report, the corporation would pay $31,502. In other words, the effective tax upon a 100-percent retention by a corporation with $100,000 of income was fixed by arriving at a compromise between $23,219 as provided in the bill as it passed the Senate and $42,500 as provided in the bill as it passed the House.

The same thing holds true with respect to a corporation with a net income of $10,000, except that under the conference report the treatment of corporations with $10,000 of net taxable income is more liberal than under the provisions of either the bill as it passed the House or the bill as it passed the Senate.

In other words, Senators who supported the Senate bill on the theory that it was less onerous in its levying of taxes upon small corporations, now attack the report of the conferees even though for the great majority of corporations—namely, those with $10,000 or less of net income—the conference report will collect less tax from them than would the Senate bill had it prevailed in conference and become law.

I recognize that merely summing up totals is perhaps misleading, but they are indicative of the efforts put forth by the conferees representing the House and the Senate to reach an agreement.

The House receded on 170 amendments. The House receded on 50 amendments with amendments. The Senate receded on 60 amendments.

The House yielded upon the important liquidation provision placed in the bill under the leadership of the Senator from Georgia [Mr. GEORGE] to enable corporations with complicated corporate structures to liquidate and not to pay excessive penalties in the process.

The House of Representatives yielded upon the so-called Bailey amendment, which plugs up the loopholes that have been discovered by the use of partially processed or substitute materials for fats and oils, and in which the farmers of the country are so vitally interested.

The House conferees accepted the important provision of the Senate on the unjust enrichment title.

The House conferees accepted the important provisions of the Senate on the refunds and floor-stock taxes.

The House conferees accepted the Senate contract cushion—that is, the cushion providing for corporations which are under contract not to pay dividends, which was a much broader and more liberal cushion than the one contained in the House bill.

The House conferees accepted the Senate's amendment on the common-trust provision, which was of great and vital importance to one Senator who has now so vigorously attacked the conference report.

The House conferees accepted the Senate's amendment as to investment trusts, which was likewise of great importance because of their operation in the State of the Senator who last night filed minority views on behalf of himself and others attacking the conference report.

The House conferees accepted the Senate's provision to restore section 102. Senators will remember that that is the section designed—although it has failed to operate effectively—to prevent accumulations of profits in corporations for the purpose of avoiding the surtax.

The House conferees accepted the Senate's amendment restoring to the law section 351 in regard to personal holding companies.

The House conferees accepted the Senate's proposal that the capital-stock and excess-profits tax should be retained permanently, although in the compromise we reduced the rate to $1.

The House conferees accepted the Senate's amendment on the fur tax.

The House conferees accepted the Senate's amendment to repeal the tax on jewelry.

The House conferees accepted the Senate's amendment relating to shingles.

Mr. President, I desire to say on behalf of the conferees representing the House of Representatives that they were most liberal in their attitude during the conference; for Senators should bear in mind that the able and distinguished members of the Ways and Means Committee of the House had given weeks and weeks and weeks of study to their bill. I desire further to testify that I have never participated in a conference where there was a more conscientious desire to maintain the respective positions of the two Houses, but at the same time to discharge the important responsibility of reporting to the respective Houses a measure which was an honest and a just compromise of the fundamental differences between the two upon this important piece of legislation.

Mr. President, the Senator from Virginia [Mr. BYRD] has spoken about the tax on the small corporation. In the first place, let it be admitted in this debate that all proposals were designed primarily to place a great proportion of the burden of increased taxation upon corporations. This was based upon the sound idea that corporate profits have increased more than any other source of income.

It was the principle of the House bill. It was the principle of the Senate committee's bill. It was the principle of the bill as it passed the Senate, and that is the principle embodied in the conference report. Obviously, if we are going to get some $620,000,000 to $640,000,000 of increased revenue from the earnings of corporations, they will have to pay increased taxes; but all through this debate I have heard so much about the small corporation that I hardly expected that the conferees would be attacked because their bill was harsh upon them.

The Senator from Virginia distributed to the respective Senators today some interesting tables. They show that under the conferees' bill the increase in tax upon a corporate earning of $1,000 would be 15.52 percent over existing law; but the Senator from Virginia was paired in favor of a bill, and he helped to force the Senate to write a bill, which increased the tax on the first $1,000 of corporate income 71 percent above present law.

Mr. BYRD. Mr. President, I hope the Senator will be fair about this matter.

Mr. LA FOLLETTE. I wish to be fair.

Mr. BYRD. My contention is not that we are increasing the taxation on the corporations to which I have referred. My contention is that the plan advocated by the Senator is very injurious to the weak corporation which is unable to declare its earnings in dividends, and is correspondingly beneficial to the strong corporation which is able to declare its earnings in dividends. That is the basis of my argument.

Mr. LA FOLLETTE. I am coming to that; but these are the tables which the Senator gave out to the newspapers, and this is the particular table which the New York Times carried in respect to the Senator's statement, and this table is on the desk of every Senator.

Mr. BYRD. I will state to the Senator that the figures in the table were obtained from the Treasury experts, and are correct.

Mr. LA FOLLETTE. I am not attacking the figures. I am just trying to make them a little more comprehensive and complete.

Ever since this controversy started the Senator from Virginia has been the champion of the small corporation; so his table shows what would happen to a corporation with $2,000 of net income. He says that under the conference report there would be a 15.52-percent increase over the existing law in the taxation on such a corporation; but the Senator from Virginia helped pass a bill through the Senate which would have soaked that $2,000 net-income corporation 71 percent more than it pays under the existing law.

Now let us take the corporation with $3,000 net taxable income. The Senator's table shows that the conference committee bill would ask that corporation to pay 21.34 percent more than the existing law; but the Senate committee's bill, which had the approval of the Senator from Virginia, would have soaked that corporation 70 percent more than the existing law.

Here is a $4,000 corporation. We are now getting up to the point where we are including a large number of the corporations. The Senator's table shows that the conference report, if it becomes a law, will ask the corporation with $4,000 net taxable income to pay 24.20 percent more than it pays under existing law; but the Senate's bill would have soaked the corporation with $4,000 of net taxable income 69 percent more than the present law.

Let us take a $5,000 corporation. There the increase would be 25.89 percent, according to the Senator's table, over existing law if the conference report should be enacted into law; but under the Senate's bill the corporation with $5,000 of net taxable income would have been soaked 69 percent more than it would have paid under the existing law.

Here is a $10,000 corporation. According to the Senator's table, the conference report would increase the tax upon a corporation with $10,000 of taxable income 61.4 percent, but the bill which the Senator from Virginia supported would have increased the tax on that corporation over existing law 68 percent.

A corporation with $20,000 of net taxable income—and here we cross the line as between the Senate bill and the bill reported by the conferees, because the treatment which the conferees gave to the smaller corporations, of course, becomes less effective as their net taxable income becomes larger. At $20,000, according to the Senator's table, the conferees' report would increase the tax over existing law 98.33 percent, whereas the bill as it passed the Senate would have increased it 67 percent.

In the case of a $50,000 corporation, the tax under the conferees' report would be 118.49 percent increase over existing law, whereas under the Senate bill it would have been 64 percent increase over existing law.

I skip now to a corporation of $1,000,000, as to which the increase over existing law under the conference report is 116.36, whereas under the Senate bill it would have been 58 percent.

I point out that the Senate bill would have increased the burden upon the small corporation 71 percent, whereas upon the large corporation which had $1,000,000 of taxable income the Senate bill would have increased the burden only 58 percent. Under the pending proposal the smallest corporation, the one making $1,000, will be asked to increase its tax contribution by only 15½ percent, whereas we ask the corporation with a net taxable income of $1,000,000 to increase its contribution 116.38 percent.

I point out that of course these figures are all based on not a dollar of dividends being paid out, whereas, as a matter of fact, it has been common experience over the past 10 years that on the average corporations have retained about 30 percent of their net taxable income each year.

Mr. President, I have a table furnished by the Senator from Virginia showing the distribution of 50 percent of the net taxable incomes by corporations. Let us see what the comparison would be between the Senate bill supported by the Senator from Virginia and the conference committee bill which he now opposes.

A corporation with $10,000 of net taxable income under the conference report bill will be asked to increase its taxes 4.93 percent, whereas the Senate bill proposed to jack up the taxes on such a corporation 46 percent above existing law.

I refer now to a corporation with $1,000,000 of taxable income. Under the conference report bill, assuming a distribution of 50 percent of its dividends, the conference report would increase the tax on the $1,000,000 corporation 42.32 percent, whereas the Senate bill would have increased the tax over existing law only 30 percent.

There, again, the more onerous burden laid upon the corporation of a million dollars' income or less under the Senate bill than under the conference bill is very clearly shown, for from $10,000 to a million dollars the Senate conferees' report increases the burden from 4.93 percent over existing law to 42.32 percent, whereas the bill which passed the Senate increased the burden upon the $10,000 corporation 46 percent and asked the corporation with a net taxable income of a million dollars to contribute only 30 percent more.

Mr. President, I see no point in going over the arguments which were made when the bill was under consideration in the Senate. I desire, however, to point out that, so far as I know, there is no way under the Constitution of the United States—at least, no one has suggested it—whereby we can retroactively tax the accumulated surpluses of corporations. It is under the system which the Senator from Virginia and others who agree with him seek to have maintained that these huge accumulations of corporation capital have grown up until today the competitive advantage of those huge aggregations of capital is tremendous, but, so far as I know, there is no way under the Constitution whereby we can remedy that situation by taxing the accumulated surpluses retroactively.

Mr. President, the question arises as to how we are to meet that situation in the future. As I see it, under the conference committee bill small corporations—or large ones, for that matter—will have no difficulty in retaining every dollar of their net income every year without the payment of a single penny of undistributed-profits tax if they will only pay out to their stockholders evidences of their proportionate share in those earnings which will be taxable in the hands of the stockholders.

Furthermore, we have provided for corporations of $50,000 of net income or less that they may take $5,000 of that net taxable income, and that they may pay only 7 percent, the lowest rate, upon that $5,000, even though the $5,000 exceeds 10 percent of their adjusted net income.

We have graduated the normal tax more widely and more generously in favor of the smaller corporations than ever before. The conferees have reported a bill which spreads the normal corporation tax from 8 percent to 15 percent, and in that respect it is so far in advance over the Senate bill in its treatment of the small corporations that they are not even within shouting distance of each other, for under the Senate bill it was proposed to jack up the normal tax rate upon even the smallest corporations 3 percent, whereas upon the smallest corporations the conferees have reduced the tax 4½ percent.

Mr. BARKLEY. Which amounts, in percentages based upon the present minimum rate and the rate in the bill, to about 40-percent reduction.

Mr. LA FOLLETTE. I meant that the rate itself had been reduced by that much.

Mr. BYRD. Mr. President, will the Senator yield?

Mr. LA FOLLETTE. I yield.

Mr. BYRD. I think the records will show that the Senator's statement applies only to those corporations which make a complete distribution. The reduction does not apply to a corporation which does not make a complete distribution.

Mr. LA FOLLETTE. Mr. President, let us not get confused about this matter. Under both the Senate bill and the conference report the corporation pays its normal tax if it has any net income.

Mr. BYRD. The super tax is not as high in the Senate bill as under the bill advocated by the conferees.

Mr. LA FOLLETTE. Yes; but I have just finished showing that the Senator asked the small corporations to pay more, to contribute a greater percentage over existing law, under the Senate bill, than is asked of them under the conference report.

No one can say that the conferees did not labor long and hard in an effort to meet the situation confronting the smaller corporations in this country. At the same time, I desire to be frank and to say that in order to reach a compromise with the House of Representatives, we did have to increase the tax upon the undistributed net income. But I assume that every Member of the Senate who has paid any attention to this legislation must recognize that we had to meet the House upon common ground somewhere, that we could not expect the House of Representatives to yield to the Senate upon the entire bill.

I wish to say in conclusion that there has been much said about the corporations which are in debt, but I point out that an individual who has a million dollars of debt and who makes a million dollars of net taxable income in 1 year has to pay about $640,000 in taxes to Uncle Sam, and he has left only about $360,000 to apply on his million-dollar debt, whereas the corporation which is a million dollars in debt and makes a million dollars of net taxable income and distributes no dividends will pay a tax, under the conference report of $323,000 and will have left $677,000 to apply upon its million-dollar debt if it desires to do so, as compared with the individual in the same situation, who will find himself with only $360,000 to apply upon his million-dollar indebtedness.

In my judgment, Mr. President, this measure is a just and equitable compromise between the Senate and the House of Representatives. By and large it contains the structure of the Senate bill. It is a compromise sufficient so that the principle embodied in the message of the President of the United States and in the bill passed by the House of Representatives will have an opportunity to be tested, and at the same time we will not run the risk of losing any of the revenue which we are now receiving from corporations.

I sincerely hope the report will be adopted.

LEVISA FORK OF BIG SANDY RIVER

Mr. BARKLEY. Mr. President, I ask unanimous consent for the present consideration of House bill 12490.

There being no objection, the bill (H. R. 12490) authorizing a preliminary examination of the Levisa Fork of the Big Sandy River in the vicinity of the Breaks of Sandy was considered, ordered to a third reading, read the third time, and passed.

INTERNAL-REVENUE TAXATION

The Senate resumed consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R.

12395) to provide revenue, equalize taxation, and for other purposes.

Mr. KING. Mr. President, may I ask the Senator from Oregon, the leader on the other side, whether there are any Senators on his side of the chamber who desire to speak at this time with reference to the tax bill? I desire to know so I may be able to allocate the time on this side of the aisle.

Mr. McNARY. I have made a casual canvass of the situation and I am not now aware of any Senator on this side of the aisle who desires to speak. The Senator from Idaho [Mr. BORAH] is on his feet and may desire to speak.

Mr. BORAH. I wish to take up 2 or 3 minutes of time. Much has been said about the taxation retroactively of accumulated surpluses being obnoxious to the Constitution. I realize it is not a practicable proposition at this time; that it is something we cannot deal with under the present circumstances, but I should like to know under what provision of the Constitution Congress may not levy a tax upon the accumulated surpluses which corporations have.

Mr. LA FOLLETTE. Mr. President, will the Senator yield?

Mr. BORAH. I yield.

Mr. LA FOLLETTE. I think I am the one who was responsible for having injected that statement into the discussion and I have predicated it upon the statement of the chief counsel of the Treasury Department, and also upon the statement in corroboration of his position made by lawyers who are members of the Finance Committee.

Mr. KING. Mr. President, robbing the interrogation of any legalistic characteristics, there are other questions involved that make it absolutely impossible, it seems to me, to make an application of that principle.

Mr. BORAH. Mr. President, I realize so far as concerns the tax bill in its present situation that it is an impracticable question which I am presenting, but I do not accept at all the doctrine that there is anything in the Constitution which inhibits Congress from taxing such surpluses.

Mr. KING. Mr. President, classifications would have to be made and the respective organizations would have to be brought within those classifications. Let me say to the Senator that any application of that doctrine, if it were legal, would be fraught with such disastrous consequences economically and industrially that I think we would all shrink from its application. Let me give an illustration. Take Mr. Ford. All of the funds or profits which he makes he plows back into the creation of new factories and the production of new machines and furnishing employment to thousands and thousands of people. Much of his profits today consist of factories and plants which are being changed and remodeled from year to year. Recently he had to remodel one plant and lost $50,000,000. If we attempted to assemble all those earnings, much of which have been lost, and then to apply any rule for the taxation of the so-called profits and reserves, we would work serious injury, not only to those engaged in the industries but also to the employees in the country generally.

Mr. BARKLEY. Mr. President, will the Senator yield?

Mr. BORAH. I yield.

Mr. BARKLEY. I did not mean to leave the impression earlier in the day when I was discussing this matter that we could not tax the existing surpluses. My injection of the subject into the debate grew out of the complaint of one of the opponents of the bill that we were not taxing surpluses; that we had left untouched the great corporations which had accumulated large surpluses in the past. I said that, of course, it is true we do not tax them in this bill, and we could not tax those surpluses in the bill as income, but we could levy a tax on the surpluses as property. I agree with the Senator from Idaho on that subject.

Mr. BORAH. That was the only point in which I was interested. I was not making the observation as a criticism of this measure, but I can readily see that in the future that might be a very important proposition, and if I had my way about it, it would be put into effect rather speedily.

Mr. BARKLEY. If the sort of tax we are proposing here now had existed in the past, it certainly would have curbed the accumulation of large and unnecessary surpluses on the part of the great corporations.

Mr. LA FOLLETTE. Mr. President, in hurrying along with my statement, I think I did not properly qualify it. What I should have said was that it was stated before the Finance Committee, and I was basing my original statement here on the floor on that premise, that there was no way by which we could tax accumulated surpluses under a graduated income tax, because they are property, and, as the Senator knows, the court went so far in Eisner against McCumber as to say when a corporation paid into the hands of the stockholder something representing that accumulation which was merely a slip of paper, that we could not tax it as income.

Mr. KING. Mr. President, I desire to say in conclusion, with respect to the tax on accumulated surpluses, that I think the decisions of the courts have regarded such a tax as a tax on property, and therefore subject to the rule of apportionment as that principle is applied by the Constitution.

Again I ask the Senator from Oregon whether there are any Senators on his side of the aisle who desire to speak to the tax measure?

Mr. McNARY. I have made a casual canvass on this side of the Chamber, and I know of no Senator here who desires further to discuss the pending bill.

Mr. KING. I thank the Senator very much.

Mr. BYRD. I understand the Senator from Missouri [Mr. CLARK] wishes to speak on the measure.

Mr. KING. Is he in the Chamber at the moment?

Mr. BYRD. He is not here just now.

Mr. KING. I suggest the absence of a quorum because the Senator from Texas [Mr. CONNALLY] wishes to take the floor.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Chavez	La Follette	Pope
Ashurst	Connally	Lewis	Radcliffe
Bachman	Copeland	Loftin	Reynolds
Bailey	Davis	Lonergan	Robinson
Barkley	Dieterich	McAdoo	Russell
Benson	Duffy	McGill	Schwellenbach
Bilbo	Frazier	McKellar	Sheppard
Black	George	McNary	Shipstead
Bone	Gerry	Maloney	Steiwer
Borah	Gibson	Metcalf	Thomas, Okla.
Brown	Glass	Minton	Thomas, Utah
Bulkley	Guffey	Moore	Townsend
Bulow	Hale	Murphy	Truman
Burke	Harrison	Murray	Tydings
Byrd	Hastings	Neely	Vandenberg
Byrnes	Hatch	Norris	Van Nuys
Capper	Hayden	Nye	Wagner
Caraway	Holt	O'Mahoney	Walsh
Carey	King	Pittman	Wheeler

The PRESIDING OFFICER. Seventy-six Senators having answered to their names, a quorum is present.

Mr. BARKLEY. Mr. President, I presume the proponents of the bill will be entitled to conclude the discussion. If any Senator desires to speak in opposition to the bill, I think he ought to proceed now. We have only one more speech on this side.

Mr. BYRD. Mr. President, a parliamentary inquiry: What is the division of time?

Mr. BARKLEY. About 15 minutes each.

The PRESIDING OFFICER. It is about 15 minutes to each side.

Mr. BYRD. The Senator from Missouri [Mr. CLARK] desires to be heard, but he does not appear to be in the Chamber at the moment.

Mr. CONNALLY. Mr. President, the pending tax bill is not going to suit those who are against any tax bill, but the Senate and Senators cannot take that view of a tax bill; we have got to act as Senators and not as taxpayers.

This bill is not going to suit those who will pay more taxes; no tax bill ever did that I know anything about; but we cannot as Senators pass on the bill as we would if we were

simply taxpayers. We have got to pass on it as Senators of the United States.

This bill is not going to suit that type of statesmanship which believes in lavish appropriations and no taxes at all. We cannot hope to get any votes from them, if there are any such—and I do not say there are—but it is not going to appeal to that type of statesmanship which loudly demands that the Treasury make liberal appropriations for all activities and then takes a spasm of economy when it comes to passing a tax bill. So we shall not look for any support from that classification.

But, Mr. President, what about Senators of the United States? When the Government has written its I O U, or its promise to pay, or has made its pledges through appropriations to do certain things and the bills begin to come due, what is the duty of Senators of the United States? Is it to enact legislation to pay the bills or simply to write new I O U's and postpone the day of judgment to a future time?

This bill would not be here but for the fact that the Congress, not as individuals but as a Congress, recently enacted the soldiers' adjusted-compensation bill, and the courts recently declared to be unconstitutional the processing taxes under the Agricultural Adjustment Administration. As the result of the enactment of that bill and of the decision of the courts, a great hole was blown in the Treasury of the United States, and it is the duty of the Congress to the American people, regardless of how Members of the Congress may have voted on the bonus, and regardless of whether they voted for other legislative enactments, to provide the money with which to pay our honest debts.

I did not vote for some of these measures; I did not vote for the housing bill, which passed the Senate the other day and which calls for appropriations of $500,000,000; but does that lessen my obligation? If a measure is once passed and becomes a draft on the Treasury, does that lessen my obligation as a Senator to walk up and take the responsibility for the enactment of legislation designed to put into the Treasury the money that so many insist on paying out of the Treasury? I did not vote for some other measures which have made some of the heaviest charges on the Treasury, but is that any reason why I should say that I am not willing to vote for taxes to redeem the promises of the Government?

I am wondering what some Senators on the other side of the aisle who were so loud and so eloquent and so insistent and so frenzied in their appeals for the passage of legislation that called for the expenditure of billions of dollars out of the Treasury are going to say when they go back to their constituents. Are they going to say, "We voted to appropriate the money for you, but we did not have the courage to vote to tax you in order to redeem the pledges made to you"?

Mr. President, what is the necessity for a tax bill—a larger outlay than there is income—and, according to all sound economics and governmental policies, we should make provision to place in the Treasury more money than is derived from the revenues now being received. Where is the money coming from? We cannot reach up and pluck it out of the blue sky. The Government has no old socks containing money hidden away to which we can conveniently resort. Where is the money coming from? It has got to come out of the people of the United States; it has got to come out either of individuals or of the corporations of the United States.

The Government needs $620,000,000. Where are we proposing to get it? We are proposing to get practically all of it from corporations. Some one immediately asks, "Why from corporations? Why not tax the individual taxpayers?" I shall tell you why, Mr. President. If the business of the corporations of America were conducted by individuals and taxes were paid by them as individuals, just as other individuals pay their taxes, it would cost the corporations in excess of $600,000,000 more than they are now paying.

In other words, after the Government shall have exacted from corporations $600,000,000, they will not be paying into the Treasury any more than would be paid if the various industries represented were carried on privately by individual taxpayers. Is not that just? Is it not fair that corporate business should bear the same burden as the equivalent individual activity of a citizen? When it comes to paying taxes to the Government, is there any reason why a corporation should have a greater immunity and a greater privilege than has an individual citizen? Has the corporation been plunged into any sort of bath of immunity that gives it a privileged status over the citizen? Of course not. So that is one reason why these added taxes should come out of the corporations, because when we get them from that source we will not proportionately increase the burden of the corporation over the burden borne by the individual citizen.

Now, let us see what else there is about it. Up until about 1928 the highest surtax and normal tax on individuals was 25 percent. A 20-percent surtax as a maximum, as the Senator from Nebraska will remember, was advocated by Mr. Mellon. What has happened? At the time when that law was in force the corporations were paying only 12½ percent; but in the meantime we have lifted the individual income tax from a maximum of 25 percent to 79 percent. Think of it! The maximum rate on individual incomes up to 1928 was 25 percent, whereas under the law today the maximum is 79 percent, while the corporate rate has only been lifted to 15 percent. So the point I am undertaking to make before the Senate is that since 1928 the great bulk of the increases in taxes have been on the individual incomes rather than upon the incomes of corporations.

In addition to the reasons already given, what further reason is there why this tax should be laid on corporations rather than on individuals? Another reason is that corporate income, according to the last available figures, demonstrates that corporations have had a more pronounced reaction from the depression, that their earnings have been greater, and their profits have been larger than either rents, salaries, or individual incomes upon which the ordinary taxpayer pays his income tax. So, in that regard, because of their increased profits, and because of the larger measure of prosperity they are enjoying, the corporations are better able to stand this increased burden than are the individual income-tax payers of the country.

Mr. President, if we do not get it from the corporations, where are we going to get it? We have got to get it from the individual income-tax payer, and we have already demonstrated that the individual income-tax payers are now paying more, in proportion, than the corporations are paying, and we have shown already that the income tax on individuals has been increased within the past 8 years at a much sharper rate than that upon corporations.

Mr. President, this bill, I am sure, is not satisfactory in all its particulars to any Member of the Senate. Were any individual member of the conference committee permitted to write the bill according to his own fancy it would not be identical with the bill as presented by the conference report. That is the case with all legislation. But why a conference committee after all? The necessity for a conference committee is obvious. Its very nomenclature suggests compromise. Its very creation means that we have to adjust differences, that the Senate must give way here and the House must give way there; otherwise we would rarely, if ever, have legislation of any kind.

The conference report in the main, in its major aspects, conforms more nearly to the terms of the Senate bill than to those of the bill as it passed the House. The theory of the House bill was that all corporate taxes which we have heretofore levied were to be abolished and in lieu thereof a single tax on undistributed profits was to be imposed on the theory—and it is a beautiful theory, but like many beautiful theories it is difficult to apply—that if all corporations paid out all of their profits in the form of dividends the individual income-tax payers would pay a sufficiently increased amount on their individual incomes to take the place of all corporate taxes. That is a wonderful theory, but early in the hearings before the Senate committee there were those of us who became convinced that it was a dangerous thing

to adopt at this moment, that it was unwise to discard the normal taxes on corporations which afforded a sure return of revenue, and to embrace an experimental and untried plan when the Government was in such dire need of increased revenue.

The arguments which have been made by Senators against the whole bill to the effect that it discourages the accumulation of surpluses no doubt had influence upon other Senators and persuaded them to lessen the rigor of the new scheme by proposing that we retain the present normal corporation taxes and superimpose thereon graduated rates on undistributed surpluses sufficient to give some encouragement and some stimulation to the payment of these undistributed profits in the form of dividends.

Thereby hangs the tale of the conference report. The conference report represents both theories. It retains in substance the normal corporate tax with the exception that at the instance of the House conferees the rates in the lower brackets on the smaller corporations were reduced from 12½ to 8 percent.

Mr. BARKLEY. Mr. President——

The PRESIDING OFFICER (Mr. O'MAHONEY in the chair). Does the Senator from Texas yield to the Senator from Kentucky?

Mr. CONNALLY. I yield.

Mr. BARKLEY. The plan proposed would allow both plans of taxation to run along parallel so that the Treasury and the Government, from the experience to come, may have more valuable information to submit to Congress in the future as to which is the better plan.

Mr. CONNALLY. The Senator from Kentucky is correct. One of the reasons that made some of us timid about embracing the new principle was that the Government and the Treasury had no experience, had the benefit of no accumulated studies as to a tax on undistributed profits. So instead of discarding all present taxes and embarking upon an absolutely untried and new plan, we proposed that we should retain in large measure the present normal rates and cautiously extend our footsteps into the new and untried territory. That is what we have done.

Mr. President, much has been said about the small corporation. Frankly, I regard this bill as more liberal to the small corporations. What is a small corporation? Under the terms of the bill a small corporation is one with a small net income. It may have a large capital or it may have a small capital, but because of its small capitalization why should it have any extraordinarily liberal treatment? The whole bill is based on the theory of net income. If a corporation does not earn a net income it pays no tax. If it earns a net income over and above its exemptions, its deductions, its depletions, its obsolescence for old machinery, its depreciation and other liberal deductions which the law gives it, and if it makes a net income over all those deductions it ought to pay a tax to the Government which gives it security and protects its property and enables it to make this large return.

The whole theory of the income tax is carried out in the present bill. The theory of the individual income tax is that unless a man has an income he pays no tax. The bill is based on the same theory with regard to corporations. If a corporation makes no net income it pays no tax, but if it does earn a net income it ought to walk up to the tax window just as the individual citizen does, and discharge its obligation to the Government.

The bill is kind to the little corporation because it reduces the normal tax on corporations in the lower brackets from 12½ percent to 8 percent. It is kind to the little corporation because it allows it a flat deduction of $2,000. When it comes to the tax on undistributed profits, the little corporation is allowed a special provision to $5,000, or 10 percent of its net income, whichever is the largest, so it amounts in any case of a corporation with a net income under $50,000 to $5,000 from the undistributed-profits tax.

Mr. President, I hold in my hand a table based on the 50-percent net distribution. Fifty-percent net distribution of profits is 5 percent less than all corporations averaged over a period of 10 years. In other words, without this tax and left to their own devices, without any pressure from the Government or from anybody else, the average distribution by all corporations over a 10-year period was about 55 percent. Based on a 50-percent distribution we find that the compromise revenue bill will tax a corporation with $1,000 net income less than it is taxed now under the present law. I invite the attention of the Senator from Virginia [Mr. BYRD] to that fact. A corporation with $1,000 net income under the present law would pay $125 and under the proposed plan embraced in the conference report would pay $112.20.

Mr. BORAH. Mr. President, there is so much confusion in the Chamber I could not hear the Senator clearly. Will he repeat his figures?

Mr. CONNALLY. The Senator from Texas was undertaking to point out that on an average 50-percent distribution of net income we have certain figures which reflect the result. He also observed that 50-percent average distribution is 5 percent less than all the corporations of the country averaged over a 10-year period of their own volition and without any pressure tax at all. We take it that that is a fairly reflective figure. On that basis, with a 50-percent distribution, a corporation with a net income of $1,000 under the present law would pay $125. It could still distribute under the terms of the conference report 50 percent of its net income and pay only $112.20 tax. We take that basis because that is more nearly the average distribution of the corporations according to their own desire.

Mr. BYRD. Mr. President, I think at that point the Senator should make it clear that under the conferees' report the corporation which earned $1,000 and made no distribution would pay $144, as compared to one that made complete distribution that would pay $80—an increase of 80 percent as between the strong and the weak $1,000 corporation.

Mr. CONNALLY. That is true. I shall answer the Senator.

The Senator says the corporation which has an income of $1,000 and makes no distribution will have to pay a tax of $144. Why should it not make some distribution? It is $1,000 better off than it was the year before. It has made $1,000 net profit.

Mr. BYRD. Suppose it has a debt to pay?

Mr. CONNALLY. Well, it had the debt the year before, and it got by in the face of debt, and still made $1,000 net.

Mr. BYRD. But no previous law ever penalized a company for paying a debt.

Mr. LA FOLLETTE. Mr. President——

Mr. CONNALLY. Mr. President, I am very fond of the Senator from Virginia; and one of the most painful things to me—not even less painful than the prospect of having to pay some of this tax—is my regret at having to differ with the Senator from Virginia, but let me say this:

A great deal has been said about corporations that owe debts. Well, suppose they owe debts, and they make $100,000 net profit? Are they not worth $100,000 more than they were worth the year before? Are they not in better position not only to pay their debts but to pay some of their stockholders a few dollars in dividends? If they do not make any profit, they do not pay a cent. So I cannot shed many tears over a poor, little $100,000-income corporation because it happens to owe debts. If it does owe debts, the chances are that it has assets for the debts. If it owes money, and has a good manager and a good board of directors, the chances are that they are going to see to it that it has some additional plant or some additional inventories. So debts do not represent waste. Debts mean that the company is trying to do something. It is trying to get ahead.

Mr. BYRD. Then why should we penalize the company that creates a debt and then tries to pay it?

Mr. CONNALLY. We are not penalizing it.

Mr. BYRD. This bill penalizes it.

Mr. LA FOLLETTE. Mr. President——

Mr. CONNALLY. Just a moment. The Senator from Virginia cannot get out of his head the idea that because we make companies pay a tax somewhat comparable to the tax their stockholders would pay if they had the money, we are penalizing the companies. Whose money is it? It is the stockholders' money. The companies say, "We will not let the stockholders have it. We will keep it in our treasuries." We say, "If you do, fine; but when you do, you must pay at least a part of the tax which the owner of the income would pay if he had it in his own pocket instead of its being in your pocket."

Mr. LA FOLLETTE. Mr. President——

Mr. CONNALLY. I yield to the Senator from Wisconsin.

Mr. LA FOLLETTE. The point I wish to reemphasize is that the bill which the Senator from Virginia helped to write, and helped to pass through the Senate, would have asked the $1,000 corporation which did not pay out a penny of dividends to pay 71 percent more than it is paying under existing law, whereas under similar circumstances the conferees' bill would ask it to pay only 15½-percent increase over existing law.

Mr. BYRD. Mr. President——

The VICE PRESIDENT. Does the Senator from Texas yield to the Senator from Virginia?

Mr. CONNALLY. The Senator yields.

Mr. BYRD. I have no desire to interrupt the Senator——

Mr. CONNALLY. I have only 3 minutes left.

Mr. BYRD. But, as a matter of fact, the Senator has spoken about 15 minutes longer than his time.

Mr. CONNALLY. I am sorry.

Mr. BYRD. All I wish to do is to make the point of order that there is no quorum present, so that we may have a roll call before the vote is taken.

Mr. CONNALLY. Mr. President, I do not yield for the purpose of making the point of no quorum.

Mr. BYRD. Mr. President, the Senator's time has expired.

The VICE PRESIDENT. Just a moment. The Senator from Texas has the floor, as the Chair understands. Does the Senator from Texas yield to the Senator from Virginia?

Mr. CONNALLY. I will say to the Senator from Virginia that I am perfectly willing to yield.

Mr. ROBINSON. Mr. President, a quorum will be called for at the conclusion of the debate.

Mr. CONNALLY. I thank the Senator.

Mr. President, I absolve the Senator from Virginia from the charge of the Senator from Wisconsin about supporting the Senate bill. The Senator from Virginia did support the Senate bill, but he did so unwillingly. He did so like a young calf with a rope around his neck. He slid and slipped and did not want to go, but he went; so I do not think it is fair for the Senator from Wisconsin to say that the Senator from Virginia supported the Senate bill.

Mr. BYRD. I will say to the Senator from Texas that I supported the compromise bill just as the Senator from Texas is supporting this proposition, much of which the Senator from Texas does not believe in.

Mr. CONNALLY. I was trying to be fair to the Senator from Virginia and admit that he had not at any time advocated a tax on undistributed corporate profits. He did support the Senate bill as a matter of compromise; but the Senator from Virginia will bear witness that the Senator from Texas was one of the first in the committee to say that we ought to retain the present flat corporate taxes, and superimpose on top of them a graduated rate on undistributed profits. Does the Senator dissent from that statement?

Mr. BYRD. I agree with the Senator from Texas.

Mr. CONNALLY. Mr. President, when the necessity arose for obtaining $600,000,000 of new money—I do not mean new from the printing press, but I mean new money from the pockets of the people—my theory was that the best way to do it was to keep what we now have, namely, the flat corporate rate, the capital-stock tax, and the excess-profits tax, and then go out for the other $600,000,000, and devise new plans for raising it in the form of an undistributed-profits tax, and superimpose that tax on the present tax.

The VICE PRESIDENT. The hour of 2 o'clock and 30 minutes p. m. having arrived, under the special order the Senate will now vote on the conference report. The question is on agreeing to the conference report.

Mr. ROBINSON. I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Clark	Lewis	Reynolds
Ashurst	Connally	Lonergan	Robinson
Bachman	Copeland	McAdoo	Russell
Bailey	Davis	McGill	Schwellenbach
Benson	Dieterich	McKellar	Sheppard
Bilbo	Duffy	McNary	Shipstead
Black	Frazier	Maloney	Steiwer
Bone	Gerry	Metcalf	Thomas, Okla.
Borah	Gibson	Minton	Thomas, Utah
Brown	Glass	Moore	Townsend
Bulkley	Guffey	Murphy	Truman
Bulow	Hale	Murray	Tydings
Burke	Harrison	Neely	Vandenberg
Byrd	Hastings	Norris	Van Nuys
Byrnes	Hatch	Nye	Walsh
Capper	Hayden	O'Mahoney	Wheeler
Caraway	Holt	Pittman	
Carey	King	Pope	
Chavez	La Follette	Radcliffe	

Mr. LEWIS. I announce the absence of certain Senators for the same reasons stated on a previous roll call.

The VICE PRESIDENT. Seventy-three Senators having answered to their names, a quorum is present.

The question is on agreeing to the conference report. The yeas and nays have been ordered, and the Clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. BILBO (when his name was called). I have a general pair with the senior Senator from Iowa [Mr. DICKINSON]. In his absence, I withhold my vote. If permitted to vote, I would vote "nay."

Mr. VANDENBERG (when Mr. COUZENS' name was called). My colleague, the senior Senator from Michigan [Mr. COUZENS], is necessarily absent from the Senate. He is paired with the Senator from Louisiana [Mrs. LONG]. If my colleague were present, he would vote "nay." I am advised that Mrs. LONG would vote "yea."

Mr. DAVIS (when his name was called). I have a general pair with the junior Senator from Kentucky [Mr. LOGAN]. I transfer that pair to the junior Senator from Maine [Mr. WHITE], and vote "nay." If the junior Senator from Kentucky [Mr. LOGAN] were present he would vote "yea." If the junior Senator from Maine [Mr. WHITE] were present he would vote "nay."

Mr. MCNARY (when Mr. DICKINSON'S name was called). The senior Senator from Iowa [Mr. DICKINSON] is necessarily absent. He has a pair with the junior Senator from Mississippi [Mr. BILBO]. If the Senator from Iowa [Mr. DICKINSON] were present he would vote "nay."

Mr. DIETERICH (when his name was called). On this vote I have a pair with the Senator from Oklahoma [Mr. GORE]. Not knowing how he would vote on this question, I withhold my vote.

Mr. LEWIS (when his name was called). On this vote I announce that I have a pair with the Senator from Georgia [Mr. GEORGE]. With that statement I leave the record for the present.

The roll call was concluded.

Mr. LEWIS. The Senator from Alabama [Mr. BANKHEAD], the Senator from Colorado [Mr. COSTIGAN], and the Senator from Nevada [Mr. MCCARRAN] are detained from the Senate on account of illness. The Senator from Massachusetts [Mr. COOLIDGE], the Senator from Ohio [Mr. DONAHEY], the Senator from Georgia [Mr. GEORGE], the Senator from Oklahoma [Mr. GORE], the Senator from Kentucky [Mr. LOGAN], the Senators from Louisiana [Mrs. LONG and Mr. OVERTON], the Senator from Florida [Mr. LOFTIN], and the Senator from South Carolina [Mr. SMITH] are unavoidably detained.

The Senator from New York [Mr. WAGNER] is detained on departmental business. He has a general pair on the passage of this bill with the Senator from South Carolina [Mr. SMITH]. I am not advised how either Senator would vote if present.

Mr. WALSH. My colleague [Mr. COOLIDGE] is unavoidably absent. If present he would vote "nay."

Mr. BILBO. Since the Senator from Oregon [Mr. MCNARY] has announced the position of the Senator from Iowa [Mr. DICKINSON], and has stated that if present he would vote "nay", I am at liberty to vote, and I vote "nay."

Mr. LEWIS. I reannounce the absence of certain Senators as announced by me on the previous roll call.

Mr. MCNARY. I desire to announce the following pairs on this question:

The Senator from New Hampshire [Mr. KEYES] with the Senator from Louisiana [Mr. OVERTON].

The Senator from Vermont [Mr. AUSTIN] with the Senator from Alabama [Mr. BANKHEAD].

The Senator from New Jersey [Mr. BARBOUR] with the Senator from Colorado [Mr. COSTIGAN].

The Senator from South Dakota [Mr. NORBECK] with the Senator from Nevada [Mr. MCCARRAN].

The Senator from New Hampshire [Mr. KEYES], the Senator from Vermont [Mr. AUSTIN], the Senator from New Jersey [Mr. BARBOUR], and the Senator from Nevada [Mr. MCCARRAN] would, if present, vote "nay", and the Senator from Louisiana [Mr. OVERTON], the Senator from Alabama [Mr. BANKHEAD], the Senator from Colorado [Mr. COSTIGAN], and the Senator from South Dakota [Mr. NORBECK], would, if present, vote "yea."

The Senator from California [Mr. JOHNSON] is absent on account of illness.

The result was announced—yeas 42, nays 29, as follows:

YEAS—42

Ashurst	Connally	McKellar	Robinson
Bachman	Duffy	Maloney	Schwellenbach
Barkley	Frazier	Minton	Sheppard
Benson	Guffey	Murray	Shipstead
Black	Harrison	Neely	Thomas, Okla.
Bone	Hatch	Norris	Thomas, Utah
Borah	Hayden	Nye	Truman
Brown	King	O'Mahoney	Van Nuys
Bulow	La Follette	Pope	Wheeler
Byrnes	McAdoo	Radcliffe	
Chavez	McGill	Reynolds	

NAYS—29

Adams	Clark	Holt	Steiwer
Bailey	Copeland	Lonergan	Townsend
Bilbo	Davis	McNary	Tydings
Bulkley	Gerry	Metcalf	Vandenberg
Burke	Gibson	Moore	Walsh
Byrd	Glass	Murphy	
Capper	Hale	Pittman	
Carey	Hastings	Russell	

NOT VOTING—24

Austin	Couzens	Johnson	McCarran
Bankhead	Dickinson	Keyes	Norbeck
Barbour	Dieterich	Lewis	Overton
Caraway	Donahey	Loftin	Smith
Coolidge	George	Logan	Wagner
Costigan	Gore	Long	White

So the conference report was agreed to.

The VICE PRESIDENT laid before the Senate the following action of the House of Representatives, which was read:

IN THE HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
June 19, 1936.

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 281 to the bill (H. R. 12395) to provide revenue, equalize taxation, and for other purposes, and concur therein with the following amendment:

In lieu of the matter proposed to be inserted by said amendmen insert:

"SEC. 915. SALARIES AND ADMINISTRATIVE EXPENSES.

"Funds made available to the Secretary of Agriculture by the appropriation for the fiscal year 1936 in section 32 of Public, No. 320, Seventy-fourth Congress, approved August 24, 1935, to the extent of the unobligated balance thereof; and by the appropriation in section 12 (a) of the Agricultural Adjustment Act, in an amount not in excess of $15,000,000; shall be available until June 30, 1937, for transfer to the Treasury Department for salaries and administrative expenses in carrying out the provisions of this title and of title IV, including necessary investigative work, and for refunds and payments under title IV. Such funds shall be available for expenditure by the Secretary of the Treasury for personal services and rent in the District of Columbia and elsewhere, for law books, books of reference, press releases, trade journals, periodicals, and newspapers, for contracting reporting services, printing and paper in addition to allotments under the existing law, travel expenses, for mileage and per diem of witnesses, in lieu of subsistence, payment of which mileage and per diem may be made in advance upon certification of such officer as the Commissioner or the Secretary may designate, and such certification shall be conclusive. In addition to the foregoing, the administrative expenses provided for in this section shall include such miscellaneous expenses as may be authorized or approved by the Commissioner or the Secretary for carrying out the provisions of this title, including witness fees and mileage for experts, notarial fees, or like services, and stenographic work for taking depositions."

Mr. KING. I move that the Senate agree to the amendment of the House to Senate amendment numbered 281.

The motion was agreed to.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its reading clerks, announced that the House had passed, without amendment, the following bills of the Senate:

S. 2647. An act authorizing the Comptroller General of the United States to settle and adjust the claims of subcontractors, materialmen, and laborers for material and labor furnished in the construction of a post-office building at Hempstead, N. Y.;

S. 3405. An act for the relief of Capt. James W. Darr; and

S. 4780. An act to extend the laws governing inspection of vessels, and for other purposes.

ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills and joint resolutions, and they were signed by the Vice President:

S. 81. An act to provide for the collection and publication of statistics of peanuts by the Department of Agriculture;

S. 1896. An act to provide for interest payments on American Embassy drafts;

S. 2039. An act making it a felony to transport in interstate or foreign commerce persons to be employed to obstruct or interfere with the right of peaceful picketing during labor controversies;

S. 2293. An act for the retirement of employees of the Alaska Railroad, Territory of Alaska, who are citizens of the United States;

S. 3247. An act to waive any exclusive jurisdiction over premises of Public Works Administration slum-clearance and low-cost housing projects, to authorize payments to States and political subdivisions in lieu of taxes on such premises, and for other purposes;

S. 4020. An act to authorize the acquisition of lands in the city of Alameda, county of Alameda, State of California, as a site for a naval air station and to authorize the construction and installation of a naval air station thereon;

S. 4268. An act to authorize the Secretary of War to set apart as a national cemetery certain lands of the Fort Snelling Military Reservation, Minn.;

S. 4390. An act to amend the National Defense Act relating to the Medical Administrative Corps;

S. 4567. An act to authorize the Secretary of Agriculture to extend and renew for the term of 10 years a lease to the Chicago, Milwaukee & St. Paul Railway Co. of a tract of land in the United States Department of Agriculture Range Livestock Experiment Station, in the State of Montana, and for a right-of-way to said tract, for the removal of gravel and ballast material, executed under the authority of the act of Congress approved June 9, 1926;

S. 4699. An act to provide a commissioned strength for the Corps of Engineers, United States Army, for the efficient performance of military and other statutory duties assigned to that corps;

S. 4784. An act to permit mining within the Glacier Bay National Monument;

S. 4786. An act to authorize the Secretary of Agriculture to make such adjustments and revisions found to be due on

contracts entered into by the Government with crop producers under the Agricultural Adjustment Act;

H. R. 1962. An act for the relief of Albert H. Jacobson;

H. R. 3943. An act for the relief of D. E. Wooldridge;

H. R. 10504. An act for the relief of Booth & Co., Inc., a Delaware corporation;

H. R. 11331. An act to authorize the sale and conveyance by the Department of the Interior to the State of Minnesota of the southwest quarter northwest quarter section 3, township 159 north, range 35 west, fifth principal meridian, in the State of Minnesota;

H. R. 12971. An act to amend the act of Congress approved May 27, 1935 (Public, No. 73, 74th Cong.), authorizing the Secretary of Commerce to convey to the city of Grand Haven, Mich., certain portions of the Grand Haven Lighthouse Reservation, Mich.;

S. J. Res. 251. Joint resolution granting the consent of Congress to the city and county of San Francisco to construct a causeway and highways on Yerba Buena Island in San Francisco Bay, and for other purposes;

S. J. Res. 277. Joint resolution to investigate corporations engaged in manufacture, sale, or distribution of agricultural implements and machinery;

S. J. Res. 291. Joint resolution amending section 11 of the Soil Conservation and Domestic Allotment Act;

H. J. Res. 388. Joint resolution to authorize the issuance of a reentry permit to Tonio Mori Moto and his readmission upon application while such permit remains valid;

H. J. Res. 608. Joint resolution extending for 2 years the time within which American claimants may make application for payment, under the Settlement of War Claims Act of 1928, of awards of the Mixed Claims Commission and the Tripartite Claims Commission, and extending until March 10, 1938, the time within which Hungarian claimants may make application for payment, under the Settlement of War Claims Act of 1928, of awards of the War Claims Arbiter; and

H. J. Res. 641. Joint resolution making appropriations for the payment of expenses incurred in an election contest for a seat in the House of Representatives from the Twentieth Congressional District of the State of New York.

LANDS IN LAWRENCE COUNTY, ALA.

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 4727) to quiet title and possession with respect to certain lands in Lawrence County, Ala., which was to strike out all after the enacting clause and insert:

That all the right, title, and interest of the United States, except such right, title, and interest as has been acquired by the United States through purchase or condemnation, in and to all of fractional section 25 which lies south of the Elk River Shoals Canal and the northwest quarter of section 36, township 3 south, range 7 west, Huntsville meridian, in Lawrence County, Ala., be, and the same is hereby released, relinquished, and confirmed by the United States to the owners of the equitable titles thereto, as fully and completely in every respect whatever as could be done by patents issued according to law: *Provided*, That this act shall amount to a relinquishment of any title the United States has, or is supposed to have, in and to any of said lands and shall not be construed to abridge, impair, injure, prejudice, or divest in any manner any valid right, title, or interest of any person or body corporate whatever, the true intent of this act being to concede and abandon all right, title, and interest of the United States to the lands described herein to those persons, estates, firms, or corporations who would be the equitable owners of said lands under the laws of the State of Alabama, in the absence of the said interest, title, and estate of the United States.

Mr. BLACK. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

SEVENTY-FIFTH ANNIVERSARY OF BATTLE OF ANTIETAM

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the joint resolution (S. J. Res. 255) to provide for the participation of the United States in the commemoration of the seventy-fifth anniversary of the Battle of Antietam, which was to strike out all after the enacting clause and insert:

That there is hereby established a commission to be known as the United States Antietam Celebration Commission (hereinafter referred to as the Commission) and to be composed of seven commissioners, as follows: Three persons to be appointed by the President of the United States; two Senators, by the President of the Senate; and two Representatives, by the Speaker of the House of Representatives. The commissioners shall serve without compensation and shall select a chairman from among their number.

SEC. 2. It shall be the duty of the Commission to arrange, in cooperation with State, county, and other organizations, an appropriate observance and celebration, to take place during the week of September 12, 1937, of the seventy-fifth anniversary of the Battle of Antietam.

SEC. 3. The Commission shall cease to exist within 30 days after the date of the expiration of the celebration.

Mr. TYDINGS. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

THE MERCHANT MARINE

The VICE PRESIDENT laid before the Senate the following action of the House of Representatives, which was read:

IN THE HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
June 19, 1936.

Resolved, That the House agree to the amendment of the Senate to the bill (H. R. 8555) to develop a strong American merchant marine, to promote the commerce of the United States, to aid national defense, and for other purposes, with the following amendment:

Strike out all of section 303 of title III of said Senate amendment; and

That the House agree to the amendment of the Senate to the title of the bill.

Mr. COPELAND. Mr. President, this means that section 303, the part of the bill dealing with the continuous-discharge feature, is eliminated from the bill, because within a week we have passed another bill which had that provision in it. I move that the Senate concur in the amendment of the House to the text of the Senate amendment.

Mr. BORAH. Mr. President, is this the measure which we passed yesterday?

Mr. COPELAND. I refer to a provision included in another bill passed during the last week, about the continuous-discharge feature. There is a difference of just one or two words. It seemed wise to do away with any possibility of conflict by omitting it from this bill.

Mr. BORAH. The bill which was passed here yesterday is the bill which has been sent back by the conference committee?

Mr. COPELAND. That is correct.

Mr. BORAH. And that is the only change?

Mr. COPELAND. That is the only change.

The VICE PRESIDENT. The question is on the motion of the Senator from New York that the Senate concur in the amendment of the House to the text of the Senate amendment.

The motion was agreed to.

APPROPRIATIONS FOR TREASURY AND POST OFFICE DEPARTMENTS—CONFERENCE REPORT

Mr. GLASS. Mr. President, I desire to call up the conference report on the Treasury and Post Office Departments bill. I infer it will not encounter any opposition.

The VICE PRESIDENT. Without objection, consideration of the report will be resumed.

The Senate resumed the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on certain amendments of the Senate to the bill (H. R. 10919) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1937, and for other purposes.

(The report is printed at page 10181 of the proceedings of yesterday.)

Mr. GLASS. I move that the conference report be agreed to.

The motion was agreed to.

ENTRY UNDER BOND OF EXPOSITION EXHIBITS

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 3843) to provide for the entry under bond of exhibits of arts, sciences, and industries, and products of the soil, mine, and

sea, and all other exhibits for exposition purposes, which was, to strike out all after the enacting clause and insert:

That all articles which shall be imported from foreign countries for the sole purpose of exhibition or display at a permanent exhibition or exhibitions and/or at a temporary exhibition or exhibitions of the arts, sciences, and industries, and products of the soil, mine, and sea, to be held at any time and from time to time by the Port of New York Authority, a municipal corporate instrumentality organized pursuant to a compact entered into on April 30, 1921, between the States of New York and New Jersey and consented to by the Congress of the United States (ch. 77, U. S. Stat. L., vol. 42, pt. I, p. 174), and/or by its tenants or licensees in the building known as the Port Authority Commerce Building, located on the block bounded by Eighth and Ninth Avenues, Fifteenth and Sixteenth Streets, Borough of Manhattan, city and State of New York, upon which articles there shall be a tariff or customs duty, shall be admitted free of such tariff, customs duty, fees, or charges under such regulations as the Secretary of the Treasury shall prescribe; but it shall be lawful, at any time during or at the close of any exhibition held pursuant to this act, to sell for delivery at the close thereof any goods or property imported for and actually displayed at such exhibition, subject to such regulations for the security of the revenue and for the collection of import duties as the Secretary of the Treasury shall prescribe: *Provided*, That all such articles, when sold or withdrawn for consumption or use in the United States, shall be subject to the duty, if any, imposed upon such articles by the revenue laws in force at the date of their withdrawal and to the requirements of the tariff laws in effect at such date: *Provided further*, That the Port of New York Authority shall be deemed, for customs purposes only, to be the sole consignee of all merchandise imported under the provisions of this act, and that all necessary governmental expenses incurred as a result of exhibitions authorized under this act, including salaries of customs officials in charge of imported articles, shall be paid to the Treasury of the United States by the Port of New York Authority under regulations to be prescribed by the Secretary of the Treasury: *Provided further*, That all such articles shall, at the expiration of 2 years, be subject to the impost duty then in force, unless the same shall have been sold or exported from this country prior to that period of time: *And provided further*, That nothing in this act contained shall be construed as an invitation, express or implied, from the Government of the United States to any foreign government, state, municipality, corporation, partnership, or individual to import any articles for the purpose of exhibition at the said exhibitions.

Mr. COPELAND. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

SUITS IN BEHALF OF INDIANS OF CALIFORNIA

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 1793) to amend the act entitled "An act authorizing the attorney general of the State of California to bring suit in the Court of Claims on behalf of the Indians of California", approved May 18, 1928 (45 Stat. L. 602), which was, on page 4, line 7, to strike out all after the words "set-off" down to and including "Indians", in line 10.

Mr. ROBINSON. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

AMENDMENT OF THE NATIONAL DEFENSE ACT

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 2460) to amend the act of June 6, 1924, entitled "An act to amend in certain particulars the National Defense Act of June 3, 1916, as amended, and for other purposes", which was, on page 1, line 10, after the word "States", to insert "or as commissioned officers, regular, temporary, or reserve, of the Navy or Marine Corps."

Mr. WALSH. I move that the Senate concur in the amendment of the House.

Mr. HALE. Mr. President, I should like to ask the Senator what the bill is.

Mr. WALSH. This is a bill which extends certain privileges to Reserve officers of the Army, and the House added an amendment including naval officers. That is the amendment which has been accepted.

The VICE PRESIDENT. The question is on the motion of the Senator from Massachusetts.

The motion was agreed to.

AMENDMENT OF WAR MINERALS RELIEF ACT

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 1567), to amend section 5 of the act of March 2, 1919, generally known as the War Minerals Relief Act, which were, on page 1, line 3, to strike out "person" and insert "claimant"; on page 2, line 4, after "and" to insert "any newly presented evidence or facts not before his predecessors and, except where in conflict with the provisions of this act"; on page 2, lines 5 and 6, to strike out "Supreme Court of the District of Columbia" and insert "courts"; and on page 2, line 13, after "claimant", to insert:

The rights of any corporation which filed a claim under section 5 of the act of March 2, 1919, but which ceased to exist at any time after filing such claim, shall be held and considered to descend—

(1) to the persons who at the time such corporation ceased to exist were entitled under the laws of the State of incorporation to share in the assets of such corporation upon the dissolution thereof, or if any such person be dead, or dies after the enactment of this act but before he receives the benefits of this act, to his legal representative as personal property; and

(2) to any officer, director, or stockholder of such corporation at the time it ceased to exist as trustee for the persons or legal representatives referred to in clause (1); and such persons or their legal representatives and such officers, directors, and stockholders shall be entitled to the benefits of this act.

Mr. HAYDEN. Mr. President, it is the intent and purpose of the House amendment to enable only those small corporations, which through failure to receive notice of their rights under the 1929 amendment to the War Minerals Relief Act, to directly appear before the Department of the Interior and have their claims for out-of-pocket losses reviewed, although they did not file under the 1929 amendment.

As stated on the floor of the House, only about 94 claims are involved under the entire bill and the total payments will not exceed $75,000.

I move that the Senate concur in the amendments of the House.

The motion was agreed to.

REGULATION OF INTERSTATE TRAFFIC IN BITUMINOUS COAL

Mr. NEELY. Mr. President, I again renew my motion to proceed to the consideration of House bill 12800, the bituminous coal conservation bill.

Mr. McNARY. A parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. McNARY. The Senator from West Virginia now proposes to proceed to the consideration of what is known as the Guffey coal bill. At not later than 3 o'clock by unanimous consent we are to vote upon this particular motion, are we not?

The VICE PRESIDENT. As to whether the Senate will take up the bill.

Mr. McNARY. At not later than 3 o'clock the Senate is to vote on that question. Will that action not be taken automatically without a motion?

The VICE PRESIDENT. The motion would automatically come before the Senate, but at any time prior to 3 o'clock any Senator may make a motion to take the bill up, because the unanimous consent provided that the vote should be taken at not later than 3 o'clock.

Mr. McNARY. Then the motion made at this time, while it is a renewal of the motion made earlier in the week, would not foreclose further debate?

The VICE PRESIDENT. Not at all.

THE GRAZING ACT

Mr. ADAMS. Mr. President—

The VICE PRESIDENT. Does the Senator from West Virginia yield to the Senator from Colorado?

Mr. NEELY. I yield.

Mr. ADAMS. I desire to ask unanimous consent that the Senate proceed to the consideration of House bill 10094. I assume the request would require laying aside temporarily the pending motion, though not the order which has been made to take a vote at 3 o'clock.

I may say that when this bill was reached on the regular call of the calendar it was objected to, but the objection has since been withdrawn. The objection which was made by the Senator from Arizona [Mr. ASHURST] was withdrawn yesterday by an open statement. The bill involves a necessary correction of the situation with reference to grazing lands and conservation of our soil.

The VICE PRESIDENT. The Chair will say to the Senator from West Virginia [Mr. NEELY] that in case he yields to the Senator from Colorado the Chair will again recognize him to renew his motion.

Mr. McNARY. Mr. President, I have no objection to the consideration of the bill now suggested by the Senator from Colorado. There was some objection to the bill, but I think it has been wholly dissipated. Inasmuch as the Senate is to vote at 3 o'clock or sooner upon a unanimous-consent proposal there should be no transaction of business between now and the time that vote is taken. Therefore I object to any legislation other than that provided for in the unanimous-consent agreement.

The VICE PRESIDENT. The Senator from Oregon gives notice of objection to any legislation other than that provided for in the unanimous-consent agreement between now and 3 o'clock.

The question is on the motion of the Senator from West Virginia that the Senate proceed to the consideration of what is known as the Guffey coal bill.

Mr. ADAMS subsequently said:

Mr. President, I ask unanimous consent for the immediate consideration of House bill 10094. A few moments ago I endeavored to secure unanimous consent for its consideration, but the Senator from Oregon [Mr. MCNARY] then said he would not permit consideration of any legislation until the general unanimous-consent agreement had been carried out. He said there was no objection to the bill except that he did not want to interfere at that time with the program. There will be no discussion about the bill. It is important that it should go to the House and have an amendment concurred in there.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Colorado?

There being no objection the Senate proceeded to consider the bill (H. R. 10094) to amend section 1 of the act entitled "An act to stop injury to the public grazing lands by preventing overgrazing and soil deterioration; to provide for their orderly use, improvement, and development; to stabilize the livestock industry dependent upon the public range; and for other purposes", approved June 28, 1934 (48 Stat. 1269), which had been reported from the Committee on Public Lands and Surveys with an amendment, to strike out all after the enacting clause and insert:

That the first sentence of section 1 of the act entitled "An act to stop injury to the public grazing lands by preventing overgrazing and soil deterioration, to provide for their orderly use, improvement, and development, to stabilize the livestock industry dependent upon the public range, and for other purposes", approved June 28, 1934, is amended by striking out the words "eighty million" and inserting in lieu thereof the words "one hundred and forty-two million."

SEC. 2. Section 7 of such act is amended to read as follows:

"SEC. 7. That the Secretary of the Interior is hereby authorized, in his discretion, to examine and classify any lands withdrawn or reserved by Executive order of November 26, 1934 (no. 6910), and amendments thereto, and Executive order of February 5, 1935 (no. 6964), or within a grazing district, which are more valuable or suitable for the production of agricultural crops than for the production of native grasses and forage plants, or more valuable or suitable for any other use than for the use provided for under this act, or proper for acquisition in satisfaction of any outstanding lieu, exchange or script rights or land grant, and to open such lands to entry, selection, or location for disposal in accordance with such classification under applicable public-land laws, except that homestead entries shall not be allowed for tracts exceeding 320 acres in area. Such lands shall not be subject to disposition, settlement, or occupation until after the same have been classified and opened to entry: *Provided*, That locations and entries under the mining laws, including the act of February 25, 1920, as amended, may be made upon such withdrawn and reserved areas without regard to classification and without restrictions or limitation by any provision of this act. Where such lands are located within grazing districts reasonable notice shall be given by the Secretary of the Interior to any grazing permittee of such lands. The applicant, after his entry, selection, or location is allowed, shall be entitled to the possession and use of such lands: *Provided*, That upon the application of any applicant qualified to make entry, selection, or location, under the public-land laws, filed in the land office of the proper district, the Secretary of the Interior shall cause any tract to be classified, and such application, if allowed by the Secretary of the Interior, shall entitled the applicant to a preference right to enter, select, or locate such lands if opened to entry as herein provided."

SEC. 3. Section 8 of such act is amended to read as follows:

"SEC. 8. (a) That where such action will promote the purposes of the district or facilitate its administration, the Secretary is authorized, for the purpose of this act only, to accept on behalf of the United States any lands within the exterior boundaries of a grazing district as a gift.

"(b) When public interests will be benefited thereby the Secretary is authorized to accept on behalf of the United States title to any privately owned lands within or without the boundaries of a grazing district, and in exchange therefor to issue patent for not to exceed an equal value of surveyed grazing district land or of unreserved surveyed public land in the same State or within a distance of not more than 50 miles within the adjoining State nearest the base lands.

"(c) Upon application of any State to exchange lands within or without the boundaries of a grazing district the Secretary of the Interior shall, and is hereby directed to proceed with such exchange at the earliest practicable date and to cooperate fully with the State to that end, but no State shall be permitted to select lieu lands in another State. The Secretary of the Interior shall accept on behalf of the United States title to any State-owned lands within or without the boundaries of a grazing district, and in exchange therefor issue patent to surveyed grazing district land not otherwise reserved or appropriated or unappropriated and unreserved surveyed public land; and in making such exchange the Secretary is authorized to patent to such State, land either of equal value or of equal acreage: *Provided*, That no State shall select public lands in a grazing district in furtherance of any exchange unless the lands offered by the State in such exchange lie within such grazing district and the selected lands lie in a reasonably compact body which is so located as not to interfere with the administration or value of the remaining land in such district for grazing purposes as set forth in this act.

"When an exchange is based on lands of equal acreage and the selected lands are mineral in character, the patent thereto shall contain a reservation of all minerals to the United States; and in making exchanges of equal acreage the Secretary of the Interior is authorized to accept title to offered lands which are mineral in character, with a mineral reservation to the State.

"For the purpose of effecting exchanges based on lands of equal acreage the identification and area of unsurveyed school sections may be determined by protraction or otherwise. The selection by the State of lands in lieu of any such protracted school sections shall be a waiver of all of its right to such sections.

"(d) Before any such exchange under this section shall be effected, notice of the contemplated exchange, describing the lands involved, shall be published by the Secretary of the Interior once each week for 4 successive weeks in some newspaper of general circulation in the county or counties in which may be situated the lands to be accepted, and in the same manner in some like newspaper published in any county in which may be situated any lands to be given in such exchange; lands conveyed to the United States under this act shall, upon acceptance of title, become public lands, and if located within the exterior boundaries of a grazing district they shall become a part of the district within the boundaries of which they are located: *Provided*, That either party to an exchange based upon equal value under this section may make reservations of minerals, easements, or rights of use. Where reservations are made in lands conveyed either to or by the United States the right to enjoy them shall be subject to such reasonable conditions respecting ingress and egress and the use of the surface of the land as may be deemed necessary. Where mineral reservations are made by the grantor in lands conveyed by the United States it shall be so stipulated in the patent, and any person who prospects for or acquires the right to mine and remove the reserved mineral deposits may enter and occupy so much of the surface as may be required for all purposes incident to the prospecting for, mining, and removal of the minerals therefrom, and may mine and remove such minerals, upon payment to the owner of the surface for damages caused to the land and improvements thereon. No fee shall be charged for any exchange of land made under this act except one-half of the cost of publishing notice of a proposed exchange as herein provided."

SEC. 4. Section 10 of such act is amended to read as follows:

"SEC. 10. That, except as provided in sections 9 and 11 hereof, all moneys received under the authority of this act shall be deposited in the Treasury of the United States as miscellaneous receipts, but 25 percent of all moneys received under this act during any fiscal year is hereby made available, when appropriated by the Congress, for expenditure by the Secretary of the Interior for the construction, purchase, or maintenance of range improvements, and 50 percent of the money received under this act during any fiscal year shall be paid at the end thereof by the Secretary of the Treasury to the State in which the grazing districts or the lands producing such moneys are situated, to be expended as the State legislature of such State may prescribe for the benefit of the county or counties in which the grazing

districts or the lands producing such moneys are situated: *Provided*, That if any grazing district or any leased tract is in more than one State or county, the distributive share to each from the proceeds of said district or leased tract shall be proportional to its area in said district or leased tract."

SEC. 5. Section 15 of such act is amended to read as follows:

"SEC. 15. The Secretary of the Interior is further authorized, in his discretion, where vacant, unappropriated, and unreserved lands of the public domain are so situated as not to justify their inclusion in any grazing district to be established pursuant to this act, to lease any such lands for grazing purposes, upon such terms and conditions as the Secretary may prescribe: *Provided*, That preference shall be given to owners, homesteaders, lessees, or other lawful occupants of contiguous lands to the extent necessary to permit proper use of such contiguous lands, except, that when such isolated or disconnected tracts embrace 760 acres or less, the owners, homesteaders, lessees, or other lawful occupants of lands contiguous thereto or cornering thereon shall have a preference right to lease the whole of such tract, during a period of 90 days after such tract is offered for lease, upon the terms and conditions prescribed by the Secretary."

SEC. 6. Such act is further amended by adding the following new section:

"SEC. 17. The President shall have power, with the advice and consent of the Senate, to select a Director of Grazing. The Secretary of the Interior may appoint such Assistant Directors and such other employees as shall be necessary to administer this act. The Civil Service Commission shall give consideration to the practical range experience in public-land States of the persons found eligible for appointment by the Secretary as Assistant Directors or graziers. No Director of Grazing, Assistant Director, or grazier shall be appointed who at the time of appointment or selection has not been for 1 year a bona-fide citizen or resident of the State or of one of the States in which such Director, Assistant Director, or grazier is to serve."

TITLE II—BADLANDS NATIONAL MONUMENT

SECTION 1. The boundaries of the Badlands National Monument, as established by the act of March 4, 1929 (45 Stat. 1553), shall be, and are hereby, extended to include such lands adjacent or contiguous thereto, in the State of South Dakota, including, but not being restricted to, lands designated as submarginal by the Resettlement Administration, as may be determined by the President, by proclamation, within 5 years following the approval of this act, to be necessary for the proper rounding out of the boundaries of said monument or the administration thereof, providing the entire area of such monument shall not exceed 250,000 acres.

SEC. 2. That the provisions of the act of August 25, 1916, entitled "An act to establish a National Park Service, and for other purposes", as amended, are hereby made applicable to and extended over such lands as may be added to the monument under the authority of the foregoing section.

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

The title was amended so as to read: "An act to amend the act entitled 'An act to stop injury to the public grazing lands by preventing overgrazing and soil deterioration; to provide for their orderly use, improvement, and development; to stabilize the livestock industry dependent upon the public range; and for other purposes', approved June 28, 1934 (48 Stat. 1269)."

CONTRACTS WITH INDIAN TRIBES

The PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the joint resolution (S. J. Res. 177) to define the term of certain contracts with Indian tribes, which was, on page 2, after line 9, to insert:

SEC. 2. Any existing valid contract heretofore made and approved pursuant to any act of Congress by any tribe, band, or group of Indians with an attorney or attorneys for the rendition of services in the prosecution of claims against the United States under authority of which suit or suits have been filed, and which contains a limitation of time for the completion of the services to be performed may be continued in full force unless a subsequent contract dealing with the same subject matter has been made and approved.

Mr. THOMAS of Oklahoma. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

TERM OF COURT AT BENTON, ILL.

Mr. DIETERICH. Mr. President, from the Committee on the Judiciary I report back favorably, without amendment, House bill 12557, to provide for a term of court at Benton, Ill., and I ask for its immediate consideration. The bill merely changes a term of court in the eastern district of the State of Illinois. There is no objection to the bill.

The PRESIDENT pro tempore. The Senator from Illinois asks unanimous consent for the immediate consideration of a House bill. Is there objection?

Mr. MCNARY. Mr. President, I announced a moment ago that I should object to any bills being taken up until the disposition of the business provided for by the unanimous-consent agreement.

The PRESIDENT pro tempore. The Senator from Oregon made such an announcement.

Mr. DIETERICH. Mr. President, this is a matter peculiarly local in its nature.

Mr. MCNARY. I ask for the regular order.

The PRESIDENT pro tempore. The regular order has been demanded.

The question is on the motion of the Senator from West Virginia [Mr. NEELY].

REGULATION OF INTERSTATE COMMERCE IN BITUMINOUS COAL

The Senate resumed the consideration of the bill (H. R. 12800) to regulate interstate commerce in bituminous coal, and for other purposes.

Mr. NEELY. Mr. President, I cannot yield now for any other purpose than for the discussion of the bituminous-coal bill. I now yield to the Senator from Pennsylvania [Mr. GUFFEY].

Mr. GUFFEY. In January 1935 it was my privilege to introduce in the Senate a bill for the regulation of the bituminous-coal industry. After lengthy hearings before Senate and House committees, and in spite of bitter opposition to the measure, that bill, with certain modifications, became law on August 30, 1935, as the Bituminous Coal Conservation Act of 1935.

Following the decision in the Carter case, in which the United States Supreme Court rendered a decision on May 18, 1936, by a divided Court, it was again my privilege to introduce the Bituminous Coal Act of 1936, which is a restatement in the main of the law previously enacted with the deletion of the provisions held objectionable by the Court.

My boyhood days were spent in the coal-mining districts of western Pennsylvania. Prior to my election as a Member of this body my business experience gave me an intimate insight into the problems of the bituminous-coal industry, and it was with a sympathetic understanding of those problems and a belief that solution could be found only in regulation by the Federal Government that I submitted the original bill in 1935.

From my study of the bituminous-coal industry, from numerous contacts with men engaged in that industry, and from my personal analysis of its problems, I have long been convinced that the bituminous-coal industry is utterly incapable of self-government; that a continuance of so-called free competition in the industry will lead only to utter chaos; that solution of the industry's problems does not lie in action, jointly or independently, by coal-producing States; and that the welfare of the industry and the national interest require regulation of bituminous coal by the Federal Government.

Today bituminous coal is produced in more than 28 States and serves as the major source of fuel and energy for our people and our industries. Four hundred thousand men derive their livelihood from the producing branch of the industry alone. More than 80 percent of the coal produced moved in interstate commerce, and to the railroads bituminous coal is the most profitable commodity transported.

Industrially, coal is essential to the successful operation of the steel and chemical industries, and in times of war ample and dependable supplies of coal are a necessity to the national defense. Nature has endowed our country with enormous coal resources, but, with utter selfishness, those engaged in the industry have made it a sorry mess.

The records of States and Nation are replete with the findings and recommendations of commissions. Plans have been devised by eminent students of government and economics, but meanwhile the industry has continued in its course of unrestrained competition. To those of you who are

unfamiliar with the history of the industry I recommend a careful reading of the record in the Carter case.

Nowhere is more clearly depicted the downward course of a Nation-wide industry under free and unrestricted competition. Not as a threat, but merely as a statement of what will ensue, I predict that failure to enact this bill will result in a continuance of the vicious cycle of price cutting and wage reductions until the Government is faced with another crisis in the industry.

It is not my purpose to review the provisions of the pending bill. Sufficient to say that, with minor changes made in the light of administrative experience, the proposed law embodies the provisions of the Bituminous Coal Conservation Act of 1935, from which, however, have been deleted all provisions relating to labor in order to meet the limitations imposed upon the power of Congress by the Supreme Court in its decision in the Carter case.

This bill has been the subject of bitter controversy, and I believe that I can render no better service to this body in its consideration of the bill than to review the positions of those opposed to the measure.

First, I would list those persons who, as a matter of principle, oppose the intervention of Government in business. In theory, their position is sound. Practically, that position is and will continue to be indefensible so long as human nature remains unchanged and the profit motive continues to dominate the actions of man.

From the very beginning of our Nation, government has intervened in business. Some enterprises, such as handling of the mails, have been taken over entirely by the Federal Government.

Many other enterprises have been regulated in varying degrees as public interest has demanded—railroads, telephone companies, power companies, banks, insurance companies. These are only a few of the instances where Government has found it necessary to intervene in order to protect the public interest, and I venture to predict that as our social and economic life increases in complexity more and more must the force and voice of government be heard in business. I do not share the fear of those who point with trembling finger to a possible complete regimentation of business. I cannot sympathize with those who seek to terrorize the people of our country with the specter of bureaucracy. I retain my faith in the common sense of the American people and their ability to limit the functions of government to the degree necessary for preservation of the principles of democracy. I accept quite calmly the trend toward more definite regulation which necessarily comes with the growth of our Nation, but I cannot share the hysteria which some opponents of this measure voice.

As a second group of opponents to the bill I list those who oppose price regulation as a method of exercising government control over business. These opponents point with pride to the progress which our Nation has made under the so-called free competitive system.

"Let competition be free and unrestrained", they say, "and depend upon the antitrust laws to safeguard the interests of our people."

These men seem to forget the costly lessons which our Nation learned from its experience with rugged individualism. In answer I merely direct their attention to the fact that in no other industry has competition been so free and unrestrained in recent years as in bituminous coal, and I ask, What has been the result?

Each year, in the mining of coal, one-third of the amount produced is wasted and as a result future generations are deprived of that amount of our greatest natural resource. A study of the industry in recent years discloses innumerable bankruptcies among operators—losses of millions of dollars to investors and creditors—thousands of miners and their families living on starvation wages, American standards of living utterly ignored with the result that social problems are created for government to solve, unfair and unethical methods of doing business tolerated and even advocated within the industry, and, more dangerous than all, a very definite trend toward monoply which we, the advocates of democracy, so bitterly condemn.

Let us analyze the situation in the bituminous-coal industry today. In the year 1934 approximately 359,000,000 tons of coal were produced in this country from more than 6,000 mines. In that same year 68 companies produced one-third of the entire tonnage of the Nation. And I venture the prediction that if free and unrestrained competition is continued indefinitely there will be a constantly increasing trend toward the concentration of coal production and coal reserves in the hands of a few financial interests.

The PRESIDENT pro tempore. The hour of 3 o'clock having arrived, under the unanimous-consent agreement the question is on the motion of the Senator from West Virginia [Mr. NEELY] that the Senate proceed to the consideration of House bill 12800, known as the Guffey coal bill.

Mr. NEELY. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Adams	Connally	Lewis	Reynolds
Ashurst	Copeland	Lonergan	Robinson
Bachman	Davis	McAdoo	Russell
Bailey	Dieterich	McGill	Schwellenbach
Barkley	Duffy	McKellar	Sheppard
Benson	Frazier	McNary	Shipstead
Bilbo	George	Maloney	Steiwer
Black	Gerry	Metcalf	Thomas, Okla.
Bone	Gibson	Minton	Thomas, Utah
Borah	Glass	Moore	Truman
Brown	Guffey	Murphy	Tydings
Bulow	Hale	Murray	Vandenberg
Burke	Harrison	Neely	Van Nuys
Byrd	Hastings	Norris	Wagner
Byrnes	Hatch	Nye	Walsh
Capper	Hayden	O'Mahoney	Wheeler
Caraway	Holt	Pittman	
Carey	King	Pope	
Clark	La Follette	Radcliffe	

The PRESIDENT pro tempore. Seventy-three Senators having answered to their names a quorum is present.

The question is on agreeing to the motion of the Senator from West Virginia [Mr. NEELY] that the Senate proceed to the consideration of House bill 12800.

Mr. NEELY. I ask for the yeas and nays.

The yeas and nays were ordered, and the legislative clerk proceeded to call the roll.

Mr. BILBO (when his name was called). I have a general pair with the senior Senator from Iowa [Mr. DICKINSON]. I am informed that if he were present he would vote "nay." If I were permitted to vote I should vote "yea." I withhold my vote.

Mr. CAPPER (when his name was called). On this question I am paired with the senior Senator from Michigan [Mr. COUZENS], who is unavoidably absent. If he were present he would vote "nay." If I were permitted to vote I should vote "yea."

Mr. CAREY (when his name was called). I have a pair with the senior Senator from Ohio [Mr. BULKLEY]. If he were present he would vote "yea." I find that I can transfer that pair to the Senator from South Dakota [Mr. NORBECK], which I do, and will vote. I vote "nay."

Mr. DAVIS (when his name was called). I have a general pair with the junior Senator from Kentucky [Mr. LOGAN]. I transfer that pair to the junior Senator from Maine [Mr. WHITE]. If the Senator from Kentucky were present he would vote "yea." If the Senator from Maine were present he would vote "nay." I am at liberty to vote and vote "yea."

Mr. TRUMAN (when his name was called). On this question I have a pair with the senior Senator from New Jersey [Mr. BARBOUR]. If he were present he would vote "nay." If I were permitted to vote I would vote "yea."

The roll call was concluded.

Mr. McKELLAR (after having voted in the affirmative). I find that my pair, the Senator from Delaware [Mr. TOWNSEND] is not present. As I am unable to secure a transfer, I withdraw my vote.

Mr. WALSH. My colleague [Mr. COOLIDGE] is unavoidably absent. If present he would vote "nay."

Mr. LEWIS. I announce that the Senator from Alabama [Mr. BANKHEAD], the Senator from Colorado [Mr. COSTIGAN], and the Senator from Nevada [Mr. MCCARRAN] are detained from the Senate on account of illness. The Senator from North Carolina [Mr. BAILEY], the Senator from Ohio [Mr. DONAHEY], the Senator from Oklahoma [Mr. GORE], the Senator from Kentucky [Mr. LOGAN], and the Senators from Louisiana [Mrs. LONG and Mr. OVERTON] are necessarily detained.

The Senator from Ohio [Mr. BULKLEY], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Florida [Mr. LOFTIN], and the Senator from South Carolina [Mr. SMITH] are absent attending the funeral of the late Senator FLETCHER.

Mr. HATCH. My colleague [Mr. CHAVEZ] is paired on this question with the Senator from Massachusetts [Mr. COOLIDGE]. If present and voting, my colleague would vote "yea", and the Senator from Massachusetts would vote "nay."

Mr. MCNARY. I desire to announce the following pairs on this question:

The Senator from New Hampshire [Mr. KEYES] with the Senator from Colorado [Mr. COSTIGAN]; and

The Senator from Vermont [Mr. AUSTIN] with the Senator from Ohio [Mr. DONAHEY].

The Senator from New Hampshire [Mr. KEYES], the Senator from Vermont [Mr. AUSTIN], the Senator from New Jersey [Mr. BARBOUR], and the Senator from Delaware [Mr. TOWNSEND], if present, would vote "nay", and the Senator from Colorado [Mr. COSTIGAN] and the Senator from Ohio [Mr. DONAHEY], if present, would vote "yea."

The Senator from California [Mr. JOHNSON] is absent on account of illness.

The result was announced—yeas 43, nays 24, as follows:

YEAS—43

Adams	Connally	Maloney	Reynolds
Ashurst	Davis	Minton	Robinson
Bachman	Guffey	Moore	Russell
Barkley	Harrison	Murphy	Schwellenbach
Benson	Hatch	Murray	Sheppard
Black	Hayden	Neely	Thomas, Okla.
Bone	La Follette	Norris	Thomas, Utah
Brown	Lewis	O'Mahoney	Van Nuys
Byrnes	Lonergan	Pittman	Wagner
Caraway	McAdoo	Pope	Wheeler
Clark	McGill	Radcliffe	

NAYS—24

Borah	Duffy	Hale	Nye
Bulow	Frazier	Hastings	Shipstead
Burke	George	Holt	Steiwer
Byrd	Gerry	King	Tydings
Carey	Gibson	McNary	Vandenberg
Copeland	Glass	Metcalf	Walsh

NOT VOTING—28

Austin	Chavez	Gore	McKellar
Bailey	Coolidge	Johnson	Norbeck
Bankhead	Costigan	Keyes	Overton
Barbour	Couzens	Loftin	Smith
Bilbo	Dickinson	Logan	Townsend
Bulkley	Dieterich	Long	Truman
Capper	Donahey	McCarran	White

So Mr. NEELY's motion was agreed to; and the Senate proceeded to the consideration of the bill (H. R. 12800) to regulate interstate commerce in bituminous coal, and for other purposes.

The PRESIDENT pro tempore. If there be no amendment to be offered, the question is, Shall the bill be engrossed and read the third time?

Mr. KING. Mr. President——

Mr. NEELY. I send to the desk an amendment, which is offered in behalf of those who favor the bill.

The PRESIDENT pro tempore. The amendment will be stated.

The CHIEF CLERK. It is proposed, on page 2, line 15, to strike out the words "Two members of the commission shall be representative of the employees of the industry, two shall be representative of the producers, and three shall have no" and insert in lieu thereof "Two members of the commission shall be experienced bituminous coal-mine workers, two shall have had previous experience as producers, but none of the members shall have any."

The PRESIDENT pro tempore. The question is on agreeing to the amendment offered by the Senator from West Virginia.

Mr. NEELY. Mr. President, the effect of this amendment, if adopted, will be to render ineligible for membership on the commission anyone who has a financial interest in the production of coal.

Mr. MCNARY. Mr. President, what is the order now about to be carried out?

The PRESIDENT pro tempore. The Senator from West Virginia [Mr. NEELY] has submitted an amendment. The adoption of the amendment is the question before the Senate.

Mr. MCNARY. Have the committee amendments been disposed of.

The PRESIDENT pro tempore. There are no committee amendments.

Mr. MCNARY. Is it the purpose of the Senator from West Virginia to explain the bill somewhat?

Mr. NEELY. It is my purpose to explain the amendments as they are offered.

Mr. MCNARY. I do not recall that anyone has offered any explanation of the bill or of the differences between the bill as now reported and the bill as it passed the last session of Congress. Is it the intention of the Senator from West Virginia to do so?

Mr. NEELY. The Senator from Oregon was evidently not listening to the able address made in part by the Senator from Pennsylvania [Mr. GUFFEY] within the last hour. He explained the bill, but was interrupted in the midst of his address by the necessity of yielding to enable the Senate to carry out the unanimous-consent agreement at the hour of 3 o'clock.

Mr. MCNARY. I appreciate that. The time was so short and the confusion in the Chamber so great that it was impossible to hear the Senator from Pennsylvania. I find that I have a very limited knowledge of the bill. The Senator from West Virginia has had much to do with legislation of this character. I should like to have him give us an outline of the bill and explain the differences between the bill now before the Senate and the bill which was enacted into law last year, which law was held to be unconstitutional.

Mr. NEELY. I suggest that the Senator from Pennsylvania [Mr. GUFFEY] complete his explanation of the bill. If the Senator from Oregon and other Senators will listen they will hear a very able explanation of the bill.

Mr. GUFFEY obtained the floor.

Mr. HOLT. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Adams	Clark	La Follette	Radcliffe
Ashurst	Connally	Lewis	Reynolds
Bachman	Copeland	Lonergan	Robinson
Bailey	Davis	McAdoo	Russell
Barkley	Dieterich	McGill	Schwellenbach
Benson	Duffy	McKellar	Sheppard
Bilbo	Frazier	McNary	Shipstead
Black	George	Maloney	Steiwer
Bone	Gerry	Metcalf	Thomas, Okla.
Borah	Gibson	Minton	Thomas, Utah
Brown	Glass	Moore	Townsend
Bulow	Guffey	Murphy	Truman
Burke	Hale	Murray	Tydings
Byrd	Harrison	Neely	Vandenberg
Byrnes	Hastings	Norris	Van Nuys
Capper	Hatch	Nye	Wagner
Caraway	Hayden	O'Mahoney	Walsh
Carey	Holt	Pittman	Wheeler
Chavez	King	Pope	

The PRESIDENT pro tempore. Seventy-five Senators having answered to their names, a quorum is present. The Senator from Pennsylvania [Mr. GUFFEY] has the floor.

Mr. HASTINGS. Mr. President, will the Senator yield?

Mr. GUFFEY. For what purpose?

Mr. HASTINGS. I desire to ask the Senator from West Virginia [Mr. NEELY] a question with respect to the bill.

Mr. GUFFEY. I yield for that purpose.

Mr. HASTINGS. My understanding is the Senate is now considering House bill 12800?

Mr. NEELY. That is correct.

Mr. HASTINGS. That bill actually never has been referred to the Committee on Interstate Commerce, has it?

Mr. NEELY. It has not. It was read twice and ordered to lie on the table.

Mr. HASTINGS. What the Senator from West Virginia proposes to offer in the way of amendments are amendments which were suggested to Senate bill 4668?

Mr. NEELY. It is my purpose to make the House bill conform to the Senate bill in every particular as the Senate bill with its amendments was reported from the Committee on Interstate Commerce.

Mr. HASTINGS. Then the various amendments which the Senator from West Virginia proposes to offer, if adopted, would make the House bill conform to the bill reported by the Senate committee?

Mr. NEELY. Identically with the Senate bill as amended by the committee and reported by the committee.

Mr. HASTINGS. I thank the Senator.

Mr. GUFFEY. Mr. President, continuing my address from the point I had reached when I yielded the floor a little while ago, the next group of opponents of this measure state that they favor some form of regulation but believe that regulation by the establishment and enforcement of minimum prices is theoretically and practically unsound. In bituminous coal today, as in other industries, Government is facing a definite and serious problem. The right of both State and Federal Government to deal with the wages and hours of labor has been denied by judicial interpretation of the Constitution, and while property remains bulwarked with all the majestic defenses of law, labor, which is equally entitled to protection of the law, is left to its own devices.

The coal industry is unique in that more than 60 percent of coal-production costs represent the wages of labor. Clearly, because of the Supreme Court's decisions, we cannot at this time protect the miner and his family directly by wage and hours regulation, but indirectly we can afford him a reasonable measure of protection by ending the reprehensible practice of price cutting by coal producers which, in the past, has always led to reduction in wage rates.

I do not intend to discuss at length the price provisions of the bill. Under its provisions prices are not fixed in the ordinary sense of the term. They include no element of profit to the producer. They are minimum prices determined by a national bituminous coal commission appointed by the President of the United States with the consent of this body, and the commission is to be guided in its work by definite standards laid down in the law which, in my judgment, are sufficiently flexible to meet actual market conditions, and which leave to the industry the highest possible degree of self-determination.

Mr. HASTINGS. Mr. President, will the Senator yield?

Mr. GUFFEY. I yield to the Senator from Delaware.

Mr. HASTINGS. What particular section of the bill refers to price fixing?

Mr. GUFFEY. I shall come to that. Let me finish this statement, please.

Briefly, we may express the fundamental principle of the bill as follows: In order to establish fair wage levels and to restore fair competitive conditions in the industry, producers of bituminous coal are prohibited from selling their product below minimum prices which are based upon production costs.

Let me turn for a moment to our last group of possible opponents—coal producers, coal miners, and coal consumers. Of those consumers who oppose enactment of this bill I ask only two questions:

Can a consumer of any commodity be heard to complain if he is required to pay for that commodity a price equivalent to its cost of production? How many coal consumers consistently sell their products below cost?

Labor in the coal industry is wholeheartedly supporting this measure. Unquestionably there is bitter disappointment because of the denial by the Supreme Court of the right to protection which labor regards as inalienable; but, believing that this bill embodies all that can be presently obtained, labor urges the necessity of immediate enactment.

To one unfamiliar with coal producers, their position with reference to this bill is difficult to explain. I call particular attention to the fact that under the Coal Conservation Act of 1935, 4,332 producers who in 1934 accounted for a tonnage of 251,000,000 tons, or 70 percent of the entire national output, evidenced their approval of the Coal Conservation Act by accepting the code; and as proof of my statement that free competition causes a definite trend toward monopoly, I call attention to a list of 20 companies, each producing more than 1,000,000 tons annually, whose aggregate production in 1934 exceeded 55,000,000 tons, or 15 percent of the national tonnage; and in their ranks I find the major opponents to this measure.

Is it significant that the Pittsburgh Coal Co., the largest commercial coal company in the United States, dominated by the Mellon interests and producing more than 10,000,000 tons annually, has voiced its opposition to Federal regulation?

Is there any deduction from the fact that the Island Creek Coal Co., a producer of more than 3,500,000 tons annually, opposes this bill?

Is it significant that the Consolidation Coal Co., having a tonnage in excess of 8,000,000 tons annually, has evidenced its bitter opposition?

Likewise, why does the Pocahontas Fuel Co., producing more than 5,000,000 tons annually, demand the right of unregulated competition?

What is the interest of the steel companies and railroads, whose opposition is silent but effective? There can be only one answer: These men demand that their private selfish interests in the coal industry shall rise above the interests of the people as a whole.

For more than a year I have listened patiently to the arguments of advocates and opponents of this measure. The advantages of free and unrestrained competition have been propounded to me. The merits of the marketing-agency plan have been detailed at length. The faults of a system of Federal regulation have been magnified. Today I am convinced beyond a doubt that the bituminous-coal industry must be regulated by Federal law; and equally am I convinced that the proposed law, as redrafted in the light of the Supreme Court's decision, is a reasonable and constitutional exercise of the power of Congress to regulate interstate commerce.

I freely admit that the measure is imperfect, as must be all laws drafted by man; and I acknowledge that in the light of administrative experience modifications must be made from time to time in the future. Nevertheless, I am firmly of the belief that the present measure will be practical and effective in regulating the coal industry, that its advantages will far outweigh its disadvantages, and that its enactment at the present session of Congress will definitely aid in the restoration to a great national industry of a reasonable degree of the peace and prosperity which it so richly deserves.

Mr. President, I ask to have printed in the RECORD at the conclusion of my remarks a list of the prominent coal companies which are opposed to the measure, comprising the producers of 55,000,000 tons annually.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

List of prominent bituminous-coal producers who did not accept the code promulgated under the Bituminous Coal Conservation Act of 1935

Name of producer:	*1934 tonnage*
Berwind-White Coal Mining Co	2,579,203
Black Star Coal Co	1,099,593
Cabin Creek Consolidated Coal Co	1,412,801
Carter Coal Co	2,126,046
Consolidation Coal Co	8,163,087
Hanna Interests	2,801,380
Hume-Sinclair Mining Co	1,243,373
Island Creek Coal Co	3,475,324
Kingston Pocahontas Coal Co	1,781,709
Madeira Hill & Co	1,176,325

List of prominent bituminous-coal producers who did not accept the code promulgated under the Bituminous Coal Conservation Act of 1935—Continued

Name of producer—Continued.	*1934 tonnage*
New River Co	2,956,000
New River & Pocahontas Coal & Coke Co	2,711,654
Pittsburgh Coal Co	10,066,131
Pocahontas Fuel Co	4,997,241
Pond Creek Pocahontas Co	1,563,104
Stonega Coke & Coal Co	1,528,079
Union Collieries Co	1,116,490
West Kentucky Coal Co	1,752,533
Westmoreland Coal Co	1,743,788
Wyatt Coal Sales Co	1,010,928
Total	55,304,789

CONTROL OF GRASSHOPPERS

Mr. McGILL. Mr. President, on yesterday evening there was passed in the House of Representatives House Joint Resolution 642, to enable the Secretary of Agriculture and the Department of Entomology to deal with the grasshopper situation as it is developing at the present time in some 23 States.

The joint resolution involves an appropriation of $250,000. No part of the appropriation is to be used, as I understand, except in expenditures for the purchase of poison bait, or the manufacture thereof, and so forth; and it is to be utilized through the Bureau of Entomology and the State agricultural colleges and by State governments cooperating with the Department of Agriculture in the administration of the measure.

I have here a letter which I received today as a result of some inquiries I have made with reference to this situation. Before I make a request, I wish to refer to some portions of the letter, in order that the Senate may have more information than it now possesses as to the necessity for the passage of the measure at this time.

The letter is from the chief of the Bureau of Entomology in the Department of Agriculture. It is written to me on this date. Among other things, the Chief of the Bureau has this to say:

> The Bureau of Entomology and Plant Quarantine has no funds to purchase and distribute bait materials for grasshopper control. The appropriation which authorized cooperation with the States for grasshopper control was only available for the fiscal years 1934 and 1935.
>
> The following summary of grasshopper infestations has been prepared from information supplied by field agents of the Bureau, cooperating State entomologists, and similar sources:
>
> Grasshoppers occur in outbreak numbers in some 23 States.

I wish the Senate to understand that is a condition developing at the present time.

> The intensity of infestations varies in the different sections. In the more northern areas eggs have just begun to hatch. The information now available indicates that the degree of infestation coincides in general with the areas where large numbers of eggs were deposited last fall.
>
> Important outbreaks occur in the following States: Montana, Kansas, Nebraska, California, Colorado, Illinois, Iowa, North Dakota, South Dakota, Oklahoma, Michigan, Idaho, New Mexico, Oregon, Utah, Wisconsin, and Wyoming.

Mr. McKELLAR. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Kansas yield to the Senator from Tennessee?

Mr. McGILL. I yield to the Senator.

Mr. McKELLAR. Is this the measure which was sent over from the House last night relative to grasshoppers?

Mr. McGILL. It was sent here yesterday evening.

Mr. McKELLAR. The joint resolution went before the Committee on Appropriations; and I had a talk with the Senator from Virginia [Mr. GLASS], the chairman of the committee, relative to it. Inasmuch as not a step or even a suggestion as to an appropriation at this late time of the year had been made regarding the problem, the Senator from Virginia felt that the committee ought not to approve the joint resolution; so, as far as I know, the committee has not done so.

Mr. McGILL. I will say to the Senator from Tennessee that personally I have not discussed this measure with the Senator from Virginia [Mr. GLASS]. I understand, however, that during the afternoon it has been discussed with him here.

Mr. McKELLAR. Yes; it has been.

Mr. McGILL. The Senator has had this letter presented to him, I think, by the Senator from Oklahoma [Mr. THOMAS]; and while I am not authorized to say what the Senator from Virginia would do, I do not believe he would object to the consideration of the joint resolution.

Mr. McKELLAR. Mr. President, in view of the conversation I had with the Senator from Virginia, I think I shall have to take up the matter with him. I hope the Senator from Kansas will continue his explanation, and let me confer with the Senator from Virginia.

Mr. McGILL. I wish the Senator from Tennessee would do so.

Mr. President, this letter goes on to show that there are urgent requests for aid from the Department of Entomology at the present time from the States of Kansas, Missouri, Oklahoma, Illinois, and Montana.

Mr. President, I, personally, have had some experience which gives me a little knowledge with reference to the destruction of crops caused by the ravages of grasshoppers when they come in large numbers in the agricultural territories of the West, the Middle West, and the Northwest.

I have today received a telegram from the State entomologist of the State of Kansas, in which he advises me that the grasshoppers are seriously injuring the crops in the State of Kansas at the present time. We feel that a condition is developing which, unless it is checked, will mean the destruction of valuable crops of the farmers not only of Kansas, but of some 23 States which have been investigated, and from which reports have been received, excerpts from which I have read, as contained in the letter to which I have just referred.

Mr. President, as I understand, it has been the custom in years gone by for the Congress to make appropriations to deal with situations such as this one, but the last appropriation made for this purpose was in 1934, and the money was used that year and part of the year 1935.

No funds are available to the Division of Entomology of the Department of Agriculture to deal with the situation at this time. My judgment, formed from letters I have received and telegrams which have come to me from people in my State, and from the information provided in the letter of the Director of the Bureau, is that unless this appropriation is made by the Congress at this time it will mean the destruction of valuable crops throughout a great area in this country.

Mr. President, I have made this brief explanation before submitting any request of the Senate in order that the importance of the measure might be clearly understood. The joint resolution involves an appropriation of only $250,000. It was passed by the House of Representatives, as I stated, last evening, after a brief discussion, without any objection.

I ask unanimous consent that the Committee on Appropriations be discharged from further consideration of House Joint Resolution 642, and that the Senate proceed to the immediate consideration of the joint resolution.

Mr. McNARY. Mr. President, I have long realized the destructive force of grasshoppers when moving in myriads. As chairman of the Committee on Agriculture and Forestry of the Senate for many years I became familiar with this subject. We made appropriations to control and destroy the pest, which kills crops and is destructive of gardens through the great intermountain country.

This matter comes before us today in a very peculiar way, inasmuch as it has not been handled by the Committee on Appropriations. The procedure is different from what has usually been followed. The bill comes from the House, and instead of going to the committee, it has gone to the desk, and is called up without any action of the Committee on Appropriations.

I shall not object to the proposed legislation, but I desire to call attention to the fact that this is an unusual procedure. I do not expect nor do I propose to sit idly by

and permit various bills to be taken off the calendar if we are to finish the session this afternoon or tonight. There are exceptional cases, and I am willing to treat this as an unusual situation in order to meet the emergency so far as I am concerned.

I desire to make it clear that I shall not permit general legislation in the way of taking orders off the calendar which have not been considered, which have no place here with the unfinished business, and which must be taken up by unanimous consent. But in view of the peculiar situation in this case I am willing to waive the rule and content myself with making this statement.

Mr. McKELLAR. Mr. President, as I told the Senator from Kansas I would do, I called the Senator from Virginia [Mr. GLASS], the chairman of the Committee on Appropriations, and he takes the position that inasmuch as this matter has not been considered by the Committee on Appropriations of the House of Representatives, and has not been considered by the Committee on Appropriations of the Senate, and cannot be considered, he feels that an objection ought to be made, and for the present I make objection.

Mr. McGILL. Mr. President, will the Senator withhold his objection a moment?

Mr. McKELLAR. Certainly.

Mr. NORRIS. Mr. President, I should like to say to the Senator that while what he says is true, my understanding was that the chairman of the Committee on Appropriations who has been consulted about this matter, would not object to it.

Mr. McKELLAR. No; he asked that objection be made.

Mr. NORRIS. As a matter of fact, assuming that we are to adjourn today—and I presume that is a fact—an objection would absolutely kill the joint resolution.

Mr. McKELLAR. That is true. Has the Senator any information from Nebraska as to the ravages of the grasshoppers?

Mr. NORRIS. Oh, no; I am getting my information from the Department of Agriculture. There are indications that some of the money might be needed in Kansas, Nebraska, California, Colorado, Illinois, Iowa, North Dakota, South Dakota, Oklahoma, Michigan, Montana, New Mexico, Wisconsin, Utah, Oregon, and Wyoming.

It is not at all probable that all of those States will be affected, but the Department of Agriculture has a rather correct idea of where this pest is likely to occur, from a knowledge of the eggs which were laid last fall, about which they have information.

I believe there are two counties in Nebraska, three in Oklahoma, and possibly counties in other States where the eggs are hatching out now, and unless something is done in those places great damage will occur. In fact, if the Senator has an idea of what a grasshopper pest means, he knows that it involves the absolute destruction of every growing thing that is on the ground.

Mr. McKELLAR. What time of the year do they usually come?

Mr. NORRIS. It depends on circumstances. I suppose in Oklahoma they are probably pretty well hatched out now. They move north gradually. It will be some time before they get to North Dakota. The eggs are laid in the fall. The danger is that in some of these localities—I do not think in all of them, but in perhaps quite a number of localities—there will be counties and parts of counties where the destruction will mean an absolute loss to the farmers of their crops.

Unless objection is withheld and we pass this legislation today, the probability is that no relief whatever can come to those localities. I appeal to the Senator not to make an objection.

Mr. McKELLAR. Mr. President, I ask the Senator from Kansas to withhold the request for the present, and let me look into it further. I hope it will be that I can withdraw the objection.

Mr. MURPHY. Mr. President, I will say to the Senator that I am deeply interested in this appropriation being made. I spoke about the matter to the Senator from Virginia [Mr. GLASS], as chairman of the Committee on Appropriations, this morning, and he said he would counsel with a number of the members of the committee, and I think it is a courtesy due the Senator from Virginia to give him an opportunity to be heard before we take any action.

Mr. McKELLAR. That is why I have asked the Senator from Kansas to withhold the request for the present.

Mr. CLARK. Mr. President, I join in the request that the Senator from Kansas withdraw the motion for the present.

Mr. McGILL. Mr. President, the course suggested by the Senator from Iowa and the Senator from Missouri and others is entirely agreeable to me, and I will renew the request at a later period in the session today. I wish to make a brief statement, however, before yielding the floor.

From information I have received recently I gather that the situation existing in the Middle West at the present time is not an ordinary condition. It is unusual, but is such as has occurred in times gone by in the history of that section when these insects have destroyed practically everything which grew throughout that section of the country. It is time that the Congress enacted a measure of this kind to take care of the situation before further damage to crops occurs.

Mr. President, it was my understanding that the chairman of the Committee on Appropriations had discussed this measure with some Senators who are in favor of it. However, I am more than willing to yield in order that they may have a further opportunity to discuss it with him.

I ask that the letter which I have received from the Director of the Bureau of Entomology, Department of Agriculture, may be printed in the RECORD as a part of my remarks.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The letter is as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF ENTOMOLOGY AND PLANT QUARANTINE,
Washington, D. C., June 20, 1936.

Hon. GEORGE McGILL,
United States Senate.

DEAR SENATOR: The following is submitted in response to your telephone request of today for immediate information on grasshopper infestations.

The Bureau of Entomology and Plant Quarantine has no funds to purchase and distribute bait materials for grasshopper control. The appropriation which authorized cooperation with the States for grasshopper control was only available for the fiscal years 1934 and 1935.

The following summary of grasshopper infestations has been prepared from information supplied by field agents of the Bureau, cooperating State entomologists, and similar sources:

Grasshoppers occur in outbreak numbers in some 23 States. The intensity of infestation varies in the different sections. In the more northern areas, eggs have just begun to hatch. The information now available indicates that the degree of infestation coincides in general with the areas where large numbers of eggs were deposited last fall.

Important outbreaks occur in the following States: Montana, Kansas, Nebraska, California, Colorado, Illinois, Iowa, North Dakota, South Dakota, Oklahoma, Michigan, Idaho, New Mexico, Oregon, Utah, Wisconsin, and Wyoming. Conditions as to infestation are perhaps more severe in Iowa, Nebraska, and Kansas. Urgent requests for aid have, however, been received from Missouri, Oklahoma, Illinois, and Montana.

In some 30 to 40 counties in Kansas grasshoppers are more abundant than have been seen for many years.

In about 20 counties of eastern Nebraska the infestation is moderate to heavy and in about 10 counties in the western half of the State similar conditions occur. Small scattered infestations are also appearing in other counties.

Over 60 cars of bait have already been used in Iowa. Part of this is the unused portion of bait secured under previous Federal appropriations. The unused portion of Federal bait in Iowa has been augmented by transfer of some which had previously been allotted to Minnesota.

An unexpected development occurred in Illinois where a heavy infestation exists on a tract of 5,000 to 8,000 acres.

The infestation in Oklahoma is in the northern section of the State and includes Noble, Kay, and Garfield Counties. Reports of damage have also been received from Grant and Pawnee Counties.

In the more southern areas where outbreaks occur the grasshoppers hatched early and have spread into the fields. In these sections they are now about half grown and cover more area. Therefore, in these sections more bait will be required to protect the crops than if the work had been carried on earlier in the season.

Yours very truly,

S. A. ROHWER,
Acting Chief of Bureau.

DEPENDENTS OF JAMES B. KILEY

Mr. COPELAND. Mr. President, I apologize to the Senator for requesting the consideration of two bills out of order, but I have been in a conference all day and I must return to it. I ask unanimous consent for the present consideration of House bill 9191, which has passed the House and has been unanimously, favorably reported by the Committee on Claims.

There being no objection, the bill (H. R. 9191) for the relief of the dependents of James B. Kiley was considered, ordered to a third reading, read the third time, and passed.

PRELIMINARY EXAMINATION OF INTRACOASTAL WATERWAY IN FLORIDA

Mr. COPELAND. Mr. President, I ask for immediate consideration of House bill 12458. Somewhere there is a Senate bill which corresponds to it, which has been lost.

The PRESIDENT pro tempore. The Chair lays before the Senate House bill 12458.

The bill (H. R. 12458) authorizing a preliminary examination of the intracoastal waterway throughout Broward County, Fla., was read twice by its title.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered, ordered to a third reading, read the third time, and passed.

INVESTIGATION OF OCEAN TRADE ROUTES

Mr. BARKLEY. Mr. President, I ask unanimous consent for the immediate consideration of Senate Resolution 307.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the Senate proceeded to consider the resolution (S. Res. 307) providing for an investigation of the ocean trade routes between the United States and South America, submitted by Mr. BARKLEY on May 26, 1936, which had been reported from the Committee to Audit and Control the Contingent Expenses of the Senate with amendments, on page 1, line 5, after the word "America" to insert "and between ports of the United States and South Africa"; and on page 2, line 19, after the word "exceed" to strike out "$20,000" and insert in lieu thereof "$5,000", so as to make the resolution read:

Resolved, That a special committee of five Senators, to be appointed by the President of the Senate, is authorized and directed to make a full and complete investigation of the ocean trade routes between ports of the United States and South America, and between ports of the United States and South Africa, and to investigate the service now maintained on such routes, the contracts, transactions, and obligations between the United States of America and any steamship line and its trustees, the operation of all American-flag services on such routes, the necessity or advisability of the construction of additional combination cargo and passenger ships for such routes, and what obligations, legal or moral, exist on the part of the United States toward security holders of any steamship line or other operators on account of existing ocean-mail contract or contracts or other transactions heretofore had between the United States of America and any such line; and shall investigate and report upon the recommendations contained in the report of the Secretary of Commerce transmitted to the President of the Senate by the Acting Secretary of Commerce on February 10, 1936.

For the purposes of this resolution the committee, or any duly authorized subcommittee thereof, is authorized to hold such hearings, to sit and act at such times and places during the session and recesses of the Senate in the Seventy-fourth and succeeding Congresses, to employ such clerical and other assistants, to require by subpena or otherwise the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths, to take such testimony, and to make such expenditures within the limits of this resolution as it deems advisable. The cost of stenographic services in reporting such hearings shall not be in excess of 25 cents per hundred words. The expenses of the committee, which shall not exceed $5,000, which sum is hereby appropriated, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman.

The committee shall report to the Senate as soon as practicable the results of its investigation, together with its recommendations, if any, for necessary legislation.

The amendments were agreed to.

The resolution as amended was agreed to.

Mr. BARKLEY. I ask unanimous consent that the committee provided for in Senate Resolution 307, just adopted, may be appointed by the Vice President during the recess of the Senate if the appointment cannot be made prior to final adjournment.

The PRESIDENT pro tempore. Without objection, it is so ordered.

HERALD PUBLISHING CO.

Mr. BYRNES. Mr. President, I ask for the present consideration of Calendar No. 2574, being House bill 3777, for the relief of the Herald Publishing Co.

There being no objection, the bill (H. R. 3777) for the relief of the Herald Publishing Co., was considered, ordered to a third reading, read the third time, and passed.

REVENUE TRANSFER STAMPS

Mr. WALSH. Mr. President, I ask for the immediate consideration of Calendar No. 2565, being House bill 12324, to amend section 723 (a) of the Revenue Act of 1932, as amended. The purpose of the bill is to amend section 723 (a) of the Revenue Act of 1932, as amended, so as to relieve incorporated stock brokerage firms from a discrimination with respect to stamp taxes on deliveries and transfers of corporate stock through them which results from a ruling of counsel for the Bureau of Internal Revenue published in the Bulletin of March 9, 1936.

These stamps are sold by the Internal Revenue Bureau at one price to incorporated brokers and at another price to unincorporated brokers. The purpose of the bill is to relieve that discrimination.

Mr. McKELLAR. Has the Finance Committee passed upon the bill?

Mr. WALSH. Yes; it has been favorably reported by the Finance Committee.

Mr. McNARY. It has been considered by the Finance Committee?

Mr. WALSH. Yes; I have on my desk a poll of the committee practically unanimously approving the bill. It is a very minor bill.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered, ordered to a third reading, read the third time, and passed.

DEPORTATION OF ALIEN CRIMINALS

Mr. ROBINSON. Mr. President, there are on the calendar two bills, Senate bill 2969 and House bill 8163, having relation to the deportation of criminals and other subjects. The Senate bill was considered for several days by the Senate and no final action was taken. It does not appear that the measure can be disposed of at this time.

I ask leave to have printed in the RECORD as a part of my remarks a letter addressed to me by the Commissioner of Immigration, together with certain other statements and memoranda regarding the matter.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is as follows:

UNITED STATES DEPARTMENT OF LABOR,
IMMIGRATION AND NATURALIZATION SERVICE,
Washington, June 18, 1936.

Hon. JOSEPH T. ROBINSON,
United States Senate, Washington, D. C.

MY DEAR SENATOR ROBINSON: May I set before you the situation which will result if there is adverse action or if there is no action before the adjournment of Congress on the Kerr-Coolidge bill (S. 2969, H. R. 8163) which has been approved by the President, the Secretary of State, the Attorney General, and the Secretary of Labor.

(1) More than 3,000 aliens of good character will be separated from their families and deported.

They will leave behind more than 7,000 members of their immediate families, including more than 5,000 American-citizen wives and children who will for the most part become public charges.

(2) Every month's delay in strengthening the present law means that more than 500 alien criminals and illegal entries escape deportation.

At least 15,000 criminals and illegal entries have escaped during more than 2 years the passage of this legislation has been delayed. If there is no action in the present Congress this number will probably have reached 20,000 or more before legislation can be introduced and enacted in the next session.

If, however, corrective legislation is enacted at this session we will be able to avoid a mass deportation which will be an outrage to our civilization and a scandal and disgrace to America in the eyes of the world. We will also be able to deport more than three times as many alien criminals as can be deported under the present law.

Very sincerely yours,

D. W. MACCORMACK,
Commissioner.

Young Women's Christian Association, National Board.

The National Catholic Welfare Conference, representing the Catholic bishops and clergy of the United States, has endorsed the bill and more than 2,200 of the leading protestant bishops and clergy of the country have likewise given it their approval.

RESOLUTIONS OF NATIONAL ORGANIZATIONS SPECIFICALLY ENDORSING THE KERR-COOLIDGE BILL

American Bar Association.
The International Association of Chiefs of Police.

AMERICAN BAR ASSOCIATION

At a meeting of the executive committee of the American Bar Association, held at Washington, D. C., on May 6–9, 1935, upon motion, duly carried, the following resolution was adopted with the understanding that the bill was to be amended so as to provide for an interdepartmental committee, or board, composed of representatives of the Departments of State, Justice, and Labor, to pass upon cases involving extraordinary hardships:

"*Resolved*, That the executive committee of the American Bar Association favors the enactment into law of H. R. 6795, introduced in the Seventy-fourth Congress by Congressman KERR, of North Carolina, which is intended to increase the classes of undesirable aliens, particularly criminals, subject to deportation; to strengthen the Government's authority to effect deportations; and permit alleviation of certain extraordinary hardships such as separation of families or enforced termination of long-established residence in cases of aliens of good character."

Resolution adopted at the forty-second annual convention of the International Association of Chiefs of Police, Ambassador Hotel, Atlantic City, N. J., July 11, 1935

RESOLUTION REGARDING DEPORTATION OF ALIENS

Whereas the Immigration and Naturalization Service of the United States Department of Labor has been for the past 2 years engaged in an intensive study of the deportation laws and their enforcement; and

Whereas the results of this study reveal that it is imperative to give the Department of Labor powers that it now lacks, and badly needs, for the apprehension of aliens who have entered the country illegally; to make possible the deportation of many alien criminals who cannot be reached under existing laws; and to authorize the Secretary of Labor to exercise limited discretionary power in certain deportation cases, in which extreme hardship to individuals, often including American-born wives and children, is not justified or compensated by any corresponding public advantage; and

Whereas bill H. R. 8163, introduced by Congressman KERR and referred to the Committee on Immigration and Naturalization, provides for the foregoing recommendations and renders violators of State narcotic laws subject to deportation in the same manner as violators of Federal narcotic statutes; and further provides for the deportation of any alien who has been convicted in the United States within 5 years of the institution of deportation proceedings against him of a crime involving moral turpitude, even if the alien is not sentenced to imprisonment, as required under existing law, and if the deportation of the alien who has been convicted in the United States within 5 years of the institution of deportation proceedings against him of a crime involving moral turpitude, even if the alien is not sentenced to imprisonment, as required under existing law, and if the deportation of the alien who has been convicted in the United States within 5 years of the institution of deportation proceedings against him of the crime of possessing or carrying any concealed or dangerous weapon, if the deportation of such alien is in the public interest; and

Whereas the members of this association consider the above proposals necessary for the welfare and protection of the people of the United States: Now, therefore, be it

Resolved, The International Association of Chiefs of Police requests the Congress of the United States to enact the provisions of bill H. R. 8163, and that the secretary of the association send a copy of this resolution to the chairman of the Committee on Immigration and Naturalization.

RESOLUTIONS OF NATIONAL ORGANIZATIONS NOT MENTIONING THE KERR-COOLIDGE BILL BY NAME BUT URGING IMMEDIATE ACTION ON THE ALIEN PROBLEM

Chamber of Commerce resolution.
General Federation of Women's Clubs.
Executive Committee of the American Legion.

Resolution adopted at twenty-fourth annual meeting Chamber of Commerce of the United States, Washington, D. C., April 28–30, 1936

CRIME AND DEPORTATION

Definite action should be taken to free the country of alien criminals. There should be immediate extension of provisions of law for deportation to include all classes of criminal aliens convicted within 5 years of any crime involving moral turpitude, even if there was not sentence of imprisonment, aliens violating State narcotic laws, alien smugglers, and aliens convicted of possessing or carrying concealed or dangerous weapons.

On the other hand, there should be such amendment to existing law as to prevent deportation from being visited suddenly upon law-abiding aliens who have been resident in the United States for many years. There should be provision which would allow such aliens, upon a proper showing of their good character and useful lives, to remain. Any such provision, however, should contain such limitations that it may not be utilized upon behalf of any alien Communist, anarchist, criminal, or member of the immoral classes.

The General Federation of Women's Clubs, which includes more than 14,000 women's organizations throughout the country and has a membership of more than 2,000,000 at the annual council meeting on April 30, 1936, passed the following resolution:

"That the General Federation of Women's Clubs petition the Congress of the United States to pass legislation during the present session which shall strengthen the existing laws relating to the deportation of criminal aliens, making it mandatory that those aliens shall be deported who have been convicted of violating the narcotic laws, State or Federal statutes; of illegal smuggling of aliens into this country; or who shall have been convicted of crimes involving moral turpitude, carrying with it a sentence of imprisonment of a year or more, as well as those known to be habitual criminals."

[Executive committee of the American Legion, meeting at Indianapolis, May 4, 1936]

RESOLUTION ON IMMIGRATION LEGISLATION

Whereas there are pending before Congress different measures dealing with the subject of immigration; and

Whereas numerous amendments have been proposed to the pending measures by Congressmen and Senators of divergent views; and

Whereas the matter of tightening our immigration restrictions and securing stricter and more efficacious enforcement of immigration law has been at a standstill through several sessions of Congress by reason of the widely divergent views of Congressmen and Senators and the diversion of strength among opposing groups; and

Whereas it appears certain the stalemate will continue and no beneficial immigration legislation will be obtained at this session of Congress if the American Legion continues to insist upon the passage of legislation embodying the full program endorsed at the St. Louis national convention; and

Whereas it appears that urgently needed restrictions and enforcement measures can be obtained if the American Legion yields in part and urges a compromise; and

Whereas the Americanism commission has reached the conclusions above recited, after hearing the subject discussed at length by E. J. Shaughnessy, Deputy Commissioner of Immigration and Naturalization, Department of Labor, the national commander and the national legislative director: Now, therefore, be it

Resolved, That the national Americanism commission recommends to the national executive committee that the legislative director of the American Legion be authorized and directed to endeavor to secure at this session of Congress the passage of an immigration act embodying so much of the program endorsed at the St. Louis convention as will not bar immediate passage and which act, in his judgment, will effect a substantial betterment of existing law.

REVIEW OF LEGISLATION ENACTED DURING PRESENT ADMINISTRATION

Mr. ROBINSON. Mr. President, I also ask leave to have printed in the RECORD a comprehensive statement and review of the legislation enacted during the present administration, the statement to be printed in the RECORD within the time limit prescribed.

The PRESIDENT pro tempore. Without objection, it is so ordered.

CORA AKINS

Mr. GEORGE. Mr. President, I ask unanimous consent for the present consideration of calendar no. 2580, being House bill 2335, a special relief bill involving a very small amount. It is for the relief of Cora Akins. The bill came over from the House, and has been favorably reported by the Committee on Claims.

Mr. McNARY. Mr. President, it is not a pleasant duty for me to object to the consideration of a bill at this time, but I must do so. If we are going through the calendar let us go through the calendar in order that every Senator may have an equal opportunity and advantage. I am willing, as I stated a little while ago, to take up bills that are highly emergent in character, but if we start in with one relief bill we will soon have 30 or 40 or 50 being considered. I do not know where the end will be.

I suggest to the Senator from Arkansas that if he desires to have the calendar gone through that is one thing; but if we are going to take up one item after another in one order and exclude others, that is a different proposition. For myself, I shall object to going through the calendar piece by piece and bill by bill without any idea of the logic involved or the merits of the various propositions.

I think it was rather understood, according to the RECORD last evening, that when we agreed to the two conference reports there would be a very great effort made to get through with the work of the Senate today.

Mr. ROBINSON. Mr. President, to proceed to the consideration of the calendar would displace the unfinished business. I do not desire that that be done, and I do not believe the Senate would desire it to be done.

Mr. McNARY. Mr. President, let me ask the Senator from Georgia a question. The bill was called up on the calendar a few days ago and doubtless there were objections or the bill would have passed.

Mr. GEORGE. Mr. President, if there be nothing else done by unanimous consent it is quite agreeable to me. However, we have been passing bills all afternoon. I withdraw my request and enter now a statement that I shall object to anything else by unanimous consent.

Mr. McNARY. I wish to be eminently fair to the Senator from Georgia. If the bill is a new claim and presents an emergency situation I should be very glad to have the Senator so declare himself.

Mr. GEORGE. This is an emergency bill. It involves a very small amount of money. If it had to be passed again through both Houses of Congress it would delay the matter more than a year.

Mr. McNARY. Was objection made to it at the last call of the calendar?

Mr. GEORGE. No. It was not at that time on the calendar for the reason that I did not have the time, being on the conference committee, to get it before the committee and secure action. It is a House bill. It is not a Senate bill.

Mr. McNARY. Mr. President, in view of the statement of the Senator from Georgia, I shall withdraw my objection to this one bill.

Mr. GEORGE. I thank the Senator.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered, ordered to a third reading, read the third time, and passed.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Haltigan, one of its reading clerks, announced that the House had passed without amendment the following Senate bill and joint resolution:

S. 4634. An act to provide for the selection of certain lands in the State of California for the use of the California State park system; and

S. J. Res. 115. Joint resolution designating the last Sunday in September as "Gold Star Mother's Day", and for other purposes.

The message also announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H. R. 7736) to provide for the establishment of the Whitman National Monument.

The message further announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 2953) to provide for the inspection, control, and regulation of steam boilers and unfired pressure vessels in the District of Columbia.

The message also announced that the House had agreed to the amendments of the Senate to the bill (H. R. 8368) to enforce the twenty-first amendment.

The message further announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 11217. An act to amend section 76 of the Judicial Code, as amended, with respect to the terms of the Federal district court held at Tallahassee, Fla;

H. R. 12410. An act to amend section 8 of the act entitled "An act to establish a National Archives of the United States Government, and for other purposes", approved June 19, 1934;

H. R. 12764. An act to create a Division of Stream Pollution Control in the Bureau of the Public Health Service, and for other purposes; and

H. R. 12876. An act to waive any exclusive jurisdiction over premises of resettlement or rural-rehabilitation projects; to authorize payments to States, political subdivisions, and local taxing units in lieu of taxes on such premises; and for other purposes.

The message also announced that the House had passed the joint resolution (S. J. Res. 177) to define the term of certain contracts with Indian tribes, with an amendment, in which it requested the concurrence of the Senate.

The message further announced that the House had agreed to a concurrent resolution (H. Con. Res. 63), in which it requested the concurrence of the Senate, as follows:

Resolved by the House of Representatives (the Senate concurring), That the two Houses of Congress shall adjourn on Saturday, the 20th day of June 1936, and that when they do adjourn on said day they stand adjourned sine die.

The message also announced that the House had agreed to a resolution (H. Res. 558), as follows:

Resolved, That a committee of two Members be appointed by the House to join a similar committee appointed by the Senate to wait upon the President of the United States and inform him that the two Houses have completed the business of the present session and are ready to adjourn unless the President has some other communication to make to them.

ENROLLED BILL SIGNED

The message further announced that the Speaker had affixed his signature to the enrolled bill (H. R. 10919) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1937, and for other purposes, and it was signed by the Vice President.

REGULATION OF INTERSTATE COMMERCE IN BITUMINOUS COAL

The Senate resumed the consideration of the bill (H. R. 12800) to regulate interstate commerce in bituminous coal, and for other purposes.

Mr. VANDENBERG. Mr. President, I wish to address myself very briefly to the pending bill, the so-called Guffey coal bill.

Mr. ROBINSON. Mr. President, the Senator understands that the bill is now the unfinished business of the Senate?

Mr. VANDENBERG. Yes; and I am speaking to the unfinished business.

When the very distinguished senior Senator from West Virginia [Mr. NEELY] addressed the Senate upon this subject last night—or perhaps it was early this morning—he undertook to indicate that he has a complete monopoly of virtue, the humanities, common sense, and decency on his side of the argument; in fact, in connection with his contribution to the filibuster against his own bill he suggested that those who disagree with him upon this subject are "warts on the ship of human progress." That is a rather curious figure of speech and scarcely pursues the chaste and elegant language which the Senate ordinarily hears from the eloquent Senator from West Virginia. I find that in the RECORD, however, we are simply "warts on the body politic."

Mr. President, if this analogy is to be pursued in any degree, I should prefer to pursue it impersonally, because I would not want to be so discourteous to the Senator from West Virginia as he has been to those who happen to disagree with him on this particular issue. But I should be perfectly willing, nonetheless, to pursue the analogy, and I could say, by analogy, that when the American Government embarks upon governmental price fixing, that any such price fixing is a carbuncle on the neck of disaster. [Laughter.]

Mr. President, the Senator from West Virginia seems to think that anybody who disagrees with him on the subject of coal price fixing has lost all sense of humanity and all perspective and proportion. I would not undertake to be dogmatic on a subject of this complex and perplexing nature, but I would assert, Mr. President, that there is just as much humanity in preserving America from the Fascist formula to which the Senator from West Virginia and the Senator from Pennsylvania invite us as there is in the passage of their measure. I would undertake to say that that section of the coal industry itself which believes that the pending measure aims a death blow at it is thinking in terms of the toiler and invested capital and employment and the chance of new employment quite as much as are those who agree with the Senator from West Virginia.

Furthermore, Mr. President, when we are contemplating a measure which it is estimated may add from $200,000,000 to $400,000,000 a year to the coal bill of the ultimate consumers of the United States, I think there is something to be said about the humanitarian element involved in the proposal to impose that burden upon the ultimate consumer. No; the Senator from West Virginia cannot monopolize all virtue and all sense and humane considerations in behalf of his side of this contemplation.

I believe historically it can be indisputably demonstrated that Government price fixing, either by the Government direct or by a Government commission of the nature here indicated, has always been a colossal failure, and that it always has chiefly injured the precise commodity to which it has been attached.

What happens, Mr. President, under such circumstances? Precisely the same thing happens that happened, for instance, in connection with the Stevenson rubber plan of 1922 to 1928. The situation as to rubber at that time was such that those in control of the British rubber felt precisely as the Senator from West Virginia and the Senator from Pennsylvania now feel. As a result, a world-wide cartel was formed, under which the price of rubber was fixed.

Mr. GUFFEY. Mr. President, will the Senator yield for a question?

The PRESIDING OFFICER (Mr. VAN NUYS in the chair). Does the Senator from Michigan yield to the Senator from Pennsylvania?

Mr. VANDENBERG. Yes, I yield.

Mr. GUFFEY. I remind the Senator that under that plan, quantity and production were limited, while under the pending bill there is no proposal at all to limit the quantity of the output. The only thing we aim to do is to limit the minimum sales price based on cost of production.

Mr. VANDENBERG. Yes, Mr. President; I will point to the Senator the analogy which I am about to lay before the Senate, because it is as clear as day. What happened as a result of the operations of the Stevenson rubber plan? This

is what happened: The price of rubber, artificially fixed at a high point, induced the inventive genius of the rubber consumer to find a substitute product at a cheaper price. The great automobile industry of the United States, for example, which was the chief purchaser and consumer of rubber, immediately sought a synthetic substitute, immediately sought the recapture of old rubber, until as a result of these influences, it is interesting to note that the proportion of reclaimed rubber used relative to the volume of crude rubber increased from 25.3 percent in 1922 to about 50 percent in 1927, thus indicating that the consumers had an effective safeguard against unwarranted increase in prices.

The point I am submitting to the Senate is that the thing that happened in connection with the Stevenson rubber plan is, speaking generally, precisely the same thing that happened in connection with Brazilian valorization of coffee; precisely the same thing that happened with respect to the fixing of prices on Chilean nitrate; precisely the same thing that happened in respect to the valorization of silk in Japan; precisely the same thing that happened in respect to government-priced wheat in France. The thing that always happens under such circumstances when the law of supply and demand is deserted in respect to the price is to throw the commodity to the hazard of competition, which will destroy it if the artificial price is too high.

Mr. President, in the present instance nothing is to be done by way of controlling the price of any competitive fuel; nothing is to be done in respect to oil; nothing is to be done in respect to anthracite coal. I have no doubt that those who know the business, which I very frankly confess I do not, and who insist that this sort of a price-fixing scheme is calculated rather to jeopardize the industry and therefore its employees, than it is to help, at least have such a powerful historical background for their viewpoint that they are not entitled to the cavalier dismissal that we received last evening in the very questionable language used by the Senator from West Virginia.

Mr. President, what interests me is the science of government as it may be affected by a scheme of this character. I think we cannot sustain democracy as we know it when we sublet to anybody a direct and specific price-fixing authority.

I do not think that is democracy. I think that is the anteroom to a system which would be known in Europe as Fascism. If we proceed in respect to one commodity with a price-fixing formula, I think we are inevitably sure to find ourselves pushed down the road to a complete system of price fixing sooner or later, and when that has happened free enterprise is gone, competition is gone, and democracy is gone.

The very able Senator from Montana [Mr. WHEELER] delivered a radio address Friday night, June 5. I rather suspect that even the restless and unhappy Senator from West Virginia [Mr. NEELY], would acquit the Senator from Montana of being "a wart on the body politic." I think he would acquit the Senator from Montana of any lack of constructive and humane and humanitarian interest in the mass welfare of our citizenship. I wish to read a few things the able Senator from Montana [Mr. WHEELER] said in connection with his broadcast because they completely reflect my point of view and are stated better than I could hope to state them. I quote:

> Our American society has been based on competition, but the plain truth about it is that lately we have been rendering lip service to the competitive system, and in fact have been getting farther away from it all the time. Whether or not we are going to have the competitive system or are going to have price fixing—

I interrupt the quotation at this point long enough to say that there is no middle ground. We must take our choice between the competitive system and price fixing.

> Whether or not we are going to have the competitive system or are going to have price fixing not only by industry but by agriculture and labor and every other section of trade and industry is something the American people must choose while the choice is still left open to them.

I join the Senator from Montana in the assertion that America must choose, and this is one of the moments when America, speaking through its chosen representatives, must choose, must choose between the free competitive system and a system of price fixing which is the direct antithesis of free enterprise and democracy.

I continue the quotation from the distinguished Senator from Montana:

> Consider the implications of ultimate price fixing for trade and industry by either the Government or private groups. It radically changes our form of government.

I agree, Mr. President. The statement is literally and scrupulously correct. Price fixing for trade and industry by either the Government or private groups radically changes our form of government, and I for one am not ready to change radically our form of government, and I decline to be castigated for that opinion and that inability by the senior Senator from West Virginia.

I continue the reading——

Mr. MINTON. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Indiana?

Mr. VANDENBERG. I yield.

Mr. MINTON. If I correctly understood the Senator, he thinks price fixing would change our form of government.

Mr. VANDENBERG. Mr. President, if the Senator has followed me, he has heard me say that there must be an ultimate choice between price fixing and democracy, and I am quoting the senior Senator from Montana [Mr. WHEELER] as saying that whenever we go to a price-fixing basis for industry by either the Government or private groups, "it radically changes our form of government."

Mr. MINTON. I assume the Senator from Michigan agrees with that?

Mr. VANDENBERG. I do.

Mr. MINTON. We have been in the price-fixing business by the Government for some time, have we not?

Mr. VANDENBERG. To what does the Senator refer?

Mr. MINTON. I refer to rate making for utilities and railroads, for instance. We have been at it since back in the eighties. That is nothing in the world but price fixing.

Mr. VANDENBERG. If the Senator cannot distinguish between Government control of monopoly and price fixing granted to private industry in its own behalf, then I cannot hope to agree with him on my premise.

Mr. MINTON. Nor can I hope to agree with the Senator from Michigan. If monopoly is going to enjoy the special privileges about which the Senator is speaking, I see no reason why any industry, standing upon its own feet, with competition, may not have some kind of a system of price fixing that will prevent it from destroying itself.

Mr. VANDENBERG. I continue the quotation from the radio address of the Senator from Montana.

> The Government would be forced into a system of regimentation of industry that would not only be onerous to the people, but that might very well be inefficient. Certainly the greatest totalitarian, bureaucratic state the world has ever seen would be the result.

Mr. CONNALLY. Mr. President—

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Texas?

Mr. VANDENBERG. I yield.

Mr. CONNALLY. May I submit an inquiry to the Senator from Michigan? He is inveighing against price fixing. Does he also agree that price fixing by monopoly would be destructive of our governmental processes?

Mr. VANDENBERG. I certainly do and I will join the Senator from Texas to the utmost limit in stopping it.

Mr. CONNALLY. Does the Senator also agree that there are in America certain great monopolies which do in effect fix prices and control prices? If the Senator admits that, then let me ask which is preferable, price fixing under Government supervision, Government examination, and Government investigation, or price fixing by a lot of inordinately greedy corporations which simply fix prices to the point of all the traffic will bear?

Mr. VANDENBERG. As between the two, I prefer the former, but if I have a free choice I do not want either. At the moment I am declining one of them.

Mr. CONNALLY. The Senator is not declining the other?

Mr. VANDENBERG. Whenever the other is before me for consideration I shall decline that, too.

Mr. SCHWELLENBACH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Washington?

Mr. VANDENBERG. I yield to the Senator.

Mr. SCHWELLENBACH. Suppose the Senator were in the position of those engaged in the coal industry and those employed in the coal industry, and were not in a position to decline; then what would the Senator do?

Mr. VANDENBERG. I wish I could answer the Senator with a constructive formula for the coal business, because I concede it is in difficulty; but I frankly say to the Senator that I do not know what the answer is. I also say to the Senator, however, that if I saw a friend of mine driving his automobile toward a bad spot around a bend of the road, I should not feel called upon to build him a new road before telling him that he would break his neck if he kept on going. [Laughter.]

Mr. SCHWELLENBACH. Mr. President, will the Senator yield for one further question?

Mr. VANDENBERG. Certainly.

Mr. SCHWELLENBACH. I think the Senator recognizes the fact that the bituminous-coal industry needs assistance of some kind.

Mr. VANDENBERG. Yes.

Mr. SCHWELLENBACH. The only proposal which has been made on the subject is that which is before us. The Senator said a few minutes ago that he wished he could work out some other proposal. We know that the industry is headed directly and rapidly toward its own destruction, and this is the only proposal before us for assisting the industry. Does not the Senator feel, in a spirit of fairness toward those engaged in the industry, that they should have an opportunity to take advantage of this sole suggestion which has been made to protect them from their own destruction?

Mr. VANDENBERG. I am sorry that I do not, and I do not for the double reason, first, that I cannot escape the conclusion historically that price fixing never has been a success, and never has contributed to anything except ultimate disaster, and I must decline the invitation and opportunity, secondly, because I am unwilling to concede that a Government adventure in price fixing of this character, involving as it does the fundamental economic formula of the Nation, is a price we can afford to pay for a speculative adventure, speaking now from the viewpoint of the ultimate consumer, the American people as a whole, and our form and system of Government.

Mr. President, I wish to conclude the quotation from my able friend from Montana [Mr. WHEELER], who has entered the Chamber, because I am sorry to say I cannot very much longer engage in this enterprise. I am about to leave the city, which will be good news for my friend from West Virginia [Mr. NEELY].

The Senator from Montana suggested a plank for a political platform in the present situation in which we all find ourselves in this country. The suggested plank reads as follows:

> We believe that there is inherent in all price fixing an economic fallacy.

I agree to that 100 percent, no matter where the price-fixing authority resides.

> Prices if fixed are placed at levels so as to protect producers generally, irrespective of their efficiency.

That is a complete axiom, and nobody can get away from it.

> They are fixed at levels higher than would result from the free play of competitive forces under the law of supply and demand.

That sentence is unanswerable. I agree with it.

> In our judgment, therefore, price fixing cannot succeed because it creates and fosters the very things which tend toward depression and economic catastrophe.

I think that statement is unanswerable.

> It tends to destroy the ability of the masses to purchase goods, consume them, and return again to the market for more. It tends constantly to increase the lack of balance between producing power on the one hand and consuming and purchasing power on the other. It is this lack of balance which brought about the depression and which will bring about at an early date a greater catastrophe involving our fundamental conceptions of government if a remedy is not now supplied.

Again, I completely agree.

> That remedy, we believe—

I am quoting the Senator's suggestion for a plank in a platform dealing with this general problem—

> That remedy, we believe, is a return to price competition and a strict enforcement and strengthening of the antitrust laws. Price fixing in this country being largely accomplished at the present time through basing-point systems, we recommend the enactment of a statute which shall outlaw basing-point systems—

I am not sure that I agree with the Senator in that detail—

> together with such other amendments of the antitrust laws as shall safeguard competition and prevent price fixing and monopolies.

To which I unreservedly agree.

> Some tell me—

Still quoting the Senator—

> that the idea of having competition in industry is archaic.

Mr. WHEELER. Mr. President, will the Senator yield?

Mr. VANDENBERG. Yes.

Mr. WHEELER. Did I correctly understand the Senator to say that he did not agree with me upon the basing-point system?

Mr. VANDENBERG. I said I had to reserve my opinion upon that subject, because I have not had a chance to inquire into it.

Mr. WHEELER. If the Senator will pardon a further interruption——

Mr. VANDENBERG. Certainly.

Mr. WHEELER. Let me say to the Senator that when I made this speech I had in mind the basing-point system because it is one of the methods by which private industry at the present time fixes prices and gets around the provisions of the Sherman antitrust law. One of the most fundamental ways of preventing price fixing in industry today is to do what the Federal Trade Commission has said should be done; that is, to abolish the so-called multiple basing-point system. I do not see how any administration can bring about free competition in industry without doing away with and outlawing the multiple basing-point system.

If the Senator will pardon me just a moment further, let me call his attention to the fact that when the question was before the Interstate Commerce Committee we found that as a result of this system the steel and cement companies were absolutely fixing the price of steel and the price of cement down to the fourth decimal point when they bid upon Government contracts, notwithstanding the fact that the Government and the various governmental agencies of both State and Nation were furnishing practically all the work to the cement industry during this period of depression.

Mr. VANDENBERG. I thank the Senator for his observation. I have been more than happy to quote him in this particular connection because I know the very high regard which the Senate and the country have for his point of view; and I am particularly happy to quote him in his attitude against price fixing because I strongly suspect that not even the most ardent proponent of the pending bill would accuse the Senator from Montana of lacking heartfulness or humanity.

Mr. President, to conclude the very brief remarks I am submitting, let me sum up in this fashion:

It seems to me that the entire and complete world experience in respect to price fixing of a basic commodity points squarely to the ultimate suicide of that particular commodity before the experiment is concluded, due, first, to the

sales resistance engendered by an artificially high price; due, second, to the increased consumption of substitutes, which, of course, inevitably offsets any primary and theoretical advantage gained in the first instance. It seems to me this conclusion is sustained by the experience under the rubber pool in England, to which I have already referred; the nitrates pool in Chile; the coffee valorization in Brazil; the international tin pool, the international rubber agreement; the camphor agreement in Japan; the sisal agreement in Yucatan; the butter agreement in the Netherlands. The failure to which I have referred pursued price fixing on wheat in Hungary, rice in Japan, wheat in Czechoslovakia, currants in Greece. It pursued most of the World War price-fixing episodes. History is strewn with the wreckage of price-fixing adventures.

So much for the affirmative side of the aspect of capital and labor involved in the enterprise itself.

Meanwhile, fundamentally and primarily, I submit that the responsibility of Congress to its sense of democracy requires it to reject a plan which proposes to deliver to a fundamental commodity production control the fixing of the price that shall be taken from the ultimate consumer in the United States in the absence of free competition. I submit that the bill should not pass.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Connally	Lewis	Reynolds
Ashurst	Copeland	Lonergan	Robinson
Bachman	Davis	McAdoo	Russell
Bailey	Dieterich	McGill	Schwellenbach
Barkley	Duffy	McKellar	Sheppard
Benson	Frazier	McNary	Shipstead
Bilbo	George	Maloney	Steiwer
Black	Gerry	Metcalf	Thomas, Okla.
Bone	Gibson	Minton	Thomas, Utah
Borah	Glass	Moore	Truman
Brown	Guffey	Murphy	Tydings
Bulow	Hale	Murray	Vandenberg
Burke	Harrison	Neely	Van Nuys
Byrd	Hastings	Norris	Wagner
Byrnes	Hatch	Nye	Walsh
Capper	Hayden	O'Mahoney	Wheeler
Caraway	Holt	Pittman	
Carey	King	Pope	
Clark	La Follette	Radcliffe	

RESETTLEMENT PROJECTS

Mr. BLACK. Mr. President, there is on the desk a bill which has just come from the House. It is a bill to which I directed the attention of the Senate several days ago. At that time the Senator from Oregon [Mr. McNARY] desired that it not be taken up until he could look into it. Since that time the bill has been presented in the House and has been passed, and is now on the desk of the Vice President. I am sure it will not lead to any discussion, and I ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER. Is there objection?

Mr. McNARY. Let the bill be stated by title.

The CHIEF CLERK. A bill (H. R. 12876) to waive any exclusive jurisdiction over premises of resettlement or rural rehabilitation projects; to authorize payments to States, political subdivisions, and local taxing units in lieu of taxes on such premises; and for other purposes.

Mr. KING. Mr. President, may I inquire of the Senator from Alabama whether the bill calls for a direct appropriation to be made out of the Treasury of the United States, municipalities or States, in lieu of taxes which ought to be paid by the so-called Resettlement Administration or whether the Resettlement Administration shall pay the tax?

Mr. BLACK. The bill calls for no appropriation of any kind or type. It does two things. In the first place, unless this bill is enacted there will be certain property owned by the Resettlement Administration which is under the jurisdiction of the Federal Government. That, of course, should not be the case.

Mr. KING. That is very unfortunate.

Mr. BLACK. The bill specifically provides that the jurisdiction to any such property is thereby ceded back to the State or subdivision.

Mr. KING. For tax purposes or police power?

Mr. BLACK. For police power. It also is provided that upon an agreement between the Resettlement Administration and the taxing authority payment can be made in lieu of taxes. That is in line with the law as it exists now in connection with the Housing Administration under the P. W. A., and places the two units of housing on the same basis. It provides no appropriation of any kind or character, but simply recognizes the right to have the jurisdiction remain in the State or the city or the municipality or the territory for police purposes and likewise gives authority to make payments in lieu of taxes.

Mr. KING. Mr. President, I am not quite clear, and it is doubtless my fault, as to whether the Resettlement Administration out of the enormous appropriation which we have properly made to it is called upon to discharge these taxes or pay them.

Mr. BLACK. It is called upon to discharge the taxes if there is an agreement made. It does not impose the duty of paying the taxes, but provides that payment may be made in lieu of taxes. Such payment is to be made out of the appropriation heretofore provided for the Resettlement Administration. This bill, I may state, is offered at the suggestion of the authorities of the Resettlement Administration.

Mr. KING. I have no objection to the bill if it is very clear that the resettlement organization, a bureaucratic organization, which, in my opinion, has failed to function properly or to meet the requirements that were imposed upon it, shall meet these obligations. I think where it goes into States, condemns property, or purchases property and thus denudes the States of the right to collect taxes upon the property, real or personal, it ought, out of any appropriations made to it, pay to the State a fair tax, to be measured by the ad-valorem value based upon the property, real or personal, that is assessed within the States.

Mr. BLACK. I may say to the Senator that this organization seems to have identically the same idea that the Senator from Utah has. It is at their suggestion that the bill is offered to carry out the very purposes which the Senator believes to be justified. I desire to say to the Senator that, in my judgment, if he will make a very careful and close study of the Resettlement Administration he will find that he is in theory in agreement with this very excellent Government agency, not only in line with this particular part of the program but with the remainder of the program.

Mr. KING. Mr. President, I have given a considerable examination to the Resettlement Administration, and while I am always happy to agree with my friend, I do not agree with him that with respect to the Resettlement Administration I should be satisfied with its activities. Quite the reverse is true.

Mr. CAREY. Mr. President, I shall object to the bill until I have had an opportunity to read it.

Mr. BLACK. I shall be glad to let the Senator have the bill, together with the report. Is there any other question in connection with it that the Senator is in doubt about?

Mr. CAREY. I should like a few minutes to look at the bill.

Mr. BLACK. I should appreciate it if the Senator would examine it now.

Mr. CAREY. I will do so now.

The PRESIDING OFFICER. Objection is heard.

LOBBYING ACTIVITIES

Mr. BLACK. Mr. President, I ask unanimous consent to have printed in the RECORD a résumé of the contributions made by various groups to certain organizations in America, namely, the American Liberty League, American Federation of Utility Investors, American Taxpayers League, Crusaders, Economists National Committee on Monetary Policy, Farmers Independence Council, League for Industrial Rights, Minute Men and Women of Today, National Economy League, New York State Economic Council, Repeal Associates, Sentinels of the Republic, Southern Committee to Uphold the Constitution, and Women Investors in America, Inc.

It is, of course, not possible for the committee to place in the RECORD a statement of all contributions made by all individuals to these particular groups, but we have gathered from information which has come to the special committee

the contributions totaling a little more than a million dollars, more than 90 percent of which were contributed by the Du Pont family, Du Pont associates, Pitcairn family, J. P. Morgan associates, Mellon associates, Rockefeller associates, Hutton (E. F.) associates, Sun Oil associates, banks and brokers, utility companies and associates.

I ask unanimous consent that this statement may be inserted in the RECORD at this point, and I will state for the benefit of those who may be interested that I have on my desk the list of these consumers by names and amounts which the committee intends to publish as a part of its hearings, so that Senators who may be interested in this information may obtain it from the special committee.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

During the past 18 months, according to data on file with the Special Committee of the Senate Investigating Lobbying Activities, the sum of $1,084,604.62 was contributed to the following 14 organizations. This sum does not represent all of the contributions to the following-named organizations, but does reflect all contributions of which the Senate committee has record.

American Liberty League.
American Federation of Utility Investors.
American Taxpayers League.
Crusaders.
Economists National Committee on Monetary Policy.
Farmers Independence Council.
League for Industrial Rights.
Minute Men and Women of Today.
National Economy League.
New York State Economic Council.
Repeal Associates.
Sentinels of the Republic.
Southern Committee to Uphold the Constitution.
Women Investors in America, Inc.

A consolidation of the names of the contributors, and the amounts contributed, into groups which are controlled by other individuals, will show that a total of $924,974.84, or 90 percent of the total, was contributed by the following groups:

Du Pont family	$204,045.00
Du Pont associates	152,622.68
Pitcairn family	100,250.00
J. P. Morgan associates	68,226.00
Mellon associates	60,752.55
Rockefeller associates	49,852.56
Hutton (E. F.) associates	40,671.28
Sun Oil associates	37,260.00
Banks and brokers	184,224.83
Utility companies and associates	27,069.94
Total	924,974.84

REGULATION OF INTERSTATE COMMERCE IN BITUMINOUS COAL

The Senate resumed the consideration of the bill (H. R. 12800) to regulate the interstate commerce in bituminous coal, and for other purposes.

Mr. NEELY. Mr. President, after the Senator from Michigan [Mr. VANDENBERG] had spoken at great length, he suggested the absence of a quorum before surrendering the floor, and thereby made it impossible for anyone to reply to him until after the calling of the roll. Before the completion of the roll call he unceremoniously fled from the Chamber, and thus indicated that he at least understands the wisdom of the famous lines of doggerel:

He who fights and runs away,
May live to fight some other day.

[Laughter.]

He bitterly condemned governmental price fixing. If consistency were a jewel, the Senator from Michigan would be the gem of the ocean and the crown jewel of the world. [Laughter.]

I hold in my hand a price-fixing bill, a sugar-quota bill, which the great statesman, the recent Presidential candidate from Michigan [Mr. VANDENBERG] who did not receive a single vote in the Republican Convention, introduced in this body on the 3d day of April 1936. Michigan produces sugar. Michigan does not produce coal. This is my response to the breast-beating, arm-waving vociferous tirade of the Senator from Michigan against the price-fixing provisions of the Guffey coal bill.

Mr. SCHWELLENBACH subsequently said: Mr. President, I ask unanimous consent that at the conclusion of the last remarks submitted by the Senator from West Virginia [Mr. NEELY], the bill to which he referred in the course of his remarks, Senate bill 4423, may be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

A bill to protect domestic producers of sugar beets and sugar cane and to encourage the domestic production thereof by the regulation of foreign and interstate commerce in sugar; to provide for the fixing and revision of yearly quotas of sugar that may be imported into, transported to, or received in continental United States; to maintain a continuous and stable supply of sugar in continental United States for the benefit of both producers and consumers; and for other purposes

Be it enacted, etc., That (1) the term "sugar" means sugar in any form whatsoever, derived from sugar beets or sugar cane, whether raw sugar or direct-consumption sugar, including also edible molasses, sirups, and any mixture containing sugar, when used for the extraction of sugar (except blackstrap molasses and beet molasses).

(2) The term "raw sugar" means any sugar, as defined above, manufactured in or marketed in or brought into continental United States, in any form whatsoever, for the purpose of being, other than to be further refined.

(3) The term "direct-consumption sugar" means any sugar, as defined above, manufactured or marketed in or brought into continental United States, in any form whatsoever, for any purpose other than to be further refined.

(4) The term "raw value" means a standard unit of sugar testing 96 sugar degrees by the polariscope. All quotas provided for under the terms of this act shall be established in terms of "raw value" and for purposes of quotas all sugar shall be translated into terms of "raw value" according to regulations to be issued by the Secretary of Agriculture.

SEC. 2. On and after the effective date of this act, all processors, handlers of sugar, and other persons are prohibited from importing into, transporting to, or receiving in interstate or foreign commerce into continental United States sugar for consumption, or which shall be consumed, therein from the Territory of Hawaii, Puerto Rico, the Virgin Islands, the Philippine Islands, the Canal Zone, American Samoa, the Island of Guam, and from foreign countries, including Cuba, in excess of the respective yearly quotas established pursuant to the provisions of section 3 of this act, and no such sugar in excess of such respective yearly quotas shall be admitted to entry into continental United States.

SEC. 3. (a) The consumption requirements of sugar for continental United States for each calendar year, beginning with the year 1937 and for each succeeding calendar year, shall be determined by the Secretary of Agriculture by ascertaining the amount of sugar distributed for consumption in continental United States during the next preceding calendar year, which amount shall become the estimate of the consumption requirements for the then current year. The Secretary of Agriculture shall also make an estimate of the amount of sugar produced from sugar cane and sugar beets grown in continental United States and available for distribution for consumption during the current year, which estimate shall be determined on the basis as hereinafter in this section provided. From the estimate of consumption requirements determined as aforesaid and after deducting a reserve of 5 percent, the Secretary of Agriculture shall deduct his estimate of the amount of sugar produced from sugar cane and sugar beets grown in continental United States and available for distribution for consumption during the current year, which estimate shall be the higher of the following figures: (1) Actual production of sugar from sugar cane and sugar beets grown in continental United States during the next preceding calendar year, or (2) 135 percent of the total inventories of undistributed sugar on hand the 1st day of the month preceding, in the possession of sugar-cane and sugar-beet processors, produced from sugar cane or sugar beets grown in continental United States; the remaining balance of said consumption estimate to be the total quota for the current year for all sugar-producing areas other than continental United States and which said total quota shall be respectively allotted on the following basis: Territory of Hawaii, 20.36 percent; Puerto Rico, 17.33 percent; Virgin Islands, 0.12 percent; the Philippine Islands, 21.58 percent; Cuba, 40.06 percent; other foreign countries, 0.55 percent. All of which determinations, together with the total and specific quotas as hereinabove provided, shall be made and proclaimed by the Secretary of Agriculture on February 1 of each year.

(b) Similarly on September 1 and again on December 1 in each calendar year, beginning with the year 1936, the Secretary of Agriculture shall determine and proclaim the estimate of consumption requirements of sugar for continental United States for the then-current year, revising and adjusting his estimate previously made on February 1, in the same proportion that the consumption of sugar in continental United States for the previous 7 months or 10 months, respectively, bears to said consumption for the corresponding period in the next preceding year; and thereupon the Secretary of Agriculture, by the application of the same formula as set forth in subdivision (a) of this section (except that the Sept. 1 and Dec. 1 determinations of total quotas for all other producing areas other than continental United States shall be calculated from the basis of 98 percent and 100 percent, respectively, of the Secretary's then estimate of consumption requirements for the current year) shall on each of said days readjust and redetermine for the then-current year the total quota for sugar-producing areas other than continental United States, as well as

the specific quotas herein mentioned, and shall on said days make public announcement thereof. Said adjusted quotas, as so determined and proclaimed, from the time of their announcement by the Secretary of Agriculture, shall, until revised or adjusted as provided herein, be the quotas in effect hereunder and shall supersede any quotas theretofore determined or proclaimed as herein provided. In no case shall any producing areas import into, transport to, or receive in interstate or foreign commerce into continental United States during January of any year an amount of sugar greater than 25 percent of the quota of that area for the next preceding calendar year announced on the next preceding December 1 as hereinabove provided.

(c) If, during any calendar year, there is not available at any time for distribution for consumption sugar produced from sugar cane and sugar beets grown in continental United States as previously estimated by the Secretary of Agriculture, or if any producing area is unable to or does not fill its full quota of sugar as determined and fixed under the provisions of this act, the Secretary of Agriculture is authorized to revise or adjust the quotas of other producing areas hereunder so as to prorate such deficiency among such other producing areas on the basis of their respective quota percentages under section 3 (a) and their ability to supply the deficiency.

(d) In respect to the quotas hereinbefore set forth for the Territory of Hawaii, Puerto Rico, the Virgin Islands, the Philippine Islands, and Cuba, there may be included direct-consumption sugar to an amount not exceeding the following percentages of the sugar quotas determined under section 3 (a) for the respective areas, to wit: Territory of Hawaii, 3.14 percent; Puerto Rico, 15.72 percent; Virgin Islands, 0.0 percent; Philippine Islands, 8.03 percent; Cuba, 22 percent.

(e) Any sugar imported into continental United States, with respect to which a drawback of duty is allowed under the provisions of section 313 of the Tariff Act of 1930, shall not be charged against the quota determined and proclaimed, as provided hereunder, for the country for which such sugar was imported, but the regulations of the Secretary of Agriculture shall not permit the substitution of sugars refined in bond in any manner which would tend to increase the quota of any area not otherwise authorized under this act.

(f) All quotas of sugar fixed and determined under the provision of this act, and the announcement of same, shall be expressed in short tons, raw value.

(g) During the calendar year 1936 the quotas hereunder for all sugar-producing areas named in section 3 of this act shall be the quotas heretofore determined and announced on December 28, 1935, by the Secretary of Agricudture for the year 1936, acting under the provisions of the Agricultural Adjustment Act, as amended, which said quotas shall be revised or adjusted as herein provided on September 1 and December 1, 1936.

SEC. 4. The Secretary of Agriculture is authorized and directed to prescribe such orders and regulations and require the furnishing of such information and data as may be necessary for the enforcement of this act.

SEC. 5. Upon the determination by the Secretary of Agriculture of the various quotas as provided in section 3 of this act, the Secretary of Agriculture shall proclaim the quotas and, with the Secretary of the Treasury, shall prescribe such regulations as may be necessary for the effective limiting of the importation into, transportation to, or receiving in continental United States of sugar to the quotas determined by the Secretary of Agriculture as aforesaid.

SEC. 6. Any person willfully violating any of the provisions of this act, or any order or regulation of the Secretary of Agriculture and/or the Secretary of the Treasury issued under authority thereof, shall, upon conviction, be punished by a fine of not more than $5,000.

SEC. 7. Any person willfully importing into, transporting to, or receiving into continental United States sugar contrary to the provisions of section 3 hereof, and/or who shall willfully transport to, or receive in continental United States sugar imported into continental United States contrary to the provisions of sections 2 and 3 hereof, or who shall willfully violate any order, regulation, or determination of the Secretary of Agriculture and/or the Secretary of the Treasury promulgated or proclaimed under authority of this act, or any person knowingly participating or aiding in the violation of any of the provisions of this act, or of any of the orders, regulations, or determinations of the Secretary of Agriculture and/or the Secretary of the Treasury issued under authority of this act, shall forfeit to the United States a sum equal to three times the current market value of the amount of sugar illegally imported into, received in, or transported to continental United States, which forfeiture shall be recoverable in a civil suit brought in the name of the United States.

SEC. 8. The provisions of sections 6 and 7 shall not be deemed exclusive but shall be cumulative to the rights of forfeiture of illegally entered goods.

SEC. 9. The several district courts of the United States are hereby vested with jurisdiction specifically to enforce and to prevent and restrain any person from violating the provisions of this act, or any order or regulation of the Secretary of Agriculture and/or the Secretary of the Treasury issued pursuant thereto, in any proceeding now pending or hereafter brought in said courts.

SEC. 10. Upon the request of the Secretary of Agriculture, it shall be the duty of the several district attorneys of the United States in their respective districts, under the direction of the Attorney General, to institute proceedings to enforce the remedies and collect the forfeitures provided in or pursuant to this act.

SEC. 11. If any provision of this act is declared unconstitutional, or the applicability thereof to any person or circumstance is held invalid, the validity of the remainder of this act and the applicability thereof to other persons or circumstances shall not be affected thereby.

SEC. 12. Public Law No. 213, Seventy-third Congress, known as the Jones-Costigan amendments to the Agricultural Adjustment Act, as approved May 9, 1934, and as amended August 24, 1935, and all acts and parts of acts in conflict with the provisions of this act, are hereby repealed. No tax, civil penalty, or interest which accrued under provision of law repealed by this act and which is uncollected on the date of the amendment of this act shall be collected; and all liens for taxes, civil penalties, or interest arising out of taxes under such provisions of law are canceled and released.

JAMES A. HENDERSON

Mr. RUSSELL. Mr. President, I ask unanimous consent for the immediate consideration of House bill 820, being Calendar No. 2581.

Mr. KING. Mr. President, let the bill be reported.

The PRESIDING OFFICER. The bill will be reported by title.

The CHIEF CLERK. A bill (H. R. 820) for the relief of James A. Henderson.

Mr. McNARY. Mr. President, that is just another claims bill.

Mr. RUSSELL. Mr. President, it is perhaps to the Senator from Oregon just another claims bill, but it is one that I regard as being so meritorious that I hope the Senator from Oregon will refrain from objecting. The case is a very meritorious one. The individual in question is sorely in need of relief in order to pay for medical services and hospital bills. The bill was passed by the House and was favorably reported by the Senate Committee on Claims.

Mr. McNARY. Has it been on the calendar?

Mr. RUSSELL. It has been on the calendar.

Mr. McNARY. Was it objected to at the last call of the calendar?

Mr. RUSSELL. It has not been called on the calendar. It was introduced a short time ago and passed the House on Wednesday of this week.

Mr. McNARY. What amount is involved?

Mr. RUSSELL. Five thousand dollars.

Mr. McNARY. What is the nature of the bill?

Mr. RUSSELL. The claim arose out of an automobile accident, I may say to the Senator from Oregon, that occurred on a Government road or trail through a forest, due to a caving in of the road.

I am not thoroughly familiar with all the details of the claim. They are set forth in the report of the committee, which contains a large number of affidavits as to the merit and justice of the claim.

Mr. McNARY. Earlier in the afternoon I stated there were many bills on the calendar. I asked the Senator from Arkansas [Mr. ROBINSON] if he desired to have a general call of the calendar, so that all Senators might have an opportunity to present various bills in which they might be interested. I stated also that I should object further to the consideration of bills of this character. I have no doubt of the merit of the bill. There are many which are worthy claims, but we cannot enter into general consideration of these bills at this hour. Repeating the statement previously made, I must object.

The PRESIDING OFFICER. Objection is heard.

THREE HUNDREDTH ANNIVERSARY OF SETTLEMENT OF HARTFORD, CONN.

Mr. SCHWELLENBACH obtained the floor.

Mr. LONERGAN. Mr. President, will the Senator from Washington yield to me?

Mr. SCHWELLENBACH. I yield.

Mr. LONERGAN. I ask unanimous consent for the present consideration of House bill 12831. It has passed the House and has been reported favorably by the Committee on Banking and Currency. It is a bill providing for the issuance of coins, 50-cent pieces, in commemoration of the celebration of the three hundredth anniversary of the settlement of Hartford, Conn.

The PRESIDING OFFICER. Is there objection?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Banking and Currency with an amendment to strike out all after the enacting clause and in lieu thereof to insert:

That in commemoration of the three hundredth anniversary of the founding of Hartford, Conn., there shall be struck at a mint of the United States to be designated by the Director of the Mint 25,000 commemorative medals of a special appropriate single design, size, weight, and composition to be fixed by the Director of the Mine with the approval of the Secretary of the Treasury.

SEC. 2. Such commemorative medals shall be delivered to the duly authorized chairman or secretary of the Hartford (Conn.) Tercentenary Commission, upon payment to the Director of the Mint of an amount to be fixed by the Director of the Mint not less than the estimated cost of manufacture, including labor, materials, dies, use of machinery, and overhead expenses; and security satisfactory to the Director of the Mint shall be furnished to indemnify the United States for the full payment of such cost.

SEC. 3. Whoever shall falsely make, forge, or counterfeit, or cause or procure to be falsely made, forged, or counterfeited or shall aid in falsely making, forging, or counterfeiting any medal issued under the provisions of this act, or whoever shall sell or bring into the United States or any place subject to the jurisdiction thereof from any foreign place, or have in his possession any such false, forged, or counterfeited medal, shall be fined not more than $1,000 or imprisoned not more than 2 years, or both.

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The title was amended so as to read: "An act to authorize the striking of an appropriate medal in commemoration of the three hundredth anniversary of the founding of Hartford, Conn."

OFFICIAL SEAL OF NATIONAL ARCHIVES

Mr. BARKLEY. Mr. President, the House has passed and sent to the Senate a bill amending The National Archives Act so as to provide that the official seal, which The National Archives organization is required to have, shall be recognized and notice shall be taken of it in the courts of the country, and further authorizing the Archivist to furnish authenticated copies under certain circumstances of documents which are within his custody. I ask unanimous consent for the present consideration of the bill.

The bill (H. R. 12410) to amend section 8 of the act entitled "An act to establish a National Archives of the United States Government, and for other purposes", approved June 19, 1934, was read twice by its title.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered, ordered to a third reading, read the third time, and passed.

IRVIN PENDLETON

Mr. BARKLEY. Mr. President, will the Senator yield further?

Mr. SCHWELLENBACH. I yield.

Mr. BARKLEY. I ask unanimous consent for the present consideration of House bill 949, authorizing the Compensation Commission to consider the claim of Irvin Pendleton, an employee injured at Muscle Shoals, whose case does not come under the Compensation Act.

Mr. McNARY. If this is another claims bill, I must object.

The PRESIDENT pro tempore. The Senator from Oregon objects.

RESETTLEMENT PROJECTS

Mr. BLACK. Mr. President, will the Senator from Washington yield?

Mr. SCHWELLENBACH. I yield.

Mr. BLACK. I again ask unanimous consent for the present consideration of House bill 12876. The Senator from Wyoming [Mr. CAREY] has now examined the bill and has stated that he does not desire further to object to it. I should like to have it immediately considered.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the bill (H. R. 12876) to waive any exclusive jurisdiction over premises of resettlement or rural rehabilitation projects; to authorize payments to States, political subdivisions, and local taxing units in lieu of taxes on such premises; and for other purposes, was considered, ordered to a third reading, read the third time, and passed.

REGULATION OF STEAM BOILERS, ETC., IN THE DISTRICT—CONFERENCE REPORT

Mr. KING submitted the following report:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 2953) to provide for the inspection, control, and regulation of steam boilers and unfired pressure vessels in the District of Columbia, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its amendment numbered 1.

That the Senate recede from its disagreement to the amendments of the House numbered 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, and 12, and agree to the same.

WILLIAM H. KING,
ARTHUR CAPPER,
ROBT. R. REYNOLDS,
Managers on the part of the Senate.
VINCENT L. PALMISANO,
WRIGHT PATMAN,
EVERETT M. DIRKSEN,
Managers on the part of the House.

The report was agreed to.

On motion of Mr. BLACK, the bill (S. 4754) to waive any exclusive jurisdiction over premises of resettlement or rural rehabilitation projects; to authorize payments to States, political subdivisions, and local taxing units in lieu of taxes on such premises; and for other purposes, was ordered to be indefinitely postponed.

INVESTIGATIONS BY COMMITTEE ON EDUCATION AND LABOR

Mr. BLACK. Mr. President, under Senate Resolution 266, passed some days ago, the Committee on Education and Labor, or any regularly authorized subcommittee, was given power to make certain investigations. By a resolution of the committee the chairman is authorized to appoint a subcommittee in order that the investigation may be conducted by a subcommittee. Before the resolution was adopted, the Senator from Massachusetts [Mr. WALSH], who was then chairman of the Committee on Education and Labor, conducted a preliminary investigation through a subcommittee. The subcommittee conducting the preliminary investigation was composed of the Senator from Wisconsin [Mr. LA FOLLETTE], the Senator from Iowa [Mr. MURPHY], and the Senator from Utah [Mr. THOMAS].

Carrying out the desire of the Senator from Massachusetts, who was chairman at the time of the appointment of the subcommittee, and being happy to concur in his ideas, as chairman of the Committee on Education and Labor, I have appointed to carry on that investigation the same subcommittee, comprised of the Senator from Wisconsin [Mr. LA FOLLETTE], the Senator from Iowa [Mr. MURPHY], and the Senator from Utah [Mr. THOMAS].

Mr. WALSH. Mr. President, had I remained as chairman of the committee I would have named the same Senators the Senator from Alabama has indicated. It is a very able subcommittee.

INVESTIGATION OF COTTON COOPERATIVES

Mr. McKELLAR. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Washington yield to the Senator from Tennessee?

Mr. SCHWELLENBACH. I yield.

Mr. McKELLAR. Several days ago and once or twice since I have asked unanimous consent for the consideration of Senate Resolution 313, extending the life of a committee authorized by Senate Resolution 185 for the investigation of cotton cooperatives. I submit the same request at this time.

The PRESIDENT pro tempore. Is there objection?

Mr. CONNALLY. Mr. President, on behalf of my colleague the senior Senator from Texas [Mr. SHEPPARD], who is out of the Chamber at the moment, I object.

The PRESIDENT pro tempore. Objection is heard.

Mr. McKELLAR. Mr. President, I ask that Senate Resolution 313 be printed in the RECORD at the conclusion of my remarks; also that immediately following it Senate Resolution 185, which it was proposed to extend, be printed in the RECORD.

I also desire to have printed in the RECORD the affidavit of C. E. Vincent, Government cotton grader and classer for the Department of Agriculture, in reference to the activities of the American Cotton Cooperative Association.

Mr. KING. Mr. President, does that include Mr. Creekmore?

Mr. McKELLAR. Unfortunately, it does not include Mr. Creekmore.

Mr. KING. Why does it not?

Mr. McKELLAR. It shows, however, that Mr. Creekmore is at the head of one of the biggest racketeering cotton organizations in the country. I desire to read an affidavit from the Commissioner of Agriculture——

Mr. LEWIS. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator from Illinois will state it.

Mr. McKELLAR. Mr. President, I believe I have the floor.

The PRESIDENT pro tempore. The Senator from Illinois desires to propound a parliamentary inquiry, which will be stated.

Mr. LEWIS. I thought the Senator had concluded.

Mr. McKELLAR. No, sir; I have not.

Mr. LEWIS. When does the Senator expect to conclude?

Mr. KING. When he gets through. [Laughter.]

Mr. McKELLAR. In a few moments. It will take me only a few moments.

Mr. LEWIS. I thank the Senators from Utah and Tennessee for the information.

Mr. SCHWELLENBACH. Mr. President, I have been standing here for half an hour. I do not care to yield for a discussion.

Mr. McKELLAR. I hope the Senator will yield for just a few moments longer.

Mr. SCHWELLENBACH. Not for argument.

Mr. McKELLAR. I do not care to argue. I wish to read some facts into the RECORD at this time.

I desire to read an affidavit from the commissioner of agriculture of South Carolina, as follows:

STATE OF SOUTH CAROLINA,
County of Richland:

Personally appeared before me, J. Roy Jones, who being duly sworn, deposes and says that he is the commissioner of agriculture, commerce, and industries; that pursuant to a concurrent resolution of the General Assembly of the State of South Carolina, passed at the 1936 session, he is making an investigation as to the manner of handling cotton by the American Cotton Cooperative Association, for the Commodity Credit Corporation, pledged as collateral against loans made by the Government.

That investigations show that the American Cotton Cooperative Association reconcentrated from State warehouse no. 3083, 35 bales of cotton, pledged to the Commodity Credit Corporation by John R. Watson, county treasurer of Dillon, S. C., into the Palmetto Compress & Warehouse Co.; that the Palmetto Compress & Warehouse Co. drew samples of this cotton and forwarded same to the American Cotton Cooperative Association, who made a classification of same; that upon said classification, the American Cotton Cooperative Association tendered an offer to the said John R. Watson, for the said cotton; that said John R. Watson was not satisfied with the classification, having been offered a better price by local cotton buyers; that he, therefore, instructed the deponent to have the cotton resampled and graded by C. E. Vincent, classer for the Department of Agriculture, Commerce, and Industries of South Carolina, and who holds Federal license no. 173, for grading and stapling cotton; that Mr. Vincent proceeded to grade and classify the said cotton, and the result showed such a wide difference from the classification made by the said cotton that he was instructed to send samples to the board of supervisors and cotton examiners, in Memphis, Tenn., which practically verified the correctness of the classification and grades made by Mr. Vincent (a copy of said classification is hereto attached and made a part of this affidavit). That the difference in the classification made by Mr. Vincent, and verified by the Board of Supervisors and Cotton Examiners of Memphis, Tenn., and classification made by the American Cotton Cooperation would result in a difference in the price on the market of approximately $4 per bale.

That deponent has not had time to make a complete investigation of the handling of cotton for the Commodity Credit Corporation by the American Cotton Cooperative Association, but in every instance so far it will show that the American Cotton Cooperative Association had undergraded and stapled all of the producers' cotton that was pledged under the 12-cent-loan plan; that local buyers of cotton, by reason of the reconcentration and supervision of cotton pledged to the Commodity Credit Corporation by the American Cotton Cooperative Association, are unable without extraordinary expense and trouble to get samples of the said cotton and purchase same; that by reason of the underclassification and grading of said cotton, and method of handling same by the American Cotton Cooperative Association, farmers and producers are unable, as the deponent is informed and believes, to get anywhere near the real worth of the said cotton.

And that deponent is of the opinion that the manner of handling the said cotton, grading and classification of same by the American Cotton Cooperative Association was done knowingly and deliberately for the purposes of deceiving the owners and producers as to the correct grade and staple so that the agents of the American Cotton Cooperative Association might buy the said cotton at a price below the actual market value of the cotton.

That the exhibits hereto attached are incorporated in and made a part of this affidavit.

J. ROY JONES.

Sworn to before me this 13th day of June 1936.

[SEAL] CHOVINE SPROTT,
Notary Public for South Carolina.

STATE OF SOUTH CAROLINA,
County of Richland:

Personally appeared before me C. E. Vincent, who being duly sworn, deposes and says that he is cotton grader and classer for the Department of Agriculture, Commerce and Industries for the State of South Carolina, and holds a Federal license, No. 173, as cotton grader and classer.

That he has read the affidavit made by J. Roy Jones, dated the 13th day of June 1936, a copy of which is hereto attached, and that same is true and correct in every particular.

C. E. VINCENT.

Sworn to before me this 13th day of June 1936.

[SEAL] CHOVINE SPROTT,
Notary Public for South Carolina.

Mr. President, I ask that there may be printed in the RECORD at this point, as part of my remarks, Senate Resolution 185, Senate Resolution 313 as proposed to be amended, and a certificate showing the grade and staple as given by the Board and as given by Mr. Vincent, as proved by this affidavit of Mr. Jones, the head of the Bureau of Agriculture of South Carolina.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is as follows:

Senate Resolution 185

Resolved, That the Committee on Appropriations, or any duly authorized subcommittee thereof, is authorized and directed to investigate the expenditures by the Federal Government for cotton cooperatives and their losses heretofore sustained. The committee shall report to the Senate, at the earliest practicable date, the result of its investigations, together with its recommendations.

For the purposes of this resolution the committee, or any duly authorized subcommittee thereof, is authorized to hold hearings, to sit and act at such times and places during the sessions and recesses of the Senate in the Seventy-fourth Congress, to employ clerical and other assistants, to require by subpena or otherwise the attendance of witnesses and the production of books, papers, and documents, to administer oaths, to take testimony, and to make such expenditures as it deems advisable. The cost of stenographic services to report hearings shall not be in excess of 25 cents per hundred words, and the expenses of the committee, which shall not exceed $1,500, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman.

Senate Resolution 313, as proposed to be amended

Resolved, That the authority conferred by Senate Resolution 185, concerning expenditures by the Federal Government for cotton cooperatives, etc., agreed to August 24, 1935, be, and the same is hereby, extended and continued in force until the expiration of the Seventy-fifth Congress: *Provided further,* That said committee is authorized to investigate the action of the American Cotton Cooperative Association and the Commodity Credit Corporation in

the concentration and sale of cotton held for the account of cotton growers.

				[2] 138.75

[1] Difference in the value of the cotton is figured by using Government differential as of June 1, 1936.
[2] Or $3.96 per bale.

Mr. McKELLAR. Mr. President, if I may be permitted another word or two, I wish to say that these affidavits show that the organization known as the American Cotton Cooperative Association, masquerading as a cotton cooperative but really a cotton merchant using the funds of the Government of the United States, has dishonestly and corruptly classified and graded its cotton, on which the Government loaned 12 cents a pound, in such a way as to defraud and virtually to steal from the farmers themselves about $4 a bale—to be absolutely accurate, $3.96 a bale on this cotton.

I have made this statement for the purpose of letting it be shown in the RECORD just what the facts are. The investigation which was had in Memphis last fall showed beyond a peradventure of doubt that the American Cotton Cooperative Association, being nothing in the world in the nature of a cooperative association but simply and solely a cotton merchant backed by the Government, is actually deceiving and defrauding not only the Government but the cotton farmers to the extent of about $4 a bale as to this particular lot of cotton and throughout the country.

I desire to add to that statement that when the Department here were asked about the matter, they declined to furnish the report that was made by their own investigators, saying it was a confidential report of the A. C. C. A., or to the A. C. C. A. I wrote a letter about the matter to Mr. Sanders, the head of the Bureau, which I ask unanimous consent to have printed in the RECORD as a part of my remarks, together with his letter to me.

The PRESIDENT pro tempore. Without objection, the letters will be printed in the RECORD.

The letters are as follows:

FARM CREDIT ADMINISTRATION,
Washington, D. C., June 16, 1936.

Hon. KENNETH McKELLAR,
United States Senate.

DEAR SENATOR McKELLAR: I regret that absence from my office has prevented an earlier reply to your letter of May 29, with further reference to your request for copies of certain documents referred to in my letter of May 28. As stated in that letter, these documents were prepared at the request and for the information of the cooperative involved. In view of their confidential character we felt that they should not be made public without the consent of the associations themselves.

The whole purpose of the program of the Government for financing cooperative associations is to provide better marketing facilities for the agricultural products of their farmer members and better facilities for the purchase of farm supplies and farm business service. In order to accomplish this purpose we are obliged to review the operations of individual associations in order to determine whether the association is a good credit risk, whether it meets the requirements of eligibility, and whether it is rendering the best service possible to farmers in its particular field. This information cannot be obtained unless the associations have confidence in our representatives assigned to the task, and have some assurance that the information of a confidential character obtained regarding the business of the association will not be made public. This last condition is particularly necessary on account of the strong competition of private merchants, brokers, and commercial companies who would like to have the information for obvious reasons. Our primary responsibility, as we see it, is to protect the interests of farmers and of their cooperative organizations.

Therefore, if the farmer organizations in the South and elsewhere find that our efforts to help them will eventuate in having their private affairs become matters of public knowledge to be used for the benefit of their competitors, these organizations will hesitate to avail themselves of the service which we have been able to render in the past.

Since the receipt of your letter I have noted your statement to the Senate that you had received the information you desired from another source. I reget very much that you misunderstood the reason which prompted us to decline to make this information available.

Very truly yours,

S. D. SANDERS,
Cooperative Bank Commissioner.

JUNE 19, 1936.

Hon. S. D. SANDERS,
Farm Credit Administration,
Washington, D. C.

MY DEAR MR. SANDERS: Your letter of the 16th received and noted.

I think you entirely mistake the obligation and duties of your office. The Farm Credit Administration was not established for the private benefit of either yourself or your board or for such farm cooperatives as you favor. Your administration is a governmental function. You represent the people of the United States to the extent that the statute authorizes you to represent them. Your organization may be bigger and stronger than the Congress that created you, but I have my serious doubts about it, and when you write me, "these documents were prepared at the request and for the information of the cooperative involved", and state that they are confidential and cannot be disclosed to me as a legislator, I am sure that you mistake entirely the duties and powers of your office.

You further state, "In view of their confidential character (meaning the report asked for), we felt that they should not be made public without the consent of the associations themselves." In the first place, under the law you have no right to have confidential relations with a cooperative or with anyone else. It is your duty to administer the law as Congress passed it. Not only are these investigations of yours as to cooperatives not confidential, but I think you will find out a little later that none of your reports are confidential from the law-making body.

It is unfortunate that the session has just about come to a close, when it is too late for us to take effective steps about the matter.

Your next statement is that in order "to provide better marketing facilities for the agricultural products of their farmer members and better facilities for the purchase of farm supplies and farm business service * * * we are obliged to review the operations of individual associations in order to determine whether the association is a good credit risk, whether it meets the requirements of eligibility, and whether it is rendering the best service possible to farmers in its particular field."

In the first place, I find that you yourself, on May 28, contradicted the above-quoted statement by the following statement in your letter: "The documents to which you refer were prepared at the request and for the information of the associations themselves."

So when you now say that this report was sought and obtained because you were obliged to review the operations of individual associations, you were entirely mistaken either at one time or the other. Your relations, however, with these associations must be of a confidential nature, and you certainly must not have asked any of these cotton associations as to whether they were good "credit risks", because before you made this report a hearing was held under my direction in Memphis, copies of which were furnished you, and a copy of the report thereon furnished you which show that the Alabama Cotton Cooperative Association had been wound up in receivership; Brazos Valley Cooperative Association had no assets as admitted by its officers; that the Georgia Cooperative Association is now being wound up through a receivership; that the Oklahoma Cotton Growers Association had recently been sold by the Government, lock, stock and barrel to the

Government, and that it not only had no property but it owed the Government something like a half million dollars.

The South Carolina Association likewise had to compromise its affairs at a great loss to the Government.

The West Texas Cotton Growers Association admitted that they had no assets of any kind, and yet your office, in its confidential relations with the American Cotton Cooperative Association, loaned these bankrupt concerns as follows:

Alabama Cotton Cooperative Association	$400,000
Brazos Valley Cooperative Association	425,000
Oklahoma Cotton Growers' Association	500,000
South Carolina Association	200,000
West Texas Cotton Growers' Association	500,000
Total	2,025,000

So that the relations of your administration with these cooperatives must have been so confidential that you did not even ask about their credit before making these enormous loans to them from which, the chances are, this Government will never realize a dollar.

You talk about the associations losing confidence in you unless you keep their affairs confidential. Is it possible, Mr. Sanders, with the proof taken at Memphis last fall before you that you still have confidence in these bankrupt concerns and are willing to continue to lend the Government's money to them? If so, you are being very generous with the Government's money.

You say that this confidential relation must be kept up or is necessary "on account of the strong competition of private merchants, brokers, and commercial companies who would like to have the information for obvious reasons." In making this statement you admit that the cooperative associations are cotton merchants in competition with all other cotton merchants, and that you are holding back information from the public so as to aid and abet these bankrupt associations which have time and again been financed by the Government to the Government's great loss.

I quote from your letter again:

"Therefore, if the farmer organizations in the South and elsewhere find that our efforts to help them will eventuate in having their private affairs become matters of public knowledge to be used for the benefit of their competitors, these organizations will hesitate to avail themselves of the service which we have been able to render in the past."

You need have no fear on this score. An organization like the A. C. C. A. that has obtained all the moneys that they have obtained in the last few years from the Government and which has had the Government pay $140,000,000 of their debts without any compensating advantage, you need not have the slightest fear that they will hestitate to avail themselves of the services that you are rendering them.

They are not a farmer organization in any sense. There is a closely knitted together organization of racketeers, masquerading as a cotton cooperative association, and using the Government's money secretly loaned to them by your organization, and if they could not have these secret dealings with you and did not get this money from you they would not be able to function as testified to by Mr. Creekmore, the real owner and controller of this so-called cotton-cooperative association.

I attach hereto a statement that I am going to put in the RECORD tomorrow, made by the Commissioner of Agriculture of South Carolina, which shows conclusively that your secret agreements with the cooperatives last year in allowing them to reconcentrate the 12-cent-loan cotton at a cost of some six or seven hundred thousand dollars, had some other purpose than the reconcentration of cotton.

I assure you that I have not misunderstood your letters to me. The cotton cooperatives made public the statement that you refused to give to a United States Senator who asked for it for legislative purposes. The cooperatives have already made it public, and I want to say that your letter of refusal and your letter of explanation of June 16 are both indefensible, coming from any public officer of this Government.

Very truly yours,

KENNETH MCKELLAR.

Mr. MCKELLAR. Mr. President, in conclusion—and I thank the Senator from Washington for permitting this to be done—I desire to say to the Farm Credit Administration, which seems to be "in cahoots" with the American Cotton Cooperative Association, that this investigation may be delayed until next January because of the objection of the Senators from Texas, who, for some reason, do not desire the facts to come to light. They are not willing to have this investigation continued even to next March. I do not know why, but, whatever may be done, I wish to say that the investigation is going to be made.

Mr. CONNALLY. Mr. President, I rise to a point of order. The Senator from Tennessee had consent for only 2 more words, and he has used about 200 words.

Mr. MCKELLAR. I think it would be very wise, it would be very beneficial to the Government of the United States, it would be tremendously beneficial to the cotton farmers of the Senator's State as well as the cotton farmers of my State, if this investigation were to go on, and let the facts come out as they may. I wish to say that in my judgment——

Mr. SCHWELLENBACH. Mr. President, I am sorry I cannot yield further, but I have been standing here for a long time.

The PRESIDENT pro tempore. The Senator from Washington declines to yield further.

Mr. CONNALLY. Mr. President, I rise to a question of personal privilege.

The PRESIDENT pro tempore. The Senator will state it.

Mr. CONNALLY. The Senator from Tennessee, knowing that the Senator from Texas had no way to respond——

Mr. MCKELLAR. Oh, no, Mr. President——

Mr. CONNALLY. Makes certain insinuations as to our reasons for objecting. He says he does not know what our reasons are. Regardless of reasons, the Senator from Texas made objection to the unanimous-consent request, and he is not bound to state his reasons to the Senator from Tennessee or anybody else.

Mr. SCHWELLENBACH. Mr. President, I am sorry I cannot yield any further.

Mr. THOMAS of Oklahoma. Mr. President, will the Senator yield?

Mr. SCHWELLENBACH. I have been yielding for 40 minutes now, and I am sorry I cannot yield further.

The PRESIDENT pro tempore. The Senator from Washington declines to yield.

DEPORTATION OF ALIEN CRIMINALS

Mr. SCHWELLENBACH. Mr. President, at the conclusion of my remarks I intend to ask unanimous consent for the consideration of Senate bill 2969, which is known as the Kerr-Coolidge deportation bill, and state that if it shall be taken up I am going to move to substitute a mere resolution which would provide for staying the deportation of the so-called hardship cases which have been mentioned in the discussion of the Kerr-Coolidge bill.

The PRESIDENT pro tempore. What is the calendar number of the bill to which the Senator refers?

Mr. SCHWELLENBACH. It is Calendar No. 1210, Senate bill 2969.

Mr. President, I think it is desirable at the end of the session that the RECORD show the situation in reference to these aliens, but I do not intend to take very much time in discussing the matter.

The Members of the Senate will recall that some 2 months ago we had before us the Kerr-Coolidge bill, that we discussed it for a number of days, and the Senator from North Carolina [Mr. REYNOLDS] discussed it at great length, as did also the Senator from Pennsylvania [Mr. DAVIS].

I wish to say that personally I feel that both of the Senators are absolutely sincere in their position with reference to this proposed legislation, and in pointing out the legislative situation which exists I desire in no way to impugn the motives or to be in any way critical of either the Senator from North Carolina or the Senator from Pennsylvania. However, this was the situation: After a discussion of about 10 days at various times the Senators from Pennsylvania and North Carolina indicated that it would be possible for us to reach an agreement in reference to the Kerr-Coolidge bill, and because of that indication the matter was taken from the calendar and I was requested by the chairman of the Committee on Immigration, the Senator from Massachusetts [Mr. COOLIDGE], and the Senator from Utah [Mr. KING] to negotiate with the two Senators in reference to an agreement.

We were not able to reach an agreement. So far as the Senator from Pennsylvania was concerned, I think we could have reached an agreement, and we probably did reach an agreement. However, it was not possible to reach an agreement with the Senator from North Carolina. He, in the utmost sincerity, in the belief that he was correct that this

should be an immigration bill, and I contending that it should be only a deportation bill, it was not possible to arrive at an agreement.

However, after that time the bill was amended and what was called a committee print was brought in. The amended bill made the following changes in the Kerr-Coolidge bill, as it was discussed the last time it was before the Senate.

The number of the cases which could be permitted to remain under the so-called hardship classification was limited to 10,000. Members of the Senate will recall that the Senator from North Carolina indicated that thousands upon thousands of people could come in under section 3 as coming under the hardship classification. So we very definitely limited the number to 10,000, and that was the total number who might come in.

In addition to that, we cut down the number of cases of people who are here and who came in as students, who came in under special classifications. We cut that number down so that only 500 could come in the first year, and then 100 each year after that, and none after a period of 5 years from the date of the enactment of the law.

In addition to that, at the special request and instance of the American Federation of Labor, we included in the bill a very definite declaration that it was not the policy of the Congress to continue that arrangement after the conclusion of the 3 years in which these hardship cases might be passed upon, to continue to permit aliens to remain in the country who had come in illegally in the first place. The amendment was introduced and it was discussed with the Senator from North Carolina, and he did not find it possible to agree upon that amendment.

At this time I ask unanimous consent to have printed as a part of my remarks at this point a letter from the president of the American Federation of Labor, Mr. William Green, dated May 22, 1936.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN FEDERATION OF LABOR,
Washington, D. C., May 22, 1936.

Hon. MARCUS A. COOLIDGE,
Chairman, Committee on Immigration,
United States Senate, Washington, D. C.

MY DEAR SENATOR COOLIDGE: The amendments proposed by the Senate Committee on Immigration to section 3 of the Kerr-Coolidge bill, S. 2969 and H. R. 8163, which limit the exercise of discretion in so-called hardship cases to aliens who are in the country on the date of the enactment of the bill, and which limits the period during which discretion may be exercised to 3 years, and a further limit to the number of cases to be benefited by the exercise of discretion, are, in general, acceptable and reasonably satisfactory.

Because there is some doubt as to whether the additional classes as provided for in this section are subject to mandatory action as distinguished from the discretionary deportation, I respectfully recommend that this subject be inquired into from a legal point of view, and if found to be discretionary, that such action be taken as to make such deportation mandatory beyond reasonable doubt.

Sections 1 and 2 of the bill, which provide for the addition of new deportable classes of criminal aliens, add strength to the present deportation law.

As to section 3, I respectfully urge that the number who are to be the beneficiaries of this section be limited to between 8,000 and 10,000, and that not to exceed 4,000 shall be given the benefit of this discretionary treatment during the first year; 3,000 during the second; and 3,000 during the third year, and that no further changes be thereafter permitted or deportation cases stayed under any circumstances.

While in accord with the plan to clear up the present cases, the American Federation of Labor is strongly opposed to such action being considered as a precedent. For that reason we urge that the following declaration of policy be incorporated in the law in order that it may be clearly understood that no further legislative relief will be granted to aliens who may hereafter enter or remain in the United States:

"It is hereby declared to be the policy of the Congress that the deportation of aliens, where grounds for their deportation exist, shall be effected with the utmost expedition; and that after the adjustment, as provided for in section 3 of this act, of the accumulated so-called hardship cases of aliens whose deportation has been ordered, but because of family separations involved has been stayed, no further legislative relief shall be given in delaying the deportation of all persons who shall have entered the borders of the United States illegally or otherwise subjected themselves to deportation."

We are in accord with section 4 of the bill, which deals with the adjustment of the status of aliens illegally in the country who are entitled under the present acts to nonquota or preference admission. However, we firmly believe that the numbers to be benefited thereby should be reduced from 500 to 250 for the first year and from 250 to 100 for each of the 3 suceeding years.

We are in accord with section 5 of the bill, which permits the registration of aliens who entered the United States between June 23, 1921, and July 1, 1924.

We are in accord with the other sections of this bill with the exception of section 11, which deals with the appointment of an interdepartmental committee. We urge that there be substituted for this section a provision providing for the appointment of a committee consisting of one representative to be appointed by the Vice President of the Senate, one by the Speaker of the House, and one by the Secretary of Labor.

We further urge that the following additional section be added to the bill, with the view of strictly limiting hereafter administrative stays of deportation:

"Section 19 of the Immigration Act of February 5, 1917 (sec. 155, U. S. C., 39 Stat. 874), is hereby amended by adding the following proviso: *Provided further*, That as to any person found deportable under the provisions of this section or any other provision of law, except as to the cases provided for in section 3 of this act, there shall be no stay of deportation unless a clear showing of great and unusual hardship is made, and provided, that in no case shall deportation be stayed for a period of more than 1 year beyond the date of the issuance of the warrant of deportation."

Permit me to again report the strong opposition of the American Federation of Labor to the general registration of aliens who enter in all forms. These recommendations and expressions of opinion are submitted to you as the result of the conversation I held with you a short time ago and in response to your request for the views of the American Federation of Labor upon the Kerr-Coolidge bill.

I express the hope that the measure, amended in accordance with the recommendations made, may pass the Congress of the United States within the very near future.

Very sincerely yours,

W. GREEN,
President, American Federation of Labor.

Mr. SCHWELLENBACH. Mr. President, a week ago today the chairman of the committee, the Senator from Massachusetts [Mr. COOLIDGE], returned to Massachusetts, and he requested that from that time on I take up the question of handling the Kerr-Coolidge bill. I realized from that time on that with the legislative situation which existed it was necessary, if we were to get anything done to have it done by unanimous consent, and I have been negotiating with the Senator from North Carolina ever since that time.

I made the proposal to the Senator from North Carolina that we could keep in the bill those portions which were giving to the Government the power to deport criminal aliens, section 1, under the terms of which 20,000 criminal aliens would be subject to deportation at the present time, and an increase of 3,500 a year during the years of the future; and that portion of the bill which gave to the Department of Labor the right to pick up these people and to hold them for 24 hours, which, according to every authority on the subject, would be of utmost help in enforcing the deportation law.

It was stated that we would strike out section 3, would strike out the objectionable portions of the bill, and leave in only those portions which strengthened our deportation laws, and that we would add to it a resolution staying these people until March of next year, or some date immediately after the Congress convened in January; and I requested that the Senator agree to that. The Senator from North Carolina was unwilling or unable to agree to that.

Finally I proposed to him a very simple resolution, merely providing that the hardship cases, which involve not only the hardship of the people who are retained here, but the hardship of their families, and the fact that their families are going to be made dependent upon relief and upon charity in this country if they are deported; but the Senator from North Carolina has been unable to agree to that.

I desire at this point to insert in the RECORD another letter from the president of the American Federation of Labor dated June 20, 1936.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN FEDERATION OF LABOR,
Washington, D. C., June 20, 1936.

Hon. WILLIAM P. CONNERY,
Member, House of Representatives,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: I am writing to advise you that the American Federation of Labor endorses and approves the adoption of a joint resolution by Congress providing for a stay in the execution of deportation proceedings in hardship cases until an opportunity is extended to enact remedial legislation dealing with this particular matter at the next session of Congress.

It is my opinion that, not only for humanitarian, but, in addition, for practical purposes, the joint resolution providing for a stay in deportation proceedings in the classified hardship cases which have been reported to Congress should be adopted before Congress adjourns.

Very sincerely yours,

W. GREEN,
President, American Federation of Labor.

Mr. SCHWELLENBACH. Mr. President, in addition to that, I desire to insert in the RECORD, in order that the matter may be made clear, a partial list of the organizations endorsing the Kerr-Coolidge bill; also resolutions of national organizations specifically endorsing the bill, the American Bar Association, and the Association of Chiefs of Police; also resolutions of national organizations endorsing the principle of the Kerr-Coolidge bill, but not mentioning it by name, the National Chamber of Commerce, the General Federation of Women's Clubs, and the executive committee of the American Legion.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

PARTIAL LIST OF ORGANIZATIONS ENDORSING THE KERR-COOLIDGE BILL

American Bar Association.
American Citizenship League, Pittsburgh, Pa.
American Federation of Labor.
American Friends Committee.
Association of the Bar of the City of New York.
Board of Social Service of the Episcopal Diocese of Newark, N. J.
Committee of Fifty for Social Action in the Passaic (N. J.) Valley.
Department of Social Service of the Episcopal Diocese of Albany, N. Y.
Federal Council of the Churches of Christ in America.
Federation of Hungarian Churches and Societies of Los Angeles, Calif.
Foreign Language Information Service.
Immigrants' Protective League.
Indiana State Senate.
International Association of Chiefs of Police.
International Association of Catholic Alumnae.
International Institute, Young Women's Christian Association.
International Migration Service.
National Council of Jewish Women.
National Catholic Welfare Conference.
National Crime Commission.
National Institute of Immigrant Welfare.
National League for American Citizenship.
Northwest International Anti-Crime Conference (Washington, Oregon, California, Idaho, and Montana).
Norwegian-American Civic Committee.
Oregon League of Women Voters.
Polish Association of America.
Second Baptist and First Methodist Churches of Edmeston, N. Y.
Southeastern Michigan Association of Chiefs of Police.
Southeastern Missouri Council of Churches.
State of Illinois Committee on Citizenship and Naturalization.
Toledo Federation of Women's Clubs.
Travelers' Aid Society.
United German Societies of Greater New York.
Washington (Iowa) City Ministerial Association.
Young Women's Christian Association, National Board.

The National Catholic Welfare Conference, representing the Catholic bishops and clergy of the United States, has endorsed the bill, and more than 2,200 of the leading Protestant bishops and clergy of the country have likewise given it their approval.

RESOLUTIONS OF NATIONAL ORGANIZATIONS SPECIFICALLY ENDORSING THE KERR-COOLIDGE BILL

American Bar Association.
The International Association of Chiefs of Police.

AMERICAN BAR ASSOCIATION

At a meeting of the executive committee of the American Bar Association held at Washington, D. C., on May 6–9, 1935, upon motion, duly carried, the following resolution was adopted, with the understanding that the bill was to be amended so as to provide for an interdepartmental committee, or board, composed of representatives of the Departments of State, Justice, and Labor to pass upon cases involving extraordinary hardships:

"*Resolved*, That the executive committee of the American Bar Association favors the enactment into law of H. R. 6795, introduced in the Seventy-fourth Congress by Congressman KERR, of North Carolina, which is intended to increase the classes of undesirable aliens, particularly criminals, subject to deportation; to strengthen the Government's authority to effect deportations; and permit alleviation of certain extraordinary hardships such as separation of families or enforced termination of long-established residence in cases of aliens of good character."

Resolution adopted at the Forty-second Annual Convention of the International Association of Chiefs of Police, Ambassador Hotel, Atlantic City, N. J., July 11, 1935.

RESOLUTION REGARDING DEPORTATION OF ALIENS

Whereas the Immigration and Naturalization Service of the United States Department of Labor has been for the past 2 years engaged in an intensive study of the deportation laws and their enforcement; and

Whereas the results of this study reveal that it is imperative to give the Department of Labor powers that it now lacks, and badly needs, for the apprehension of aliens who have entered the country illegally; to make possible the deportation of many alien criminals who cannot be reached under existing laws; and to authorize the Secretary of Labor to exercise limited discretionary power in certain deportation cases, in which extreme hardship to individuals, often including American-born wives and children, is not justified or compensated by any corresponding public advantage; and

Whereas bill H. R. 8163, introduced by Congressman Kerr and referred to the Committee on Immigration and Naturalization provides for the foregoing recommendations, and renders violators of State narcotic laws subject to deportation in the same manner as violators of Federal narcotic statutes; and further provides for the deportation of any alien who has been convicted in the United States within 5 years, of the institution of deportation proceedings against him of a crime involving moral turpitude, even if the alien is not sentenced to imprisonment, as required under existing law, and if the deportation of the alien who has been convicted in the United States within 5 years of the institution of deportation proceedings against him of a crime involving moral turpitude, even if the alien is not sentenced to imprisonment, as required under existing law, and if the deportation of the alien who has been convicted in the United States within 5 years of the institution of deportation proceedings against him of the crime of possessing or carrying any concealed or dangerous weapon, if the deportation of such alien is in the public interest; and

Whereas the members of this association consider the above proposals necessary for the welfare and protection of the people of the United States: Now, therefore, be it

Resolved, That the International Association of Chiefs of Police requests the Congress of the United States to enact the provisions of bill H. R. 8163, and that the secretary of the association send a copy of this resolution to the chairman of the Committee on Immigration and Naturalization.

RESOLUTIONS OF NATIONAL ORGANIZATIONS NOT MENTIONING THE KERR-COOLIDGE BILL BY NAME, BUT URGING IMMEDIATE ACTION ON THE ALIEN PROBLEM

Chamber of Commerce resolution.
General Federation of Women's Clubs.
Executive committee of the American Legion.

Resolution adopted at twenty-fourth annual meeting, Chamber of Commerce of the United States, Washington, D. C., April 28–30, 1936

CRIME AND DEPORTATION

Definite action should be taken to free the country of alien criminals. There should be immediate extension of provisions of law for deportation to include all classes of criminal aliens convicted within 5 years of any crime involving moral turpitude, even if there was not sentence of imprisonment, aliens violating State narcotic laws, alien smugglers, and aliens convicted of possessing or carrying concealed or dangerous weapons.

On the other hand, there should be such amendment to existing law as to prevent deportation from being visited suddenly upon law-abiding aliens who have been resident in the United States for many years. There should be provision which would allow such aliens, upon a proper showing of their good character and useful lives, to remain. Any such provision, however, should contain such limitations that it may not be utilized upon behalf of any alien Communist, anarchist, criminal, or member of the immoral classes.

The General Federation of Women's Clubs, which includes more than 14,000 women's organizations throughout the country, and has a membership of more than 2,000,000, at the annual council meeting on April 30, 1936, passed the following resolution:

"That the General Federation of Women's Clubs petition the Congress of the United States to pass legislation during the present session, which shall strengthen the existing laws relating to the deportation of criminal aliens, making it mandatory that those aliens shall be deported who have been convicted of violating the

narcotic laws, State or Federal statutes; of illegal smuggling of aliens into this country, or who shall have been convicted of crimes importing moral turpitude carrying with it a sentence of imprisonment of a year or more, as well as those known to be habitual criminals."

[Executive committee of the American Legion meeting at Indianapolis, May 4, 1936]

RESOLUTION ON IMMIGRATION LEGISLATION

Whereas there are pending before Congress different measures dealing with the subject of immigration; and

Whereas numerous amendments have been proposed to the pending measures by Congressmen and Senators of divergent views; and

Whereas the matter of tightening our immigration restrictions and securing stricter and more efficacious enforcement of immigration law has been at a standstill through several sessions of Congress by reason of the widely divergent views of Congressmen and Senators and the diversion of strength among opposing groups; and

Whereas it appears certain the stalemate will continue and no beneficial immigration legislation will be obtained at this session of Congress if the American Legion continues to insist upon the passage of legislation embodying the full program endorsed at the St. Louis national convention; and

Whereas it appears that urgently needed restrictions and enforcement measures can be obtained if the American Legion yields in part and urges a compromise; and

Whereas the Americanism commission has reached the conclusions above recited, after hearing the subject discussed at length by E. J. Shaughnessy, Deputy Commissioner of Immigration and Natuarilzation, Department of Labor, the national commander, and the national legislative director: Now, therefore, be it

Resolved, That the national Americanism commission recommends to the national executive committee that the legislative director of the American Legion be authorized and directed to endeavor to secure at this session of Congress the passage of an immigration act embodying so much of the program endorsed at the St. Louis convention as will not bar immediate passage, and which act, in his judgment, will effect a substantial betterment of existing law.

Mr. SCHWELLENBACH. Mr. President, at this time, with the statement that I do not intend to ask the Senate to pass upon the Kerr-Coolidge bill itself, but that I intend, if the unanimous consent for the immediate consideration is granted, to substitute for it a simple resolution which will stay these cases until next year, I now ask unanimous consent for the immediate consideration of Senate bill 2969, a bill to authorize the deportation of criminals, to guard against the separation from their families of aliens of the noncriminal classes, to provide for legalizing the residence in the United States of certain classes of aliens, and for other purposes.

The PRESIDENT pro tempore. The Senator from Washington asks unanimous consent for the present consideration of the bill to which he has referred.

Mr. BORAH. Mr. President, as I understand, if the Senator secures unanimous consent, he will offer a resolution as a substitute for the bill.

Mr. SCHWELLENBACH. That is correct.

Mr. BORAH. Has the resolution been printed?

Mr. SCHWELLENBACH. It has been printed. It was a resolution offered by the Senator from New York. I would ask to strike out all of the whereases in the resolution. I should like to have the proposed resolution read.

Mr. BORAH. I was going to ask that the resolution be read before unanimous consent is accorded.

Mr. REYNOLDS. Mr. President, before the reading of the resolution I will say that it is my understanding that my colleague from the State of Washington [Mr. SCHWELLENBACH] was asking for consideration of the Kerr-Coolidge bill. I should like to inquire if it is not in order to pass upon that question prior to voting on the motion to substitute the resolution for the Kerr-Coolidge bill.

The PRESIDENT pro tempore. The Senator from Washington asked for consideration of a measure on the calendar.

Mr. REYNOLDS. Was unanimous consent asked?

The PRESIDENT pro tempore. Yes.

Mr. REYNOLDS. I object.

The PRESIDENT pro tempore. Objection is heard.

Mr. KING. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator will state it.

Mr. KING. I am under the impression that my friend from North Carolina—and I hope he will pardon me for making this suggestion——

Mr. REYNOLDS. Certainly.

Mr. KING. Did not quite understand the implications arising from the suggestion made by the Senator from Washington. The Senator from Washington made it very clear that he did not intend to press the consideration of the so-called Kerr-Coolidge bill, but in order to get before the Senate the substitute which is offered, which is a mere resolution, it was perhaps considered necessary to advert to the Kerr-Coolidge bill and then to move to substitute the resolution for the Kerr-Coolidge bill. I am sure my friend from North Carolina, with his perspicacity and his humanitarianism, will certainly not object to that.

Mr. REYNOLDS. My objection having been noted, Mr. President, to the consideration of the Senate bill known as the Kerr-Coolidge bill, for which there have been two substitutes offered, one by my colleague from Utah [Mr. KING] and one by my colleague from Massachusetts [Mr. COOLIDGE], the chairman of the Committee on Immigration of the Senate, now comes a resolution, and I object to the consideration of that resolution.

Mr. KING. Mr. President, will the Senator further yield?

Mr. REYNOLDS. I yield.

Mr. KING. If I may trespass further upon the time of the Senate, let me say that, as I understand, the resolution merely provides for an extension for a limited period of time of what might be denominated an order of deportation de facto or de jure of about 2,800 aliens, many of whom have wives and children who are Americans, and who, if deported, will cast upon the American people the responsibility to care for their defenseless wives and children. I cannot believe that the Senator from North Carolina, notwithstanding his devotion to what he conceives to be the duty of American citizens to exclude aliens and to provide for the American citizen, would be willing to pursue a course which would eventuate in such tragic consequences and impose upon the American people burdens which they ought not to be compelled to bear.

Mr. REYNOLDS. Mr. President, regardless of the nearness of the hour of final adjournment of the Congress, in view of the statement that has been made by my friend from the great State of Utah, and in view of the immense interest that has been evidenced in this great question throughout the length and breadth of the United States, not only for years upon years past but particularly during the present session of Congress, I feel that I should, and I therefore now do, avail myself of the opportunity of explaining my attitude to the American people, because, Mr. President, I would not have the American people, particularly those of my great State of North Carolina, those whom I have the honor to represent in part, feel that I have no human sympathy in my breast.

I would not lose this opportunity to let the American people know that in my heart of hearts I do not feel that I am doing that which is unjust, not only to the American people but to those who are now on our shores illegally, the thousands upon thousands who violated the law of our country by securing their admission to this country in an illegal manner.

This resolution, Mr. President, interests itself in what? It interests itself, I tell Members of the Senate, in permitting to stay in this country several thousand aliens who have violated our laws, despite the fact that the present laws of our land say that they are mandatorily deportable. Now comes this resolution asking the Members of this body to permit to stay in this country those who, under the laws at present, must be deported if those laws are carried out, if those laws are executed.

Mr. President, I recognize and I shall state this in perfect frankness and all candor and fairness to those who in our Nation unfortunately do not agree with me, that there may be perhaps some worthy cases in all of the 2,862 plus mentioned in the resolution, but those who are interested in them should have done what? They should have introduced private bills in Congress asking for the relief of those worthy, God-fearing people who, by word of mouth and by printed literature, have been proclaimed as being heavenly and angelic.

Mr. ASHURST. Mr. President——

Mr. REYNOLDS. I am delighted to defer to my distinguished friend, for whom I have great love and affection and admiration, the Senator from Arizona [Mr. ASHURST].

EXTENSION OF JURISDICTION OF UNITED STATES COURT FOR CHINA

Mr. ASHURST. Mr. President, I highly value the words of commendation from the Senator. I wish the Senator from North Carolina to know that I particularly appreciate his friendship, and I would not interrupt him except upon a matter of importance—not as important as the subject which the able Senator is discussing, but I ask if he will yield to me for the immediate consideration of a bill?

Mr. REYNOLDS. I should be delighted, Mr. President, to yield to my distinguished friend for any length of time he may desire, because it is always my pleasure to favor a courteous and distinguished gentleman of his type, of whom we are all envious.

Mr. ASHURST. Mr. President, for the first time, I am unable, in words, to express myself.

The House has passed a bill, H. R. 12257, relating to the United States Court for China. My able friend who has the floor and I were in China with other Senators last fall, but I am not familiar enough with China to pass definite opinions. The United States Court for China has jurisdiction to try and determine cases that arise in China, but if an offense is committed on the high seas, say, 30 miles out of Shanghai, the alleged offender must be brought to the mainland of the United States for trial, which is very expensive and entails delay. The bill passed by the House permits, or grants rather, to the United States Court for China the authority to try American citizens for offenses committed on the high seas.

Mr. KING. By American citizens.

Mr. ASHURST. By American citizens. The Senator from Utah is correct. I have requested the Senator from Vermont [Mr. GIBSON] to make an analysis of the bill, and if the Senator from North Carolina will permit me, I shall ask that the Senator from Vermont [Mr. GIBSON] make a statement as to whether or not I am correct in my statement as to the purpose of the bill.

Mr. GIBSON. Mr. President, the distinguished Senator from Arizona is entirely correct. He has pretty well stated the purposes of the bill.

In pursuance of the treaties existing between this Government and China, consuls and ministers have certain judicial authority. In 1906 we established a United States Court in China which had jurisdiction of civil matters where one of the parties was a citizen of the United States and jurisdiction of criminal matters which called for fines of not over $10 or imprisonment of no more than 60 days.

It is true, as the Senator from Arizona has said, that where crimes are committed on the high seas or in waters adjacent to China, the respondents would have to be transferred to the United States for trial. The only purpose of the bill is to confer concurrent jurisdiction on our court in China to try such cases. The bill is recommended by the Department of Justice and I understand has the approval of the Department of State. I think it is a meritorious bill.

Mr. KING. Mr. President, as a member of the Judiciary Committee and with some knowledge of the questions involved and from an investigation which I made while in China, I desire to state that I hope the bill will be passed.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection the bill (H. R. 12257) to extend the jurisdiction of the United States Court for China to offenses committed on the high seas, was considered, ordered to a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That section 1 of the act entitled "An act creating a United States Court for China and prescribing the jurisdiction thereof", approved June 30, 1906 (34 Stat. 814; U. S. C., title 22, sec. 191), be, and it is hereby, amended to read as follows:

"That a court is hereby established, to be called the United States Court for China, which shall have exclusive jurisdiction in all cases and judicial proceedings whereof jurisdiction may now be exercised by United States consuls and ministers by law and by virtue of treaties between the United States and China except insofar as the said jurisdiction is qualified by section 2 of this act; and to concurrent jurisdiction of all offenses committed on the high seas in cases in which the person or persons charged with such offenses shall be found in or be brought first into China. The said court shall hold sessions at Shanghai, China, and shall also hold sessions at the cities of Canton, Tientsin, and Hankau at stated periods, the dates of such sessions at each city to be announced in such manner as the court shall direct, and a session of the court shall be held in each of these cities at least once annually. It shall be within the power of the judge, upon due notice to the parties in litigation, to open and hold court for the hearing of a special cause at any place permitted by the treaties, and where there is a United States consulate, when, in his judgment, it shall be required by the convenience of witnesses, or by some public interest. The place of sitting of the court shall be in the United States consulate at each of the cities, respectively.

"That the seal of the said United States Court for China shall be the arms of the United States, engraved on a circular piece of steel of the size of a half dollar, with these words on the margin, 'The Seal of the United States Court for China.'

"The seal of said court shall be provided at the expense of the United States.

"All writs and processes issuing from the said court and all transcripts, records, copies, jurats, acknowledgments, and other papers requiring certification or to be under seal may be authenticated by said seal, and shall be signed by the clerk of said court. All processes issued from the said court shall bear test from the day of such issue."

Mr. ASHURST. Mr. President, I desire to say to the generous and polite Senator from North Carolina [Mr. REYNOLDS] that I hope North Carolina will retain him in the United States Senate as long as he lives and that he shall live as long as life is agreeable to him. [Laughter.]

Mr. REYNOLDS. I thank the Senator and I am thoroughly in accord with the Senator's wishes in that respect.

Mr. ASHURST. Moreover, I should be deficient in courtesy if I did not now thank the Senator from Vermont [Mr. GIBSON] for the attention he gave to the bill.

NOTIFICATION TO THE PRESIDENT

The PRESIDENT pro tempore. The Chair lays before the Senate a resolution of the House of Representatives, which will be read.

The Chief Clerk read the resolution (H. Res. 558), as follows:

Resolved, That a committee of two Members be appointed by the House to join a similar committee appointed by the Senate to wait upon the President of the United States and inform him that the two Houses have completed the business of the present session and are ready to adjourn unless the President has some other communication to make to them.

The PRESIDENT pro tempore. The Chair appoints the Senator from Arkansas [Mr. ROBINSON] and the Senator from Oregon [Mr. MCNARY] as the committee on the part of the Senate.

Mr. MCKELLAR. Mr. President, I did not understand that the resolution was adopted.

The PRESIDENT pro tempore. It is not necessary to adopt it. It is a House resolution.

Mr. GUFFEY. Does the matter require unanimous consent?

The PRESIDENT pro tempore. It does not.

REGULATION OF INTERSTATE COMMERCE IN BITUMINOUS COAL

Mr. GUFFEY. Mr. President, I call for the regular order.

The PRESIDENT pro tempore. The Senator from Pennsylvania demands the regular order. The regular order is the consideration of House bill 12800.

The Senate resumed the consideration of the bill(H. R. 12800) to regulate interstate commerce in bituminous coal, and for other purposes. The question is on the amendment of the Senator from West Virginia [Mr. NEELY].

Mr. KING. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator will state it.

Mr. KING. Under the regular order and under the rules of the Senate, the Senator from North Carolina [Mr. REYNOLDS] having the floor and addressing himself as he may see fit to the question before the Senate or any other question, he is entitled to continue his observations, is he not?

The PRESIDENT pro tempore. The Chair cannot determine to what subject the Senator shall address himself.

Mr. KING. In other words, it is immaterial to the Chair what the subject may be?

The PRESIDENT pro tempore. When the regular order is called for that means that the Chair shall state the pending question, which is the amendment of the Senator from West Virginia.

Mr. KING. Upon that amendment the Senator from North Carolina or other Senators may discuss such questions as they feel are pertinent and relevant?

The PRESIDENT pro tempore. That is the custom of the Senate.

Mr. BILBO. Mr. President——

The PRESIDENT pro tempore. Does the Senator from North Carolina yield to the Senator from Mississippi?

Mr. REYNOLDS. I yield.

LOUD-SPEAKING SYSTEM IN THE SENATE CHAMBER

Mr. BILBO. I ask permission to have the clerk read a resolution which I submitted this morning, and after he has read it I desire to submit a motion with reference to it.

The PRESIDENT pro tempore. That can only be done by unanimous consent.

Mr. REYNOLDS. Mr. President, I shall gladly yield for that purpose, provided I do not lose the floor. Otherwise, I shall have to hesitate.

The PRESIDENT pro tempore. The Senator has control over his own time; but under the rules of the Senate, when the regular order is called for, no other matter or business may intervene except by unanimous consent. The pending question is the amendment of the Senator from West Virginia.

Mr. BILBO. Mr. President, I ask unanimous consent to have the resolution read.

Mr. CONNALLY. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator will state it.

Mr. CONNALLY. What is the pending question?

The PRESIDENT pro tempore. An amendment offered by the Senator from West Virginia to the so-called Guffey coal bill.

Mr. CONNALLY. And the regular order is a speech by the Senator from North Carolina?

The PRESIDENT pro tempore. Which is supposed to be upon the amendment.

Mr. REYNOLDS. Mr. President, I shall make it applicable to the Guffey coal bill.

Mr. CONNALLY. No one can take the Senator from the floor except with his consent.

The PRESIDENT pro tempore. That is the rule.

Mr. BILBO. I am asking unanimous consent to have the resolution read.

The PRESIDENT pro tempore. The Senator from Mississippi asks unanimous consent to have a resolution read. Is there objection?

Mr. REYNOLDS. Mr. President, I shall have to object if the Chair should rule that by not objecting I should lose the privilege which I am now assuming.

Mr. BILBO. I am only asking to have the resolution read in the time of the Senator.

The PRESIDENT pro tempore. If the Senator from North Carolina permits the reading of a resolution he would have to be recognized again, and the Chair would recognize him again. Is there objection to the request of the Senator from Mississippi? The Chair hears none, and the clerk will read as requested.

The legislative clerk read the resolution (S. Res. 326) submitted today by Mr. BILBO, as follows:

Whereas it is evident to every Member of the Senate, as well as to all visitors to the Senate galleries, that the acoustic properties of the Senate Chamber are very poor and unsatisfactory; and

Whereas it is the ardent wish and desire of every Member of the Senate, as well as visitors to the galleries, to hear and understand every statement and speech made by Members of the Senate; and

Whereas the recent developments of loud-speaking instruments are so thoroughly improved and perfected that they can be installed upon the top or side of each Senator's desk without obstruction and inconvenience, making it possible for every Senator to be

heard in all parts of the Senate Chamber and galleries as well when speaking from his desk; and

Whereas it is necessary for Senators in the rear of the Senate Chamber to leave their seats and occupy, or attempt to occupy, the seats of other Senators at the front and near the President's chair if they hear or understand anything that is said and done, and in doing this it is not only embarrassing to the intruder, or trespasser, but it is exceedingly annoying to the older Members of the Senate, who, by right of seniority, occupy these seats of advantage; and

Whereas if it were possible for each and every Member of the Senate to hear everything that is said and done on the floor of the Senate, it would bring about a more satisfactory and expeditious transaction of the business of the Senate; and

Whereas the Senate Rules Committee has the power, right, and authority to direct the installation of a loud-speaking system in the Senate: Now, therefore, be it

Resolved, That the Rules Committee be respectfully requested and urged to give favorable consideration to the proposition of directing the Sergeant at Arms to install a loud-speaking system in the Senate Chamber before the convening of the first session of the Seventy-fifth Congress.

Mr. SCHWELLENBACH. Mr. President, will the Senator yield to me?

Mr. BILBO. I yield.

Mr. SCHWELLENBACH. I should like to ask the Senator from Mississippi whether it was the difficulty he had had in hearing the Senator from North Carolina that caused him to bring up this resolution at this time. [Laughter.]

Mr. REYNOLDS. Mr. President——

Mr. BILBO. I desire to make one observation. There are about half a dozen Senators who can be heard in the Senate Chamber from all parts of it, and in the galleries, but there are about 90 Senators who cannot be heard. I have a seat on the side over here next to the door, and I have tried in the past to understand all that has been said, and I declare most solemnly that I have not been able to understand a word uttered by the leader on the Republican side during two sessions of the Congress. [Laughter.]

The resolution does not require any affirmative action of the Rules Committee. It merely asks that the Rules Committee make a study of the advisability and feasibility of installing a system of this kind, so as to give every Senator an equal chance to understand what is going on in the Senate.

I ask at this time that the question be put as to whether the Rules Committee shall be requested to make the investigation.

Mr. BARKLEY. Mr. President, I think the resolution ought to go to the Rules Committee for its consideration. I do not think it ought to be adopted at this time.

The PRESIDENT pro tempore. What is the request of the Senator from Mississippi with regard to the resolution?

Mr. BILBO. I am asking that the Senate vote on it, to see whether it is the will of the Senate that the Rules Committee should consider it.
